Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. l, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

Contents

T

[continued]

Twelve-note. This term refers to the 12-note system in which the 12 pitch classes are placed in a specific order, forming a set which then becomes a compositional tool. *See* SERIALISM and TWELVE-NOTE COMPOSTITION.

Twelve-note composition. A method of composition in which the 12 notes of the equal-tempered chromatic scale, presented in a fixed ordering (or series) determined by the composer, form a structural basis for the music. It arose in the early years of the 20th century, when the dissolution of traditional tonal functions gave rise to several systematic attempts to derive a total musical structure from a complex of pitch classes that are not functionally differentiated. Skryabin's Seventh Sonata (1911–12), for example, is based upon such a complex, or 'set' (ex.1). The

Ex.1

set, at any of its 12 transpositional levels, generates both the melodic and the harmonic elements of the composition. It is defined in terms of its pitch-class content, relative to transposition, and no pre-compositional ordering or segmentation of the set is assumed. Clearly there is only one analogously unordered set of all 12 pitch classes. About 1920 Hauer and Schoenberg independently arrived at concepts of 12-note set structure that make it possible to differentiate between one 12-note set and another, and among transformations and transpositions of any given 12-note set.

See also ATONALITY and SERIALISM.

1. 12-note tropes. 2. 12-note series. 3. Origins of the 12-note set. 4. 12-note composition. 5. Pre-compositional structures. 6. 12-note 'tonality'. 7. Extensions and developments of 12-note composition. 8. Conclusion.

1. 12-NOTE TROPES. In Hauer's system the 12 pitch classes are divided into discrete, mutually exclusive segments. The order of segments within a 12-note set and the order of pitch classes within each segment are not pre-compositionally defined. Each such set and its 12 transpositions represent what Hauer called a 'trope'. The only tropes that Hauer investigated systematically are those that divide the pitch classes into two hexachords. Let the integers 0 to 11 represent the successive pitch classes of an ascending chromatic scale of unspecified transposition. If pitch-class numbers 2, 3, 5, 7, 9 and 10 are chosen as one hexachord, the trope will be completed by the hexachord formed by the remaining pitch classes: 0, 1, 4, 6, 8 and 11. The hexachords (8, 9, 11, 1, 3, 4) and (6, 7, 10, 0, 2, 5) are a representation of this same trope since they are its transposition by a tritone of (i.e. the addition of 'T-no.6' to) each element of the original. Hauer demonstrated that there are 80 non-equivalent hexachords. Eight of these will each form a trope by combination with its own transposition. (For example, the whole-tone hexachord (0, 2, 4, 6, 8, 10) may be combined with a transposition of itself by any odd T-no.) The remaining 72 hexachords are paired to form 36 tropes, and so there are 44 independent hexachordal tropes.

Hauer's is the earliest known attempt at any general formulation of the resources of a 12-note sound world. His concept of hexachordal tropes was a remarkable anticipation of subsequent developments in 12-note composition and theory. It is doubtful, however, that he had any direct influence on what is significant in these developments. His own compositions are simple-minded exercises, and his 12-note theory was embedded among mystical and megalomaniac assertions. The fact remains, however, that he was the first to discover the all-important principle of segmentation – the partitioning of the collection of 12 pitch classes into mutually exclusive sub-collections – as a basis for classifying the pitch-class material of 12-note music.

2. 12-NOTE SERIES. If the 12 pitch classes are regarded as an unsegmented collection, sets can be differentiated only by the ordering of their elements. In Schoenberg's system ordered sets ('series' or 'rows') that may be transformed into one another by transposition (i.e. the addition or subtraction of a constant T-no., mod 12), by retrograding, by inversion (i.e. the subtraction of each of the original pitch-class numbers from a constant T-no., mod 12) or by any combination of these operations, are all regarded as different forms of a single series. Since the series in each of its aspects – prime (P), retrograde (R), inversion (I), retrograde-inversion (RI) – may be stated at 12 transpositional levels, there will be 48 set forms in the complex generated by a single series.

3. ORIGINS OF THE 12-NOTE SET. The term '12-note music' (or 'dodecaphony') commonly refers to music based on 12-note sets, but it might more logically refer to any post-triadic music in which there is constant circulation of all pitch classes, including both the pre-serial 'atonal' compositions of Schoenberg, Berg and Webern

and the 'atonal' compositions of Skryabin and Roslavets based on unordered sets of fewer than 12 elements (*see* ATONALITY). However, the customary sense is retained here.

Occasional systematic statements of the 12 pitch classes first appeared in the music of Berg. A 12-note series is one of the principal themes of his Altenberg songs, composed in 1912, about three years before Schoenberg's first experiment with 'a theme consisting of the 12 notes' in his unfinished oratorio *Die Jakobsleiter*. Schoenberg's 'theme' is a hexachordal 12-note trope, rather than a series. By summer 1919 Berg had completed, in short score, the first act of *Wozzeck*, which contains a 12-note passacaglia theme that is often cited as an adumbration of the Schoenbergian series. Non-serial 12-note collections are found in Berg's works throughout his career. In the concluding song of op.2 (1910) a white-key glissando in the left hand of the piano part occurs simultaneously with a black-key glissando in the right, a 12-note aggregate which anticipates by about 20 years the white-key and black-key clusters of the Athlete's leitmotif in *Lulu*. A chord consisting of all 12 pitch classes opens and closes the third of the Altenberg songs. The two mutually exclusive whole-tone scales and the three mutually exclusive diminished 7th chords generate 12-note collections in *Wozzeck*. Other examples can be cited from *Wozzeck* and the *Drei Stücke* for orchestra (1914–15).

Schoenberg has explained the concept of a 12-note series as originating in the desire to avoid excessive pitch-class repetition in atonality, citing in this connection the tendency to avoid the octave in atonal compositions. Webern apparently anticipated both Schoenberg and Berg in this respect: he consistently avoided octave doublings as early as 1910 in his *Zwei Lieder* op.8. In a lecture given in 1932 (published in 1960) he described his early intuitive approach to the concept of the 12-note series as follows:

> About 1911 I wrote the Bagatelles for string quartet (op.9), all very short pieces, lasting a couple of minutes – perhaps the shortest music so far. Here I had the feeling, 'When all 12 notes have gone by, the piece is over'. Much later I discovered that all this was a part of the necessary development. In my sketchbook I wrote out the chromatic scale and crossed off the individual notes. Why? Because I had convinced myself, 'This note has been there already'. ... In short, a rule of law emerged; until all 12 notes have occurred, none of them may occur again. Were this 'rule' to be strictly applied the 12 pitch classes would be continually reiterated in the same order within a movement, thus forming a repeating series.

The principle of non-repetition, however, is clearly not a sufficient explanation of the serial concept. One of the characteristic features of a melodic theme in tonal music is, after all, the order assigned to its pitches, but this feature is inseparable from others – rhythm, contour, tonal functions – any and all of which may be varied within certain limits without destroying the identity of the theme. The interdependence and interaction of these elements are far more ambiguous and problematical in atonality. The pitch-class content of a group of notes may be exploited independently of its other components, and in one of Schoenberg's last pre-dodecaphonic works, the first of the *Fünf Klavierstücke* op.23, the pitch-class order of the initial melodic line is treated as an independent referential idea (ex.2).

The melodic figure which begins the second piece of the same opus serves as nothing less than an ordered set,

though it is only one of the sources of pitch-class relations. Both pieces were completed in July 1920. A month later Schoenberg was at work on op.24 no.3, the Variation movement of the Serenade. This is the earliest example of an entire movement exclusively based on a totally ordered – though not yet 12-note – set. The 14-note series, comprising 11 pitch classes of which three occur twice, is employed in all four aspects, but there is no change in the initial transpositional level (as there is in op.23 no.2). The earliest 12-note serial piece, the *Präludium* of the Piano Suite op.25, was composed during the period 24–9 July 1921. The series, sole source of pitch relations, is employed in all four aspects and at two transpositions separated by the interval of a tritone. Since the tritone, which is invariant in its pitch-class content under transposition by a tritone, is significantly represented in the structure of the set, important invariants are generated between the different set forms.

On completion of the first movement of the Suite, Schoenberg took up the Serenade again. The first movement, evidently composed in one day (27 September 1921), is largely based on the concept of strict inversional complementation, though in a non-serial context. Work on the *Fünf Klavierstücke* op.23 was resumed on 6 February 1923 and completed in less than a fortnight. No.3, based on a five-note set, is an extraordinarily complex study in the structural implications of inversional complementation and invariant relations. The concluding piece, however, Schoenberg's second 12-note serial piece, seems primitive and naive in its constant reiteration of the initial set form, as compared with his first piece in the system, composed almost two years earlier. The same may be said of the only 12-note serial piece of op.24, the *Sonett*, composed a few weeks later. Meanwhile, between 19 February and 8 March, Schoenberg composed the five remaining movements of the Piano Suite, basing all of them on the same set and the same procedures as the first movement, and thus asserting, for the first time, all the basic premises of his 12-note system.

Of the remaining movements of op.24, completed in March and April 1923, only portions of no.5, *Tanzscene*, are based on a 12-note set. The first 57 bars, dating from August 1920, make no use of anything that may be termed a set, but on taking up this movement again on 30 March 1923 Schoenberg converted the pitch-class content of the initial six-note motif into one of the hexachords of a 12-note trope, supplied the missing hexachord to complete the trope and used this as the basis of the newly composed contrasting sections of the piece. (Schoenberg had experimented with a hexachordal trope in 1915, and there is no reason to assume that he was influenced by Hauer's theory.) A tritone transposition of either hexachord of the

trope of the *Tanzscene* (ex.3) leaves the pitch-class content of the hexachord unchanged, a property exploited by

transpositional relations in the work. The *Tanzscene* points forwards to one of Schoenberg's late works, the *Ode to Napoleon* (1942), which is also based on a trope (self-transposable at T-no.4 and T-no.8), rather than a series.

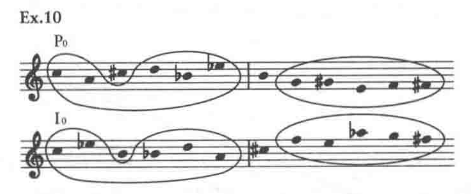
4. 12-NOTE COMPOSITION. It is one thing to define a 12-note set and quite another to define 12-note composition. A general definition cannot go beyond the assertion that all the pitch-class relations of a given musical context are assumed to be referable to a specific configuration of the 12 pitch classes, a configuration that is understood to retain its identity regardless of its direction or transpositional level. Problems arise with the definition of that context and with the compositional representation of the rules of set structure.

With regard to the first question, Schoenberg noted: 'It does not seem right to me to use more than one series [in a composition]'. Of the three Viennese masters, only Webern, beginning with op.19, unambiguously observed this principle. It is completely inconsistent with Berg's practice, even within any single movement. Schoenberg's implied definition of a 'series' does not include cyclical permutations as representations of a given series, but Berg made use of these regularly. Almost every movement in which he can be said to employ some sort of 12-note method contains 'free', that is non-dodecaphonic, or at least non-serial, episodes. And even the 12-note sections of such movements are often based on two or more independent sets – independent in the sense that no form of one set can be transformed into any form of another by transposition, inversion, retrogression, cyclical permutation or any combination of these operations. The first movement of the *Lyrische Suite* is based on not one but three sets. All three, however, are representations of

the same trope (ex.4). (In the notation of set forms in the examples that follow, each accidental affects only the

note it precedes.) The principal set is a serial representation of this trope (ex.5). Another series is derived by reordering

the hexachordal content of ex.4 as a circle of 5ths (ex.6). Finally, the conjunct version of the trope is itself employed



compositionally, not only in the form shown in ex.4, but also with various cyclical permutations of the hexachords, as in ex.7.

The last movement of the *Lyrische Suite* simultaneously employs two different series throughout. In order to understand their relationship one must include the characteristic contour assigned to each series among its essential attributes. The initial series is partitioned into two segments in terms of the registral distribution of its elements, as shown by stemmed and unstemmed notes in ex.8, and these form a second series (ex.9).

Schoenberg's own practice can be said to conform to his rule of the unique series only if the term 'series' or 'row' is replaced by 'set' and if the latter is considered only partially defined by the serial ordering. The first completely 12-note work, the Piano Suite, op.25, employs a series that is partitioned into three four-note segments, and these are employed simultaneously as well as successively. Thus the set cannot be properly defined exclusively in terms of its total serial ordering. A single referential ordering can be deduced in this and in most of Schoenberg's other 12-note compositions, but this ordering tends to be secondary to another attribute of Schoenberg's sets: their segmental pitch-class content. The Third String Quartet and the String Trio are exceptional in that each employs several distinct series. If the set of the string quartet, however, is defined as consisting of an invariably ordered five-note segment and a variably ordered seven-note segment, and that of the string trio as consisting of two variably ordered six-note segments, each work may be said to be based upon a single set.

Even where a single unambiguous pre-compositional serial ordering of the set is assumed, the moment the series is used compositionally there are inevitable ambiguities. The presence of another structural attribute, in addition to that of serial order, is almost always implied: the partitioning of the series into segments. It has been shown (exx.4–6) how a set segmented into two unordered hexachords provides the basis for the association of three independent derived sets. In general, segmentation is used as the basis for the association of set forms chosen from the 48 members of the complex generated by a single series. The first movement of Webern's Second Cantata op.31, for example, employs the following forms (ex.10)

and their respective retrograde versions (R_0 and RI_0). (The level of a set form is indicated by a subscript integer; that assigned to any P or I form of an ordered set is the same as its initial pitch-class number, and that assigned to an R

or RI form will be the same as its final pitch-class number; in the rest of this article pitch-class numbers 0 to 11 represent the successive elements of an ascending chromatic scale beginning on C.) Each hexachord holds five pitch classes in common with the given inversionally complementary hexachord, as shown in the example. Were P to be paired with any other transposition of I, there would be less than five elements in common between corresponding hexachords. The manner in which the hexachords are compositionally stated supports the assumption that the association of inversionally complementary segments is motivated by their maximum invariance of content.

The series on which the 12-note sections of the third movement of Berg's *Lyrysche Suite* are based begins with a four-note segment whose reordered content recurs in transposed or inverted forms within the series. The set forms given in ex.11 convert each of the reordered segments into the pitch-class collection of the initial four-note segment of P_{10}. (In the composition P_8, I_3 and P_5 are cyclically permuted to commence or conclude with the invariant segment.)

The series of Webern's Concerto op.24 is segmented into subsets which are themselves forms of a three-note series. P_{11} and RI_0, the first two set-form statements, present subsets of identical pitch-class content in the same relative positions within each set form (ex.12).

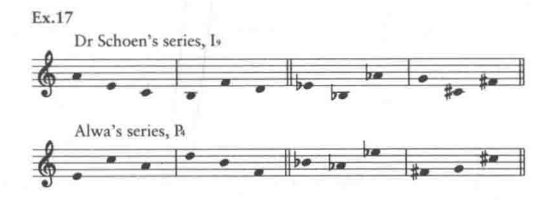
The series of Webern's Symphony op.21 consists of two hexachords related as p_0 to r_6 (ex.13). Thus each P

form of the set is equivalent to the tritone transposition of its retrograde, and the corresponding relation will hold between I and RI forms. For this, as for any 'symmetrical series' (any series comprising two hexachords related as p_n to r_n+_6 or p_n to $ri_n+(_{2x}+_1)$, there are 24, rather than 48, non-equivalent set forms.

From 1928 Schoenberg systematically employed hexachordal segmentation as a basis for the association of set forms. In the Fourth String Quartet, for example, P_2 and I_7, or any other pair of equivalently related set forms, may be combined so that corresponding hexachords (vertically aligned for illustrative purposes in ex.14) produce all 12

pitch classes. Set-form association based on such aggregates of the 12 pitch classes, known as combinatoriality (*see* SET), is the governing structural principle in Schoenberg's 12-note music. The P/I combinatoriality illustrated in ex.14 is only possible where the two hexachords of the series are inversionally complementary in content. If the series of ex.14 is rewritten as a hexachordal trope (ex.15),

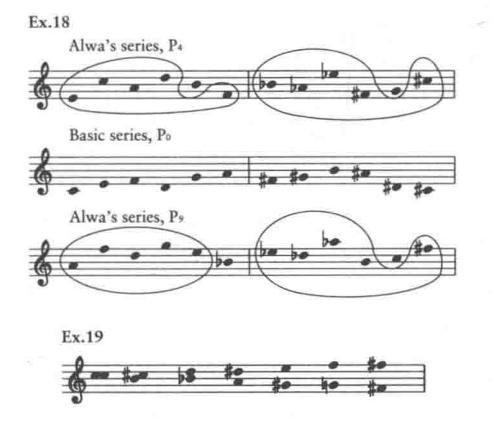
it is clear that P_2, I_7 and their retrograde forms R_2 and RI_7, the four primary set forms of the work, are all members of the same trope.



What Babbitt has called an 'all-combinatorial' set permits P/RI as well as P/I combinatoriality. Although Webern did not observe Schoenberg's principle that combined set forms must produce 12-note aggregates, the series of his Concerto is an example of an all-combinatorial set. If P_{11} of ex.12 is considered as a hexachordal series, it is evident that it may be paired combinatorially with I_4, RI_2, P_5 or R_{11}. (The last is a trivial instance, since any series will, by definition, form 12-note aggregates with its own retrograde.) Since transpositions of each of these set forms by the addition of T-no.4 merely reorders the hexachordal content, P_{11} may also be paired with I_8 or I_0, RI_6 or RI_{10}, P_9 or P_1 and R_3 or R_7.

Where corresponding hexachords of a pair of set forms are mutually exclusive, as in ex.14, the contents of non-corresponding hexachords will, of course, be identical. In the music of Berg set forms are associated through this invariance of segmental content. The principal pair of P and I set forms of the basic series of *Lulu* is shown in ex.16. Transpositions at the tritone will interchange the

contents of the two hexachords. Progression among set forms, including members of independent complexes of set forms, may be referred principally to degrees of invariance of segmental content. Schoen's series and Alwa's series are associated through the set forms shown



in ex.17, which are trichordally as well as hexachordally invariant with each other.

The principal set forms of Alwa's series, P_4 and P_9, are maximally invariant (five elements in common) with the basic series at P_0 (or I_9), as illustrated in ex.18.

Where a set is strongly characterized by segmental content as well as serial ordering in the music of Schoenberg and Berg, linearly stated set segments – functioning as 'broken chords' in a sense – often depart from the assumed ordering. In Schoenberg's *Klavierstück* op.33*a*, for example, though one can deduce an ordering for the set, segmental content is a far more significant property, and in the *Ode to Napoleon* it is the only defining property of the set. The numerous sets found in Berg's *Lulu* include series, tropes based on various types of partition, 'serial tropes' (i.e. sets whose segments are subjected, independently of the set as a whole, to such serial operations as will not revise their respective contents) and 'harmonic tropes' (i.e. sets partitioned into segments of an essentially chordal, rather than linear, character).

In Schoenberg's 12-note works the combinatorial relation between P and I or R and RI set forms is preserved by maintaining a constant difference in the respective transpositional levels of the associated set forms. In op.33*a*, for example, the succession of T-nos. is as follows: P/R 10 0 5 10 I/RI 3 5 10 3 Webern sometimes used the opposite procedure: the maintenance of a constant sum between T-nos. of associated set forms. In the first movement of the Quartet op.22, for example, inversionally complementary set forms are paired as follows: P_1 P_7 P_1 P_{10} P_{11} R_0 P_0 R_1 P_7 P_7 R_1 I_{11} I_5 I_{11} I_2 I_1 RI_0 I_0 RI_{11} I_5 I_{11} RI_{11} The sum of T-nos., 0, mod 12, remains the same throughout. The principal set forms of the second movement are P_6, I_6, R_6 and RI_6, and so here too the sum of complementary T-nos. is 0, mod 12. The significance of this procedure is that it preserves exactly the same pairs of inversionally complementary pitch classes, whatever the respective transpositional levels of the set forms. These complementary relations are shown in ex.19 for this case.

In Schoenberg's op.33*a*, on the other hand, the complement of any given pitch class is different for each pair of T-nos.

5. Pre-compositional structures. The concepts of segmentation and inversional complementation permit a generalized description of pitch relations for 12-note music. The special properties that derive from the hexachordal organization of a given series are shared with all other serial representations of the same trope, and a series based on any other type of segmental organization may be similarly regarded as a special instance of a single pre-compositional structure. The series of Schoenberg's Fourth String Quartet (see ex.14) is one of 518,400 (= (6!) (6!)) series that may be derived by reordering the elements of each hexachord of the trope in ex.15. All of these series share the structural functions that depend upon hexachordal content alone. Whatever the series, the content of each hexachord of any given P form will be duplicated in the content of the non-corresponding hexachord of one I form. The same property characterizes every series that may be derived from any of 12 other tropes. Thus 13 of the 44 tropes may be grouped together as a family, and almost every one of Schoenberg's 12-note works is based on a serial representation of one of these. (The 13 tropes of the 'Schoenbergian' type are numbered 14 to 26 under 'Six-Note Collections' in the appendix to Perle, 1962, rev.6/1991.)

The hexachordal trope illustrated in ex.4 is represented by the basic series of *Lulu* (see ex.16), as well as by the three sets on which the first movement of the *Lyrische Suite* is based (see exx.4–6). This trope is one of six (numbered 1 to 6 in Perle) characterized by the following properties: the relative pitch content of both hexachords is the same, that is each can be converted into the other by transposition; each hexachord is invariant under inversion, and therefore also an inversion as to unordered content of the other hexachord (since the two are transpositionally equivalent as to content). The all-combinatorial series are representations of these six tropes. Transposition by a perfect 5th above or below of any series derived from ex.4 preserves maximum invariance of hexachordal content between identical aspects of the series (five common elements), and in *Lulu* Berg made significant use of the resulting hierarchy of harmonic areas. The series on which the third of Schoenberg's *Drei Lieder* op.48 is based preserves total invariance of content either between corresponding or between non-corresponding hexachords for all set forms of the complex, since it is a representation of the trope whose hexachords are the two non-equivalent whole-tone collections. All transpositions of this trope are equivalent, since transpositions do not alter the segmental content of the trope but merely interchange the two segments.

Any given 12-note set form is one of 479,001,600 (=12!) permutations of the chromatic scale. Symmetrically related dyads are generated when equivalent permutations of two contrary chromatic scales are aligned. Ex.20 shows

two such, intersecting at C and F♯ (intersections will always occur at two points separated by the interval of a tritone; the ascending scale will be termed a 'P cycle' and the descending scale an 'I cycle'). The dual axis of symmetry of each dyad will then be C and F♯, which is to say that the members of each dyad will be equidistant in opposite directions from C, and likewise from F♯. The axis of symmetry may be conveniently represented by the sum of pitch-class numbers that represent the members of any dyad. (In this instance that sum is 0, mod 12.) The interval classes generated by the aligned cycles may consistently be represented by the number, mod 12, obtained by subtracting the pitch-class number of each element of the I cycle from that of its complementary element in the P cycle. Inversionally complementary set forms whose T-nos. are 0 and 0, 1 and 11, 2 and 10, 3 and 9, 4 and 8, 5 and 7, and 6 and 6 will permute the vertical intervals of ex.20, but the pair of pitch classes that constitute a given interval class remains the same, since the sum in each instance is 0, mod 12. All of these T-no. pairs except 4 and 8 are represented in Webern's Quartet op.22 and are the basis of its tonal structure and formal design. The opening and closing sections of the first movement of the Symphony op.21, and the middle movement of the Piano Variations op.27, are limited to paired complementary set forms of sum 6.

Any realignment that displaces one of the two cycles of ex.20 by an even number of semitones transposes the same collection of intervals. The association of inversionally complementary hexachords to form 12-note aggregates, as in most of Schoenberg's 12-note compositions, is only possible where the sum of T-nos. is odd, since otherwise there must be pitch-class duplication at two points. If the diverging chromatic cycles are aligned so that the sum of complementary pitch classes is odd, the interval classes that contain an odd number of semitones are produced and pitch-class duplication is eliminated. The principal pair of set forms of Schoenberg's Fourth String Quartet (see ex.14) generates the dyadic relations shown in ex.21.

Ex.21

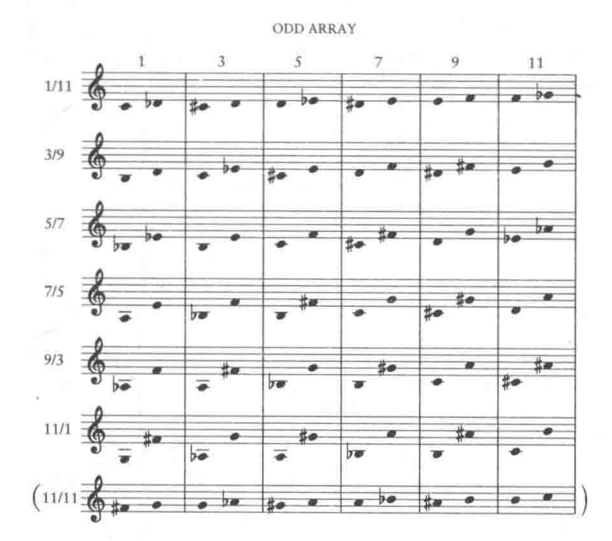
The symmetrical pitch relations produced by the one-to-one alignment of complementary chromatic cycles should not be confused with thematic inversion in earlier music. The harmonic and tonal context within which themes and motifs are sometimes 'inverted' in diatonic music exists before and apart from the operation of inversion. Thematic inversion in a diatonic context is not literal since complementation is not measured in terms of a single unit, the semitone, as it is in the 12-note system, and the functional properties of the diatonic system are not reflected by inversion, which would require that the function of the root of a major triad be assignable to the 5th of a minor triad and that the degree functions of a major scale be assignable to the symmetrically complementary degrees of a retrograde Phrygian scale.

Strict inversional complementation has been significantly employed in non-diatonic music apart from the 12-note system: the first-movement exposition of Schoenberg's Serenade op.24 is exceptional in that it is as rigorously and consistently employed there as it might be in a 12-note serial work. The periodic formal design is entirely dependent upon inversional procedures and all pitch relations are based on a single sum of complementation. Perhaps the most sophisticated use of inversional complementation is to be found in some of the works of Bartók, particularly the Fourth String Quartet. Here there is modulation from one sum of complementation to another via pivotal elements (primary among these is the tetrachordal structure illustrated in ex.22, the inversional

Ex.22

relations of which may be interpreted in two different ways); differentiation of harmonic areas through the simultaneous or successive juxtaposition of dyad collections representing different sums; differentiation through the juxtaposition of progressions which preserve constant intervallic differences with progressions which preserve constant sums; the combining of small-scale, non-symmetrical progressions into large-scale symmetrical progressions; the use of axes of symmetry as tone centres and so on. It is obviously necessary to discuss such a work in the same context as the 12-note music of Schoenberg, Berg and Webern, although Bartók did not use 12-note series. The basic cell of the quartet (ex.22) is also the basic cell of Berg's 12-note opera *Lulu* and generates the set – a tetrachordal trope – with which that work begins (ex.23). The role assigned to this trope in the opera is

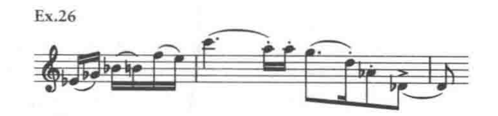
Ex.23



explained by its special character: it may be inverted at any odd T-no. or transposed by any even T-no. without change to its tetrachordal pitch-class content. The intervallic properties (deriving from the presence of the tritone) that explain the function of this tetrachord in Bartók's Fourth String Quartet are also those that explain its function in Berg's opera.

Wherever there is inversional symmetry based on the chromatic scale, one of two 'modes' is expressed (the one producing only odd, the other only even intervals), and that 'mode' occurs in one of its six 'keys' (the six sums that represent the different transpositional levels of the collection of symmetrically related intervals). All intervals and sums are given in the two arrays shown in ex.24; Even array and ex.24; Odd array. Dyads of the same sum class are in the same column and dyads of the same interval class in the same row. Each row of intervals is continued in the equivalent row (1/11 in 11/1 etc.); each column of sums is continued in the same column read in the opposite direction from the point of intersection (intervals 0 and 12, or 1 and 11). Any symmetrical collection, regardless of the number of its elements, can be analysed into dyads that will lie in the same column.

Ex.24



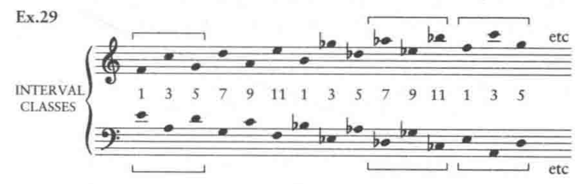
Symmetrical tetrachords of two dyads of sum 9, which play a significant role in Bartók's Fourth String Quartet, will be formed by any pair of dyads in the 9 column, as for example C–A and E–F, with which the work opens. The same tetrachord may be read as the interval pair C–E and A–F in the 4 or 8 row, or as the interval pair C–F and E–A in the 5 or 7 row. The compositional process in the first movement is largely an unfolding of the implications of such reinterpretations of tetrachordal collections. The principal series of the first movement of the *Lyrische Suite* (see ex.5) is not only a representation, as noted above, of a particular hexachordal trope, but also a representation of the collection of dyads of sum 9. These are compositionally articulated in the initial thematic statement of the series (ex.25) and again in a cyclic permutation of that statement (ex.26).

Ex.25

Ex.26

The opening section of Webern's Symphony demonstrates the simultaneous representation of different sums of complementation. The contrapuntally associated set forms, P_9 and I_9, I_5 and P_1, I_0 and P_6, and P_2 and I_4, are sum 6 complements. Although the series is of the $P_n=R_{n+6}$ symmetrically ordered type, which implies hexachordal segmentation (see ex.13), it may also be segmented into inversionally symmetrical tetrachords that are invariant as to content between P_n and I_{n+3}. The eight set forms unfold a double inverted canon in which each voice consists of successive set forms that conform to this relation: canon 1: P_9 I_0 I_9 P_6 canon 2: I_5 P_2 P_1 I_4 This aspect of the set structure is clearly articulated through the assignment of an invariant timbre for each invariant

Ex.27



tetrachordal collection in canon 1 (ex.27). (Complementary pitch classes are beamed together in the example.) The complementary pitch classes are adjacent to each other in the outer tetrachords. The middle tetrachord is identical with that illustrated in ex.22, above. Unlike the others it has two sums of complementation, and the alternative sum maintains invariant two-note segments (ex.28).

Ex.28

6. 12-NOTE 'TONALITY'. Exx.20–21 show how any alignment of two contrary chromatic scales produces all the odd or all the even intervals around a single odd or even axis of symmetry. An equivalent result is produced by alignments of diverging cycles of 5ths. The sum 9 dyads within each hexachord of the basic set of the *Lyrische Suite* are explicitly generated in this way (ex.29).

Ex.29

Where the second hexachord of the principal set (see ex.5) is directly followed by its first hexachord – as happens

occasionally in the *Lyrische Suite* and regularly in Berg's song *Schliesse mir die Augen beide*, which is based on the same set – the alternate notes of the set completely unfold the diverging cycles. A continuation of the cycles produces the retrograde form of the same set and pitch-class repetition at the point where the cycles intersect (ex.30).

Ex.30

Berg's series, when read as in ex.30, displays a significant property that is not found in the general Schoenbergian set: the elements immediately adjacent to any member of the set (these will be termed the 'neighbour notes' of the given axis note) always form the same interval, a perfect 5th in this instance, with the respective transpositional levels of this interval inversionally complementary to the respective transpositional levels of its axis note (ex.31).

Ex.31

The vertically stated pitch-class collections in ex.31 comprise all the three-note segments contained in the set form illustrated in ex.30. The verticalization of set segments is the fundamental means of forming chords in 12-note music and derives from pre-12-note atonal practice, where referential pitch-class collections often occur as simultaneities as well as linear details. However, the collection of chords generated by the verticalization of segments of the general Schoenbergian set provides no basis for a total, systematic control of the harmonic dimension, as this procedure does when applied to cycles and to sets derived from cycles as in ex.30. Suppose, for example, that the verticalized segments of ex.31 were combined with corresponding verticalized segments of an inverted form of the same set (ex.32). The combined

Ex.32

segments will yield a series of symmetrically related chords (ex.33). If the axis-note dyads are transposed, the

Ex.33

combined neighbour-note dyads will be equivalently transposed in the opposite direction. Thus if any given axis-note dyad occurs at all of its transpositional levels, so will its neighbour-note chord at the complementary transpositional levels (ex.34). Wherever the axis-note dyad is identical in pitch-class content with a dyad

Ex.34

segment of one of the two sets, the neighbour-note chord will be identical in pitch-class content with a tetrachord segment of the other set (see starred items in ex.34).

Any interval may be used to generate cyclic sets analogous to ex.30. Ex.35 shows diverging cycles of

Ex.35

minor 3rds, intersecting so as to yield adjacencies of sum 9 as in ex.30. (The set must be partitioned into two subsets in order to produce the complete collection of such dyads.) The verticalization procedure may be applied to such sets to generate series of pitch-class collections analogous to those illustrated above, with the new cyclic interval replacing the cyclic interval of the perfect 5th in each such collection. There is nothing to prevent the association of set forms, generated by different cyclic intervals, to produce neighbour-note chords based on two different intervals. Through the use of sets such as these all possible verticalizations may be systematically formulated.

The cyclic set is an ordered unfolding of a complete collection of symmetrically related dyads such as is illustrated for dyadic sums 0 and 9 respectively in exx.20–21. The pair of diverging semitonal scales that generates the sum-9 complementary relations of Schoenberg's Fourth String Quartet is equally relevant to the first movement of Berg's *Lyrische Suite* and to the first movement of Bartók's Fourth String Quartet. In a certain sense they can be said to be in the same 'key'. The replacement of a diatonic scale of unequal steps and functionally differentiated notes by a semitonal scale of equal steps and functionally undifferentiated notes completely transforms the meaning of inversion, which becomes a pre-compositional means of symmetrically partitioning the tone material, rather than a means of composing in a harmonic context that is already given. Symmetry, as represented by both the cyclic divisions of the octave and the inversional complementation of pitch classes, is thus an inherent property of the 12-note scale. In the first movement of the *Lyrische Suite* this property is mapped into the structure of the 12-note series itself.

In *Le cru et le cuit* Lévi-Strauss challenged Boulez's defence of 'serialism' as a new kind of musical thought which, 'operating in accordance with a particular methodology, creates the objects it needs and the form necessary for their organization, each time it has occasion to express itself. … There is no longer any preconceived scale or preconceived forms – that is, general structures into which a particular variety of musical thought can be inserted'. Lévi-Strauss insisted that there must be a 'first level of articulation, which is as indispensable in musical language as in any other, and which consists precisely of general structures whose universality allows the encoding

and decoding of individual messages'. For Lévi-Strauss that 'first level of articulation' is provided by 'the hierarchical structure of the scale', by which he meant the diatonic scale and its triadic functional relations. Schoenberg, too, seems to have assumed that a 'first level of articulation' was a prerequisite for a musical language. In the article 'Problems of Harmony', after a tendentious and ill-informed attempt to derive the 12-note scale from the overtone series, he concluded that 'should this proof be inadequate, it would be possible to find another. For it is indisputable that we can join twelve notes with one another and this can only follow from the already existing relations between the twelve notes'. The symmetrical implications of the semitonal scale can serve as the 'first level of articulation' of a 12-note musical language, that is as the source of 'the already existing relations between the twelve notes'.

7. EXTENSIONS AND DEVELOPMENTS OF 12-NOTE COMPOSITION. The influence of Schoenberg's 12-note system in Germany and Austria before World War II was largely limited to his students and, in turn, to their students. Krenek was perhaps the only widely known composer outside this circle to adopt the system, on which he based his opera *Karl V* (1933). Under the regimes of Hitler and Stalin a ban was placed on what was represented as an expression of 'Jewish Bolshevism' on the one hand and 'bourgeois decadence' on the other, and even where there was no political suppression, neoclassicism came more and more to dominate composition from the late 1920s until the end of the war. Immediately after the war, however, there was an astonishingly rapid and widespread growth of interest in the work of Schoenberg, Berg and Webern, and by the end of the 1950s there remained few composers in the USA or western Europe who were not in some way influenced by the concepts of 12-note composition.

Stravinsky's adoption of serial procedures was remarkable not so much because his position in the musical world had been regarded as diametrically opposed to Schoenberg's, but rather because of the way in which he was able to integrate these procedures into his own musical language. This is clearly evident in his *In memoriam Dylan Thomas* (1954), one of the most strict of Stravinsky's early serial pieces. The work is based on a five-note set, E, E♭, C, C♯, D. This use of a five-note set, under transposition and the four transformations of the 12-note system, differs from Schoenbergian serialism mainly in that every transformation does not necessarily contain different permutations of the same collection of pitch classes. Characteristic features of Stravinsky's earlier music remain, but they appear in a new context: the recurrent motivic statements of the set and emphasis on certain pitch successions such as E♭–E to emphasize cadential points; the chromatic filling-in of an interval, a major 3rd, with successions of only ascending or descending semitones or minor 3rds (compare the passage in *The Rite of Spring* at no.130, where an interval of a tritone is filled in by the alto flute using only major 2nds, minor 3rds and major 3rds); and the rhythmic alteration of similar pitch configurations in the strings at the opening of the song and at nos.2, 4 and 8 (compare the oboe solo at the beginning of the second movement of the *Symphonie de psaumes*).

In his later works Stravinsky more thoroughly incorporated traditional 12-note concepts while still achieving Stravinskian results. The set of *Movements* (ex.36), for example, is all-combinatorial, but it is not used to form 12-note aggregates. Instead Stravinsky concentrated on the high degree of trichordal segmental redundancy within hexachords. The trichords formed by elements in ordinal positions (0, 1, 2), (3, 4, 5) and (8, 9, 10) (where 0 denotes the ordinal position of the first note of the set) are of transpositionally or inversionally equivalent content, as are the trichords in ordinal positions (2, 3, 4), (6, 7, 8) and (9, 10, 11). This kind of redundancy is particularly Stravinskian, and the motivic use of these trichords generates a musical surface with precisely the kinds of intervallic repetition and emphasis found in the earlier serial works, such as *In memoriam*.

Ex.36

In later compositions Stravinsky independently reinvented a procedure of hexachordal rotation and transposition that Krenek had employed in 1941–2 in *Lamentatio Jeremiae prophetae*. An 'array' for *Abraham and Isaac* (1963), for example, is derived by aligning hexachordal rotations of a single transposition of a set: G G♯ A♯ C C♯ A B D♯ D E F♯ F G♯ A♯ C C♯ A G D♯ D E F♯ F B A♯ C C♯ A G G♯ D E F♯ F B D♯ C C♯ A G G♯ A♯ E F♯ F B D♯ D C♯ A G G♯ A♯ C F♯ F B D♯ D E A G G♯ A♯ C C♯ F B D♯ D E F♯ This array is used as a basis for lineal and vertical relations. Stravinsky also constructed an array in which each successive rotation is transposed so as to begin on the same pitch class as the first. This provides a succession of simultaneities whose properties are derived from the structure of the set but whose local characteristics appear quite different from those of the set itself. In the following array this procedure is applied to the first hexachord of the set: G G♯ A♯ C C♯ A G A B C G♯ F♯ G A A♯ F♯ E F G G♯ E D D♯ F G D♯ C♯ D E F♯ G F F♯ G♯ A♯ B (Pitch-class repetitions in columns occur as a function of interval duplication by pairs of pitch classes with the same differences in ordinal positions within the original hexachord. Within each hexachord the columns whose ordinal positions are complementary to 6 (with the initial column as 0) are symmetrical inversions of each other as to pitch-class content, with G as the axis of symmetry.

Many postwar developments involved an extension of the serial concept to control and interrelate the various dimensions of a composition – rhythm, pitch, timbre, dynamics, articulation and so on – in a more precise and highly determinate way. Such processes were foreshadowed in the music of Schoenberg, Berg and Webern. In Webern's Symphony op.21 and Concerto op.24, rhythm, register and orchestration are organized in such a way as to project and clarify transformations and properties of pitch and pitch class. The set of the Concerto (ex.12) has the property that certain transformations will individually permute each of its trichords. In the opening bar each trichord is assigned a different instrument and rhythm, and in bar 4 the piano's statement of RI_0 – a transformation which retrogrades each of the individual trichords and retains their original order within the set – retrogrades the rhythm and places pitch classes in the same registers as in bars 1–3, thus projecting and interpreting these invariant relations (ex.37). In the opening of the Symphony pitches are assigned symmetrically around *a*. In

Ex.37 Webern: op.24 (1934)

the canonic pairing of P and I sets at the beginning of the composition, P_9 and I_9, and P_1 and I_5, corresponding pitches in these inversionally related, matched sets are thus symmetrically deployed around *a*.

The earliest instance of a strictly serially derived duration set is in the third movement of Berg's *Lyrische Suite*. The set consists of two subsets (ex.38 shows the

Ex.38

relative points of attack) derived by partitioning the pitch set in terms of the registral distribution of its elements (ex.39).

Ex.39

It was not until after the war that the first attempts were made to generalize the application of serial structure by systematically transferring the attributes of a pitch set to the non-pitch elements. The first composer systematically to apply serial procedures to rhythm was Babbitt, in the Three Compositions for Piano (1947). Serial operations have also been applied to dynamics, instrumentation and register (*see* SERIALISM).

8. CONCLUSION. Many difficult and troublesome musical questions are raised by such extensions of the serial concept. It is reasonable to question the sense in which dynamic differentiation, for example, can be usefully considered outside the context of a musical composition, and even within that context whether loudness can function as a variable, independent of timbre, texture, rhythm, tempo or register, to the same degree as pitch, pitch class or, possibly, rhythm. There also arises the larger question of the extent to which it is useful, or even meaningful, to consider whether a piece is serial without saying 'how' it is serial. When, for example, every pitch of a composition has been explained in terms of its position in some 12-note set, the problem remains of how this helps understanding of the conjunction of pitch, rhythm, dynamics, timbre and other elements of that piece. Even when all other dimensions have been derived in terms of unique predetermined orders, one may question that this necessarily shows how the result is heard, particularly when most musical dimensions are so highly contextual and subject to complex interaction. In short, the depth of musical relations within a composition may be so rich that the claim which that composition has to being a unique instance of musical thought may only in part be ascribed to the varieties of interrelations between serial aspects, and even the view of that part in these terms may be seriously questioned by the result which is the product of these interrelations. It may be more fruitful to consider serial ordering as a relatively abstract idea which has excited the imaginations of many composers and helped them to reshape and rethink their compositional habits and predilections in new and interesting ways. Perhaps the most important influence of Schoenberg's method is not the 12-note idea in itself, but with it the individual concepts of permutation, inversional symmetry and complementation, invariance under transformation, aggregate construction, closed systems, properties of adjacency as compositional determinants, transformations of musical surfaces through predefined operations, and so on. Each of these ideas by itself, or in conjunction with many others, is emphasized with varying degrees of sharpness in the music of such different composers as Bartók, Stravinsky, Schoenberg, Berg, Webern and Varèse. In this sense the development of the serial idea may be viewed not as a radical break with the past, but as a particularly brilliant coordination of musical ideas which had developed in the course of recent history. The symmetrical divisions of the octave often found in Liszt and Wagner, for example, are not momentary aberrations in tonal music which led to its ultimate destruction, but, rather, important musical ideas which, in defying integration into a given concept of a musical language, challenged the boundaries of that language.

Twenty-second. *See under* ORGAN STOP.

Twining, Thomas (*b* Twickenham, 8 Jan 1735; *d* Colchester, 6 Aug 1804). English clergyman and amateur musician. As the eldest son, Twining was intended to enter the tea business founded by his grandfather, but his distaste for business and aptitude for scholarship took him to Cambridge University in 1755. There he became acquainted with the poet Thomas Gray, who modified his antiquarian tastes in music and made him aware of

Pergolesi and the moderns. As a result of his classical studies Twining was vastly knowledgeable about ancient music, and he helped extensively in the preparation of the first volume of Charles Burney's *History* (1776), which would have had a completely different complexion without Twining's input in planning and content. It is possible that Burney might never have written beyond the first volume without the encouragement of Twining, whose humour and common sense enabled him to help Burney through deep depressions experienced during the writing. He refused Burney permission to mention the debt owed to him. An equal diffidence inhibited his desire to publish his own work. His translation of Aristotle's *Poetics* (published as *Aristotle's Treatise on Poetry*, 1789) contains two essays that make a valuable contribution to 18th-century theories of mimesis. There are several unpublished vocal and instrumental compositions of Twining in the Essex Record Office, Chelmsford, and in the University of Western Ontario, London, Ontario, including a rondo for keyboard in Twining's hand, dated 1776 and attributed by Twining to C.P.E. Bach. Two glees for four voices, composed in 1802, were published posthumously by his brother (London, *c*1815). The largest collection of Twining's papers is located in the British Library.

PHILIP DOWNS

Two foot. A term used in reference to organ stops, and by extension also to other instruments, to indicate that they are pitched two octaves above the EIGHT FOOT or 'normal' pitch now based on $c' = 256$ Hz. A 'two-foot organ' is one whose biggest open Principal pipe is or would be 2′ (60 cm) long at C, irrespective of any larger stopped pipes; nor does the terminology imply that the compass extends to C, since it could apply to a stop or department of any compass. The BRUSTWERK department of the ideal WERKPRINZIP organ was a two-foot positive organ incorporated in the main organ case.

PETER WILLIAMS

Two-step (Fr. *deux temps*). A fast ballroom dance of American origin. It became popular in the 1890s, particularly when danced to Sousa's *The Washington Post* (1889). It spread to Europe about 1900, and remained popular until replaced by the one-step and foxtrot shortly before World War I; indeed, the term 'two-step' was often used for the foxtrot in Europe during the 1910s. The steps, to a quick–quick–slow rhythm in each bar, were done with a gliding skip similar to that of the polka. The standard ballroom position with the man and woman facing each other was sometimes replaced by one in which the man stood behind and slightly to the left of his partner, who raised her hands above her shoulders to take his hands. The term also came to refer to the type of march to which the dance was originally performed, with a characteristic skipping rhythm in 6/8 and a light, springing melody. In addition to *The Washington Post*, popular two-step marches include Louis Conterno's *Red Clouds March Two Step* and Nellie Beamish's *Thirteenth National Regiment March and Two Step*.

Tyāgarāja (*b* Tiruvarur, Tamil Nadu, 4 May 1767; *d* Tiruvaiyaru, Tamil Nadu, 6 January 1847). South Indian composer, musician and member of the Karnatak *trimūrti* ('trinity') of singer-saints (*see also* DĪKṢITAR, MUTTUSVĀMI and ŚĀSTRI, ŚYĀMA). Tyāgarāja is widely regarded by Karnatak musicians as the finest and most important South Indian composer. He was born into a climate of Hindu revivalism, and his father, Rāma Brāhmam, a *pūjāri* connected with the court of Tulajājī at Thanjavur, introduced his son to Rāma *bhakti*. Both Tyāgarāja and Muttusvāmi Dīkṣitar are known as having been *smārta* Brahmans, a group closely associated with the development of devotional religion in the 15th and 16th centuries. The status of the 'trinity', as Brahman musicians, contributed greatly to an increase in the social acceptability of the practice of music. The Thanjavur musician Soṇṭi Vēṅkaṭaramaṇa became Tyāgarāja's teacher in 1782, and Tyāgarāja studied with him for the next 20 years. There is some evidence that he also had access to musical texts in the possession of his grandfather, including the *Saṅgīta-ratnākara*. He was married twice, at first to Parvatī, and then on her death to her sister, Kamalāmbā. Tyāgarāja is said to have travelled widely, visiting many temples and singing in praise of their deities, for example his *kriti 'Tera tīyagarādā'* in *rāga Gauḷipantu* was sung for Śrī Veṅkaṭeśvara at Tirupati. At the age of 74 he became a *sannyāsin*, and on his death he was buried beside his *guru*, Soṇṭi Vēṅkaṭaramaṇa, on the banks of the Kaveri.

His lifelong devotion to Rāma is well documented, and it is this which was the primary focus of his musical activity. Like the other two members of the 'trinity' he was firm in his refusal to serve at court, in the face of repeated requests, seeing it as incompatible with his role as a *bhakta*. (This resolve was reportedly the cause of some friction between Tyāgarāja and his brother.) A significant difference between Tyāgarāja and Muttusvāmi Dīkṣitar and Śyāma Śāstri, however, was his dedication to teaching other musicians. His many disciples included Vēṅkaṭaramaṇa Bhāghavatar and Vīṇā Kuppayyar, who, among others, preserved his compositions through notation, and Subbarāya Śāśtri, the son of Śyāma Śāstri.

Tyāgarāja is remembered both for his devotion and the *bhāva* ('emotion') of his *kriti*, a song form consisting of *pallavi*, *anupallavi* and *caraṇam*. This three-part form is shared by the devotional *kīrtanam* from which the *kriti* derives. Tyāgarāja's development of the *saṅgati* (composed variation) within this three-part structure is one of the markers that distinguishes the *kriti* from the *kīrtanam*. He is also noted for composing in a great number of different *rāga*, many of which he invented himself. The texts of his *kriti* are all, with a few exceptions in Sanskrit, in Telugu (the contemporary language of the court), and this use of a living language, as opposed to Sanskrit, the language of ritual, is in keeping with the *bhakti* ideal of

the immediacy of devotion. Of his many compositions, which number over 700, particularly noteworthy are: the *pañcaratna* ('five jewels') *kriti*, one in each of the *ghana* ('heavy') *rāga Nāṭa* (the Sanskrit '*Jagadānandakāraka*'), *Gauḷa* ('*Duḍukugala*'), *Ārabhi* ('*Sādhiñcenē*'), *Varāḷi* ('*Kanakana rucirā*') and *Śrī* ('*Endarō mahānubhāvulu*'), this grouping was suggested by Harikesanallur Muthiah Bhagavatar in 1940 and it has become a permanent feature of the annual Tyāgarāja festival in Tiruvaiyaru; and those *kriti* in which he refers to the theory of music itself as an aspect of the divine, such as '*Nāda sudhārasambilanu*' in *rāga Ārabhi*, '*Nādatanumaniśam*' in *Cittarañjanī*, '*Sōgasugā mṛdaṅgatāḷamu*' in *Śrīrañjanī*, '*Svara rāga sudhārasayuta*' in *Śaṅkarābharaṇam* and '*Vidulaku mrokkeda*' in *rāga Māyāmaḷavagauḷa*, which praises musicologists both divine and mortal, including Sōmēśvara and Śārṅgadeva.

MARIA LORD

Tyard [Thyard, Thiard], **Pontus de** (*b* Château de Bissey-sur-Fley, nr Mâcon, 1521; *d* Bragny-sur-Saône, 23 Sept 1605). French poet and philosopher. He studied at Paris in 1537, was canon at Mâcon Cathedral in 1552 and, after serving Henri III as reader in astronomy, geography, mathematics and philosophy between 1569 and 1578, became Bishop of Châlon. He was the philosopher of the Pléiade and his work reflects the Platonism and Petrarchism of Maurice Scève, his friend and mentor, and the Lyons poets. The three books of his *Erreurs amoureuses* (Lyons, 1549–54) express his love, both idealized and sensual, for his musical mistress, Pasithée (probably the Lyonese Lady Marguerite de Bourg). In *Solitaire premier, ou Prose des muses et de la fureur poétique* (Lyons, 1552; ed. S.F. Baridon, Geneva and Lille, 1950), the fire of his dialogues to instruct Pasithée in humanist philosophy (inspired by Ficino's commentary on Plato's *Banquet*), the lady enchants her admirer by singing to the lute an ode 'measured in the Italian manner'. The neo-Pythagorean and Platonic conventions of Ficino and his followers such as Leone Ebreo (whose *Dialoghi d'amore* Tyard translated in 1551) are expanded in *Solitaire second, ou Prose de la musique* (Lyons, 1555; reprinted in his *Discours philosophiques*, 1587; ed. C.M. Yandell, Geneva, 1980). This attempts to relate music to ethics, metaphysics and astrology in an encyclopedic philosophy. Most of his ideas derive from Plato's *Timaeus* as commented by Chalcidius, Ficino and Champier. Tyard may have read Aristotle's *Politics* and *Problems* directly, but the majority of his references to the Ancients (such as Pythagoras, Aristoxenes, Plutarch and others) come through the intermediaries of Boethius and Gaffurius, who provide the essence of his theoretical discourse; Glarean is acknowledged in the description of the modes. Tyard also discussed at length the Greek concept of genera, including the chromatic and enharmonic which, like Vicentino, he considered to be artificial and reserved for the learned. Tyard considered musical terminology, notation (including an original example with Greek letters), proportions, harmony and mathematical propositions; but he was more interested in the mnemonic virtues and effects of music, and so extolled its 'secret' power to move the passions, recounting a contemporary report on the marvellous effects of Francesco da Milano's lute playing on his audience – an obvious transposition of Plato's acount of Timotheus and Alexander. He was also concerned with the union of music and poetry, and thus preferred monody to polyphony. He sought to adapt rhyme, metre and melody to subject matter, but he found the French language unmusical, because it was not measured quantitatively, and thus anticipated the experiments of Baïf's Académie de Poésie et de Musique.

Six of his poems were set for four voices by Pierre Clereau and one by Antoine Cartier, but most composers found his lyric verse too esoteric and unsuitable for musical setting, just as his treatises offered little to practitioners whom he dismissed as 'vagabond singers, mercenary minstrels or ecclesiastical musicians'.

FRANK DOBBINS/SAMUEL AUCLAIR

Tye, Christopher (*b c*1505; *d* before 15 March 1573). English composer.

1. LIFE. The date and place of Tye's birth are unknown, but as he later spent much of his life in Cambridge, Ely and neighbouring parishes, he may well have been born in the eastern counties of England, where the name was common. The first certain references to him are in Cambridge: in 1536 he took the degree of BMus there, and in March 1537 became a lay clerk at King's College. The Grace for the degree mentions his ten years' study of the art of music, with much experience in composition and teaching boys. Since such documents never understated years of previous experience, Tye must have begun his adult musical career after 1525, which suggests a birthdate of about 1505 or even later.

The earlier date usually proposed is based on a probable misidentification. The account books of King's College, Cambridge, record a 'Tye' as chorister in 1508–12; and in 1527 the same name (again with no first name) occurs as that of a lay clerk, who left in April 1528. At Christmas 1528, a Richard Tye then joined the choir as a lay clerk, remaining in that post with no known break until 1545, and his first name may have been included to distinguish him from his predecessor. There is no reason to identify any of these with Christopher Tye. He left some time between Michaelmas 1537 and Michaelmas 1539; the records for the two-year period are missing.

Tye's movements after leaving King's College are uncertain. His next known appointment, as *Magister choristarum* of Ely Cathedral, may date from as early as 1541; certainly he was in position by 1543, when the earliest extant accounts record payment of his annual

salary of £10. In 1545 the University of Cambridge awarded him the degree of DMus, with which he is reported to have 'incorporated' at Oxford in 1548. His career strongly suggests the influence of Dr Richard Cox, a zealous reformer of the church, who entered King's College as an undergraduate in 1519, was made Archdeacon of Ely in 1541, and became chancellor of Oxford University in 1547. From 1544 to 1550 Cox was also tutor to the young Prince (then King) Edward, during which period he was almost certainly responsible for introducing Tye to the court. Some supporting evidence for this is found in a play *When you see me, you know me* written in 1605 by Samuel Rowley, who was probably Tye's grandson. In it, Edward addresses Tye as follows:

> I oft have heard my father [Henry VIII] merrily speake
> In your high praise, and thus his highnesse saith,
> 'England one God, one truth, one doctor hath
> For musick's art, and that is Doctor Tye,
> Admired for skill in musick's harmony'.

Elsewhere Edward calls him 'our music's lecturer'. In 1553 Tye published his metrical version of *The Actes of the Apostles*, which he dedicated to Edward with a long verse preface that implies personal friendship, but does not explicitly mention a master–pupil relationship. The title-page describes Tye as 'one of the Gentylmen of hys grace's most honourable chappell'. In the light of this it is odd that his name does not appear in the ten or so lists of Chapel Royal staff extant for the period 1545–60. Nevertheless his surviving music, and the sources into which it was copied, strongly suggest that he served there in some capacity during the 1550s, and the mandate for his livery allowance for Mary Tudor's coronation in 1553, which describes him as one of the 'gentylmen of our Chapell', indicates that he was at least an 'associate' member of that body.

It is not clear whether he retained his post at Ely throughout this period. Most of the treasurer's rolls have been lost, except that for 1547, when a payment to Tye is entered. He was still in the cathedral's employ in 1551, when his name appears first in a list of eight lay clerks. The next surviving reference to him, dated 23 May 1559, records a payment from the dean and chapter 'pro diligenti servitio ... hactenus impenso', and is accompanied by a statement of Tye's duties and privileges as organist and master of the choristers. By analogy with similar documents affecting later holders of the post, this seems to imply that Tye had successfully completed a period of probation following reappointment in 1558, and that he had previously been absent for a number of years. His return to Ely was doubtless instigated by his old friend Richard Cox, who had become bishop there in 1558. Shortly afterwards, however, Tye decided to take holy orders, and Bishop Cox ordained him deacon in July 1560, and priest in November of the same year. Early in 1561 Tye resigned his position at Ely (he was succeeded by Robert White) and was appointed to one of the richest livings in the land, that of Doddington-cum-Marche in the Isle of Ely. In 1564 he also acquired, in plurality, two further livings nearby, Wilbraham Parva and Newton-cum-Capella. These were subsequently sequestrated when he neglected to pay first fruits, and he formally resigned them in 1567 and 1570 respectively. He still held Doddington on 27 August 1571, but had died by 15 March 1573, when his successor was appointed. There is no record of his death at Doddington itself, nor has his will been located.

In his first year at Doddington Tye was reported to Archbishop Parker as 'Doctor Musicae non tamen habilis ad predicandum' ('not, however, very skilful at preaching'). There is certain other evidence to suggest that he tended to neglect his parishes, but whether he continued to frequent the court after his ordination is not known. Anthony Wood, not the most reliable of chroniclers, related the following anecdote about him:

> Dr. Tye was a peevish and humoursome man, especially in his latter dayes, and sometimes playing on ye organ in ye chap.[el] of qu. Elizab. wh.[ich] contained much musick but little delight to the ear, she would send ye verger to tell him yt he play'd out of tune: whereupon he sent word yt her eares were out of Tune.

The queen's reaction to this, if it is true, is not recorded. In his later years Tye evidently did not lose his propensity for writing verse, and may even be the 'C.T.' who in 1569 produced *A Notable History of Nastagio and Trauersari*, a verse translation of a story by Boccaccio.

Though family relationships are difficult to establish with certainty, it appears that Tye's wife was named Katherine, and that they had at least three children, and possibly five or more. A son, Peter, was rector of Trinity Church, Ely. (He seems to have obtained this living by fraud, and a disparaging description of him by Bishop Cox is recorded in Strype's *Annals of the Reformation*, ii, appx i, no.51.) In 1560, in the same church, a Mary Tye married Robert Rowley: they were probably the parents of Samuel Rowley, author of the above-mentioned play. An Ellen Tye, known to be Mary's sister, married Robert White. The supposition that Mary and Ellen were Tye's daughters (and White therefore his son-in-law) is borne out by a reference in the *Commentary on Samuel II* published in 1614 by Andrew Willet, Prebendary of Ely: a long *Epistola dedicatoria* addressed to the dean and chapter lists the eminent Eleans of the preceding half-century or so, including 'D. Tyum, Whitum eius generum, Farandum [= Farrant], Foxum, Barcroftum, eiusque discipulos Iordanum, Amnerum, cum aliis'.

2. Works. As a composer of Latin vocal music Tye was active both before 1547 and in the reign of Mary Tudor (1553–8), but his music has suffered heavily from the loss of manuscript sources, for of 22 known works only 11 survive intact. The remainder were all substantial compositions: three lack one voice, and the other eight (probably all in six parts) are known only from single voice-parts and small extracts. The earliest was possibly the Jesus-antiphon *Ave caput Christi*, the remnants of which point to a date about 1530–35. Two of the masses are Henrician also. The five-voice mass (which lacks its tenor) is in the Peterhouse Partbooks and therefore presumably dates from before 1540, although there is no evidence for the suggestion that it was Tye's BMus exercise in 1536. It is remarkably 'modern' for its date, being in duple time with short *tripla* interpolations, mainly imitative, and flexible in vocal scoring. The *Mass 'Western Wind'*, like those of Taverner and Sheppard, is a set of contrapuntal variations on a popular tune, in a manner which has been held to suggest the influence of Luther's musical ideology during the entente of the late 1530s. The three composers may have worked in close association around 1540, although it is not known where: it is perhaps significant that both Tye and Sheppard took up new appointments in 1543. In the same source as this

mass, the Gyffard Partbooks, are five other short four-voice pieces attributed to Tye.

In Mary Tudor's reign it seems that the Henrician votive antiphon was largely replaced by Latin psalm settings, which however retained the traditional antiphon structure. Tye's setting of *Miserere mei, Deus*, for example, is in two halves, one in triple and one in duple time, each constructed on a large scale, using blocks of reduced and then full texture to achieve formal effect. This pattern was also followed in *Domine Deus*, an antiphon-like prayer which refers to Mary Tudor's 'gubernacula huius regni ... Catholica fide et religione restauranda'. Much of this music seems almost deliberately archaic, and some, such as the *Magnificat* settings, may indeed be older. Three works of this period are, however, much more 'up to date' in style, wholly in duple time, and highly accomplished essays in continental motet techniques. They are the two psalms *Omnes gentes, plaudite* and *Cantate Domino*, and the fine six-voice *Mass 'Euge bone'*, whose title perhaps indicates a parody of a lost antiphon. There are, rather curiously, no festal responds or hymns by Tye, although the profusion of In Nomine settings indicates that he had no aversion to cantus-firmus technique as such.

It is probable that all Tye's extant church music to English texts was written during the reign of Edward VI. The most modern work (on stylistic grounds) is the *Mass 'Euge bone'*, which he would not have composed while an Anglican parish priest in the time of Queen Elizabeth. Any Anglican music that he did compose would probably have been for Ely Cathedral, but no music by him for this repertory survives. The range of extant sources for his Anglican music tends to confirm that it was all Edwardian. It comprises anthems and Service music, of which the latter category is negligible: the Evening Service is apparently derived from a Morning Service by Parsley (and may even be by him), and only the unpretentious third *Nunc dimittis* has no rival claimant. The 15 extant anthems, however, are more varied in scale and method than those of any other early composer, even Tallis or Sheppard. One of the simplest is the offertory *Give alms of thy goods*, which is imitative and repeats some text, but has no melisma whatever. Two others, *Save me, O God* and *Deliver us, good Lord*, make use of the familiar early-anthem pattern of chordal opening followed by formal, syllabic imitation. Such is their studied restraint that the music in no way reflects the sense of the text, not even at the words 'In that dreadful day when the heavens and the earth shall be moved'. A few anthems make some obvious musical reference to their text; in *O God, be merciful* there is a florid melisma for the word 'glad' in 'rejoice and be glad', and a long rising scale opens *From the depth I called on thee*.

The longer anthems are musically more resourceful and substantial, sometimes dividing into two halves. They include *I have loved, My trust, O Lord* (a metrical version of Psalm xxxi, probably made by Tye himself), and *Praise ye the Lord*, which builds up to an impressive ending for the words 'to be a joyful mother of children', followed by a florid 'So be it' in place of 'Amen'. *I will exalt thee* is structurally interesting in that it divides up into eight sections each of which is repeated in some form (possibly for decani-cantoris antiphony) making about 130 'bars' in all: its different procedures and textures include virtually all those used by early anthem composers. The most sumptuous of all the anthems is the six-voice *Christ rising*, whose sole (17th-century) source is liberally supplied with clashing accidentals that may or may not represent Tye's own intentions.

In *The Actes of the Apostles*, which is for didactic and recreational rather than church use, Tye again revealed the current taste for presenting biblical text in metrical form with simple four-voice musical settings, in this case the first 14 chapters of *Acts* with a double-common-metre 'tune' for each. The literary quality seems low, but the tunes are neatly turned, mostly concealing their four-square structures by means of one or more sets of imitative entries. In later centuries they were adapted into many simple anthems and partsongs, and also one hymn tune ('Gethsemane').

Tye was evidently a keyboard player, for by 1559 he was acting as organist at Ely Cathedral as well as *Magister choristarum*; but if he composed for the instrument, not a trace of the music has survived. He is, conversely, by far the best-represented composer of consort music of this period, which suggests that he must himself have been an enthusiastic viol player in the court circle of musicians. The great majority of pieces are five-part In Nomine settings, with curious enigmatic titles in the tradition of earlier Italian pieces for viols (e.g. *La stangetta* in Petrucci's *Odhecaton A*). Some are straightforwardly vocal in style, while others have angular or florid lines, or rapid repeated notes as in *Crye*. One or two even experiment with eccentric metres such as 5/4 (*Trust*) or present the cantus firmus in a different metre from that of the other parts (*Howld fast*).

Tye was clearly a composer of great talent, who could readily master the latest continental techniques in the 1530s, formulate new genres for the Anglican Church, and develop the In Nomine in an individual way. But he was fluent only within well-defined limits, for certain types of imitative and other procedures constantly recur in his music, which thus assumes a professional but slightly routine quality, lacking the rugged freshness and insularity of Sheppard, or the quiet poetic mastery of his exact contemporary, Tallis. The scant evidence of his character suggests that he was perhaps an opportunist, who liked life at the court, was not prepared to carry his Protestant principles to the extent of sharing the Marian exile of his patron, Cox, and who finally adopted the priesthood as a means of easy retirement rather than as a vocation.

PAUL DOE/DAVID MATEER

Tyes, J. [?John] (*fl c*1400). English composer. The old layer of the Old Hall Manuscript transmits a Gloria and Sanctus by him (ed. in CMM, xlvi, 1969–72; nos.19 and 122). The three-part Gloria is isorhythmic in all parts, with mensural changes within sections; the text alternates

between the upper parts. The Sanctus is a four-part setting of the Sarum 5 chant.

He is probably identifiable with the John Tyes who was a secular *organista* at Westminster Abbey in 1399/1400, one of seven lay singers who constituted the Lady Chapel choir; his duties may have included playing the organ and singing polyphony. The royal connection at Westminster might have provided a direct route into the repertory of the Old Hall Manuscript. From 1402 Tyes was contracted for 20 years at Winchester Cathedral Priory to sing and play the organ in the daily Mass, and to teach chant to up to four boys of the Priory. He was also to sing in the main monastic choir on festivals when polyphony was used.

MARGARET BENT

Tyler, James (*b* Hartford, CT, 3 Aug 1940). American lutenist, cittern and viol player. He studied at the Hartt College of Music, Hartford, and privately with the lutenist Joseph Iadone. In 1962 he made his début with the New York Pro Musica, and after playing with various early music groups in the USA and with the Studio der Frühen Musik in Munich he moved to Britain in 1969. That year he joined the Early Music Consort of London and Musica Reservata, and with Anthony Rooley formed the Consort of Musicke, of which he was co-director until 1972. His performances of lute duets with Rooley were highly praised, not least for the interplay of their differing personalities and styles. In 1974 he joined the Julian Bream Consort. Tyler also formed a quintet (Tyler playing the banjo, with piano, guitar, bass fiddle and tenor horn) to perform ragtime; the New Excelsior Speaking Machine made its début in 1975 with a programme of original and arranged works (Scott Joplin, Rachmaninoff). In 1976 Tyler formed the London Early Music Group, an ensemble specializing in Renaissance music. Tyler's bold and exuberant playing makes him an exciting soloist and distinguishes his contribution to the various groups with which he plays. He has edited Gasparo Zanetti's *Il scolaro* (London, 1984), while his various writings on music for early plucked instruments show a fastidious approach to detail and an enthusiasm for neglected repertories. He has also composed and arranged music for several BBC television productions. In 1986 he became professor and director of the early music programme at the University of Southern California, Los Angeles.

DAVID SCOTT/R

Tyling (*fl c*1450–75). Composer, probably Netherlandish. A three-part arrangement by him of the Dutch song *T'andernaken* survives in *I-TRmp* 87. It appears to be written for wind instruments, with the tune in the tenor and a florid 'trebulus'. There are similar textless pieces in the same handwriting added on other nearby leaves in the manuscript: one of these bears the initial 'T' and may also be Tyling. Disertori and, following him, Hamm, believed that all these compositions are English.

BRIAN TROWELL

Tylkowski, Wojciech (*b* 1624 or 1629; *d* ? Vilnius or Warsaw, 14 Jan 1695). Polish philosopher. He was a Jesuit connected mainly with the colleges at Vilnius (intermittently from 1646 to 1694) and also with those at Braunsberg (now Braniewo), Płock and Warsaw. From 1670 to 1674 he lived in Rome. In his numerous writings he followed the traditions and models of the Roman school of Aristotelian Jesuits. They were very interested in music from the point of view of philosophical speculation, and he discussed music in two of his works. In *Arithmetica curiosa* (Kraków, 1668) he presented the proportions and relationships of harmonics. His main work is *Philosophia curiosa* (Kraków, 1669, enlarged 2/1680–90). It is divided into five parts; he treated musical matters in part ii, 'Physica curiosa' (Pythagorean connections between music and astronomy, and intervallic relationships based on the monochord), and in part iv, 'De anima' (the existence and behaviour of sound, the anatomy of the ear and the aural imagination).

MIROSŁAW PERZ

Tympanon (Fr.). *See* DULCIMER.

Tympanum [tymbal] (Lat., from Gk. *tumpanon*). Ancient hand drum (a MEMBRANOPHONE). Approximately 30 cm in diameter, it consisted of a rim of metal or wood covered on both sides by a skin membrane. It is usually shown held in the left hand being struck by the fingertips of the right. Normally it was associated with the orgiastic cults of Dionysus and Cybele where it appeared almost invariably with the AULOS. The absence of any reference to it in Homer or the Archaic lyric poets, and its sudden appearance in the art and literature of the 5th century BCE, have prompted the suggestion that it came to Greece from Asia Minor in that century with the cult of Cybele and spread thence to the cult of Dionysus; nevertheless, it may only have become more prominent then, since the almost universal appearance of hand drums and pipes in orgiastic cults might speak for its usage in the Dionysian cult of pre-classical Greece.

A Cybele priest with the instruments associated with her cult, tympanum (upper right), cymbala (upper left) and Phrygian aulos: Roman relief, 2nd century CE *(Musei Capitolini, Rome)*

The use of the instrument certainly increased as the Asiatic cults became more popular. Livy described its ecstatic function in the cult of Dionysus at Rome, and the introduction of the worship of Cybele to Rome in 204 BCE furthered its employment. There are many Roman literary references and pictorial representations, which usually refer to this cult usage. The popularity of the mime from late republican times also extended its use. Interludes of dance and song sometimes supplemented the acting of the *mimi* and among the instruments featured were tympana.

JAMES W. McKINNON/ROBERT ANDERSON

Typophone. A precursor of the CELESTA.

Typp, W. (*fl c*1410). English composer. The combination of an initial and an uncommon name permit some confidence in accepting Harrison's identification with the Fotheringhay precentor of 1438 (*HarrisonMMB*). In addition, a William Tippe can be traced as a Fellow of Corpus Christi College, Cambridge, between 1408 and 1414. He is one of the better-represented composers of the old layer of the Old Hall Manuscript, though his music is not known from other sources. All but one of his pieces are unpretentious but shapely descant settings notated in score, with considerable use of migration and *divisi* notes. The three-part isorhythmic Credo has three tenor statements in successive diminution and three taleae to each color.

Fallows (*A Catalogue of Polyphonic Songs, 1415–1480*, Oxford, 1999) reported that a further Agnus Dei (no.128; erased) bore an ascription to Typp, but it seems probable that the attribution was in fact to ALEYN as reported in Bent (*The Old Hall Manuscript: a Paleographical Study*, diss. U. of Cambridge, 1969).

MARGARET BENT

Tyranny, 'Blue' Gene [Sheff, Robert] (*b* San Antonio, TX, 1 Jan 1945). American composer and keyboard player. In the late 1950s he studied the piano with Meta Hertwig and Rodney Hoare, harmony and orchestration with Otto Wick and composition with Frank Hughes. With the composer Philip Krumm he gave several concerts at San Antonio's McNay Art Institute, sometimes giving the first performances of works by Cage, Maxfield and Corner, as well as his and Krumm's music; in other concerts he played Bartók, Satie, Webern, Schoenberg, Ives, Yoko Ono and La Monte Young. He won a BMI Student Composers award in 1961 and went to Ann Arbor, Michigan, where he rejoined Krumm and joined the ONCE group. In the 1960s and 70s, besides composing his own electronic and graph-score music, he also toured with numerous jazz and rock groups, including Carla Bley and Iggy Pop, with whose band he began using the stage name 'Blue' Gene Tyranny. At Mills College he taught music history, theory and recording-studio techniques (1971–82), and in 1976 began collaborating on Robert Ashley's landmark video opera, *Perfect Lives (Private Parts)* (1976–83).

His renown as an improvising pianist took off with the 1982 release of *The Intermediary* (1981), which included electronic reinventions of his playing. Since then he has performed internationally, combining spontaneous pianism with interactive electronics. He has composed music for dances (by Timothy Buckley, Stefa Zawerucha and Trisha Brown), plays (by Pat Oleszko and the Otrabanda Company) and videos (by Kit Fitzgerald and Kenn Beckman); like some of his other work, these scores use pop materials for the non-pop purpose of investigating the dynamics of spirit and events. In the 1990s, along with writing such commissions for pianists as *The De-Certified Highway of Dreams* (1991) and *The Drifter* (1994), he has developed the music-theatre work *The Driver's Son* (1990–99), which he describes as an 'audio storyboard'.

COLE GAGNE

Tyrolienne (Fr.: 'Tyrolese', 'Tyrolean'). A fast triple-metre dance and song type, considered a modified form of LÄNDLER. The name was first used in English to refer to fashionable ballet music of the early 19th century that attempted to represent the dances of Austrian and Bavarian peasants, whence it was adopted as an evocative title for pedagogical piano pieces; 'tyrolienne' was also applied to 19th-century vocal pieces intended to imitate Alpine folk music.

Tyrolese music was very popular in both England and the USA in the first half of the 19th century, partly because of the clamorous success of touring groups of Swiss and Austrian singers. The Rainer family were probably the first such group to achieve international fame. Their first visit to England, in 1827, prompted the publication of two volumes of songs from their repertory arranged by Ignaz Moscheles (*The Tyrolese Melodies*, London, 1827–9; a third volume contains a biography of the Rainers), and it apparently stimulated a constant popular demand in London for performances by similar groups (e.g. the brothers Dengg, the Steyrische Alpensänger, the Family Leo). The Rainers' North American tours began with an appearance in Boston in 1839, and stimulated the nascent vogue for itinerant singing families like the Hutchinsons (*see* HUTCHINSON), virtually all of whom subsequently included 'Alpine' or 'Tyrolean' songs in their programmes. The 'Tyrolean Business' was frequently introduced as a part of minstrel shows in the 1850s. Vocal tyroliennes, characterized by sentimental or pastoral texts, triple metre, waltz-like rhythms, triadic melodies, harmonies in parallel 3rds, and echo and yodel effects, proliferated in mid-19th-century sheet music on both sides of the Atlantic. Moscheles arranged three of the Rainers' tunes for piano; another, *Der Schweizbub*, derives from the theme of Chopin's Introduction and Variations in E major on a German National Air (1826). The chorus 'A nos chants viens mêler tes pas' in Act 3 of Rossini's *Guillaume Tell*, called a 'choeur tyrolienne' in some editions, is probably the best-known example in art music. (H. Nathan: 'The Tyrolean Family Rainer, and the Vogue of Singing Mountain Troupes in Europe and America', *MQ*, xxxii (1946), 63–79)

□

Tyrrell, Agnes (*b* Brno, 20 Sept 1846; *d* Brno, 18 April 1883). Moravian composer and pianist of English origin. She was the daughter of Henry Tyrrell, an English language-teacher who had established himself among the German-speaking community in Brno. She studied the piano at the Vienna Conservatory (1862) and composition with Otto Ritzler, the director of the Brno Musikverein. Her frail health prevented an active career as a pianist, though she gave some concerts; instead she devoted herself to composition, encouraged by Count Haugwitz of Náměšť, whom she visited in 1867, and Liszt, who in 1874 praised her piano studies, suggesting some alternative fingerings. These and other piano pieces were published in Vienna; she also wrote songs (some to English texts), choruses, an opera and some orchestral music. Her most adventurous compositions are her choruses, though her piano pieces show Liszt's influence, a rare occurrence in 19th-century Moravia.

JOHN TYRRELL

Tyrrell, John (*b* Salisbury, Southern Rhodesia [now Harare, Zimbabwe], 17 Aug 1942). British musicologist. He studied at the University of Cape Town (BMus 1963) and at Oxford, where he took the doctorate in 1969 with a dissertation on Janáček's stylistic development as an operatic composer. He served as associate editor of *Musical Times* and worked on the editorial staff of *The New Grove Dictionary of Music and Musicians* before becoming lecturer at Nottingham University (1976; Reader in Opera Studies, 1989; British Academy Research Fellow in the Humanities, 1992–4; professor, 1996–7). In 1996 he became deputy editor of *The New Grove Dictionary of Music and Musicians* and in the following year was appointed executive editor. He was appointed professorial research fellow at Cardiff University in 2000.

Tyrrell's main research interest is Czech music, particularly Janáček and his operas, and he has done more than any other writer in this area to inform English-speaking scholars, students and audiences, through his lucid and informative writings and translations of key documentary sources. With Charles Mackerras he has produced definitive editions of *Jenůfa* (1996) and *From the House of the Dead* (forthcoming).

ROSEMARY WILLIAMSON

Tyson, Alan (Walker) (*b* Glasgow, 27 Oct 1926). British musicologist. He was educated at Rugby School and Magdalen College, Oxford, where he read *literae humaniores* (1947–51). In 1952 he was elected a Fellow of All Souls College, Oxford, becoming a senior research fellow in 1971; in 1969 he was visiting professor at Columbia University, New York, and in 1973–4 Lyell Reader in bibliography at the University of Oxford. In 1977–8 he was visiting professor at the University of California at Berkeley and in 1983–4 he was a member of the Institute for Advanced Study at Princeton University. Earlier he had studied psychoanalysis and medicine, qualifying in 1965; he was one of the translators of the Standard Edition of Freud's works. During his years of medical studies he produced a large number of musicological writings, mostly on Beethoven, relating in particular to textual and bibliographical questions: much of this work was drawn together in *The Authentic English Editions of Beethoven* (1963), in which the priority of certain English editions, hitherto neglected by Beethoven scholarship, was established. His interests lay mainly in the bibliographical side of musicological research, including matters of authenticity, music printing and publishing, dating, watermarks and copying, in the period 1770–1850, centring first on Beethoven and later on Mozart but also touching considerably on Haydn, Clementi, Field and others. He particularly threw light on Beethoven's creative methods, as seen in his sketches, and on the ways in which his music was disseminated. His pioneering series of articles on the chronology of Mozart's later works through paper studies of the autograph scores was gathered together in book form in 1987 and his catalogue of papers that Mozart used, based on rastrology and watermarks, was published as a supplementary volume to the Neue Mozart-Ausgabe five years later. Tyson's writings, which include numerous reviews (mostly in the *Musical Times*), are distinguished by their clear and precise expression and the elegant logic of their deduction. A Festschrift in his honour appeared in 1998.

STANLEY SADIE

Tyulin, Yury Nikolayevich (*b* Reval [now Tallinn], 14/26 Dec 1893; *d* Moscow, 8 May 1978). Russian musicologist, theoretician and composer. He studied mathematics (later switching to law) at St Petersburg University (1912–17); at the same time he attended the St Petersburg Conservatory, where he studied with Kalafati, Sokolov and Tcherepnin. He was awarded the doctorate from the Conservatory in 1937 for his dissertation on harmony. From 1921 he lectured at the Institute for the History of the Arts, with which he was periodically associated as a scientific officer until 1958, and worked at the Experimental Monumental Studio Theatre (Mamont) attached to the State Academic Theatre (Mariinsky). He taught at the Leningrad State Conservatory (1925–67), the Tashkent Conservatory (1948–50), the Gnesin State Institute for Musical Education (1970–75) and the Moscow Conservatory (1971–8).

Tyulin became known particularly for his innovatory theory of harmony, which he described as 'a logically differentiated system of the qualitative interrelation of tones' and in which he regarded mode as the basis of all musical thought. Based on psychophysiology and acoustics, Tyulin saw mode as a multi-level and historically mobile system of direct communication, characterized by the unity of functional organization of all levels and components. For him, the system, with its origins in *Intonatsiya* (intonation), made up the basis of musical communication; the principles of the theory are expounded in his dissertation.

Tyulin advanced ideas on the main and variable functions of harmonic verticals and the 'phonism' of chords and intervals, and addressed problems in the genesis of contemporary harmony. He worked on the differentiation of the levels of musical form and musical speech, the functionality of form and the variability of its functions. He also made a significant contribution to developing the theory of traditional cultures (Russia, Armenia, Georgia, Uzbekistan, Kazakhstan, Lithuania). He proposed a new solution to the problem of pitch in folksongs, putting forward the thesis of 'the qualitative stability' of the interval when there is variability of intonation.

As a teacher, Tyulin responded to the need for reform in the education of musicians prevalent at the Leningrad Conservatory in the mid-1920s. He joined a group of theoreticians centred on Shcherbachyov, whose aim was to renew the theoretical courses, bringing them closer to real artistic practice, broadening the scientific basis and creating a new method of teaching that overcame the utilitarian and applied notion of music theory.

Tyulin's compositions follow the St Petersburg school of music of Stravinsky and especially Prokofiev. His works reflect contemporary trends: a passion for symbolist poetry in *Poèma* ('Poem' for voice and orchestra on poems by Bal′mont, op.7, 1922); an experiment in dynamic motor rhythms in the Piano Sonata no.3 (1923) and a tribute to modernism in the piano piece *De profundis* (1924), with its wealth of polyrhythms and polytonality.

ABRAHAM I. KLIMOVITSKY

Tyves. *See* THEEUS family.

Tzamen [Aquanus], **Thomas** (*fl* Aachen, 1508). German composer. He is known for one motet for three voices, *Domine Jesu Christe*, printed in Glarean's *Dodecachordon* (Basle, 1547). Adam Luyr, a former pupil of Tzamen, gave it to Glarean when the latter was studying at the University of Cologne. It also appears as a textless piece in Aegidius Tschudi's songbook (*CH-SGs* 463, no.8). Eitner, not realizing that the same composer and composition were involved, listed Tzamen and Aquanus as separate composers.

Úbeda, José María (*b* Gandía, nr Valencia, 1839; *d* Valencia, 25 March 1909). Spanish organist and composer. He studied music at Valencia Cathedral with Pérez Gascón. A founder of the Valencia Conservatory, he served as its director and taught organ there until his death. He was one of the most important members of the Valencian organ school and one of the first organists to perform music of earlier centuries found in local libraries. His sacred compositions include several motets and numerous works for organ.

ANTONIO IGLESIAS

Uber. German family of musicians. As well as those discussed below, Georg Friedrich Uber (*fl c*1750), organist at the Protestant church of Haynau, Silesia, and Christian Gottlieb Uber (*fl c*1757), organist at the Elftausend-Jungfrauenkirche in Breslau, may have been family members.

(1) **Christian Benjamin Uber** (*b* Breslau [now Wrocław], 20 Sept 1746; *d* Breslau, 1812). Amateur musician. After studying law at the University of Halle, where he may have been a pupil of W.F. Bach, he entered the civil service in Breslau (1772) and advanced to become government advocate and judicial commissioner (1774). He was a virtuoso glass-harmonica player and presented amateur concerts twice weekly in his own home. As a composer he was considered a skilful and industrious dilettante; his works include a Singspiel as well as various vocal and chamber works.

WORKS

Vocal: Clarissa, oder Das unbekannte Dienstmädchen (Spl, 3, J.C. Bock), Breslau, 1771, vs (Breslau, 1772); Das Weltgericht (orat), Breslau, 1781; Deukalion und Pyrrha (cant.), Breslau, 1781; Dos Ritterspeel ei Fürstensteen, dan 17. Ogust 1800 (dialect poem) in *Schlesische Blumenlese*, i (1801), 16–17; music to Der Volontair (comedy)

Chbr: Sonate, kbd, vn, 2 hn, b (Breslau, 1773); 6 sonatines, vn, kbd, op.2 (? Berlin and Amsterdam, n.d.); Serenate, kbd (Breslau, 1775); 3 Sonaten, kbd, vn (? Berlin and Amsterdam, 1776); 6 Sonaten, kbd, vn acc. (n.p., 1776); Divertiment, kbd, 2 vn, 2 fl, 2 hn, va, b (Breslau, 1777); Divertissement, pf, 2 vn, fl, hn, va, b (1777); 6 divertissements, kbd, fl, vn, 2 hn, b (Leipzig, 1783); Sonate, hpd, acc. (Dessau, n.d.); 2 concertinos, kbd, fl, va, 2 hn, basset-horn; Sonatas, kbd, b; Ariette avec variations, vn, b

(2) **Christian Friedrich Hermann Uber** (*b* Breslau, 22 April 1781; *d* Dresden, 2 March 1822). Composer and conductor, son of (1) Christian Benjamin Uber. While studying law in Halle he came to the attention of D.G. Türk, who taught him composition; he deputized for Türk as conductor of the subscription concerts in 1801 performing among other works his own, Violin Concerto op.3 and cantata *Das Grab*. He was active in Breslau in 1803, and then in 1804 travelled with Prince A.-H. Radziwiłł to Berlin, where he entered the service of Prince Louis Ferdinand as a chamber musician. After serving briefly as a violinist in Brunswick, in 1808 he was appointed music director of the Kassel opera, where he produced several of his own works. He left in 1814 to become theatre Kapellmeister at Mainz, and in 1816 became director of the Seconda company in Dresden. After it was dissolved he worked briefly in Leipzig as a teacher and author, then returned to Dresden to become Kantor at the Kreuzschule in 1817 and music director of the Kreuzkirche soon afterwards. His oratorio *Die letzten Worte des Erlösers* was performed there on the day of his death. Only some of his works met with favourable critical reaction.

WORKS

Stage: incid music to Moses (A. Klingemann), Kassel, 1809; Der falsche Werber (int), Kassel, 1811; Les marins (op), Kassel, 1812, ov (Offenbach, n.d.); Der frohe Tag (op), Mainz, 1815; incid music to Saxonia (allegorical play), Leipzig, 1816; Der ewige Jude (Klingemann), Dresden, *c*1820, ov. pubd as op.6 (Leipzig); Der Taucher (melodrama)

Sacred: Das Grab (cant.), Halle, 1801; Die Feier der Auferstehung (cant.), Dresden, *c*1820; Die letzten Worte des Erlösers (orat), Dresden, 2 March 1822

Orch: Vn Conc. op.3 (Leipzig, n.d.); other vn concs.

(3) **Alexander Uber** (*b* Breslau, 1783; *d* Carolath, Silesia, 1824). Composer and cellist, son of (1) Christian Benjamin Uber. Unlike his brother, he remained primarily in Breslau, where he studied with J. Janetzek (violin), J. Jäger (cello) and J.I. Schnabel (theory), and befriended Weber. After touring from 1804 as a virtuoso cellist (to Strasbourg, Basle and elsewhere) he returned to Breslau, and in his later years was Kapellmeister to the Prince of Schönaich-Carolath. In 1816 the *Allgemeine musikalische Zeitung* (xviii, 690) described him as 'a talent of true originality'.

WORKS

most printed works published in Mainz or Offenbach

Orch: [2] Air varié, fl, orch, opp.1–2; Vc Conc., op. 12; Variations, vc, orch, op.14; 16 variations, vc, orch; ovs.

Chbr: 6 caprices, vc, op.10; Septett en forme d'un potpourri, cl, hn, vn, 2 va, vc, op.17; Variations, fl, vn, va, vc, op.40; 3 thèmes variés, fl, op.41; Variations, hn, str qt; 6 danses en forme de rondeaux, pf 4 hands

Vocal: 8 Lieder für Kinder, op.18; Gebet während der Schlacht, 2 T, B, orch; 6 Gesänge, 4vv, pf, 2 vols.; Lob des Gesanges (canon), 2vv, pf; Gesänge, 1v, pf; choruses

Uccelli [née Pazzini], **Carolina** (*b* Florence, 1810; *d* ?Paris, 1885). Italian composer. She made her début in Florence on 21 June 1830 with the successful performance at the Teatro della Pergola of *Saul*, a sacred opera in two acts, for which she wrote both libretto and music. Her two-act *melodramma Anna di Resburgo* (libretto by Gaetano Rossi) was performed in Naples two years later. The overture of her opera *Eufemio da Messina* was performed in Milan in 1833. Uccelli's only other known work is a cantata for chorus and orchestra, *Sulla morte di Maria Malibran*. She was widowed in 1843 and moved to Paris with her daughter Giulia, a singer. They performed together on concert tours in Belgium, the Netherlands and Switzerland.

MATTEO SANSONE

Uccellini, Marco (*b* c1603; *d* Forlimpopoli, nr Forlì, 11 Sept 1680). Italian composer and instrumentalist. After studying in Assisi he settled in Modena some time before 1639. In 1641 he became head of instrumental music at the Este court and in 1647 *maestro di cappella* at the cathedral there, a post he held until 1665. From 1665 until his death he was *maestro di cappella* at the Farnese court at Parma. None of the music of the operas and ballets he produced there has survived.

Uccellini is important as a composer of instrumental music, of which his extant output comprises seven printed collections; at least one other (op.1) is lost. Opp.2–5 are mainly devoted to sonatas, while the later prints contain shorter sinfonias and dances. Although the sonatas are early, they, together with his development of violin technique, represent his most notable achievements. Most of the sonatas are basically in ternary form; others are in as many as five sections. Variation and sequential repetition of themes and phrases are favourite methods of expanding sections; in an attempt to achieve thematic unity more than one subsequent section of several sonatas opens with a variant of the initial idea or even of an entire previous section. Uccellini's use of triadic themes and lengthy sequences modulating through the circle of 5ths points towards a strong connection with the style later to be developed in Bologna by Cazzati, G.B. Vitali and G.M. Bononcini. His exploration of more distant keys such as B major, B♭ minor and E♭ minor, unusual in string music of the time, is notable. He also used piquant chromaticisms and false relations. The range of the violin is extended up to 6th position (*g‴*), and slurs, tremolo passages and wide leaps are frequent. The solo violin sonatas of opp.4 and 5 represent the highest point of development in the genre before J.H. Schmelzer and Biber. They are longer and in a patently more virtuoso style than those of Biagio Marini, and are clear counterparts to keyboard toccatas. The sinfonias, except for a battle piece in op.8, are less adventurous than the sonatas. The *arie* of the 1642 and 1645 collections are descendants of the older variation sonata; their thematic material includes an interesting selection of popular tunes of the time.

WORKS

published in Venice unless otherwise stated

Sonate, sinfonie et correnti, a 2–4, bc, libro II (1639)

Sonate, arie et correnti, a 2–3, bc [libro III] (1642)

Sonate, correnti et arie, a 1–3, bc, op.4 (1645/*R*); 2 sonatas, 3 correnti and 3 arias ed. L. Torchi, *L'arte musicale in Italia,* vii (Milan, 1907)

Sonate, over canzoni, vn, bc, op.5 (1649)

Salmi, 1, 3–5vv, bc, concertante parte con instrumenti e parte senza, con Letanie della beata virgine, 5vv, bc, op.6 (1654)

Ozio regio: compositioni armoniche sopra il violino e diversi altri strumenti, a 1–6, bc, libro VII (1660 abridged [lost]; Antwerp, 2/1668 as Sonate sopra il violino)

Sinfonici concerti brevi e facili, a 1–4, op.9 (1667)

Sinfonie boscareccie, vn, bc, 2 vn ad lib, op.8 (Antwerp, 1669)

Le navi d'Enea (ballet, A. Guidi), Parma, 1673, lost

Gli eventi di Filandro ad Edessa (op, G. Gaddi), Parma, Collegio dei Nobili, 1675, lost

Il Giove d'Elide fulminato (ballet, Guidi), Parma, 1677, lost

THOMAS D. DUNN

Uc de Saint Circ [Saint Sixt] (*b* Thégra, nr Rocamadour, 1190; *d* c1253). Troubadour. He was the younger son of a poor vavasour and was active in Toulouse and certain courts in Spain before travelling to Italy in about 1218. He appears to have married in Italy and worked in the courts of Turin, Treviso and Auramala. He wrote the *vida* of Bernart de Ventadorn, and has been credited with many others. He composed a few chansons before his marriage but concentrated thereafter on sirventes, tensos and strophic exchanges (*see* JEU-PARTI). His partners included Guillem of Baus, 4th Count of Orange, the Count of Rodez and probably Raimondo III of Turin. Only three of his 43 surviving songs have melodies (*Anc enemics qu'eu agues*, PC 457.3; *Nuls hom no sap d'amic, tro l'a perdut*, PC 457.26; *Tres enemics e dos mals seignors ai*, PC 457.40): all are in a regular *AAB* form and survive uniquely in *I-Ma* R.71 sup.

IAN R. PARKER

Uchida, Mitsuko (*b* Atami, nr Tokyo, 20 Dec 1948). Japanese pianist. She studied with Richard Hauser at the Vienna Hochschule für Musik and made her début at the age of 14 with a recital in the Brahmssaal of the Musikverein. At the 1975 Leeds International Piano Competition she was awarded second prize. In 1982 she gave cycles of all the Mozart sonatas in London and Tokyo (later also in New York) and followed them with all the Mozart concertos, in the same two cities, in 1985–6 and 1987 respectively. Her Mozart recordings, in particular her set of the 18 sonatas with some of the fantasies, rondos and other pieces (issued in 1989), brought her acclaim as a leading Mozartian of the day. It was perhaps inevitable that they hid for a while the full range of her gifts and favoured repertory, which includes all the great Austrian and German composers who were associated with Vienna, from Haydn to Schoenberg, as well as much of Chopin, Debussy and Bartók. To all of these she is an exemplary guide, with a commitment to unusually imaginative programmes, as was shown by the series of Schubert and Schoenberg recitals she gave in the mid-1990s in six cities worldwide. She is also a notable interpreter of the Schoenberg Piano Concerto. Her playing is characterized by concentration, poise and a wide range of dynamics: there are few who are capable of such sustained intensity and eloquence while playing so quietly and contemplatively, although to some she has made Schubert retreat to a world that is too ethereal and idealized. The conviction and amazing dexterity displayed in her recording of the Debussy Etudes, issued in 1990, can be set against this, where her refinement of sonority, accentuation and characterization proclaim her a virtuoso of uncommon calibre. There has been wide agreement that this is one of the finest Debussy piano records ever made.

STEPHEN PLAISTOW

Uçi, Koço (*b* Korça, 21 Jan 1923; *d* Tirana, 7 Apr 1982). Albanian composer and choral conductor. Born into a rural family, he went to Tirana during the Italian occupation, where he received musical training from Vittorio Allogio, a ballroom pianist and bandleader. After the 1944 liberation, he directed a musical and theatrical group affiliated to the Directorate of Popular Culture, conducted the State Theatre Orchestra (1946–9) and was a choral trainer with the State Chorus (1949–51). He is, however, primarily associated with the Ensemble of the People's Army, which rose to prominence in the 1950s. As its conductor and principal composer he toured with the ensemble throughout the Communist world (including the USSR and China) before poor health forced his retirement in 1976.

Uçi was one of the most prolific composers of the early Albanian socialist period. An early exponent, along with Trako, of the Albanian cantata, he was also among the first to adapt folksongs, those of central and southern Albania especially, to patriotic and political texts. His large output, almost exclusively vocal, includes settings of some of the best-known Albanian poets (including Naïm Frashëri, Andrea Varfi and Ismail Kadare) and covers almost every significant occasion in the national life of the period. His songs are simple and direct in their appeal, with an instinctive melodic elegance and sober but effective harmonizations.

WORKS
(*selective list*)

Dramatic: Vlorë 1920 (choreographic scene), 1962; Ushtari i popullit [People's Soldier] (choreographic fantasy, 1), 1963; Qemal Stafa (film score), 1964; Të paepur na kaliti partia [The Party has Forged us to Become Indomitable] (choreographic scene), 1965; Katërmbëdhjetë vjeç dhëndër [The 14-Year Old Bridegroom] (incid music, A.Z. Çajupi), 1966; Jemi mbrojtës të bregdetit [We are the Guardians of our Coast] (choreographic scene), 1967; Batalioni partizan 'Hakmarrja' [Partisan Battalion 'Vengeance'] (choreographic poem, choreog. F. Shaqiri) (Tirana, 1970)

Choral-orch: Ushtria jone popullore [Our People's Army] (cant., ?Uçi), solo vv, male chorus, orch, 1963; Partia ne na thirri [The Party has Invited Us] (cant., A. Varfi), solo vv, male chorus, orch, 1965; Kanga krenare [Proud Song] (T. Miloti), B, 4-pt male chorus, orch, 1966; Ma i zjarriti hymn [The Most Fervid Hymn] (L. 'Ūd (*oud*; pl.: *'īdān*). Short-necked plucked lute of the Arab world, the direct ancestor of the European lute, whose name derives from *al-'ūd* ('the lute'). Known both from documentation and through oral tradition, it is considered the king, sultan or emir of musical instruments, 'the most perfect of those invented by the philosophers' (Ikhwān al-Ṣafā': *Rasā'il* [Letters] (1957), i, 202). It is the principal instrument of the Arab world, Somalia and Djibouti, and is of secondary importance in Turkey (*ut*, a spelling used in the past but now superseded by *ud*), Iran, Armenia and Azerbaijan (*ud*). It plays a lesser role in Greece (*outi*), where it has given rise to a long-necked model (*laouto*); the latter is used in rustic and folk contexts, while the *'ūd* retains pre-eminently educated and urban associations. In eastern Africa it is known as *udi*; in recent decades it has also appeared in Mauritania and Tajikistan.

1. The term *'ūd*. 2. Early history. 3. Description. 4. Models of the *'ūd*. 5. Performance, aesthetics and repertory. 6. Study of the *'ūd*. 7. Makers.

1. THE TERM 'ŪD. Literally, *'ūd* means 'twig', 'flexible rod' or 'aromatic stick', and by inference 'piece of wood'. In Ibn Khaldūn (14th century), *'ūd* denoted the plectrum of the lute called *barbāṭ*. The etymology of the word has occasioned numerous commentaries, among them the thesis put forth by Farmer that the Arabs adopted the

term to differentiate the instrument, with its wooden soundtable, from the similar Persian *barbaṭ*, whose belly is covered with skin. But this can no longer be defended. The choice of the term *ʿūd* depends on a discursive form of Arab thought which required some other word to define the *barbāṭ* before the *ʿūd* (the same applies to all the instruments of the emergent Islamic world): in this system of ideas, one term refers back to another or is glossed by yet another, leading to a multiplicity of terms. As the *ṣanj* is described as a *wanj*, the *būq* as a *qarn*, the *duff* as a *ṭār*, the *ʿūd* becomes a synonym of the *barbāṭ*. The skin–wood difference was not taken into account. This play of reference is clearly stated by the 10th-century Andalusian writer, Ibn ʿAbd al-Rabbīḥ: 'the *ʿūd* is the *barbāṭ*'. Other writers, such as Ibn Sīnā and Ibn Khaldūn, included the *ʿūd* under the heading of 'barbāṭ' when speaking of its characteristics. In the 10th century commentaries on pre-Islamic poetry by al-Anbārī (*d* 916) give the *ʿūd* two semantic meanings: *barbaṭ* and *mizhar* (Lyall: *The Mufaḍḍaliyāt*, Oxford, 1921, p.812); *mizhar* was to become a poetic substitute for the *ʿūd*. Earlier, it could equally denote the lyre, suggesting a process of transference from lyre to lute, the lute gradually acquiring the attributes of previous string instruments and becoming a sublimation of them. This transference is noticeable in the earliest Arabic versions of the Bible, where *kinnor* (lyre) is translated as *ʿūd* (lute).

2. EARLY HISTORY. The transfer of terms for lyre and lute appears more subtly in the myth of the invention of the *ʿūd* which has been handed down in two variants from the 9th and 10th centuries, the first being Iraqi (Robson, 1938) and the second Iranian (Masʿūdī, 1874). These say that the *ʿūd* was invented by Lamak, a direct descendant of Cain; on the death of Lamak's son, he hung his remains in a tree, and the desiccated skeleton suggested the form of the *ʿūd* (a contradiction between archaeological research and mythological tradition; the former assumes a process of evolution from lyre to lute, confirmed by organology). The myth attributes the invention of the *miʿzaf* (lyre) to Lamak's daughter.

Just as the *ʿūd* becomes the quintessence of earlier chordophones, it also constitutes their functional synthesis. In the 9th century Māwardī, the jurist of Baghdad, extolled its use in treating illness, a principle allowed and defended in Arab Spain by the 11th-century theologian Ibn Ḥazm. The symbolism lived on until the 19th century: 'the *ʿūd* invigorates the body. It places the temperament in equilibrium. It is a remedy ... It calms and revives hearts' (Muḥammad Shihāb al-Dīn, *Safīnat al-mulk*, Cairo, 1892, p.466). There is also evidence that it was played on the battlefield (M. Salvat: 'Un traité de musique du XIIIème siècle, le De Musica de Barthelemi-l'Anglais', *Actes du colloque musique: Littérature et société au moyen âge*, Paris, 1980, p.357). In any case it was predominantly in secular usage that the *ʿūd* made its mark, as the only kind of accompaniment to a form of responsorial song known as *ṣawt*, according to written tradition (the *Kitāb al-Aghānī* of al-Iṣfahānī) and oral tradition (Tunisia and the Arabian Gulf).

The emergence of the *ʿūd* on the stage of history is an equally complex matter. Two authors of the end of the 14th century (Abū al-Fidā, or Abulfedae, and Abū al-Walīd ibn Shiḥnāh) place it in the reign of the Sassanid King Shapūr I (241–72). Ibn Shiḥnāh added that the development of the *ʿūd* was linked to the spread of Manicheism, and its invention to Manes himself, a plausible theory because the disciples of Manes encouraged musical accompaniments to their religious offices. Reaching China, their apostolate left traces of relations between West and East, seen in a short-necked lute similar to the *ʿūd* (Grünwedel, 1912). But the movement's centre was in southern Iraq, whence the *ʿūd* was to spread towards the Arabian peninsula in the 7th century. However, the texts mentioning the introduction to Mecca of the short-necked lute as the *ʿūd* were all written in the 9th and 10th centuries. The *ʿūd* spread to the West by way of Andalusia.

3. DESCRIPTION. The *ʿūd* consists of a large soundbox connected to a short neck, features that give it its letters patent of nobility and distinguish it from the long-necked lute family (*ṭanbūr*, *saz*, *bağlama*, *setār* etc). The body has evolved considerably from the original pear shape (which is perpetuated in our own time by the *qanbūs*, taking on a swelling, rounded form). A spherical shape may even have been envisaged: al-Kindī (9th century) described the body of the lute as a ball divided in two, but a century later the Ikhwān al-Ṣafāʾ encyclopedia (see Shiloah, 1978) suggested harmonious proportions: 'The length must be one and a half times the width; the depth, half the width; the neck, one quarter of the length'. (p.203). If the neck measured only 20 cm (its approximate length today), the total length would be 80 cm, with or without the pegbox, making it much the same size as very large contemporary models. Another tradition required the length of the vibrating string from nut to bridge, now about 60 cm, to be equal to the body length, which would leave only 15 cm for the length of the neck (Mīkhāʾīl Allāhwayrdī: *Falsafat al-mūsīqā al-sharqiyya* [The philosophy of oriental music], Damascus, 1948, p.381).

The body is made from lightweight wood. It consists of a series of 16 to 21 ribs, mentioned as early as the 10th century by the name of *alwāḥ* ('boards') and now called *ḍulūʿ* ('sides'). In the 19th century the body was called *qaṣʿa* ('receptacle', 'bowl'), and by the classical authors *jism* ('body'). It consists of a strongly rounded back (*ẓahr*) and a flat front surface (*baṭn*: 'belly'; *ṣadr*: 'chest', or *wajh*: 'face') made of lightweight wood, which must 'reverberate if it is struck' (Ikhwān al-Ṣafāʾ). This, the soundboard, is pierced by one quite large soundhole, or (earlier) two small ones; sometimes there are three round or oval soundholes (a design inspired by the lotus flower in Morocco). The holes may be plain or richly ornamented. They are called *shamsiyya* ('little sun'), *qamarāt* ('moons') or *ʿuyūn* ('eyes'). The bridge, on the lower part of the belly, is known in classical writings as *mushṭ* ('comb') and as *faras* ('horse') or *marbaṭ* ('fastening place') today. It bears the strings and stands about 10 cm from the lower edge, which is called *kaʿb* ('heel'). (In a recent innovation by Munīr Bashīr, of Iraq, the 11th, low string is not on the traditional bridge but on the lower edge of the soundbox; see fig.2.) The *raqma* ('membrane'), a piece of fish-skin or leather, or occasionally of shell, between the bridge and the soundhole, protects the belly from the strokes of the plectrum. This section may take all kinds of extravagant shapes; a Tunisian example is in the form of a parallelogram. The *raqma* tends to be absent from the modern Iraqi *ʿūd*.

The neck, joined to the body, is described as *ʿunq* ('neck') in classical writings and the *raqba* ('neck') or *zand* ('wrist') today. It extends the upper part of the

instrument by some 20 cm and is inserted into the soundbox up to the soundhole. This length, which has been much discussed, is important in the instrument's construction, determining the number and location of the intervals and thus affecting the modes. In early 19th-century Egypt, Villoteau gave the measurement as 22·4 cm; a century later, also in Egypt, Kāmil al-Khulāʿī gave it as 19·5 cm. In contemporary Egypt, the length of the neck may vary between 18 and 20·5 cm. It is standardized as 20 cm in Syria, but a length of 24·5 cm may be found on Moroccan models, the *ʿūd ʿarbī* (Arab *ʿūd*). If the *ʿūd ʿarbī* is the descendant of an archaic model of Andalusian provenance, the upper part of the instrument may have become shorter. The neck rarely has frets (*dasātīn*), but some are found on the Tunisian lute of Khumayyis Tarnān (1894–1964). Both sides of the neck are inlaid with marquetry to facilitate the learning of the instrument, so providing visual references for the placing of the hand. There is a nut of ivory or bone, called *anf* ('nose') or *ʿataba* ('threshold'), at the upper end of the neck before it bends sharply back to become the pegbox. The tuning-pegs are screwed to the pegbox; they are called *mafātīḥ* ('keys') or more commonly *malāwī* ('folds', 'whorls'). The vibrating length of the strings ranges from 60 to 67 cm, according to the model (see Fu'ād Maḥfūẓ, 1960, p.105), but lengths as small as 52 cm have been noted.

The quality of material used in the making of the *ʿūd* is extremely varied; the more the diversity, the better it sounds. This explains the elaborate attention paid to decorative inlay work and the assembling of an impressive number of pieces of wood. The Baghdad lute maker Ḥannā Ḥajjī al-ʿAwwād (1862–1942) used 18,325 pieces to make a single *ʿūd* (see ʿAlī Maḥfūẓ, 1975, p.328).

Classical lexicographers regarded the wood of the *wa's*, which cannot be identified, as best for the material of the *ʿūd*. All kinds of wood have been used, some chosen for their aromatic quality (like sandalwood). Some texts recommend the use of a single type (Ibn Ṭaḥḥān, 14th century; see Farmer, 1931/*R*, ii, 94); woods mentioned include walnut, larch, beech, maple, cypress, pistachio, oak, mahogany, cedar and pine for the belly, and ebony for the fingerboard. There is a growing tendency to add inlay work to the *ʿūd*, whose weight may exceed 800 grams in Arabian lutes but is less in Turkish ones (which are 6 to 8 cm smaller than their Arabian counterparts, and more like the Maghribi *ʿūd* of the *ʿarbī* type).

4. Models of the ʿŪd.

(i) Two-string ʿūd. The thesis of its existence has been upheld by musicologists from Europe (Land, 1883) and Iran (Barkechli, 1960); it envisages the archaic *ʿūd* as a counterpart of the *ṭanbūr*, having two strings like that instrument. The argument rests on the names of the strings, two of which are Iranian terms (*bamm* and *zīr*) and two others of Arab origin (*mathna* and *mathlath*). There is no circumstantial documentary evidence to support this hypothesis.

(ii) Four-course ʿūd. The Arabian *ʿūd qadīm* (ancient lute), in particular, invited cosmological speculation, linking the strings with the humours, the temperature, the elements, the seasons, the cardinal points, the zodiac and the stars. The strings may be tuned bass to treble or treble to bass. Bass to treble tuning is represented by al-Kindī (9th century), who advocated tuning the lowest course (*bamm* or first string) to the lowest singable pitch. Placing the ring finger on a mathematically determined length of this string, one moves on to deduce the pitch of the third open course (*mathna*), then that of the second (*mathlath*) and finally the fourth (*zīr*). (This system is also applied to the five-course *ʿūd* and is still used as a tuning method, following the sequence 1–4–2–3–5 or 1–4–2–5–3.) Adherents of the opposite school (Ikhwān al-Ṣafā') tune from treble to bass. The intention, inherited in part by the Turkish *ʿūd*, entails pulling hard on the *zīr* (high) string, so that as it approaches breaking-point it gives a clear sound. One then moves on to determine the pitch of the second course (*mathna*), the third (*mathlath*) and finally the fourth (*bamm*). These two schools did not remain entirely separate. But whichever procedure is used, both end up with tuning by successive 4ths, each course being tuned a 4th above the lower course preceding it. Musicologists, Eastern as well as Western, who try to interpret the pitch of these notes in European terms end up with different results.

Although the four-course *ʿūd* survives in Morocco, as the *ʿūd ʿarbī*, the tuning does not conform to the pitches inferred from classical treatises: a conflict between oral and written traditions. The Moroccan method seems to be the product of a previous system, the *ʿūd ramāl*, which also comprised a sequence of 4ths: *ramāl*, *ḥsīn*, *māya*, *rāghūl*. This *ʿūd*, like its Tunisian counterpart, may be variously tuned: a feature of these tunings is that they juxtapose the traditional 4ths with the octave and sometimes the 5th and 6th (*D–d–G–c*). The strings of the *ʿūd ʿarbī* are named *dhīl*, *ramāl*, *māya*, *ḥsīn*; this terminology by no means refers to a fixed pitch standard such as academic and standardized tuition methods call for.

At the time of al-Kindī, two of the courses were made of gut and two of silk. In the 10th century silk became predominant and some texts give the composition of the twisted threads: *bamm* = 64 threads, *mathlath* = 48, *mathna* = 36, *zīr* = 27.

Another characteristic of the four-course *ʿūd* is that it is bichordal, having double courses. 13th-century iconography shows that it was already usual to pair the strings at that time, probably to increase sonority but also to allow the development of a more virtuoso type of performance.

(iii) Five-course ʿūd. The addition in Andalusia of a fifth course has been attributed to Ziryāb (8th–9th century), although in theoretical writings it appeared in Iraq with al-Kindī. (The addition of this extra course has a parallel in China.) With Ziryāb the fifth course, known as *awsaṭ* ('intermediary'), a term perpetuated in the *ʿūd* of Sanaʿa called *qanbūs*, is placed between the second (*mathna*) and third (*mathlath*) courses. With al-Kindī and his successors, it was to reach the end of the instrument and become the string called *ḥadd* ('high') or the second *zīr*. As the ancient *ʿūd* did not have a two-octave compass, the appearance of the fifth string corresponded to the demands of a new system. The four-course *ʿūd* had no need to run right through the octave. Its repertory was performed on a tetrachord or pentachord, transposable an octave higher. With the five-course model, the heptatonic system imposed complete series of octaves. The new lute was called *ʿūd kāmil* ('perfect *ʿūd*').

The five-course *ʿūd* (fig.1) is the most common and most popular model among performers. It has also been called the *ʿūd miṣrī* (Egyptian) because of the finely

1. Five-course 'ūd player and drinking companions in a wine cellar: detail of a minature from a MS, probably Egyptian, dated 1334 (A-Wn A.F.9, p.42)

constructed instruments produced by the lute makers of Egypt, who export them as far as Zanzibar. The people of North Africa have added the dialectal name of *m'sharqī* or *mashriqī* ('of the east'). The method of tuning it, extremely flexible in the 19th century, is now becoming stabilized. These modifications are due partly to the breakup of the Ottoman Empire, which has caused a rupture between Turkish and Arab cultures, and partly to the proliferation of teaching methods endeavouring to impose a single type of tuning, running from low to high: *yakā* = *G*; *'ushayrān* = *A*; *dūkā* = *d*; *nawā* = *g*; *kardān* = *c'*. However, there are variants reintroducing tuning by 4ths. Thus what is described as 'Aleppo tuning' consists of: *qarār būsalīk* = *E*; *'ushayrān* = *A*; *dūkā* = *d*; *nawā* = *g*; *kardān* = *c'*. This latter structure is used in Turkey and Iraq. To answer the practical requirements of present-day notation, a treble clef followed by the figure 8 is used. This procedure has been much criticized by those in favour of using the bass clef (see al-Ḥilū, 1975, p.199). The tuning of the Turkish lute faithfully reflects the Arab type but in reverse, reading in descending order: *gerdâniye* = *g'*; *nevâ* = *d'*; *dügâh* = *a*; *aşîrân* = *e*; *kaba dügâh* = *d* (this last, more mobile pitch may equally settle upon *G*: see Sözer, 1964, p.434). This outdated tuning represents the 'old school' (*eski akort*), and has now been replaced by an ascending tuning – the 'new school' (*yeni akort*): *A–B–e–a–d'–g'*. Though it is now considered incorrect in the Syro-Egyptian area, and representative of the old Ottoman school, a tuning method in ascending order survives in Iraq. It consists of: *yakā* = *d*; *'ushayrān* = *e*; *dūkā* = *a*; *nawā* = *d'*; *kardān* = *g'* (see Bashir, 1961, p.21). The compass of the bichordal five-course *'ūd* is just over two octaves; in Turkey, it is three octaves with the addition of a low course. Arabian instruments can achieve this by the addition of a sixth course.

(iv) Six-course 'ūd. Two kinds of six-course *'ūd* exist: one has six pairs of strings, the other five pairs with an additional low string. The first was found by Jules Rouanet in North Africa towards the end of the last century; tuned inclusively (see Rouanet, 1922), it has since disappeared except in Libya, where it is still made but with different tuning. A similar instrument, found in Syria, is tuned *C–E–A–d–g–c'*. The instrument with five double strings and a single low one, however, is becoming increasingly usual from Istanbul to Baghdad. It has become common to place the additional string after the highest (or chanterelle). Its pitch is at the choice of the player; no rule is laid down. The presence of the extra string endows the instrument with a wider range and increased ease of playing, allowing the performer to run effortlessly through three octaves. The sixth course is also coming to be used as an intermittent drone, a new phenomenon.

(v) Seven-course 'ūd. Seven-course models, based on a complex system of tuning, were found in Egypt and Lebanon in the 19th century but have not been seen since 1900. There is one exception: the Tunisian, Fawzī Ṣāyib, is a living master of the seven-course instrument in the six pairs and one low arrangement. A feature of this *'ūd* (as described by Villoteau, 1809) was that it reversed the arrangement of strings, placing first the high and then the low strings on the neck from left to right. According to Mīkhā'īl Mushāqa (1800–88), only four of the seven courses were played, the lowest course (*jahārkā*) and the two highest (*būsalīk* and *nihuft*) being unused in performance (see Smith, 1849, p.209).

5. Performance, aesthetics and repertory. The strings of the contemporary *'ūd* are twisted, or spirally reinforced. They are plucked with a plectrum (*rīsha*, 'quill') made of an eagle's feather and held between thumb and index finger; a shell or plastic plectrum may be used instead. The technique calls for suppleness of the wrist as the plectrum strikes the strings in a simple fall, or combines risings and fallings. Certain teachers, such as Tawfīq al-Ṣabbāgh, claim that a technique similar to the mandolin tremolo was once used. This may have disappeared, but another technique spread rapidly: the *baṣm* ('imprint'), which was invented by the Egyptian Aḥmad al-Laythī (1816–1913). It consists of substituting for the

2. Aḥmad al-Jumayrī playing the 'ūd in a performance of sawt, Bahrain, 1998

plectrum touches of the fingers of the left hand, plucking the strings, and introduces light and shade into the execution. Munīr Bashīr (Iraq) extended the technique by using the right hand too; he has made it one of the canons of present-day aesthetics of the *'ūd*.

There are two schools or conceptions of performance. The first, or 'Ottoman', takes as its principle the ornamentation of the sound, produced by delicate glissandos of the fingers and slight vibratos. The touch of the plectrum on the string sets off a vibration which, in turn, gives rise to an effect of resonance, volume and controlled intensity. The plectrum does not interfere with the resulting sound. This produces an intimate style of playing, making the interiorized *'ūd* a path to meditation. This approach was first promoted in Istanbul by Ali Rifat Çağatay (1867–1935) and Nevres Bey (1873–1937), then by Refik Tal'at Alpman (1894–1947) and Cinuçen Tanrikorur (*b* 1938). It spread to Aleppo (Nash'at Bey, *d* *c*1930, and 'Abd al-Raḥmān Jabaqjī, *b* 1931), then was developed in Baghdad by SALMĀN SHUKUR (*b* 1921), JAMĪL BASHĪR (1921–77) and MUNĪR BASHĪR (1930–1997; for further information on the Baghdad *'ūd* school *see* IRAQ, §I, 5).

The second aesthetic approach is Egyptian. The volume is amplified by firm strokes of the plectrum, which makes the strings resonate. This calls for virtuosity in performance, which is conceived of as an exteriorizing factor. The finest proponents of this school have been Ṣafar 'Alī (1884–1962), Muḥammad al-Qaṣabjī (1898–1966) and FARĪD AL-AṬRASH (1915–74), who, despite his melodramatic style, breathed a new vitality into the instrument. A synthesis of these two styles is taking place in Somalia, where the manner of performance combines extensive glissandos with the sonorous impact of the plectrum; the outstanding proponents of this style are Abdullahi Qarshe and 'Umar Dhule.

After 1971, when Munīr Bashīr gave one of the first solo recitals in Geneva, an independent instrumental repertory for the *'ūd* has developed, allowing it to be played as a solo instrument rather than as accompaniment or as part of an ensemble. The repertory concentrates on the form of improvisation known as *taqsīm* by both the Arabs and the Turks (*taksim*). In Bashīr's performances, however, this improvisation assumed a new character and underwent considerable development. Bashīr constructed a concert programme by linking several short *taqsīm* together and then interpolating metric pieces in an arrangement that he followed throughout his career, making no further modifications to their order of appearance. Under his plectrum the *taqsīm* became a long piece alternating between improvised and metric passages. Unconsciously, and without ever intending a reference to Iranian music, Bashīr provided Arab music with the foundations of a new system parallel to and comparable with the Persian *dastgāh*. While the Turkish performer Cinuçen Tanrikorur is alone in retaining the singing voice in *'ūd* concerts, in conformity with Turkish tradition, in his case it plays an important part and indeed is on a par with the *'ūd* itself, requiring both vocal and instrumental qualities of performance in the interpreter. Earlier, Udi Hrant (Hrant Kenkulian, 1901–78), a Turk of Armenian origin, had brought the technique of *'ūd* playing with sung accompaniment to a high degree of perfection.

As a general rule interpreters have made the Arabic *taqsīm* and its Turkish equivalent, the *taksim*, the basis of the *'ūd* repertory. The form of improvisation known as *taqsīm* allows interpreters to display their musical knowledge; they are judged by their capacity for modulations. However, other compositions of various kinds are included in the repertory: Ottoman pieces of the 19th and 20th centuries (*semai*, *pechrev*, *saz semaisi*, *longa*), which also occur in Arab music, adding the *taḥmīla* prelude. Songs transposed for instrumental performance have also been taken into the repertory, together with many original compositions (*ma'zūfa*) with evocative and poetic titles, sometimes in the nature of descriptive music or fantasy. The predecessor of this genre may be found in three *Kapris* (caprices) written between 1923 and 1924 by the Turkish composer Muhiddin Targan. These virtuoso pieces were first printed in Rahmi Kalaycioglu's collection *Türk musikisi bestekârli külliyati* (Istanbul, 1977) and new techniques, with arpeggios, chords and features often borrowed from Western music. Finally, the *'ūd* has featured in duos with other instruments: *'ūd* and guitar, *'ūd* and saxophone, *'ūd* and accordion, *'ūd* and Indian sitār, *'ūd* and *qānūn*, *'ūd* and piano. Rabbīḥ Abū Khalīl, a Lebanese living in Germany, has introduced the *'ūd* into jazz. Mention should also be made of recitals for two *'ūd*; here the Lebanese duo of Marcel Khalifé (*b* 1950) and Charbel Rouhana (*b* 1965) has led the way, perfecting a type of four-movement improvisation called *Jadal*, of symphonic dimensions. Concertos for *'ūd* and orchestra have also been written by Egyptian composers: the *Kunshirtū al'ūd wa-al-urkistra fī maqām ḥijāz kar kurd* [concerto for *'ūd* and orchestra in the *ḥijāz kar kurd* mode] of 1983–4, by 'AṬIYYA SHARĀRA (*b* 1923), and Ḥusayn al-Maṣrī's *L'oiseau calife concerto pour oud* (1994).

None of these developments could have arisen without a certain amount of backing in the West, where this type of performance originated. It is largely due to Bashīr that the relationship between the *'ūd* and audiences has been changed. An *'ūd* recital is now given in complete silence, without any of the old *ṭarab* demonstrations among the audience in the form of all kinds of emotional displays, loud cries or physio-psychological reactions. Such reactions were generally set off by the conclusion of the improvised passage (*qafla*) and the return to the original or secondary mode (*finalis*) the performance style of the Syrian lutenist Qadrī Dallāl (*b* 1946) shows an obvious reluctance to resort to the concluding passage, with a view to restraining and diverting audience reaction.

6. STUDY OF THE 'ŪD. With the appearance of new problems of theory, such as the 19th-century division of the octave into 24 quarter-tones, the *'ūd* has entered a new phase. In the past it was not an ideal instrument for theoretical research, unlike the *ṭanbūr*: 'The *'ūd* allows of theoretical demonstrations, but in an imperfect manner' (see Al-Farābī in d'Erlanger, 1930–59, i, 305). However, as the *ṭanbūr* fell into disuse among Arabs during the 19th century, the *'ūd* was substituted for theoretical reference (see Aḥmad Amīn al-Dīk, 1926). The present-day tendency towards a standardized teaching method based on a Western approach tries first to resolve the problems created by the use of microintervals not provided for in Western treatises, and second to produce teaching manuals adapted to the instrument's evolution. The earliest such course to be published, in 1903, was by the Egyptian Muḥammad Dhākir Bey (1836–1906): *Tuḥfat al-maw'ūd bi ta'līm al-'ūd* ('The promise of the treasure,

or the teaching of the *ʿūd*'). Since then, various manuals have tried to 'democratize' the instrument, placing it within everyone's reach and putting forward teaching rules that claim to be universal. They offer instruction in solfeggio and Western theory and give exercises on occidental or oriental modes. They all use Western notation, with modifications of key signature, and place before the student a large repertory, mostly of the 19th and 20th centuries. Notable among proponents of this method of teaching was Muhiddin Targan (1892–1967). This trend has been opposed, in the name of the elementary aesthetic rules of traditional Arab music (i.e. creative liberty and the development of the modal sense; Y. Kojaman, *The Contemporary Art Music of Iraq* (London, 1978), 102ff). But certain masters of the *ʿūd* owe something to these newer manuals. Two are outstanding for their instructional value, those by Fu'ād Maḥfūẓ of Damascus (1960), and Mutlu Torun of Istanbul (1993). The manual by ʿAbd al-Raḥmān Jabaqjī of Aleppo (1982) was the first accompanied by audio-cassettes.

7. MAKERS. In the past little attention was paid to the field of string instrument making and instrument makers pursued their profession out of the public eye. A greater awareness of their work dates from the second half of the 19th century, in Istanbul, when makers' names became known for the first time. One of them was Manol (1845–1915), an instrument maker of Greek origin from Istanbul, renowned for the exceptional quality of his instruments, which are highly prized in Turkey. The Syrian Naḥḥāt dynasty, originally from Greece, settled in Damascus at the end of the 19th century, and signed their instruments with the name of Ikhwān Naḥḥāt (the Naḥḥāt brothers). The first generation was active in the 1920s and consisted of four brothers, Hannā, Anṭūn, Rūfān and ʿAbduh Naḥḥāt; the second generation comprised Hannā's two sons Tawfīq and Jurjī, and the dynasty came to an end with Tawfīq's death in 1946. The Naḥḥāt family, who worked on a small scale as craftsmen, not on the industrial scale usual today, transformed the *ʿūd* by giving it its pear shape (*ʿūd ijjāṣ*, or in dialect *ʿūd njāṣ*), and produced extraordinary instruments through their research into the sonority of wood. Specimens of the *ʿūd* signed by the Naḥḥāt brothers are sought after both by the greatest players, for the exceptional sonority which has been the reason for their success, and by antiquarians and collectors; these models of the *ʿūd* are the equivalent to the perfection of Stradivarius violins in the Western world.

CHRISTIAN POCHÉ

Udalscalcus [Udalschalk, Uodalscalc] **of Maisach** (*b* Augsburg; *d* Augsburg, 10 March 1149 or 1151). German composer, historian and hagiographer. He was a student, then a Benedictine monk, and finally abbot (after 1124) of the monastery of St Ulrich and Afra, Augsburg. He is said to have reconstructed it along the lines of the monastery of Hirsau and to have devoted much energy to ornamenting the church. Two somewhat different but parallel accounts from old chronicles testify to his musical talents, as well as to his skill as a versifier.

Two substantial musical works by Udalscalcus survive: his Offices for St Ulrich and for St Conrad. The text of the Ulrich Office is in hexameters; the antiphons are arranged in modal order, the responsories in reverse modal order, a striking novelty. The text of the Conrad Office is in rhymed prose. The music of both Offices is bold and imaginative, going far beyond the limits of classical Gregorian style (see Dörr, Schlager and Wohnhaas for an edition of the music of the Ulrich Office). Two hymns by Udalscalcus also survive, for Ulrich and Afra, respectively, and a sequence for Ulrich.

Udalscalcus composed a tonary or had one compiled according to his instructions ('secundum prescriptum piae memoriae domini Udalschalci'). It is to be found in slightly differing versions in two 12th-century manuscripts, *D-W* Gud.lat.334 (from St Ulrich and Afra, Augsburg) and *Mbs* Clm 9921 (from Ottobeuren).

LAWRENCE GUSHEE/DAVID HILEY

Udbye, Martin Andreas (*b* Trondhjem, 18 June 1820; *d* Trondhjem, 10 Jan 1889). Norwegian composer and organist. He was largely self-taught and said of his independent study: 'I got hold of a harmony text, and with its help and some study of song scores I succeeded rather late in working out the mysteries of harmony'. In 1844 he was appointed organist at the Hospitalskirke in Trondhjem, a post he held for 25 years. In 1851 a scholarship enabled him to spend a year in Leipzig, the first of two trips abroad that greatly influenced his career. He studied composition with Hauptmann and the organ

with Carl Becker and attended concerts and the opera frequently. On his return home in 1852 he became singing master at the cathedral school. Another scholarship made possible a study trip in 1858–9, this time to Berlin, Leipzig, Dresden, Vienna and London. In 1869 he moved as organist to the Vår Frue Kirke in Trondhjem.

Udbye's impressive output of diverse and complex works belies his limited formal training. His compositions include the opera, *Fredkulla* ('The Peacemaker', 1858), the operettas *Hr. Perrichons reise* (1861), *Hjemve* ('Homesickness', 1862; produced at Christiania, 8 April 1864) and *Junkeren og flubergrosen* ('The Squire and the Rose of Fluberg', 1867; Christiania, 7 January 1870), the cantatas *Sonatorrek* ('The Loss of a Son', 1872) and *Islaendinger i Norge* (1873), choruses, three string quartets (1851–5), an orchestral sketch entitled *Lumpasivagabundus* (1861), a fantasy on Scandinavian melodies for violin and orchestra (1866), 20 piano trios (1868) and 100 organ preludes (mostly 1867). His stylistic model was German Romanticism, and his dramatic works in particular show the influence of Weber, among others; his attempts to create a personal style were only partly successful. Of the 46 works to which he gave opus numbers, 21 are orchestral or for various vocal combinations with orchestral or piano accompaniment; his affinity for drama is apparent in these works from his choice of texts and his musical expression. His string quartets however are Classical in style and he seems largely to have been uninfluenced by Norwegian folk music.

One of the most gifted Norwegian composers of his time, Udbye was unable to achieve the recognition he deserved, perhaps owing to his lifelong economic difficulties and to being overshadowed by his contemporaries Kjerulf and L.M. Lindeman and, somewhat later, by Grieg and Svendsen. Few of his works were published, most of the manuscripts now being held by the Vitenskapsselskapets Bibliothek in Trondheim. Udbye's unusually large private music collection contained many works by all the important, as well as many minor, composers from the Renaissance to his own time.

KARI MICHELSEN

Uddén, Olof Wilhelm (*b* Stockholm, 4 Aug 1799; *d* Stockholm, 3 May 1868). Swedish composer and teacher. After studying music with Thomas Byström and Erik Drake, he earned his living as a customs official (1821–46). In 1846 he founded a music school in Stockholm that was evidently very well attended. His compositions include a *Missa solemnis*, an opera *Narcissus*, written *c*1840 but not performed, and other choral and vocal works. He also wrote a book on musical ornaments and a piano tutor (after Logier). In 1853 he was elected a member of the Swedish Royal Academy of Music.

ANDERS LÖNN

Udine. City in north-east Italy, capital of the province of the same name in Friuli-Venezia Giulia. In 983 it was ceded by Emperor Otto II of Saxony to Rodoaldo, patriarch of Aquileia, but it was only in the 13th century that the city began to assume some importance. In 1263 the patriarch Gregorio di Montelongo established a collegiate *cappella* of eight canons with the duties of officiating and singing in the church of S Odorico, recently built at the foot of the castle. In 1334 this church, expanded and decorated by the patriarch Bernardo and probably also endowed with an organ, assumed the name of S Maria Maggiore and the prerogatives of a parish which had been taken away from the older S Maria di Castello (now unsuitable and in an inconvenient location); it was also given a benefice for a precentor and in 1346 a notated gradual. The names of some of the first singing teachers and precentors are recorded from that point onwards: Manino (1347), Wuillelmo (1348), Luchino della Torre (1374–99), Francesco, formerly Filippo di Mercatonuovo (1393), Domenico da Buttrio (1395), Angelo da Spoleto (1398) and Guglielmo. An inventory of 1368 shows an increase in the endowment of books of liturgical music according to the Roman rite, replacing those in the Aquileian rite. The first known organists are Friar Domenico (1407) and Father Andrea (1417–19). In the 15th century other important figures in the cathedral *cappella* were Nicolò da Capua (1432–4) and Cristoforo da Feltre, or de Monte (1432), the German Giovanni Brith (1471) and the printer and precentor Gerardo di Lisa (before 1488). From at least 1372 the commune of Udine paid for wind players during public celebrations such as horse races, archery competitions, balls and important visits. Wind players were employed with increasing frequency in the 15th century, even during church services and the numerous processions which saw the involvement of local confraternities (in 1507 there were 32) and the Dominican and Franciscan religious communities. Various orders, even the mendicant ones, had their own singers, singing teachers, instrumentalists, music books and organs in their own churches. A book of laude from the 13th to 14th centuries, and a 15th-century Psalter and breviary have survived from the Battuti of S Maria della Misericordia.

The 16th century was particularly rich musically: the *maestri di cappella* at the cathedral included Giovanni Bayli (he held the post for almost 40 years), Francesco Patavino (Santacroce), Mattia da Ferrara, Gabriele Martinengo, Domenico Micheli, Ippolito Chamaterò, the Frenchman Lambert Courtois, Vittorio Raimondi and Giulio Cesare Martinengo. Organists included Girolamo de Rogatis, Giuseppe a Bobus and Innocenzo Bernardi. The number of wind players grew and they were increasingly employed during civil and religious ceremonies. Families of musicians emerged (including the Mosto, dalla Casa, Bucci, Cesari, Zagabria and Orologio families), skilled players of the cornett, horn, trombone, fife and flute who practised their art in various musical establishments in northern Italy and central and eastern Europe.

In the 17th century the directors of the cathedral *cappella* were Orindio Bartolini, G.A. Rigatti, Pietro Gambari, Cirillo Pacini, G.P. Fusetti and Teofilo Orgiani; gradually wind instruments were replaced by strings. Directors of the *cappella* in the 18th century were P.B. Bellinzani, Girolamo Pera, Bartolomeo Cordans,

Gregorio Rizzi and G.B. Tomadini, and in the 19th century Giacomo Rampini (ii), Francesco Bonitti, Giacomo de Vit, Michele Indri and Filippo Comelli. One of the outstanding organists was Francesco Comencini, whose compositions were much praised. 20th-century *maestri* included Giovanni Pigani, Albino Perosa, Gilberto Pressacco and Giovanni Zanette. A great deal of sacred music in manuscript by these composers (particularly from the 17th century to the present day), most of it in the concertato style, is held by the cathedral.

As well as in the churches, there was music-making in many noble households, at academies (particularly that of the Sventati, founded in 1606), in some institutions such as the Casa Secolare della Zitelle (1596), the patriarchal Seminary (1601), the Collegio dei Barnabiti (1679), and during celebrations and the frequent public balls. It is known that there were theatrical presentations from the early 16th century onwards, in the open air, the hall of the loggia comunale or in the grand hall of the castle (*rappresentazioni sacre* of Christ's Passion had been given in the cathedral from at least 1374). The first theatre, the Teatro Contarini, constructed within the great hall of the Palazzo Comunale, or town hall, was inaugurated in 1672 with *Iphide greca* by Nicolò Minato and G.P. Fusetti, but was closed after only two years. In 1680 the Teatro Mantica was inaugurated, and it remained in operation until 1754. It was temporarily replaced by the Teatro della Racchetta, or Provvisionale, between 1754 and 1770, during which time a number of noble families oversaw the construction of the Nuovo Teatro della Società dei Nobili, inaugurated in 1770 with *Eurione*, attributed to Ferdinando Bertoni. This theatre was later renamed the Teatro Sociale (1852), then, in the interwar period, the Teatro Puccini; it was demolished in 1964. From 1730 to 1810 Udine also had the Teatro dei Barnabiti, to which access was by invitation only, and from 1856 until World War 1 the Teatro Minerva. In the second half of the 20th century, after the demolition of the Teatro Puccini, concerts were for decades given in unsuitable or inadequate halls (the Sala Aiace, Palamostre, Auditorium Zanon and various churches) until the Teatro Nuovo Giovanni da Udine was inaugurated on 18 October 1997 with Mahler's Eighth Symphony.

Other notable musical institutions in Udine are the Istituto Filarmonico, a free music school founded in 1824 and taken over by the commune in 1876; it became the Civico Istituto Musicale Pareggiato J. Tomadini in 1925, and finally, in 1981, a Conservatorio Statale; the Associazione Amici della Musica was created in 1922 to run concert seasons, and the Scuola Diocesana di Musica was founded in 1928. Various instrument makers were natives of Udine (notably F. Gobetti, S. Serafino, S. Peresson) and the city was home to organ workshops (including that of F. Comelli). The Civico Museo houses a number of valuable musical instruments from the 16th and 17th centuries, and various portraits of musicians.

FRANCO COLUSSI

Udine, Girolamo da. *See* DALLA CASA, GIROLAMO.

Uffenbach, Johann Friedrich Armand von (*b* Frankfurt, 6 May 1687; *d* Frankfurt, 10 April 1769). German amateur musician. He was a member of an old Frankfurt family of prosperous tradespeople. As a student he travelled in the company of his elder brother Zacharias Conrad to Lübeck and then from Hamburg to England where they recorded their impressions of musical performances. Johann Friedrich, the more musical of the two, spent two further years studying in Strasbourg and after graduating in law in 1714 travelled through Switzerland to Italy to gain experience of operatic and concert life there. In Venice, at the S Angelo theatre, he witnessed a performance of L.A. Predieri's *Lucio Papirio* during which Vivaldi, who was acting as musical director and leader of the orchestra, played an astonishing cadenza where he ascended so high that, his fingers came, in Uffenbach's words, 'within a straw's breadth of the bridge'. Later in 1715 he went to Paris to receive instruction in lute playing from Gallot; he returned two years later to settle in Frankfurt, where he keenly supported the Frauenstein musical society concerts then directed by Telemann.

Uffenbach was a man of wide interests and many accomplishments. He formed a private learned society in Frankfurt (resembling Mizler's in Leipzig), and rose to an eminent position in the administration of the city. In *Dichtung und Wahrheit* Goethe referred to his work in organizing concerts and oratorios there and to his fine collection of music. Uffenbach was a benefactor of the new University of Göttingen, to whose library he left, among other things, the journals of his extensive travels in Europe. These constitute an important body of historical source material, as do his letters to musicians such as Telemann, Hotteterre, Graupner, Mattheson and Graun.

In England in 1709–10 the Uffenbachs heard Nicolini and Pepusch with admiration and noted the excellence of the London orchestras, consisting largely of foreigners. They found the English not very talented musically except as organists, a view confirmed for them on a visit to Cambridge where they heard the organ played in Trinity College chapel and attended a meeting of the music club at Christ's College where the *ingenia*, apparently, were not in the least *musica*. Uffenbach's interest in opera extended to writing two librettos: *L'arti communi: quo vanno per la città*, a *dramma per musica* which was

printed, and *Pharasmanes*, a Singspiel dated 1720 which remained unpublished until 1930.

MICHAEL TILMOUTH

Uffererii, Giovanni Damasceni [Ufferer, Johann Damascenus; Aufreri, Offererius] (*b* ?Pesaro, *fl* early 17th century). Italian composer. Eitner's bibliographies distinguished between German and Italian composers with similar names, and subsequent scholarship has tended to focus on his putative German composer 'Ufferer'. However, Beer has provided compelling evidence that the surviving compositions probably all come from a single Italian composer from Pesaro. The lost publication of sacred concertos may have acted as the source for his surviving motets, 16 of which were published in a number of German anthologies between 1613 and 1638, notably those compiled by Johann Donfrid. The works are fine examples of the early concertato motet, embracing a wide range of vocal idioms familiar from the motets of more celebrated north Italian composers of the period. Distinctive touches include the incorporation of the plainsong intonation for 'Gloria in excelsis Deo' in *Hodie nobis coelorum rex*, and the bold harmonic progressions found amidst the otherwise more conservative style of *O quam suavis est Domine*.

WORKS

all motets with basso continuo

Collection of sacred concs., 1–6vv (Venice, 1609), lost, cited by various, incl. Walther; Anima mea liquefacta est, 3vv, 1616[2]; Coeli enarrant gloriam Dei, 6vv, 1613[2]; Confitemini Domino, 2vv, 1623[2]; Factum est silentium, 4vv, 1627[1]; Filiae Jerusalem venite, 2vv, 1623[2]; Haec dies, 3vv, 1623[2]; Hi sunt quos aliquando, 4vv, 1616[2]; Hodie nobis coelorum rex, 4vv, 1622[2]; Jesu dulcis memoria, 5vv, 1646[2] (inc.); Jubilemus in arca Domini, 2vv, *D-Dl* (inc.); Magnus Dominus noster, 4vv, 1623[2]; O quam suavis est Domine, 4vv, 1623[2]; Pastores [Mariae] loquebantur, 2vv, 1622[2]; Repleatur os meum, 2vv, 1616[2]; Repleatur os meum, 1v, 1638[5]; Tota pulchra es, 3vv, 1627[2]; Voce mea ad Dominum, 2vv, 1622[2]; Vulnerasti cor meum, 3vv, 1627[2]

GEOFFREY WEBBER

Ufḳī, 'Alī [Bobowski, Wojciech] (*b* Lwów, 1610; *d c*1675). Ottoman musician of Polish origin. He evidently received a sound classical as well as musical education. He was captured, presumably by raiding Tatars, and taken to Constantinople, where he became a court musician, performing on the *santur*. He converted to Islam and in later life was active as an official interpreter. He wrote extensively on religious topics, but also produced an account of life in the imperial palace which includes a brief but instructive account of musical activities. More crucially, he compiled for his own purposes three collections of notation: a small group of psalms, and a first draft (*müsvedde*) and a much enlarged and more finished final version of a collection of instrumental and vocal pieces (*Mecmua-yi saz ü söz*) which covers much of the music heard at court. It would be difficult to exaggerate the importance of this collection as a historical document, for it provides a unique insight into the nature of the Ottoman tradition, hitherto recorded only in the form of song text collections. Of particular value is that in addition to the instrumental repertory 'Alī Ufḳī included a wide range of vocal forms, religious as well as secular, and covered folksong genres in addition to those of urban art music.

OWEN WRIGHT

Uganda, Republic of. Country in east-central Africa. Situated on the northern shores of Lake Victoria (Nyanja), it has an area of 241, 038 km^2 (including 43, 938 km^2 of water). Its population, numbering approximately 22·21 million (2000 estimate), is ethnically diverse, composed of over 30 individual societies distinguished by history, language, geographic location and social and political structures (fig.1). The many, varied musical traditions that result from this diversity serve as identity markers themselves.

I. Introduction. II. Music areas. III. Buganda. IV. Modern developments.

I. Introduction

1. Languages and ethnic groups. 2. History and research.

1. LANGUAGES AND ETHNIC GROUPS. The Ganda, Masaba (or Gisu), Gwere, Hima and Iru, Hutu, Kenyi, Kiga (Chiga), Konzo (Konjo), Kooki, Nyala, Nyambo, Nyole, Nyoro, Ruli, Sese and Tooro are Bantu-speaking groups who live south of a boundary formed by Lake Albert, the Victoria Nile and lakes Kyoga and Salisbury. Groups speaking River-Lake Nilotic languages live in north-central Uganda to the north of this boundary, which forms part of what is sometimes called the 'Bantu line'; they include the Acholi, Alur, Labwor and Lango. Another related group, the Padhola, live in a small area in south-eastern Uganda. In the north and east, speakers of Plains Nilotic languages include the Karamojong (Karimojoŋ) and the Teso; in the north-west there are a few groups, including the Madi, that belong to the Moru-Madi division of central Sudanic languages, as well as a

1. Map of Uganda showing the former kingdoms and the distribution of ethnic groups

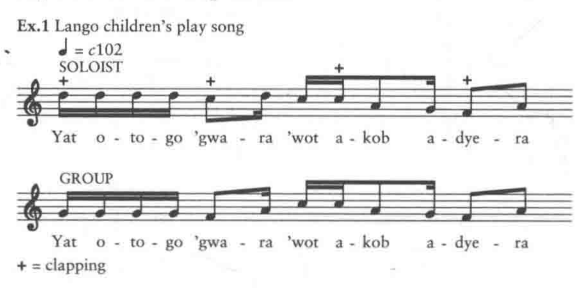
few representatives of the Plains Nilotes. In the extreme west of Uganda live a few small groups of 'pygmy' peoples: in the mountain rain-forests near the borders with Rwanda and the Democratic Republic of the Congo (the former Zaïre) live numerous bands of Twa. A few groups of Mbuti 'pygmies' inhabit the forest around the Semliki river along the border with the Democratic Republic of the Congo. (For a discussion of their music *see* RWANDA AND BURUNDI and the DEMOCRATIC REPUBLIC OF THE CONGO.)

Since language and speech are important determinants of a music tradition, specific music traditions can be identified with specific ethnic groups and their languages. In addition it is also possible to identify particular music traditions visually, through the instruments and various aspects of the dance (costumes, formations and movements). Because it was formerly one of the largest and most powerful kingdom states of east-central Africa and because its rich and varied music traditions have been researched more fully than those of neighbouring peoples, the part of Uganda previously called Buganda is treated separately (see §II below).

2. HISTORY AND RESEARCH. Oral traditions of the historic kingdoms of Uganda mention drums in association with chiefly power and patronage, and at the tombs of past rulers personal drums are preserved among the regalia. Specific songs associated with important events are also mentioned in clan traditions. The xylophone associated with Kyabaggu (king of Buganda during the mid-18th century) is still preserved at a rural shrine, along with the remains of the *entamiivu* drums that accompanied it. Rock gongs discovered in several locations in Uganda, often in association with rock shelters and rock paintings,

are probably of much greater age. Written accounts of musical activity began with the diaries of European explorers such as J.H. Speke and Emin Pascha in the mid-19th century and report mostly on musical life at the court of the Ganda king. Subsequently, explorers, missionaries, anthropologists (such as J. Roscoe) and administrators (e.g. Sir Harry Johnston) have added to this history. Some cylinder recordings made by Johnston survive from the early years of the 20th century. By the 1920s HMV was producing records throughout East Africa, and from the early 1930s numerous Ugandan recordings (including some Christianized church music) were made by Odeon and later by EMI (*c*1937).

Joseph Kyagambiddwa was the first Ugandan to publish staff notations and analyses of Ganda music at the same time as Klaus Wachsmann was completing his important survey of instruments throughout the country in his role as curator of the Uganda Museum (Trowell and Wachsmann, 1953) and was also recording extensively on disc. Copies of Wachsmann's recordings are stored at the Uganda Museum and at the National Sound Archive in London. Both Radio Uganda and the National Theatre in Kampala have preserved some of their recordings, but as yet Uganda has no national sound archives.



There was a considerable growth in research done mostly by visiting scholars during the 1960s (notably Anderson, Kubik, Cooke, Gourlay and Van Thiel). This work was further stimulated by research seminars given by John Blacking at Makerere University (Kampala) during 1965 and 1966. The troubled years of the 1970s and early 1980s effectively halted any serious research by foreign scholars within Uganda and also hampered the development of any local research base, though aspects of traditional music are studied and taught (mainly as performance) in the Department of Music, Dance and Drama at Makerere University and at the music department of the Institute for Teacher Education (Kyambogo). An exception is James Makubuya who completed his ethnomusicology training in the USA in 1995, writing a detailed study of the role and significance of the *kiganda endongo* (bowl lyres of the Ganda people) and later beginning a study of the *nindingidi* (tube fiddle). Since 1987 a few foreign scholars have returned to continue research in southern Uganda with P.R. Cooke exploring the fate of the former court music of Buganda as well as surveying the development of mixed instrument ensembles in Busoga, C.T. Gray examining the textual content of bowl lyre songs and researching the creation of vernacular music for use in the Catholic Church, and A. Cooke, Micklem and Stone researching xylophone styles in eastern Uganda.

II. Music areas

Despite the ethnic diversity of Uganda, five principal music areas can be identified if one surveys general features of musical style (especially rhythm and tempo), together with language, dance styles and preferred instrument combinations. These areas are: (1) pastoralist music of north-eastern Uganda; (2) Nilotic music of northern Uganda; (3) music of the Sudanic language group (Madi, Lugbara and Kakwa) in north-western Uganda; (4) Bantu music of central and eastern Uganda; (5) music of the western kingdoms of Tooro, Bunyoro and Nkore, including Kigezi. Rhythmic and tempo differences are clearly evident in the most representative dances of each region.

1. Pastoralist music of north-eastern Uganda. Formerly called Nilo-Hamites or Plains Nilotes, these people include the Karamojong, Jie, Pokot (Pökoot), Tepeth (So) and Teso. With the exception of the Teso, these peoples make little use of musical instruments, except for the occasional animal-horn trumpet used to heighten excitement in dances and temporary flutes made often from lobelia stalks for solo diversion. Singing styles are characterized by leisurely and long choral refrains, the use of vocal cueing among the Karamojong to permit democratic participation through change of soloist (Gourlay, 1972), the slow timed claps of the chorus and the foot-stamps of high-leaping dancers in the *edonga* dance. Ox-songs expressing praise and love for cattle are a principal theme in men's singing, whether for a beer party or for *edonga*. Interestingly, there are similarities with the music of the pastoralist Hima living among settled Bantu-speaking Iru and Hutu in the plains of Nkore and Bunyoro in western Uganda, notably the relatively leisurely style of performance and the comparative absence of instruments. However, a distinctive feature of Hima singing, the frequent use of melisma, is absent in the singing of the Plains Nilotes.

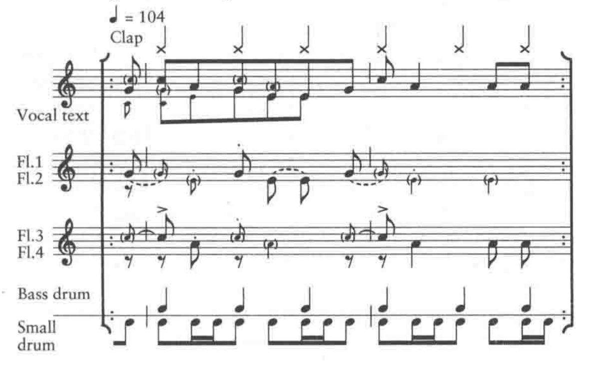
2. Nilotic music of northern Uganda. Among both the Nilotic north and the Bantu south one finds a wide range of instruments used in village music-making. Clear differences in size, design and playing techniques of the harps, lyres, flutes, trumpets and drums can be noticed. Musical rhythm is also a major distinguishing factor. The syllabic rhythm of Nilotic languages (with their high proportion of short syllables) lends itself readily to a rhythmic base in duple time.

A children's song from Iceme, Lango, ex.1, illustrates the typical rhythms of Nilotic song accompanied by a regular clapped pulse. Communal singing among the Acooli (Acholi) shows a high degree of overlap between soloist and chorus leading to polyphony. In Acooli, Lango and as far east as Labwor, young men make use of three sizes of lamellophones known as *lukeme* (Acooli) or *okeme* (Lango) in large ensembles of as many as 15 or 20 players to accompany their choral songs. The most important dance of the Acooli is the *Bwola* ceremonial dance. Crouching and leaping characterizes the movements of men who carry small drums when dancing the *Bwola*, while women make much use of shoulder and arm movement. The *dingi dingi* girls' dance, the *orak* and *laracaraca* are other dances performed by young people.

Conspicuous among the musical genres of the Nilotic Alur are large ensembles of long side-blown wooden trumpets played in hocket style by men and youths for their *agwara* communal circular dances. Similar hocketing ensembles employing sets of smaller trumpets known as *tuum* used to be known in Acholi but may now no longer be played. In the last 20 years of the 20th century the *adungu* (arched-harp) of the Alur became widely popular throughout Uganda and is now played in several different sizes with the largest being up to 2 m in overall length.

3. Music of the Sudanic language group in north-western Uganda. The music of this language group (Ma'di, Lugbara and Kakwa) has been little researched. While the music sounds rhythmically similar to that of their Nilotic neighbours, no rigorous comparisons have been made. Popular communal dances include the *osegu* stopped-flute ensembles of the Madi, which are similar in their use of hocket to the trumpet ensembles of the Alur. During the course of the performance a rich texture is produced by the increasing use of harmonic equivalents, so that the 'melody' begins to sound like a chordal ostinato. Ex.2, an *osegu* song from Ma'di-Okollo, illustrates some of these features. Madi men perform a genre of song accompanied by technically simple but rhythmically complex playing of the *odi* lyre, and it is organized metrically in long cycles of as many as five or six utterances for each cycle that can span up to 60 or 72 minimal units.

The music of the Kakwa, a small group of Bari-speaking peoples living in the extreme north-western corner of Uganda, differs greatly from that of any of its Ugandan neighbours in its melodic features. Downward pitch glides are so common in their songs (possibly related to the phonological structure of the texts) that it is difficult for outsiders to perceive distinct pitches. However, their long single-headed drums, used in accompanying *lorojo*, *bayito* and *mute* song genres in family rites such as funerals and heir-naming, are carefully tuned to contrasting pitches.



4. Bantu music of central and eastern Uganda. Four groups considered here are the Ganda and the Soga, who live around the northern shores of Lake Victoria, and, separated from these, the Masaba (Masabe, Lugisu or Gishu) who inhabit the slopes of Mount Elgon on Uganda's eastern border, and the Konjo (or Konzo) who live in a similar habitat in the Ruwenzori mountain range on Uganda's western border. The Konjo and Masaba may have been the earliest inhabitants of the interlacustrine area, displaced to their highland fastnesses by immigrant peoples.

The syllabic rhythms of Bantu speech, resulting from the particular mixture of long and short syllables, is closely preserved in song, and the mora (the tone-bearing unit of length) plays a key role in shaping these rhythms (long syllables consist of two morae). Text rhythms are commonly underlaid with musical rhythms based on drummed triplets. Ex.3*a* illustrates this relationship. In the case of most typical songs of the Soga, Konjo and Masaba every third unit is marked by clapping, rattles or legbells. In Buganda, however, this is converted to a slower principal beat (marked by a low-pitched drum and clapping, commonly with six divisions of the beat (ex.3*b*). The Konzo and Masaba use pitch systems that are not pentatonic as in the rest of Uganda, but heptatonic and hexatonic respectively.

Busoga, a region that frequently suffered in past centuries from the raids of both Ganda and Nyoro, has a wide range of instruments, possibly as a result of ethnic mixing. These include xylophones (used only by the Alur and Adhola among the Nilotic peoples); sets of panpipes (of three different sizes) used increasingly since the 1960s; tube fiddles; notched four-holed flutes; several sizes of lamellophones; rattles, other concussion instruments and drums. Some troupes of Soga semi-professional musicians use all of these instruments in their ensembles.

Polyrhythmic interlocking is an essential feature of panpipe playing, and it resembles the interlocking tec-hiques of xylophone playing throughout southern Uganda. Lamellophones, not adopted by the more conservative Ganda, were readily adopted by the Soga from their Nilotic neighbours in the north and have become increasingly popular since the 1920s. An ensemble of three different sizes played with a flute are a favourite combination for beer-party music. Several styles of log xylophone playing are found in Busoga: those in the northern part of the region seem to have been influenced rhythmically by Nilotic musical style while those in the south are more like the *amadinda* style of the Ganda. In Busoga villages as many as six persons play on one instrument often built over a pit, which enhances the lower frequencies of the bass keys. Dance gestures of both the Ganda and Soga focus on virtuosic pelvic rotation with the arms carried in a variety of statuesque positions at or near shoulder level.

Ex.2 *Osegu* stopped-flute ensemble song from Madi-Okollo, West Nile. Basic structure. The four flute parts extend over several octaves with variation in both vocal and flute parts. The pitches C and G are harmonically equivalent, likewise A and E, and notes in brackets indicate optional sounding of harmonic equivalents.

5. Music of the western kingdoms of Tooro, Bunyoro and Nkore, including Kigezi. Though closely related linguistically to the Ganda, the musical styles of the neighbouring kingdoms of Bunyoro and Tooro show a Nilotic influence that clearly parallels the degree of penetration into western Uganda by the Bito clans from the Nilotic north. At some point in the late 16th or the 17th century these invaders established a ruling hegemony, replacing the legendary Cwezi dynasty of the old kingdom of Bunyoro-Kitara. Unlike the Bantu-speaking groups discussed in the previous section, duple metre rhythms similar to those in Nilotic music are used to accompany songs and dances. As a result, syllables of two morae are frequently compressed, and conversely short syllables are lengthened to fit the underlying metrical framework of the music. Accompanying rhythms are exemplified with rattles strapped around the lower-legs

of dancers, sounding intricate rhythmic patterns against the crisp sounds of the short, single-headed, hand-beaten *ntimbo* drums for the popular *orunyege* dance style common to both Tooro and Bunyoro.

Further south in the former kingdom of Nkore, where pastoralist Hima people have moved into an area populated by Iru agriculturalists, the pastoralist influence seems to have produced slower and gentler tempos. The two principal dance genres, the men's *ekitaaguriro* and the women's *ekizino* dances of the Iru majority, call for a lightly beaten, continuous pulsation of sounds produced by raft-rattles, large water pots (tapped on their mouths with flat beaters made from banana fibre) or small drums. The pulsation is grouped into repeated patterns of eight beats that are accented variously. Male choral responses at the beginning of their *ekitaaguriro* dance take the form of prolonged low humming that imitates the lowing of cattle. The dance gestures of the men are marked by raised arms that symbolize the slowly waving long horns of their Nkore cattle, while their feet tap out polyrhythmic patterns. The more powerful and aristocratic Hima became the rulers of the kingdom and many of their cults and song texts are associated with cattle. Poorer Hima earn their living as herders and often live in temporary grass huts within pastures. The Hima *entooro* men's dance also consists of gentle arm-waving gestures, but it is performed while seated. While the Hima adopted the Bantu language of the Iru, Hima singing style (often admired and sometimes imitated by non-Hima) is extremely melismatic and thus quite distinct from Iru singing.

In 1993 the people of Nkore, unlike the Nyoro and Tooro, voted against the restoration of the kingship to the Hima royal family. Former musical institutions of the palace are likely to vanish, but the playing of one of the ensembles, the *esheegu* stopped-flutes, was not confined solely to the court and is still practised by a few teams of men in western Nkore. In the mountainous south-western corner of the country the Kiga, whose culture resembles that of the Iru in Nkore, shows less northern influence in their singing styles. Syllable timings in song are more like those of the Bantu peoples discussed above in §4, but as in Nkore, Bunyoro and Tooro the accompanying rhythms are based on a duple division (ex.3*c*).

This survey covers the more important and distinctive music styles in Uganda, but is necessarily incomplete. Table 1 lists many of the principal song-dance genres of most of the ethnic groups in Uganda, as well as the distribution of certain instruments and ensembles (for obvious reasons drums and most idiophones are not included). The information on instruments is based on Wachsmann's survey (Trowell and Wachsmann, 1953), and it must be noted that since the time of that survey some instruments have been adopted by other ethnic groups partly as a result of national education and cultural policies (see §IV below).

III. Buganda

The kingdom of Buganda, on the northern shore of Lake Victoria and to the west of the Nile, was settled at an early date by independent clans of unknown origin. Other clans arrived later to form one nation, a conglomerate of 38 clans under the rule of the *kabaka* (king). Much of Buganda's musical history is embedded in the oral traditions that record the contributions of the clans to the musical life of the nation. The kingship was interrupted with the coup of 1966 when Muteesa II fled into exile, later dying in London. When the monarchy was reintroduced and Muteesa's heir, Ronald Mutebi (*b* 1955), was installed as 36th *kabaka* in 1993, the royal *mujaguzo* drums were sounded again at his coronation, but in the intervening years many of the former palace

musicians had become very old or had died. A 'cultural village' has been created adjacent to one of the royal residences, where such traditional musical ensembles as are discussed below might flourish again, but too short a time has elapsed to assess the chances for success of such a revival.

1. Instruments. 2. Form.

1. INSTRUMENTS. Instrumentalists at the court are under the charge of two hereditary chieftainships, Kawuula and Kimomomera, whose main concern is the royal drums. Next to the royal drummers, the trumpeters were the most conspicuous. They took turns (*ebisanja*) to serve at the palace for periods of four to six weeks in the year. The *amakondeere* (trumpets) are made of bottle-shaped gourds and are side-blown. They form an ensemble of at least five instruments played in hocket, each instrument being named according to its position within the pentatonic system to which the set is tuned.

The trumpeters lived on the *kabaka*'s land; a settlement of trumpeters was known as the *ekyalo ky 'abakondeere* ('trumpeters' village'). It is believed that the *amakondeere* came from the east because of their association with the Mmamba (Lungfish) clan, who claimed to have come west across Lake Victoria. Another trumpet set, *amagwara*, was obtained from one of the neighbouring Bunyoro counties conquered in the 19th century. It was played at the palace on rare occasions and is an example of the accretion of a musical style in the wake of conquest. Certain important chiefs in the past were entitled to trumpet music at their homes. Few members of the former trumpet bands appear to have survived the interregnum period.

The same is true of the former players of the *kabaka*'s *ekibiina ky'abalere*, a set of five or six notched flutes (*endere*) played with a quartet of drums (see fig. 2 below). Although it was less prestigious than the trumpet-sets, it still constituted a court ensemble. The *akadinda*, a large xylophone with up to 22 free keys (*see* XYLOPHONE, fig.5), was the exclusive instrument of the *kabaka*. While few specimens are extant, the two villages from which the king's *akadinda* players were recruited continued to maintain and teach the royal repertory throughout the interregnum. The *amadinda* or *entaala*, a xylophone with 12 free keys, was widely played in the homes of important and well-to-do Ganda, and its popularity in school music programmes ensured the continuity of this tradition. As in the case of the *akadinda*, in the 1990s the previous *kabaka*'s *amadinda* players and younger kinsmen still practised the repertory in their villages.

The *entenga* (drum-chime) rose to great social heights within two centuries. First played as a spectacle for country people, later providing entertainment for the priest of an influential spirit cult, it eventually found favour with a *kabaka*. It became part of the court ensemble to which several refinements were added, and was held in great esteem. When a *kabaka* wished to favour a chief publicly, he sent *entenga* to play for him. From the 1950s *entenga* were made and played at one of the country's leading high schools, a sure sign that, as regalia, the drum-chime did not rank as highly as certain royal drums.

The music of the court is inseparable from the music of the Ganda people. An example of this may be seen in the role of the *omulanga* (harpist) who, besides satisfying the musical aspirations of all the community, also held a privileged position at court; he was the only performer who played in the quarters of the king's wives, and his relationship with his lord was as close as that of David and King Saul. Since the beginning of the 20th century there have been few harpists, a mere handful in a nation of some two million people.

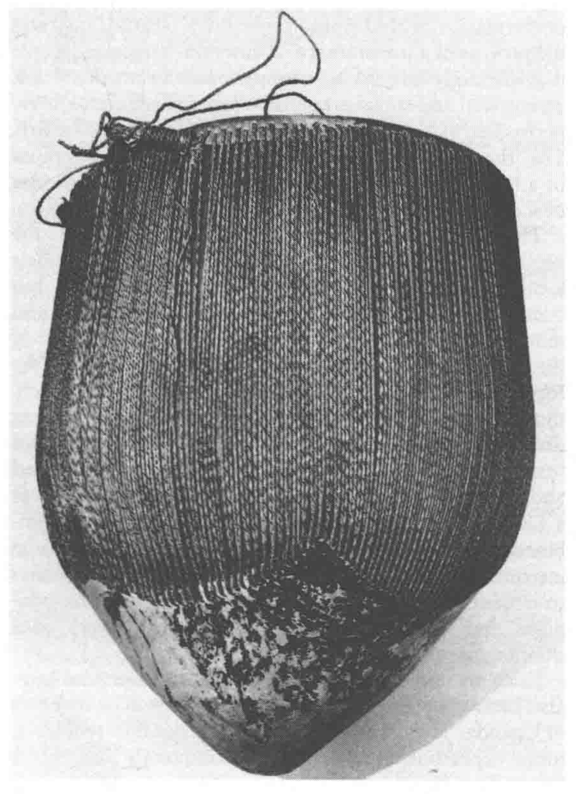
Consort music is so important in Buganda that even *eng'ombe*, the individually made and owned animal-horn trumpets of the hunters, are often sounded together. Like the *amakondeere* and *amagwara*, the *eng'ombe* are side-blown; each has a small hole in the tip which when stopped yields a grace note less than a minor 3rd below the open note, an interval of critical importance in the speech of the Ganda. Unlike the trumpets used in proper sets, *eng'ombe* are not tuned in relation to each other. Because the hunters rely on horn-calls for coordinating the practical and ritual steps necessary for a successful hunt, the calls tend to follow in fixed sequences; in this sense the horns perform in consort and their sounds acquire 'musical' coherence.

In the 18th century Buganda turned its attention to the east bank of the Nile, which resulted in an influx of music from Busoga. A striking example of such borrowing against a background of political supremacy occurred in the second half of the 19th century, when the *ntongooli* (bowl lyre) of Busoga first attracted attention at the *kabaka*'s court – where, initially, *ntongooli* players were a distinct group of Soga entertainers – and in time became a popular favourite under the name *endongo*. Despite their whole-hearted adoption of the instrument, the Ganda still apply the epithet *eya Soga* ('of the Soga') to the *endongo*. When harp playing became an esoteric art in Buganda, the bowl lyre predominated because it was free from the ties of tradition and in no way diminished the prestige of the harp.

From the beginning of the 20th century migratory labourers have come from abroad in large numbers, bringing their music with them. The most important instrument introduced in this migration, the box-resonated lamellophone, reached Buganda in two different forms, one from Rwanda and Burundi in the south-west and the other from the Alur in the far north-west, by way of Busoga. Labourers from the south-west also brought the gourd bow with tuning-noose, but it has not become established. Although the lamellophone is popular in Buganda, it is rarely played by the Ganda themselves but by immigrants who constitute half the population of some villages.

In 1906–7, a young musician, Eriya Kafero of Mityana, created the *endingidi*, a single-string tube fiddle that is the only Ganda bowed instrument. The invention was probably inspired by both the indigenous *sekitulege* (ground bow), a child's string instrument, and the foreign *rebab*, which was played by Arab travellers from the east coast of Africa introducing to Kafero the technique of bowing. Circumstances favoured the *endingidi*; like the bowl lyre, it was free from traditional ties and was used to accompany topical poetry. With the *endongo* it is still favoured by wedding musicians.

Social occasions are often marked by the use of a particular instrument or ensemble. Thus traditional wrestling matches require drumming on the *engalabi*, a tall, single-headed drum with an exterior profile reminiscent of an ancient cannon (fig.2). The monitor lizard-skin head, struck with bare hands, gives a crisp note. Spectators



2. Ekibiina ky'abalere ensemble of notched flutes, three embuutu ('Uganda' drums) and one engalabi (single-headed drum)

participate with long choral ostinatos at a remarkably slow tempo for Ganda music. The *engalabi* is also indispensable to the funeral rites during the stage at which the clan elders appoint a successor to the deceased; to attend the ceremony is *okugenda mu ngalabi* ('to go where the *ngalabi* is'). This drum was of minor importance at the palace compared with the *embuutu*, a kettledrum with a wooden shell either in the form of an egg truncated at both ends (fig.3) or in a combined cylindrical and conical form, with a sharply angled profile where the lower conical section meets the upper cylindrical section.

Music for the *baakisimba*, the best-known Ganda traditional dance, at one time required a trio of two *embuutu* and an *engalabi* (figs.2–3), but during the 1980s extra *embuutu* drums were included in the ensemble as a drumming style from the Kooki tribe in south-western Buganda became popular among the semi-professional groups of drummers and dancers. Wedding feasts call for an ensemble in which the *embuutu* plays a major part. The ensemble, *embaga*, literally 'the wedding feast', consists of a bowl lyre, one or two spike tube bowed lutes, one or two notched flutes and an *embuutu*. The *embuutu* is also used for drumming *emizira* (clan slogans), phrases that name a clan ancestor or hero and recall important events in that clan's history.

Drum names can be confusing. For instance, musicians usually call certain *embuutu* drums *baakisimba* because of the role they play in that dance. A drum may have a proper name as if it were a person (virtually the rule for drums in the palace); others have names derived from their use at certain functions or their part in a certain ensemble; alternatively, they may be called by a generic term that identifies them by type. The word *eng'oma* (NGOMA) means 'drum', 'feast' or 'dance' in Ganda, as in many other Bantu languages.

3. *Embuutu ('Uganda' drum)*

2. FORM. The solo-chorus or antiphonal form, ubiquitous in Africa, is also practised in Buganda. Choral responses are disciplined and at times accompanied by hand-clapping. Instrumental music in several parts predominates, and the successive entry of parts is characteristic. Parts interlock like fingers of folded hands, and the only interval that is struck simultaneously is the octave. These features have been studied extensively in xylophone music, which is especially rewarding because it also demonstrates practices such as octave transposition and the existence of the *miko*, a modal system. Data on *miko* were first published by Kyagambiddwa (1955) and later studied by Lois Anderson (1968).

Luganda is a tonal language, and musicians claim that the tonal and accentual profile of the language determines the shape of the chanting. However, it is the poetry of the song texts that is of supreme importance; listeners attend to the words rather than to any other feature. In this sense it is justifiable to speak of parameters other than poetry as accompaniment. The text line is the unit of the song, each line usually of four and a half to five seconds' duration. People refer to a particular song by its opening line or lines, many of which are familiar to most Ganda. The performer's task consists of elaborating on the imagery in those lines; he executes his elaborations on different tonal frames, rather like vocal registers, thus producing complex and formal musical and poetic schemes. The manner in which these changes are applied can make the difference between an inspired and a pedestrian performance.

Poetic creation and the use of different tone levels is essentially improvisatory; the singer may use many stock phrases and exclamations to achieve continuity and to mark climaxes. The improvisation of a performer may be repeated on another occasion and eventually become a song in its own right. The various aspects of improvisation, especially those that lead to the creation of a new song, are termed *ekisoko*, a concept difficult to translate into a Western language. Ganda historians record the political and social circumstances out of which an *ekisoko* has sprung, even though it be centuries ago, and quote the model for the new *ekisoko*.

Patterns of accompaniment are likely to be rigidly fixed. It is impossible to say how conservative these patterns are and for how long they have remained intact; however, one has been recorded as having remained stable for over 25 years, and this single case may well be representative of most music in Buganda and may be valid for a much longer period. The music lends itself to notation in 3/8 or 6/8, but Kyagambiddwa has also published several transcriptions in 5/8. He believed that heroic songs of the past were sung in 4/4, a pattern he called *biggu* ('witch-doctor's rattles'). The melodies are pentatonic, probably of the pen-equidistant variety, which tends to adapt to Western diatonic tuning. A study of xylophone and harp tuning processes provides an insight into the tunings themselves (Wachsmann, 1967; Cooke, 1992).

IV. Modern developments

Western music continues to have an influence on Uganda's music. From the 1950s 'Sunday' composers, untrained in Western composition, turned mainly to choral music. The first commissioned composition was

probably Mbabi-Katana's *Te Deum* for the ceremony at the High Court in Kampala on the occasion of Elizabeth II's coronation in 1953. Kyagambiddwa's *Uganda Martyrs African Oratorio* (1964) was recorded and widely performed in Europe. His technique is characterized by detailed vocal scoring, which closely follows the profile of the text in the traditional manner, with written instructions naming the particular dance style in which drummers might improvise an accompaniment for the chorus in each movement. Like Kyagambiddwa (1928–78), the Munyankore composer Benedicto Mubangizi (1926–95) frequently composed in his own vernacular, closely emulating at times the traditional singing style of his people and occasionally using traditional rhythmic accompaniments. His output was large and included six masses and 265 anthems and hymns. His hymnbook compilation *Mweshongorere Mukama* (Let us Praise the Lord) contained many of his own compositions and has become popular in Catholic churches throughout the diocese of Western Uganda. Within the Protestant Church of Uganda composers have tended to create vernacular compositions with SATB homophony similar to English models (Gray, 1995).

The late Ahmed Oduka, director of the Uganda Police Band, created a repertory with tunes based on traditional melodic patterns and wrote out the score for band instruments as he had been taught at the Royal Military School of Music, London (Kneller Hall). Like Kyagambiddwa, he added drummers on ad hoc local drums, without scoring their parts.

In Kampala, the capital, and in the few other provincial towns, nightclubs, bars and local radio stations disseminate imported musical entertainment and the somewhat Westernized popular music of local groups. While Congolese and Swahili songs and styles based on West African and Latin American genres are popular, groups such as Jimmy Katumba with the Ebonies and the Afrigos Band (both popular during the 1980s and early 1990s) also perform in local vernacular languages, and in some cases the influence of Western church homophony is clearly evident. One of the most popular genres of the mid-1990s was *kadongo kamu*, originally inspired by American country music; it involved one singer with a steel-string guitar performing very much in the tradition of the itinerant rural musician. Humorous, topical and subversive commentary (especially during the period of army rule) were important characteristics in these acts. While the guitar accompaniments were rudimentary, using simple triadic Western harmonies, indigenous rhythms such as the *baakisimba* dance pattern were also integrated. Later, *kadongo kamu* moved into popular theatres and was enlarged to accommodate other instrumentalists (e.g. electric and bass guitars) and dancers, but it lost none of its political and social content.

Popular theatre involving much song and dance burgeoned through the 1990s, drawing on both the expertise of graduates from Makerere University's School of Music, Dance and Drama and the musical skills of popular musicians. Topical new songs and Western 'hits' are juxtaposed with modernized action songs, traditional dances, court music and ritual to build plots advanced mainly by improvised dialogue. Numerous theatre venues have appeared in Kampala and its suburbs, where semi-professional companies often play to packed houses. Some of the urban Muslim population have developed an interest in *taarab* music from the Swahili coast and several *taarab* bands were formed during the 1990s, modelling their playing on imported recordings.

During the period of strife, Western religion was perceived by many rural Ugandans to have failed them, and this perception, combined with a breakdown in the national health infrastructure, corresponded to a rise in importance of traditional healers who combine their medicinal work with ancestor worship and spirit appeasement through the use of mediums and various types of trance. Music and dance are vital ingredients in these activities. Moreover, since traditional culture and traditional belief go hand in hand, the leaders of such cult groups (e.g. the Cwezi ancestor cult in Bunyoro and the corresponding Swezi cult in Busoga) regard themselves as guardians of traditional culture and extend patronage to local amateur groups specializing in traditional songs and dances. The cults are well-organized on a national basis; the Ugandan Traditional Healers and Cultural Association serves as a central organization.

An official policy aimed at recognizing the special potential of women in national development has led to the formation of innumerable women's clubs and self-help groups throughout rural Uganda. Singing and dancing often occupy a central place in their activities and in their songs (whether traditional or newly composed), which disseminate the latest ideas on good husbandry, hygiene, child care and other matters considered essential to development.

The ministries responsible for culture, education and agriculture view performance of traditional music and dance as a means of furthering their work. Accordingly, they organize regular district and national music festivals. While new songs are produced in abundance, the performance of traditional repertories clearly illustrates the process of a transference of function. Music and dance that formerly played an essential role in work, ritual, ceremonial and social events in village life are increasingly performed as 'consati' (concert programmes) or as theatre. The 'theatre' may often be no more than the compound of a homestead or a temporary open space in front of a new dispensary, village school or local government offices.

The numerous rural amateur troupes throughout the regions rehearse programmes that feature not only their local traditional instrumental styles and dances but occasionally also stereotypes of popular dances and musical genres from other regions of Uganda. Some of these groups model their programmes on those of the former National Ensemble (Heatbeat of Africa), which, though based at the National Theatre in Kampala during the 1960s and 70s, used a large cast of performers drawn from various regions in order to create ethnically varied and attractive programmes and to express the concept of a harmonious multi-ethnic society. These efforts, combined with the widespread encouragement of traditional instrument playing in Ugandan schools, lead sometimes to a varied instrumentarium where harps, zithers, panpipes and xylophones are added to what were once smaller ensembles.

Since around 1970 the *adungu* harps of the Alur have also been adopted as ensemble instruments in many areas of Uganda. They are made in three or four different sizes, tuned heptatonically, and are used frequently like guitars to produce simple triadic harmonies for accompanying traditional and modern songs and hymns. Everisto

Muyinda (*d* 1992) was the chief inspiration for the concept of mixed ensembles; he became a key figure in the musical life of the country during his varied career as a palace musician, a research assistant in a government-sponsored survey of music in Uganda, a chief musician in the widely travelled National Ensemble (where he was credited with inventing the 'Kiganda orchestra'), a demonstrator in the music gallery of the Uganda Museum and an instructor in traditional music at several large secondary schools. His younger colleague, Albert Ssempeke, like Muyinda a singer and performer of many instruments, also obtained initial training from the *kabaka*'s musicians and has taken up Muyinda's mantle in his efforts to promote traditional Ganda music. Both men have been teachers and mentors of many Westerners who have studied music in Uganda.

PETER COOKE

Ugarte, Floro M(elitón) (*b* Buenos Aires, 15 Sept 1884; *d* Buenos Aires, 11 June 1975). Argentine composer and teacher. He received his earliest musical training from Hercules Galvani (violin) and Cayetano Troiani (harmony) in Buenos Aires. Later, he attended the Paris Conservatoire, where he studied harmony with Pessard and Lavignac and counterpoint, orchestration and composition with Félix Fourdrain. After completing his education in 1913, he returned to Buenos Aires, where he held various teaching positions, including professorships at the Conservatorio Nacional de Música and the Universidad Nacional de La Plata. He served as a member of the Comisión Nacional de Bellas Artes and as president of the Sociedad Nacional de Música (later the Asociación Argentina de Compositores). He had a longstanding association with the Teatro Colón, serving on its board of directors (1924–7) and acting as technical director (1930) and general director (1937–43, 1946, 1956) of the theatre.

Ugarte is recognized as one of the leading composers of his generation and a principal proponent of Argentine musical nationalism. His early works show traces of French Impressionism; later, he infused his style and melodic, rhythmic and harmonic suggestions derived from Argentine folk music. His works of the 1940s and beyond

reveal an abstract compositional approach, avoiding overt folkloric references. Ugarte composed in all genres. His one-act fairy-tale opera, *Saika* (1918), and his indigenous ballet, *El junco* (1944), both received performances at the Teatro Colón. His Violin Sonata (1928) stands as one of the most important works of the Argentine chamber music repertoire. His charming song, *Caballito criollo* (1928) reveals a potent use of national idioms and expressive capabilities within a concentrated form.

WORKS
(*selective list*)

Stage: Saika, (op. 1, Ugarte), 1918, Buenos Aires, Colón, 22 July 1920; El junco, (choreog. poem, 1, E. Morales), 1944, Buenos Aires, Colón, 27 Oct 1955

Orch: Entre las montañas, sym. poem, 1922; De mi tierra, suite, 2 series, 1923, 1934; La rebelión del agua, sym. poem, 1931; Sym., A, 1946; Tango, 1950; Vn Conc., 1963

Chbr: Pf Qt, 1921; Vn Sonata, 1928; Str Qt, 1935

Pf: Preludio, g, 1945; 5 preludios, 1945; Vidala, 1948; Lamento campero, 1949; Ronroncitos, 1952

Songs: Baladas argentinas (F. Ugarte), 1v, pf, 1918; Caballito criollo (B. Roldán), 1v, pf, 1928; Ofrenda (M. A. Camino), 1v, pf, 1934; La Shulca (R. Jijena Sánchez), 1v, pf, 1934; Naides (A. Dentone), 1v, pf, 1953; Revelación (E. Morales), 1v, pf, 1954

'Ugav (Heb.). Ancient Jewish instrument, possibly a reed-pipe or form of organ. *See* BIBLICAL INSTRUMENTS, §3(xii).

Ughi, Uto (*b* Busto Arsizio, 21 Jan 1944). Italian violinist. He began playing the violin as a child and first appeared in public at the age of seven, performing the Bach D minor Chaconne. A meeting with George Enescu at the Accademia Musicale Chigiana in Siena in the early 1950s led to his going to Paris for two years as one of Enescu's last pupils. He then studied at the Geneva Conservatoire and toured with the pianist Lamar Crowson before beginning an international career. Since 1979 he has helped to organize a festival in Venice, and from 1987 to 1992 he directed the Accademia di Santa Cecilia Chamber Orchestra in Rome. For some time he has spent a third of his year in Italy, where he is based in Rome, and the other months on tour. Ughi is an archetypal Italian violinist, with a strong technique and a large tone of great beauty which he deploys in a repertory ranging from the Italian Baroque to the 20th century. His recordings include many of the large-scale concertos as well as some by Tartini; Beethoven sonatas with Wolfgang Sawallisch at the piano; and Bach's unaccompanied works. He has the use of two violins: the 1701 'ex-Kreutzer' and the 1744 'ex-Grumiaux' Guarneri 'del Gesù'.

TULLY POTTER

Ugo de Lantinis. *See* LANTINS, DE.

Ugolini, Vincenzo (*b* Perugia, *c*1580; *d* Rome, 6 May 1638). Italian composer, singer and teacher. He was a pupil of G.B. Nanino at the choir school at S Luigi dei Francesi, Rome, from June 1592 to 31 October 1594. On 1 May 1600 he was engaged as a bass there. From February 1603 to 6 December 1609 he was *maestro di cappella* of S Maria Maggiore, Rome; after a severe illness in January 1606 he could no longer fulfil his obligations and in order to recover his health was granted leave of absence from Rome from May to September that year. From 1610 he worked at Benevento Cathedral and from 1614 was director of music to Cardinal Arrigoni in Rome. From 1 August 1616 to 31 July 1620 he was *maestro di cappella* of S Luigi dei Francesi. On 13 June 1620 he was chosen as successor to Francesco Soriano, who had retired as *maestro* of the Cappella Giulia at S Pietro. He took up the post in July at a salary of only five scudi a month, while Soriano still received ten scudi; from August 1621, after Soriano's death, he was paid the entire salary of 15 scudi. On 16 February 1626 he was discharged, probably because he refused to take part in a public composition contest with Paolo Agostini, who was appointed to succeed him the following day. According to Vincenzo Giustiniani (*Discorso sopra la musica*), he was in Parma for a short period in 1628, for the Duke's wedding to Margarita de' Medici, sister of the grand duke of Tuscany. From May 1631 until his death he was again *maestro di cappella* of S Luigi dei Francesi. Orazio Benevoli was among his pupils.

Though clearly rooted in the 16th-century polyphonic style, Ugolini's music is also influenced by innovations taking place around 1600. In his first book of *Sacrae cantiones*, the setting for double choir is often interspersed with passages for solo voice or a few voices only, and rapidly performed *passaggi* predominate in the Alleluia sections. Features of this new stylistic approach are present in greater diversity in the *Motecta sive sacrae cantiones* (Venice, 1616). The solo motets in particular contain extensive virtuoso *passaggi* of considerable difficulty, requiring trained singers to perform them (see, for instance, the introit motet *Dies sanctificatus*, with trills within extensive chains of coloratura writing, and the motet *Congratulamini*, with rapid runs and long coloratura passages calling for considerable vocal range).

The *Motecta sive sacrae cantiones* (Rome, 1619) contains works characteristic of the concerto style in Roman church music of around 1620. Strong rhythmic contrasts are created by the alternation of extensive coloratura sections and parlando passages, and by frequent changes of meter. Short, rhythmically concise *soggetti*, repeated in sequence or taken up in imitation by the other voices, enliven the concertato interplay. In the solo motets the continuo forms the function of a supporting bass for extensive melodic sections interspersed with coloratura passages and ornamentation. Internal contrasts, provided by the alternation of rapid and sustained passages, serve to illustrate the text.

The *Motecta et missae*, liber secundus (Rome, 1622), represent a stylistically interesting symbiosis of the modern concertato style and polyphonic setting in the form of the anachronistic art of the canon. These works are a significant reflection of the situation in Rome at the time, when Romano Micheli was enlivening the scene from 1620–50 with his numerous polemical writings, and urging his contempories to write canonic compositions. Ugolini employs canons for four to 12 voices almost exclusively in the Sanctus movements (the Osanna and

Benedictus) of his masses. The only exception is the *Missa sopra il vago Esquilino*, which also has a canon in the Agnus Dei. In the manner of the riddle canon of the Netherlands, the solution is hidden in an accompanying Latin motto. However, the *resolutio* is always expressed. By comparison with Ugolini's earlier works, an increasing sublimation and depth of expression is perceptible in this collection. Important connotations of meaning are sometimes taken to ardent heights by the repetition of words in connection with short melodic sections in sequence (as in the motet *Accipe munus*). Extensive melismas and the repetition of short motifs in sequence, as in the Christe of the *Missa sopra il vago Esquilino*, and the occasional insertion of solo passages (as in the Credo of the *Missa Beata Virgo Maria*, 12vv), emphasize the new stylistic attitude of these compositions. The collection is an important, and in its musical structure a specifically Roman, contribution to the concertato mass of the first quarter of the 17th century.

KLAUS FISCHER

Ugolino, Biagio. *See* UGOLINUS, BLASIUS.

Ugolino of Orvieto [Ugolino di Francesco Urbevetano; Ugolinus de Urbeveteri] (*b* ?Orvieto, *c*1380; *d* Ferrara, 23–31 Jan 1452). Italian theorist and composer.

1. Life and music. 2. Theory.

1. LIFE AND MUSIC. He was already at Forlì Cathedral by 18 July 1411. On 13 May 1413 'domnus Ugolinus de Urbeveteri' was reported as a papal singer swearing allegiance to Pope Gregory XII. From 1415, when he represented the city of Forlì at the Council of Konstanz, he was a canon at Forlì Cathedral, appointed archdeacon in 1425; he was also rector at S Antonio abate in Rivaldino, Forlì. In 1427 he served as episcopal vicar during Bishop Giovanni Caffarelli's absence in Rome and was evidently a figure of substance within the city. He had correspondence with the humanists Girolamo Guarini, Ambrogio Traversari and Flavio Biondo; he was famous as an orator; and he is credited with a treatise on physics.

Ugolino visited Ferrara with the singers of Forlì on St Luke's day, 1426. On 12 October 1429 he was elected canon of Ferrara Cathedral, but he was still living in Forlì in November 1429; his permanent residence in Ferrara is documented only from March 1431. Evidently the rise of the Ghibellines in Forlì had forced his departure. On 25 August 1431 he was elected archpriest of Ferrara Cathedral (until 1448), in which capacity he seems to have played an important role in the expansion of the choir-school.

In 1448–51 he was vicar to Cardinal Pietro Barbo (the future Pope Paul II), in the diocese of Cervia. On 16 December 1449 he was appointed a papal secretary, a position he retained to the end of his life. Ugolino made his last will on 23 January 1452 at his home in Ferrara; an inventory of his estate was ordered on 31 January. According to an inventory of 1466, he had left the cathedral a copy of his *Declaratio* and a large but incomplete music-book that he had compiled, apparently of his own compositions.

But Ugolino's musical legacy is hard to judge. Although he was one of the last surviving composers of the Italian Trecento, the main body of his surviving music is all but illegible: the 18th gathering of the palimpsest manuscript *I-Fsl* 2211 was devoted to songs by him, 10 large openings containing perhaps 11 pieces; they include works with French as well as with Italian text. Three songs, headed 'Idem Ugolino', appear at the end of *I-Rc* 2151 (*c*1450), the grandest manuscript of his *Declaratio*; all are in the then outdated full-black notation with red coloration (a technique found also in the Ferrarese manuscript *P-Pm* 714 from the same years; *see* ROBERTUS DE ANGLIA), and use intricate rhythmic devices that reflect the Ars Subtilior tradition, though their style is otherwise that of the late Trecento composers. All three appear to be in two voices, though here too there are severe legibility problems (attempts at editing them are in Seay, 1955). The first, *Si videar invidorum sequi consortia*, seems to be a ballade, though its Latin text has no clear structure; *L'alta virtute* and *Chi solo a si* are both Italian ballate, though for the latter only the discantus line survives.

2. THEORY. Ugolino's *Declaratio musicae disciplinae* ('declaration of the discipline of music'; ed. in CSM, vii, 1959–62) was most likely completed during his years at Ferrara. Divided into five books, probably on the model of Boethius, it represents the *summa* of his learning, both speculative and practical. From the very first sentence of the introduction, 'The intellective power is known to be the noblest of the powers of the soul', it is clear that the treatise is pitched at a high intellectual level. Music is approached through reason and the senses, but reason, based on mathematics, takes precedence: music is a science. This Aristotelian orientation is evident throughout the treatise.

Proceeding from things more known to those less known, Ugolino began with the elements of music. Book 1, divided into 165 chapters, covers pitches, properties,

intervals, mutation and modes, but more than half of it is an extensive discussion of chants and their differences. The much shorter Book 2, on 'musica melodiata', is devoted to note-against-note counterpoint. Consonant and dissonant intervals are calculated within a hexachord and between different hexachords, illustrated with numerous examples. The book closes with a very important chapter on *musica ficta*, with rules and examples for perfecting imperfect consonances and 'sweetening the harmony'. Book 3 is an extended gloss in Scholastic terms on Johannes de Muris's *Libellus cantus mensurabilis*, rather oddly preceded by a discussion of modal ethos. With this book we come to the end of Ugolino's writings on practical music. Book 4 takes up the speculative aspect of intervals: it treats proportions first from a purely mathematical point of view, then as the basis of intervals. Book 5 returns to the high philosophical plane, with an inquiry into the nature of sound and its relation to *musica instrumentalis*, *humana* and *mundana*. Here the principal authority is Boethius.

It is clear that Ugolino, while not mentioning authors more recent than Johannes de Muris, had studied the works of Prosdocimus de Beldemandis, in whose footsteps he followed in treating both the practical and the speculative aspects of music. Many sections of Book 2 recall Prosdocimus's own counterpoint treatise. Moreover, the short treatise of the monochord appended to Ugolino's *Declaratio* is directly modelled on Prosdocimus's *Parvus tractatulus de modo monacordum dividendi*. Both produce one division in *musica recta* and two in *musica ficta*, providing flats and sharps. The only difference is that Ugolino began on *c* rather than *G* and split the semitones B–C and E–F into equal halves. Prosdocimus's and Ugolino's divisions, resulting in five flats and five sharps, were to have considerable influence on late-15th-century theorists in Italy. A significant source for the speculative portions of the *Declaratio*, likewise unnamed by Ugolino, has been identified as the anonymous *Questiones* on music (*F-Pn* lat. 7372), perhaps written by a pupil of Biagio Pelacani or someone in his circle.

Ugolino's treatise, though less original than was once thought, was nevertheless influential, especially the first two books. Franchinus Gaffurius copied substantial extracts in his *Extractus parvus musicae* of about 1474 and was able to purchase his own (incomplete) copy after he moved to Milan (*GB-Lbl* Add.33519). John Hothby used a copy (*I-Fn* Magl.XIX.36) for teaching purposes. Bartolomeus Ramis de Pareia transmitted Ugolino's metrical rules on counterpoint, with improvements, in his *Musica practica* of 1482. Giovanni del Lago quoted the *Declaratio* frequently in his letters, although he believed it to be by Prosdocimus. The treatise is a major if unacknowledged source of the anonymous *Compendium musices* printed in many editions in Venice between 1499 and 1597 (ed. in CSM, xxxiii, 1985). A chained copy of Ugolino's *Declaratio* was still in the sacristy of Ferrara Cathedral in the 16th century, when it was mentioned as being 'thoroughly useful to clerics'.

DAVID FALLOWS (1), BONNIE J. BLACKBURN (2)

Ugolinus, Blasius [Ugolino, Biagio] (*b* Venice, *c*1700; *d* Venice, 1771). Italian theorist. He may originally have been Jewish, though apostatized, eventually becoming a monk in the Franciscan order. As a scholar of Hebrew and other ancient languages, he was well qualified to compile and edit a vast anthology of writings, mainly by 17th-and 18th-century Christian authors, including himself, on Jewish antiquities, named *Thesaurus antiquitatum sacrarum* (Venice, 1744–69). Amounting to 34 volumes in folio, the compilation includes Latin translations of numerous tractates from the Mishnah, the Babylonion and Palestinian Talmud and rabbinical writings. Volume xxxii (1767) is entirely dedicated to learned disquisitions on biblical music and related topics; it contains 46 essays (in Latin), many of them excerpts from larger treatises, by 34 scholars, among whom the names of Marin Mersenne, Athanasius Kircher, Augustin Calmet and Augustus Pfeiffer indicate the breadth of Ugolinus's reading. Of special importance is Ugolinus's own Latin translation of the polyhistor Abraham Portaleone's *Shiltei ha-giborim* ('Shields of the Mighty', Mantua 1612), with its partly factual, but more often fictitious, descriptions of the Ancient Temple and its music. The title of Mersenne's posthumous tract *De musica hebraeorum* is misleading inasmuch as it contains the first translation (into Latin) of the 'Book of creation' (*Sefer yetsirah*, written between the 3rd and 6th centuries, though with later interpolations), among the earliest sources of Jewish

Kabbalah. In historical perspective Ugolinus's bold encyclopedic enterprise may be considered a first step towards a comparative study of ancient folklore and a harbinger of the 'higher criticism' which burgeoned in scholarship only one or two generations thereafter.

Ugolinus de Maltero Thuringi. *See* ANONYMOUS THEORETICAL WRITINGS (Cat. no.107).

Ugoni, Francesco (*b* ? Maleo, nr Milan, bap. 24 Aug 1587; *d* after 1616). Italian composer and organist. He is known only by *Giardinetto di ricreatione: canzoni et madrigali ... libro primo* (Milan, 1616; ed. M.G. Genesi, Trento, 1997), for one to five voices and continuo, from which it appears that he was priest and organist of the collegiate church of Maleo Lodigiano. He dedicated the collection to Bernardo Belloni, who was *principe* of the Accademia dei Novelli at nearby Codogno, judge of Maleo and Cavacurta, and author of most of the 22 texts. The single instrumental French chanson in the collection is entitled *La Bellona* in his honour, and some of the madrigals are dedicated to other members of the Accademia dei Novelli. According to Schmitz, 'all of Ugoni's work seems to be an artistically productive fusion of the *stile nuovo* and Renaissance polyphony, although with a distinct predominance of the latter'. A canzone entitled *La Ugona*, which appears in a collection of Floriano Canale (Venice, 1600), possibly refers to Ugoni.

SERGIO LATTES (with AUSILIA MAGAUDDA, DANILO COSTANTINI)

Ugrino. German firm of music publishers. In 1921 Gottlieb Harms and Hans Henny Jahnn founded the firm in Hamburg; in 1923 it was registered as an 'association for safeguarding the interests of the Ugrino religious community, publishing section'. Hilmar Trede joined the firm in 1925 as director. The first undertaking (in 1921) was a complete edition of the works of Vincent Lübeck which was followed by complete editions of Scheidt and Buxtehude. Jahnn was forced to emigrate in 1933, and apart from works already in preparation when he left, which continued to appear until 1935, publishing did not resume until his return in 1952. In 1956 the firm was again incorporated in the commercial register. After Jahnn's death in 1959 it was taken over by his daughter Signe Trede. On 1 October 1971 the VEB Deutscher Verlag für Musik in Leipzig acquired the publishing rights of Ugrino, which still continues to produce works by Buxtehude, Gesualdo, Scheidt, Schlick and others. On 1 January 1992 Breitkopf & Härtel acquired Deutscher Verlag für Musik, but it still exists in Leipzig as an independent firm.

THEODOR WOHNHAAS

Uhde, Hermann (*b* Bremen, 20 July 1914; *d* Copenhagen, 10 Oct 1965). German baritone. He studied as a bass at Philipp Kraus's opera school in Bremen, where he made his début as Titurel in *Parsifal* (1936). After some years at Freiburg and Munich he first appeared in baritone roles at The Hague in 1942. A prisoner-of-war from 1944 to 1947, he then sang regularly at Hamburg, Vienna and Munich. He scored a great success at Covent Garden with the Munich company as Mandryka in *Arabella* (1953), and later with the resident company as Gunther and Telramund, roles in which he was generally recognized as unsurpassed in his lifetime. He sang at Bayreuth and Salzburg, and made a particular impression at the Metropolitan Opera with his Wozzeck, sung in English. He created many roles, including Creon in Orff's *Antigonae* (which, like his performance of Wagner's Dutchman, is still impressive on record). He died during a performance of Bentzon's *Faust III*. (A. Williamson: 'Hermann Uhde', *Opera*, xii (1961), 762–9)

J.B. STEANE

Uhde, Johann Otto (*b* Insterburg, East Prussia, 12 May 1725; *d* Berlin, 20 Dec 1766). German composer and violinist. From the age of eight he was an apt student of the violin, and at 14, after his father had become a high court councillor in Berlin, he became a favoured soloist at the musical soirées of the minister von Happe. In Berlin he studied the violin with the Brunswick orchestra leader Simonetti, and keyboard and composition with Christoph Schaffrath. As an adult, inspired by the Berlin Opera, he became a good solo singer. In 1743 he entered the university in Frankfurt an der Oder as a student of law, and from 1746 until his death he carried on a distinguished legal career in Berlin.

Uhde was one of the most talented among the large and influential number of mid-18th-century German amateurs of music. Like such amateurs as the lawyer Krause and the poet Gerstenberg, he helped to develop a new attitude towards the lied as a form of poetical expression; unlike them, he showed considerable versatility as a composer. According to Hiller, several of Uhde's compositions were published anonymously in Berlin; this probably refers to anthologies such as the *Musikalisches Mancherley*. His musical estate is now in Harvard University Library, Cambridge, Massachusetts.

WORKS

Temistocle (op, P. Metastasio), *D-Bsb*; some arias red. kbd in Musikalisches Mancherley (Berlin, 1762)
Cantata, composta per il giorno natalizio di sua maestà Federico il Grande (Berlin, 1763), *A-Wn*

EUGENE HELM/PETER WOLLNY

Uhl, Alfred (*b* Vienna, 5 June 1909; *d* Vienna, 8 June 1992). Austrian composer. A pupil of Franz Schmidt at the Vienna Music Academy, he received the diploma in composition (1932) with honours. He subsequently secured a position as Kappelmeister of the Swiss Festspielmusik in Zürich, composing scores for a variety of cultural and industrial films. He returned to Vienna in 1938 and in 1940 was drafted into the Austrian Army. From 1940 to 1942 he commanded a French prison camp in Neumarkt. He joined the faculty of the Vienna Music Academy in 1945, where he taught theory, orchestration and composition until his retirement in 1980. He was the recipient of the Vienna Schubert Prize (1943), the Austrian State Prize (1960), the Vienna Music Prize (1961), the Viennese Gold Medal of Honour (1969) and the Austrian Badge of Honour for Service and Arts (1980). He also served as the president of the Austrian Gesellschaft der Autoren, Komponisten und Musikverleger (1970) and the Künstler-Union (1976).

Synthesizing elements from neo-classicism, atonality, serialism and traditional tonal and contrapuntal idioms, Uhl's style combines technical sophistication and musical charm. The wit and humour, rhythmic inventiveness, thematic development and advanced harmonic language of his works give his music a vitality that is at once engaging and appealing.

WORKS
(*selective list*)

Op: Der mysteriöse Herr X (3, T. Lingen), 1965

Film scores: Gebändigte Zeit, 1932; Der Weg nach dem Süden, 1932; Abessinienflug, 1933; Mensch im Schnee, 1933; Seldwyla, 1935; Frauennot – Frauenglück, 1936; So Lebt China, 1936; Symphonie des Wassers, 1936; Das gestohlene Jahr, 1950

Orch: Austrian Suite, 1935; Vienna Waltz, 1939; Sinfonischer Marsch, 1942; Concertante Sinfonie, cl, orch, 1943; 4 Capricen, 1945; Molière Suite, 1946; Introduktion und Variationen über eine Melodie aus dem 16. Jahrhundert, str, 1947; Concertino, vn, orch, 1949; Vn Conc., 1963; Conc. a ballo, 1966; Sinfonietta, 1977; 2 Stücke, 1978

Uhlig, Theodor (*b* Wurzen, nr Leipzig, 15 Feb 1822; *d* Dresden, 3 Jan 1853). German theorist, critic and composer. The illegitimate son of King Friedrich August II of Saxony, he studied with Friedrich Schneider in Dessau (1837–40) and joined the Dresden orchestra as a violinist in 1841. Although he was initially hostile to Wagner, study of *Tannhäuser* and of the essay on Beethoven's Ninth Symphony (1846) turned him into one of the earliest, most loyal and most articulate of Wagner's defenders. His 'great seriousness and his quiet but unusually firm character' attracted the attention of Wagner, who also wrote in his autobiography that Uhlig 'had grasped with clear understanding and perfect agreement those very tendencies of mine which many musicians of apparently wider culture than his own regarded with almost despairing horror, as being dangerous to the orthodox practice of their art'. He remained a close friend of Wagner, whose correspondence with him is filled with enlightening personal and professional details (Uhlig's letters to Wagner have not survived). With Uhlig's untimely death to consumption in 1853, Wagner lost one of the few 'progressive' commentators from the early 1850s (besides Liszt) whose opinions Wagner supported. Uhlig attacked Meyerbeer and *Le prophète* in 1850–51 in the *Neue Zeitschrift für Musik*, at the same time defending *Tannhäuser*, *Lohengrin* and Wagner's operatic practice in general. He allowed his sympathies for Berlioz, Weber, Mendelssohn and Schumann to be diminished by his devotion to Wagner; but he is important for being one of the first critics to write about music with reference to the issues raised by Wagner, as not merely a limited aesthetic sensation or a matter for technical theory but as part of the cultural life of a country and an epoch. Nevertheless, Uhlig's articles tended to focus more on purely musical issues than Wagner's writings. Uhlig's thought also had a reciprocal influence upon Wagner's own writings, for example in the reception of Beethoven. Uhlig's theoretical writings include a study of phrase structure that greatly impressed Wagner, and one of errors in the printed scores of Beethoven's symphonies. His review of an article by Liszt drew from the composer an admiring letter (25 June 1851). Uhlig's compositions, which ran to 84 opus numbers, include Singspiele, symphonies, chamber music and songs.

JOHN WARRACK/JAMES DEAVILLE

Uhlmann. Austrian family of wind instrument makers and musicians. The firm was founded by Johann Tobias Uhlmann (*b* Kronach, Upper Franconia, 8 June 1778; *d* Vienna, 12 May 1838), who was granted a licence to trade in Vienna in 1810; he took the oath of citizenship in 1817. In addition to his instrument-making activities he was an oboist at the Theater an der Wien. In 1831 his sons Leopold and Jakob entered the firm, which already had become one of the most important in the Austrian lands, producing wind instruments of all kinds and exporting them to the rest of Europe as well as to Egypt, Persia and Brazil. Jakob Uhlmann (*bap* 19 Dec 1803; *d* 18 Nov 1850) received his licence to trade in 1830 and was also an oboist in the Hofmusikkapelle from 1843. He died of typhoid. His son Jakob (*b* 1837) is recorded at the same address during the following years. The fact that Jakob Uhlmann junior (*d* 10 Sept 1871) was also an oboist has caused some confusion. The younger Jakob played in the orchestra of the court opera, and from 1866 taught at the conservatory of the Gesellschaft der Musikfreunde. He died of pulmonary tuberculosis aged 34.

Leopold Tobias Uhlmann (*b* 22 Feb 1806; *d* 8 March 1878) learned his father's trade and applied for his 'freedom' in 1825. In 1830 he received a patent in connection with improvements to the double-piston or Vienna valve (*see* VALVE (i); for illustration *see* HORN, fig.1*b*), developed by Joseph Riedl and Josef Kail. The new valve was quieter, more airtight and produced less friction. Although Uhlmann used this valve in horns, trumpets and trombones, it was to prove useful only for the horn; with minor alterations it is still used today in the so-called Vienna horn in F. Uhlmann also made improvements to the ophicleide, providing it too with Vienna valves (*see* OPHICLEIDE, §3). In 1843 he applied for patents for four other improvements: a mouthpiece in which the volume of the cup changes according to lip pressure; a new process for making the flare; an improved rotary valve; and auxiliary keys to improve intonation. Uhlmann was appointed wind instrument maker to the Austro-Hungarian court in 1874. His advertisements proudly mention the firm's exports to both Russia and America, and the nine medals won at trade and international exhibitions. After Leopold Uhlmann's death his son of the same name continued the family business. In 1900 the Erste Productivgenossenschaft der Musikinstrumentenmacher (workers' cooperative; founded 1892) took over the stock of the workshop.

Joseph Uhlmann (*b* 31 Dec 1807; *d* 1 May 1859) also joined his father's business and appears in the Vienna registers as an independent instrument maker of wind instruments from 1846 onwards.

RUDOLF HOPFNER

Uilleann [union] **pipes.** A type of bellows-blown bagpipe known in Ireland from the early 18th century and now widely played. In the 19th century they were known as 'union pipes'; the present term was only coined at the turn of the 20th century and comes from the Irish word *uille* ('elbow'). (*See* BAGPIPE, §4, and IRELAND, §II, 6 and fig.2.)

Uissel, Gui d'. *See* GUI D'USSEL.

Ujfalussy, József (*b* Debrecen, 13 Feb 1920). Hungarian musicologist. He studied the piano and composition at the Debrecen Music School and took a degree in classics at the university, where he also took his doctorate (1944) with a dissertation on the structure of Homer's epics; concurrently he worked as a university assistant and taught at a secondary school (1943–6). At the Budapest Academy he studied composition with Veress, conducting with Ferencsik, musicology with Szabolcsi and Bartha and folk music with Kodály (1946–9). He was a member (1948) and then head (1951–5) of the music department of the Ministry of Culture before returning to the academy as professor of music aesthetics and theory (1955). In 1961 he joined the staff of the Bartók Archives (from 1969 the Institute of Musicology) of the Hungarian Academy of Sciences. He became a corresponding member of the Hungarian Academy of Sciences in 1973, having succeeded Szabolcsi as president of the musicological commission and director of the Institute of Musicology in 1973.

In 1985 he became a regular member of the Hungarian Academy of Sciences, and from 1985 until 1993 was its vice-president. Between 1980 and 1988 he was rector of the Music Academy. He is president of the Hungarian Aesthetics Society and a member of the Académie Européenne des Sciences, des Arts et des Lettres (Paris), and the executive committee of the International Association for Aesthetics. He was awarded the Erkel Prize in 1961, the Kossuth Prize in 1966, the Apáczai Csere János Prize in 1985, and the Herder Prize in 1987.

József Ujfalussy is one of the leading personalities of Hungarian musicology. His research has focussed mainly on the works of Mozart, Debussy, Bartók and Kodály; his scholarly temperament, however, is best characterized by an approach to genre and semantics that encompasses the whole of music literature and concentrates on the meaning within the music.

Ukelele. *See* UKULELE.

Ukmar, Vilko (*b* Postojna, Slovenia, 10 Feb 1905; *d* Kamnik, Slovenia, 24 Oct 1991). Slovene composer and writer on music. He studied law at the University of Ljubljana (1924–8, diplôme 1931) and music at the conservatory there (1924–30); he continued his musical studies with Schmidt in Vienna (1931–2) and at the Zagreb Academy (1932–4). From 1934 to 1943 he was professor of music history at the Ljubljana Academy of Music, also serving as director of the opera company (1939–45); he returned to lecture in music history and aesthetics at the Academy (1947–75) and at the University (1962–79). Initially writing in a Romantic vein, he was drawn to Expressionism and the use of 12-tone techniques.

PAUL GRIFFITHS/IVAN KLEMENČIČ

Ukraine. Country in Europe. It is located in the Steppes to the south of the central Russian upland, with an area of 603,700 km² and a population of 50.8 million (2000 estimate). Ukraine is a historic land, but historically unrevealed. Its political and cultural history has not enjoyed an extended independent existence for centuries. Consequently, Ukrainian culture has had a series of sporadic emergences, between which it kept its identity welded to each of the societies that controlled Ukrainian politics, whether Russian, Polish or Austro-Hungarian. Discussion of Ukrainian culture has always been in the context of countries and empires that ruled various parts

of it and its accomplishments were used as fodder to build other cultures opposed to its development, even its existence. In a sense, Ukrainian culture has lived in diaspora in its own homeland.

I. Art music. II. Traditional music.

I. Art music

1. To 1800. 2. The 19th century. 3. The 20th century.

1. TO 1800. The early history of music in Ukraine is centred on KIEV. However, Kiev, and thus Ukraine, fell in political importance in the 13th and 14th centuries, and between the 14th and 17th centuries the principal purveyors of formal music instruction were the church brotherhoods, who were particularly active in Lwów (now L'viv), Peremyshl (now Przemyśl), Ostrog (now Ostrih) and Luzk (now Lutsk), as well as Kiev. Although set up primarily for religious education, music instruction was a significant part of the curriculum. An important development in music occurred when the Polish-Lithuanian union of 1569 brought the Ukrainian Church under Western influence. Western musical theories and polyphony were adapted at the Mohyla Academy (1615–1915) in Kiev, the central institution of higher learning in 17th-century eastern slavdom. By the second half of the 16th century neumatic notation had been replaced with the five-staff system called *kyivs'ke znamya.*

The intellectual revolution of the 1600s was given a decisive push by the first great Ukrainian composer and theorist, Nikolay Dilets'ky. He was well equipped for the task of Westernizing Ukrainian music, since he had received an excellent education at the Jesuit academy in Vilnius and was familiar with new developments in Polish music. One of the most prolific composers in eastern Europe, Diletsky wrote the first work on the new music theory to issue from eastern Europe (*Grammatika peniya musikiyskago*, published in various editions between 1677 and 1681). Dilets'ky (and by extension the Mohyla Academy, which trained composers such as F. Ternopil's'ky, Y. Zahvoys'ky, H. Skovoroda (1722–94), Berezovs'ky (1745–77), H. Rachyns'ky (1777–1843), and Artemy Vedel (1767?–1808), determined the course of the development of music on the territory which then encompassed Ukraine, Belorussia, Lithuania and Russia. For this new style of multi-voiced choral compositions, known as *partesniy spiv* ('part singing'), Dilets'ky provided the theoretical and practical foundation. This resulted in the primacy of the polyphonic style in Kiev and led to the development of the genre of the '*partesniy*' ('choral') concerto. This particularly slavonic mixture of Baroque, and later Classical, styles became firmly established in Kiev and other parts of Ukraine and was transmitted to Moscow via Ukrainian singers and composers who worked there. The popularity and importance of the '*partesniy*' concerto is attested by the fact that in 1697 two music registers belonging to the L'viv Dormition Brotherhood record 398 works by Ukrainian composers for three to 12 voices (the majority, 120, for eight voices). In 1738 the Hlukhiv Singing School was founded.

As Ukraine began to reach its musical maturity in the 18th century, its accomplishments started to serve, and be absorbed by, Russia's musical development, so that in the early 19th century Kiev lost its musical primacy to Moscow. More and more musicians were being engaged in Russia and forced to develop a musical life there. This trend had already started at the end of the 17th century when the tsar summoned Diletsky to Moscow to teach the rudiments of polyphonic style, and continued with the appointment in the early 18th century of I. Popovsky as the precentor of the imperial court choir and the recruitment of singers from Ukraine. It became more pronounced when the Rozumovs'ky (Razumovsky) family (which produced the last hetman of Ukraine, to 1764) established itself in St Petersburg and began hiring gifted musicians from Ukraine (e.g. M. Poltorats'ky). The flowering of the Ukrainian school can clearly be seen in the work of three masters: Artemy Vedel, Berezovs'ky and Dmytro Bortnyans'ky. The last two also studied elsewhere in Europe, and upon their return were to remain in St Petersburg: Berezovs'ky, very briefly before his suicide, and Bortnyans'ky for the rest of his productive life. In their best and most original work, notably in the genre of the *a cappella* choral concerto, the two styles of Baroque and Classical are synthesized into a choral style of symphonic proportion and dramaturgy.

2. THE 19TH CENTURY. In the 19th century, Ukrainian culture became victim to increasing repression in the Russian Empire, culminating in the Ems Ukase of 1876, which forbade the dissemination of Ukrainian culture except for travelling troupes presenting musical comedy of the vaudeville variety. From the end of the 18th century into the middle of the 19th, instrumental music had begun to be written by such composers as Oleksandr Lizogub, H. Rachyns'ky and Yo. Vytvyts'ky (1813–1866). Large estates also had their own private serf orchestras and, mostly anonymous, composers wrote a great deal of *Gebrauchsmusik* for them.

In western Ukraine (which was under Austro-Hungarian rule and did not have similar restrictions), musical activity first centered in Peremyshl, then moved to Lemberg (now L'viv). In Peremyshl, a group of semi-professional composers (chief among them Mykhaylo Verbyts'ky, the composer of the present national anthem, and I. Lavrivsky (1822–73), developed a distinctive school of Ukrainian music aimed at the amateur and tied to folklore. It was also used as a tool of *Prosvita* ('Enlightenment') societies, uniquely Galician organizations formed to promote Ukrainian populist ideals. There were *Prosvita* societies in eastern Ukraine after 1905 as well. Other composers who worked in the same vein were V. Matyuk (1852–1912), Isidor Vorobchievici (1836–1903, educated at the Vienna Music Academy) and Anatol' Vakhnyanyn, active in Lemberg and the composer of the opera *Kupalo*. The first important 19th-century Ukrainian work was for the stage. Tradition holds that 19th-century Ukrainian national music began with Semen Hulak-Artemovs'ky's *The Cossacks beyond the Danube* (1863, St Petersburg). Italian tradition provides the basis, but there is a Ukrainian colour in the harmonic and melodic structure, as well as in the use of folk tunes. It is a marvellous and clever work that combines musical sophistication and Ukrainian vaudeville.

The cornerstone of Ukrainian 19th-century music is the work of composer, pianist, choral conductor, ethnomusicologist and teacher Mykola Lysenko, who, with his opera *Taras Bulba* (composed 1880–91, after Gogol''s novel), forged a national style. After settling in Kiev in 1876, Lysenko began to create a Ukrainian style based on folk music; he also aided in the revival of Ukrainian language and the attempt to separate the achievements of Ukraine from those of Russia. Lysenko was acknowledged

to be the leading figure in Ukrainian music circles but because of his strong national and political beliefs, he was shunned by the influential Russian Musical Society. In 1904 he established in Kiev the Muzychno-Dramatychna Shkola (Music and Drama School; among its students were the composers Levko Revuts′ky and Kirill Stetsenko. Lysenko's achievements were considerable but uneven. Although a few composers wrote symphonies, such as Mykhailo Kalachevs′ky's *Ukrainian Symphony* in A minor (1876) and V. Sokals′ky's (1863–1919) symphony in G minor (1892), the main focus of late 19th-century composers was on choral music and opera. In this period Petro Sokals′ky composed *Mazepa* (1858–9), *May Night* (1876) and *The Siege of Dubno* (1878). Although not produced professionally, these works created a musically distinctive Ukrainian language, though modelled on Czech as well as Russian national operas. Other Ukrainian composers who wrote operas under these difficult circumstances were Vakhnyanyn (*Kupalo*, 1870), Mykola Arkas (1852–1909; *Kateryna*, 1899), Borys Pidhorts′ky (*The Spark of Kupalo*, 1901), Denis Sichyns′ky (1865–1909; Roskolyana, 1908) and Stetsenko (the miniatures *Polonianka*, *Lesychka*, *kotyk ta pivnyk*). In all these the material is based on Ukrainian history or on plots drawn from works by Shevchenko or Gogol′, and the use of folk tunes to establish Ukrainian identity.

3. The 20th century. The creative and pedagogical activities of Lysenko were particularly influential. Professional organizations in L′viv, such as Lysenko Higher Institute of Music (established in 1903) and Boyan Music Society, and Muzychno-Dramatychna Shkola (Music and Drama School), established in Kiev in 1904, which in 1918 became the base for Muzychno-Dramatychny Institut im. Lysenka (The Lysenko Institute of Music and Drama), put an end to the amateur aspects of Ukrainian music. Increased contacts between eastern and western Ukraine (stimulated by efforts to circumvent the tsarist ban on Ukrainian publications by setting up publishing houses in L′viv), further reduced the composers' isolation and led to a growth in professionalism. Ironically, another important institution was the Russian Musical Society, which in addition to sponsoring concerts, established music schools in a number of Ukrainian cities in the 19th century which developed into conservatories. In 1913 the Kiev Conservatory was so formed, and its second principal (1914–20) was Glière, who after Lysenko was most effectual. In its early years the conservatory boasted an excellent staff, producing a number of important performers, among them Vladimir Horowitz. The first two decades of the 20th century were thus critical in establishing a group of professional composers and teachers such as Mykola Leontovych, Yakir Stepovy, Stetsenko in Kiev, Filaret Kolessa in L′viv, Stanislav Lyudkevych, and Fedir Akimenko in Khar′kiv.

One of the first masterpieces of this period was Lyudkevych's symphonic cantata, *The Caucasus* (1902–13). It is a monumental choral symphony, inspired by the choral concerto tradition of 18th-century Ukraine, and a work of considerable power and originality. Another composer of importance was Leontovych, the most brilliant and original product of the Lysenko school in Ukrainian music. Between 1908 and 1918 Leontovych dispensed with the traditional Lysenkovian aesthetic and began to compose in a vividly expressive and figuratively rich fusion of Ukrainian improvisational polyphony, sophisticated imitative counterpoint, Impressionist harmonic refinements and dramatic complexity though rooted firmly in genuine folk tradition. In this he rivalled similar attempts by Bartók and Kodály.

Between 1917 and the establishment of Soviet Ukraine in 1922, Ukraine experienced enormous social and political changes. A number of different governments ruled, each with its own cultural programme. During the 1920s many important artistic personalities emerged: P. Kozyts′ky (1893–1960), Viktor Kosenko, Mykhaylo Verykivs′ky, Msykola Kolyada, Volodymyr Femelidi, Borys Yanovs′ky and Mykola Vilinsky. In western Ukraine, at that time part of Poland, Lyudkevych was joined by Vasyl′ Barvyns′ky, Adam Soltys (1890–1968) and Mykola Kolessa in developing the Galician school. Opera companies, symphony orchestras, choral ensembles, and various folk groups were established in all the major cities of Ukraine.

The two most important names to emerge in the 1920s were Levko Revuts′ky and Borys Lyatoshyns′ky. Their creative outlooks defined the two divergent attitudes in Ukrainian music for the rest of the century: on the one hand the view that to be Ukrainian, music had to have a direct connection with folk music, and on the other that it could develop independently of folklore and still retain its national character. Revuts′ky did most of his important work in the 1920s, including the Symphony no.2 (1926–7), which gave a new twist to the Lysenko tradition. But the composer of genius was Lyatoshyns′ky. He initiated the modern movement in Ukraine with a series of intense and highly expressive works that reflected a central preoccupation with expressionism: Piano Trio no.1 (1922), two piano sonatas (1924, 1925), Violin Sonata (1926), String Quartet no.3 (1928) and Symphony no.2 (1935–6). He also experimented with folk music, and in such works as the *Overture on Four Ukrainian Themes* (1927) and the opera *The Golden Ring* (1929) integrated folklorism into his style with considerable success.

Lyatoshyns′ky was influenced by the then prevalent romantic vitalism, a loosely defined Ukrainian artistic current that shared with other modernist movements of the day an exuberant belief in the dawning of a new age and which was an alternative to the primitivization of the arts that was beginning to take place throughout the USSR in the 1930s. Unfortunately, it came into being almost simultaneously with the advent of Socialist realism, a dogma that first discouraged and then forbade such developments. In Ukraine this was gradually accomplished by dissolving various competing musical societies and replacing them with a single Union of Composers of Ukraine in 1932, which executed the party's dictates with terrible efficiency. The result was a wholesale retreat from the sort of composing done in the 1920s. Typical works were the Symphony no.1 (1937) by K. Dankevych (1895–1968), the Piano Concerto (1937) by M. Skoruls′ky (1887–1950), Lyatoshyns′ky's second opera, *Shchors* (1938), the symphony-cantata *My Ukraine* (1942) by Andry Shtoharenko, and operas such as *The Young Guard* (1947) by Yuly Meytus, *Taras Shevchenko* (1964) by Heorhy Mayboroda and *The Destruction of the Squadron* (1967) by Vitaly Hubarenko. The most famous Ukrainian socialist realist opera was K. Dankevych's *Bohdan Khmel′nytsky* (1951, 2nd version 1953, 3rd version 1977). Socialist realism also produced some

exemplary work, e.g. Lyatoshyns'ky's great Symphony no.3 (1951, rev. 1954), in which the two sides, the expressionistic and the national, are most successfully integrated.

By the end of 1956 committees were being formed to begin the slow process of rehabilitating the cultural leaders of the 1920s and 30s – the thaw had begun. This post-Stalinist thaw brought in a new renaissance, reminiscent of the 1920s. In Kiev the so-called Kiev avant garde, all of them students of Lyatoshyns'ky, broke with the still prevailing dogma of socialist realism (similar positions were taken in L'viv by Andry Nikodemowicz, and in Khar'kiv by Valenty Bibyk). The musical dignitaries who ruled at that time found the emergence of avant-gardism not only difficult to accept but ideologically suspect, if not intolerable. But by the mid-1970s atonality had become accepted. Stravinsky was rehabilitated and Ukrainian music was developing in many different directions. These included the new folklorism of Myroslav Skoryk, the eclectic and overtly national post-Romantic expressionism of Yevhen Stankovych, the intellectual structuralism of Hrabovs'ky, the neo-expressionism of Volodnyr Zahortsev, the neo-classicism of Ivan Karabyts, the Christian aesthetic of Alemdar Karamanov, the monolithic directness of Bibyk and the mystical and mytho-poetic polystylistics of Sil'vestrov. In the last decade of his life Lyatoshyns'ky triumphantly returned to his first style in such works as the *Polish Suite* (1961), Symphony no.4 (1963), and the extraordinary cycles for unaccompanied chorus (1964–66).

The interrupted, non-linear history of Ukrainian politics and culture has affected the Ukrainian artistic mentality, producing a way of thinking that often defies standard logic. In music, this attitude takes the form of extreme introspection, involving the use of fantastic colours, and an inward lyrical quality that permeates even the most exuberant musical passages. A hyperbolic atmosphere pervades, in which events that are strange and fantastic somehow seem quite natural. Between the late 1960s and the mid-80s a large number of works were written that illustrate this quixotic tendency. Some of the better known are *Autumn Music* (1966) by Huba, *Drama* (1970–71) and *Quiet Songs* (1974–84) by Sil'vestrov, *When the Fern Blooms* (1978) and Chamber Symphony no.4 (1987) by Stankovych, Symphony no.3 'In the Style of Ukrainian Baroque' (1980) by Levko Kolodub, Chamber Cantata no.3 (1982) of Oleh Kiva and *When?* (1987) by Hrabovs'ky.

There is now in Ukraine a younger generation of composers who have achieved international recognition. Among these are, in Kiev, Volodymyr Runchak and V. Zubytsky; in Khar'kiv, Oleksandr Shchetyns'ky and Oleksandr Grinberg; in L'viv, Yury Lanyuk; and in Odessa, Karmela Tsepkolenko. A number of Ukrainian composers, or composers of Ukrainian descent, live and work in diaspora: Valery Kikta (in Russia), Hrabovs'ky (in the USA since 1990), Bibyk (in Israel since 1998), M. Kouzan (in France), George Fiala and L. Melnyk (in Canada) and Virko Baley (in the USA).

The presence of many Ukrainian composers and performing ensembles on European, Asian and American stages and in recording studios has greatly increased since independence, while two in particular, the National Honoured Academic Symphony Orchestra of Ukraine and the Kiev Camerata, have made recordings since 1955. Festivals have also proliferated, the principal ones being the Kyiv Music Festival and Premières of the Season (annual since 1990) and Kontrasty (Contrasts) in L'viv (annual since 1995). An equally remarkable development in Ukrainian music has been the gradual emergence of historians and musicologists. Although a number of ethno-musicological studies were done in the 19th and early 20th centuries, the seminal works on Ukrainian music were Pylyp Kozytsky's *Spiv i muzyka v Kirsky akademiïza 300 rokiviï isnuvannya* ('Singing and music in Kiev Academy during 300 years of its existence') (1917) and by M. Hrinchenko's *Istoriya ukraïns'koï muzyky* (1922). In the period of the late 1950s and early 60s M. Hordiychuk, O. Shreier-Tkatchenko, Y. Malyshev and L. Arkhimovych did important work. In 1964 *Muzychna Ukraïna* began to publish an annual, *Ukraïns'ke muzykoznavstvo* ('Ukrainian musicology'), on a wide variety of subjects. A pioneering issue was no.6 (1971), which was devoted to Ukrainian music of the 16th to 18th centuries. Prominent among Ukrainian musicologists in recent years have been Herasymova-Persyds'ka (specializing in the Baroque and Diletsky), V. Samokhvalov, M. Kopytsya (both on Lyatoshyns'ky), O. Zin'kesych and S. Pavlyshyn (on contemporary composers) and T. Husarchuk (on Arteny Vedel).

II. Traditional music

1. Historical background and general features. 2. Vocal music: (i) Calendrical ritual and celebratory musics (ii) Polyphonic and heterophonic song. 3. Music of the Carpathians. 4. Epics: (i) Dumy (ii) Other traditions. 5. Research.

1. HISTORICAL BACKGROUND AND GENERAL FEATURES. Much of Ukrainian music is influenced by the country's geographical position, lying between eastern Europe and western Asia, with both Slav and non-Slav neighbours. Its musical life is recorded in a number of historical sources. The 11th-century frescoes in the cathedral of St Sofia in Kiev depict musicians playing aerophones, instruments resembling lutes, *guslis*, a harp, organ and cymbals. They also show the *skomorokhi* dance and theatrical performances. The Chronicle of Volïnsk (1241) mentions Mitusa, a 'renowned' singer from Galicia, and documents of the 14th and 15th centuries record Ukrainian *lira* (hurdy-gurdy) players at the Polish court, and the *bandura* performer Churilo. The Kiev *znamennïy* chant is thought to have been developed from non-liturgical vocal music in the second half of the 11th century.

Ukrainian vocal musics exhibit a wide variety of forms – monodic, heterophonic, homophonic, harmonic and polyphonic (from the 16th century) – often reflecting the instrumental accompaniment with which they are associated. Common traditional instruments include: the *kobza* (lute), BANDURA, *torban* (bass lute), violin, *basolya* (similar to the cello), the *relya* (a hurdy-gurdy on wheels) and the cimbalom; the *sopilka* (duct flute), *floyara* (open, end-blown flute), *trembyta* (long wooden trumpet), fife, accordion and *koza* (bagpipes); and the *buben* (frame drum), *tulumbas* (kettledrum, played by Cossack regimental musicians), *resheto* (tambourine) and *drymba* (jew's harp). Traditional instrumental ensembles are often known as *troïstï muzyki* (from the 'three musicians' that typically make up the ensemble, e.g. violin, *sopilka* and *buben*; violin, cimbalom and *buben*; violin, accordion and *buben*). When performing dance melodies instrumental performance often includes improvisation.

Traditional melodies may be broadly classified in four ways: formulaic recitative with a narrow pitch range, common in ritual, ceremonial and epic genres; declamatory recitative with a non-strophic structure, used for *dumy*; *rospivno-protyazhnïy* melodies with two- or three-line stanzas (*AB*, *AAB*, *ABB*), followed by a modified reprise, typical of domestic and social texts; and melodies based on dance rhythms characteristic of games, epigrammatic refrains and short and cyclical instrumental forms. Although West Asian melodic characteristics can be discerned, traditional musics have been greatly influenced by the Western major-minor system. *Rospiv* (chant) melodies and melodies that are based on dance rhythms come close to Western diatonic and functional-harmonic models.

Among the traditional dances of Ukraine are: the *kozak*, *hopak*, *kolomïyka* and *hutsulka* in duple time; and the *metelitsya*, *shumka*, *arkan* and *chabarashka*. Dances originating outside the region but which have been widely adopted include: the polka, mazurka, *krakowiak*, *csárdás*, waltz, *barynya* and *tropak*. Vocal and instrumental genres of dance melodies are found; both display a characteristic acceleration of tempo during performance. Dance melodies for vocal performance form a 'template' to which a great number of often short, different lyrical texts may be sung. The opposition of accents in the text against those of rhythm and metre is a characteristic feature of dance melodies. Ukrainian instrumental and dance music was also influenced by Jewish and Gypsy *korchmar* ('tavern') ensembles.

2. VOCAL MUSIC.

(i) Calendrical, ritual and celebratory musics. *Kolyadki* ('carols') and *shchedrivki* are sung at Christmas and New Year respectively. The texts of these songs refer to agriculture and domestic life. Sung antiphonally, they consist of a verse and refrain of blessings (e.g. *oy day Bozhe*, 'may God grant you', *dobriy vecher*, 'good evening'), often with lines of 5+5 syllables. They have a limited pitch range and are usually in a diatonic major or minor mode. The singers are accompanied by players who portray characters known as 'the goat' and 'Malanka'. Carols from church traditions are also sung.

Vesnyanki are songs performed by women to celebrate the coming of spring. They have a characteristic exclamation, '*gu*', which is sung as a glissando at the end of each stanza (ex.1). There are round-dance and game

Ex.1

variants of *vesnyanki* (e.g. *proso*, 'millet', *kryviy tanets*, 'the crooked dance', and *vorotar*, 'the gate-keeper'), which have become children's game-songs. Texts have various forms but each stanza usually has two lines. *Kupal'skiye* songs which were performed during the summer solstice, have now been appropriated for the festival of the birth of John the Baptist. Associated with these songs are the *petrivochnïye*, which were sung from Trinity Sunday to St Peter's day (12 July). The texts of both types of song refer to love and match-making. Harvest is marked by *obzhinochnïye* songs, which accompany the weaving of garlands from ears of wheat and rye, and by a procession of reapers.

All calendrical and ritual songs are performed by a group, who partly sing antiphonally. The melodies have a narrow pitch and are variants of basic formulae. They consist of one or two lines with refrains (less frequently they can be of three lines with a repetition of the second half) and are both sung in unison and with heterophony.

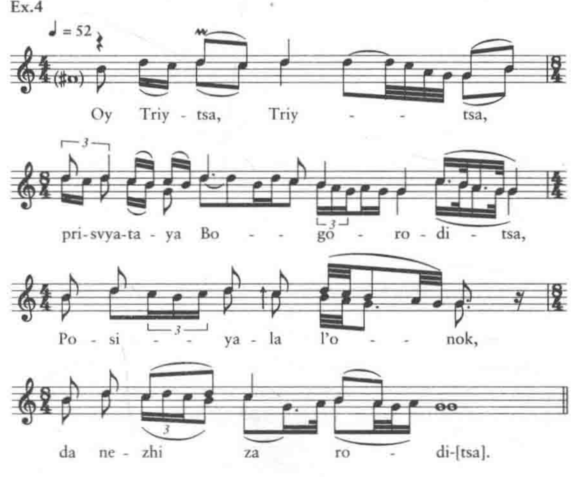
Of celebratory ritual songs – *vesilnï* (wedding), *krestyl'nï* (baptismal) and *pomynal'nï* (funerary) – the largest number are wedding songs. Indispensable at a Ukrainian wedding are the ritual songs *ladkannya*, sung by a chorus, often antiphonally between men and women. They comment on and describe the wedding rituals, for example decorating the wedding sapling (*gil'tse*), untying the

bride's tress and covering the head of the bride with a cap. The singing uses both unison and heterophonic textures, with the voices often in parallel 3rds. A singer using a high falsetto (*tonchik*) sings above the chorus (ex.2). The *ladkannya* texts have lines of 5+3, 6+3 and

Ex.2

7+3 syllables. The melodies are formulaic, use ornamentation and a slight slowing of the tempo to delay the movement from note to note, particularly when in the Western major mode and when sounding the first degree. In the western parts of Ukraine *ladkannya* are recited in unison on the tonic, or in 3rds (*gymel*).

(ii) Polyphonic and heterophonic song. During the second half of the 17th century Ukraine was divided into the *dneprovskoye levoberezh'ye* (left bank of the Dnieper), which was Orthodox, and the *pravoberezh'ye* (right bank), which was Greco-Catholic. A widespread genre on the *levoberezh'ye* was the polyphonic singing of 'street' long songs (*protyazhnïy*).



In these the second, supporting, part was sung with a *belïy* ('white') chest sound in a low to medium register. The pitch was set by the leader and was taken up by the chorus from which an upper voice (*govryak*) stood out. The melodic lines were similar to *rospiv* (chant) melodies on which the singers could improvise. Characteristic features included frequent changes of metre, and repetition of the preceding musical line for the first line of a new stanza. This style was used for love songs, domestic songs, songs sung by ox-cart drivers (*chumaki*) who carried salt from the mines, and in Cossack songs (ex.3).

Ex.3

In north and north-western Ukraine (Poles'ye and Volïn') a form of heterophony is found of falsetto singing with glissandi over a tonic drone, the top line having an ambitus of a 4th or 5th. The style is found in ritual songs, for example *vesnyanki* (spring songs), *troitskiye* (songs for the Trinity), *obzhyiskovi* (reaping songs) and *vesilnï* (wedding songs). The ends of the stanzas are characterized by long pauses on the last accented syllable of the stanza, and a shortening of the last unaccented one (ex.4).

Ex.4

3. Music of the Carpathians. The three peoples who live in the Carpathian region – Boykys, Hutsulys and Lemkïs – possess distinct musics influenced by their pastoral and agrarian economy. The most common genres are solo songs, performed in a parlando rubato style; group songs are performed in unison. Melodies often consist of microtonal descending lines, with a glissando at the end of the stanza; they are similar to shepherds' tunes played on the *sopilka* or *drymba*.

Goekannya are solo songs used to exchange messages between shepherds, in a style similar to yodelling. These are found in the foothills of the Carpathians and also in parts of Slovakia and Romania. Another widespread genre of this region is the recitative-like *holosinnya* (lament) for the dead. They were once found throughout Ukraine and are associated with the long, chanted epic chronicles (*oprïshkov* and *gayduk*) which recount the deeds of historical liberators of Ukraine, and contemporary unusual events in the people's lives.

The music of Hutsulys is greatly influenced by the *kolomïyka* couplet (with lines of 4+4+6 syllables), particularly the slow *protyazhnïy* songs. Boykys and Hutsulys also have rapid tunes of the *kolomïyka*-type, which provide the basis for thousands of short texts of an epigrammatic character. They are performed solo with instrumental accompaniment, including *troïstï muzyki* ensembles at weddings and during leisure-time activities. A characteristic mode of the Hutsulys has a lowered third and sharpened fourth and seventh degrees, and is known as the 'Hutsuly mode' (ex.5). Hutsuly vocal music may

Ex.5

also be pentatonic. Ukrainian Lemkïs, who live in the extreme west of the country, have musics that have characteristically swift tempos and are based on dance rhythms.

4. Epics.

(i) Dumy. A genre of Ukrainian performed epic poetry, *dumy* are mainly found in central and eastern regions. They have recitative-like, declamatory melodies, not arranged in stanzas, often accompanied by the *kobza*, *bandura* or *lira*. Large-scale works, which can total more than 300 lines or more of poetry, are linked to the epics of old Kiev, the *byliny* and *Slovo o polko Igoreve* ('The lay of Igor's campaign').

Dumy are first mentioned in the annals of the Polish chronicler S. Sarnitski (1567), and were first written down in 1693 as *Kozak Holota* (Cossack Holota). Some 50 tales, in a large number of variants, have been documented, which were composed by soldiers in Cossack campaigns and later were cultivated by professional players who specialized in playing the *kobza* and *lira*. Many of these performers were blind and were formed into guilds.

To gain recognition as players of the *kobza* and *lira*, musicians had to spend three to six years studying under a master of the guild. During this time they would learn the epic repertory, study the *dumy* melodies, gain proficiency in playing the instruments, learn Levian (the language of the guild) and the guild's etiquette, and pass an examination, known as *vizvilka* or *otklinshchini*. The schools and guilds, which were organized on a territorial basis and protected the rights of the musicians, existed until the beginning of the 20th century. Outstanding performers of *dumy* include O. Veresay, A. Shut, M. Kravchenko, G. Goncharenko, I. Skubiy, M. Dubina, E. Movchan, G. Tkachenko and A. Hrebin.

The lines of *dumy* are not equisyllabic, extending over 6–16–18 syllables grouped together in irregular declamatory groups (*ustupy*). A performance begins with a rhetorical exclamation, '*oy*' or '*hey*' sung to a descending musical phrase, known as *zaplachka* ('weeping'). This phrase contains the basic motif that is varied by the *kobza* or *lira* throughout the performance. A characteristic feature of traditional performance is the ornamented cadences performed at the end of each *ustupy*. Motifs in the texts often are embellished with rhyming figures of speech (e.g. *dumaye-hadaye*, *plache-rydaye*) and phrases such as *nevolya turets'kaya* ('Turkish captivity') or *slava kozats'ka* ('Cossack glory'), and conclude with a 'glory' section, *slava ne umre, ne polyazhe, bude slava slavnaya pomezh kozkami, pomezh druz'yami, pomezh rytsaryami* ('let not glory die, let it not perish, let there be resplendent glory among Cossacks, among friends, among knights').

(ii) Other traditions. In addition to the *dumy*, traditions of epic performance in Ukraine included the Kievan *byliny* (after the collapse of the Kievan state, 882–1054, the performers of *byliny* migrated north), 'historical' songs, ballads and *spivanki-khroniki* ('sung chronicles'). These 'chronicles' took the form of performed short stanzas of epic poetry. They were performed in both urban and rural contexts, assimilating many regional styles, in particular urban *kant* melodies.

The earliest records, both texts and music, of historical songs date from the late 17th century (*Hoy na hori zhentsi zhnut*, 'Hoy, the Reapers are Reaping on the Hill', and *Oy bida, bida tiy chaytsi nebozi*, 'Oh Woe, Woe Poor Lapwing'). The text of the ballad *Dunayu, Dunayu, chemu smuten techesh?* ('Danube, Danube, Why do you Flow so Sadly?') was recorded in the grammar book of the Czech scholar Jan Blagoslav (1550–60). Large cycles of songs in rhymed syllabic verse about national heroes, such as Morozenko, Nechaye and Khmel'nitsky, have survived in manuscripts dating from the 19th and 20th centuries.

During the 17th and 18th centuries Cossacks, members of the lower middle class and those in training for the priesthood were taught singing, alongside other subjects, in 'schools of the brotherhood' set up in important urban centres (for example those in Lvov, founded 1585, Kiev, 1615, and Lutsk, 1617). These schools introduced elements of written tradition and the major-minor system into epic performance. Historical songs and ballads have melodies in march rhythms that reflect underlying harmonic progressions and cadences in which a leading note resolves onto the tonic.

The growing importance of written traditions in the growth of the romance during the 18th and 19th centuries was a result of interaction between traditional and urban musics. Especially popular romances include *Yikhav kozak za Dunay* ('The Cossack Went beyond the Danube'), text by S. Klimovsky, *Chornïi brovy, karïi ochi* ('Black Brows, Brown Eyes'), text by K. Dumitrashko, and *Stoit' hora visokaya* ('There Stands a High Mountain'), text by L. Glibov.

5. Research. The first written records of Ukrainian traditional songs and instrumental melodies were set down in the 17th and 18th centuries in publications such as M. Dilets'ky's *Gramatyka muzykal'na* (The grammar of music; 1675), the *Bohohlasnik* (Word of God) of the Pochayeyev monastery (1790), V. Trutovsky's four-volume *Sobraniye russkikh prostïkh pesen s notami* (A collection of simple Russian songs with notation; 1776–95) and *Sobraniye narodnïkh russkikh pesen s ikh golosami* (A collection of Russian songs with their vocal parts) by N. L'vov and I. Prach (1790). During the 19th and into the 20th century scholars started to produce work which concentrated on regional traditions and specific genres. They include: Vaclav from Oleska and K. Lipinsky, M. Lysenko, A. Rubets, O. Kolberg, S. Lyudkevych and I. Rozdol's'sky, A. Konoshchenko, F. Kolessa, K. Kvitka, L. Yashchenko, A. Humenyuk, Z. Vasylenko, V. Goshovs'ky, O. Pravdyuk and A. Ivanis'ky.

Important institutions which have been responsible for the collection and publication of traditional musics are: the south-western division of the Imperial Russian Geographical Society (Kiev, 1873–6), the Studyroom of Musical Ethnography at the Historical and Philological section of the All-Ukrainian Academy of Sciences (1922–32). The Institute of Folklore in Kiev (now the Institute of Art History, Folklore and Ethnology) was founded in 1936. In addition to amassing a large archive of recordings it has published collections of texts and music.

VIRKO BALEY (1), SOPHIA HRYTSA (2)

Ukulele [ukelele] (from Hawaiian: 'leaping flea'). A small guitar-like instrument. It is derived from the virtually identical *machete da braça* (fig.1) brought to the Hawaiian (then the Sandwich) Islands by immigrants from Madeira. There is no string instrument native to Hawaii other than the *'ūkēkē*, a mouth bow. Three Portuguese instrument makers arrived in 1879: Manuel Nunes, who opened the first shop in 1880, and his associates Augusto Dias and José do Espirito Santo, who opened their own shops in 1884 and 1888 respectively. The instrument rose swiftly to popularity among the native population: in 1886 ukuleles were used to accompany hula dancers at King Kalakaua's jubilee celebration, and the *Hawaiian Annual* of the same year reported that 'of late they have taken to the banjo and that hideous small Portuguese instrument now called the "taro-patch fiddle"'. The 'taro-patch fiddle' is a large ukulele which appears to be derived from the *machête da rajao*.

Although a US tour by the Hawaiian Glee Club in 1901 included ukulele accompaniments, and a Los Angeles publisher, R.W. Hefflefinger, was advertising 'a self-instructor for the ukulele or Hawaiian guitar and taro-patch' by 1914, the ukulele first truly came to national prominence during the Panama-Pacific Exposition of 1915 in San Francisco. According to the official history of the exposition published in 1917, 'people were about ready for a new fad in popular music at the time of the Exposition and the sweet voices of the Hawaiians raised in those haunting minor melodies you heard at the Hawaiian Building ... were enough to start a musical vogue.'

In the Hawaiian music fad that swept across the United States, lasting into the 1930s, the ukulele was at the forefront. The small portable size and light weight, combined with a simple tuning and undemanding technique, were all factors in the ready acceptance of the ukulele for the accompaniment of popular song. Tin Pan Alley songwriters published dozens of novelty songs that mentioned the ukulele in the titles or lyrics. A flood of instruction books, mostly published outside Hawaii, appeared in response to heightened interest. American guitar manufacturers, including Martin, Gibson and Weissenborn, offered variously sized models; later entrants to the market included Lyons & Healy, Regal, and Harmony, all of Chicago. The Kamaka Ukulele Co., founded in 1916, remains the sole mass production operation in Hawaii; independent instrument makers also cater to serious performers.

Numerous entertainers have been associated with the ukulele as virtuoso performers; many have written instructional books as well. Hawaiian players include Ernest Kaai (1881–1962), active from the 1910s to the 30s; Jesse Kalima (1920–80), active from the 1940s to the 60s; and Herb Ohta [Ohta-San] (*b* 1934), who has released several dozen recordings since 1964. In mainland America exponents include Cliff Edwards ['Ukulele Ike'] (1895–1972); Roy Smeck (1900–94); May Singhi Breen (*d* 1970); Arthur Godfrey (1903–83), whose television

1. Ukulele from Hawaii (right), with a five-string machête da rajao (left) and a machete da braça (centre) from Madeira, all dating from the late 19th century (Stearn Collection, University of Michigan, Ann Arbor)

show in the 1950s sparked a revival of interest; and 'Tiny Tim' (Herbert Khaury; 1925–96). The fashion for the ukulele also spread to Europe, where it was adopted by stars of British music hall; one of the most successful entertainers of the 1930s and 40s, George Formby (1904–61) (fig.2), featured the banjulele: a hybrid instrument combining a banjo body with a ukulele fingerboard, stringing and tuning. In the 1990s a new generation of virtuosos has brought renewed attention to the ukulele in Hawaii, foremost among them Troy Fernandez and Israel Kamakawiwo'ole (1959–97).

There are four sizes of ukulele: soprano or standard (which is 46–53 cm in length, with 12 to 17 frets), 'concert' (*c*60 cm; up to 19 frets), tenor (*c*70 cm, 18 to 22 frets) and baritone (*c*80 cm, up to 22 frets). Instruments with four strings predominate. The tuning is re-entrant and spans a major 6th, although absolute pitch is not regarded as important: the basic tuning of *g′–c′–e′–a′* may be raised or lowered to enable the player to accompany in a key that is comfortable for the singer's voice and avoids awkward chord patterns. The different sizes are used to provide variety of timbre and register. On the tenor and baritone resonance is often enhanced by doubling (or even tripling) the courses, and tuning the doubled strings an octave apart. All four sizes are played predominantly with a strummed chordal style, although the soprano ukulele has also become a virtuoso melody instrument, starting with the work of Jesse Kalima in the late 1950s.

JAY SCOTT ODELL/AMY K. STILLMAN

Ulanova, Galina Sergeyevna (*b* St Petersburg, 28 Dec 1909/10 Jan 1910; *d* Moscow, 21 March 1998). Russian dancer. *See* BALLET, §3(iii).

Ulbrich, Maximilian (*b* Vienna, 16 Jan 1743; *d* Vienna, 20 Sept 1814). Austrian composer. His father Anton Ignaz Ulbrich (*b* Bohemia, *c*1706; *d* Vienna, 14 Dec 1796) was a trombonist in the Hofkapelle of Empress Elisabeth Christine from 1741 to 1750, and a trombonist and bass singer in the Hofkapelle of Empress Maria Theresa from 1750 until his death (though occasionally replaced as a singer by J.M. Vogl after 1794); he was also a composer and author of religious writings, patriotic poems and the oratorio text 'Das durch den Tod erhaltene Leben von dem wunderthätigen Blut-Zeug Jesu Christi Johann von Nepomuk' (Vienna, 1759), set to music by Christoph Sonnleithner. Maximilian Ulbrich attended the Jesuit seminary in Vienna, and studied harmony and composition under G.C. Wagenseil and the organ and sacred

2. *George Formby playing a banjulele during the making of 'George in Civvy Street', 1946, Columbia Pictures*

music under J.G. Reutter. He entered the service of the Lower Austrian *Stände* (estates of the realm) as an accountant in 1770, became assistant bookkeeper in 1790, bookkeeper in 1800, and was pensioned off in 1804. He organized a large public concert in Vienna in 1782, and was repeatedly invited to perform as a bass singer, cellist and pianist in chamber music at the court of Emperor Joseph II. His best-known work is the oratorio *Die Israeliten in der Wüste,* performed by the Tonkünstler-Societät orchestra in 1779 and 1783; he also wrote three operas, church music and a number of instrumental works.

Two of Maximilian Ulbrich's brothers were also musicians: Johann Ulbrich (*fl* 1780s) became a trombonist in the Hofkapelle in 1787; and Anton Michael Ulbrich (*b* Vienna, *c*1754; *d* Vienna, 5 May 1830) was a trombonist in the Hofkapelle from 15 July 1793 until his death.

WORKS

OTHMAR WESSELY

Ulehla, Ludmila (*b* Flushing, NY, 20 May 1923). American composer, pianist and teacher of Czech descent. She began writing music at the age of five and later studied at the Manhattan School of Music (BMus 1946, MMus 1947), where her composition teacher was Vittorio Giannini. She became a professor at the Manhattan School in 1947 and was chairperson of the composition department there from 1970 to 1989; she received the President's Medal for Distinguished Faculty Service from the school in 1998. Additionally she taught at the Hoff-Barthelson Music School, Scarsdale, New York (1968–91), and acted as chairperson of the American Society of University Composers (1972–3) and programme chairperson for the National Association for American Composers and Conductors (1967–74). She has received awards and grants from ASCAP and Meet the Composer. Although Ulehla's musical language is contemporary, the legacy of the classical canon as well as Slav influences have clearly contributed to its evolution. Her works are tonal, but are not organized by key; emphasis is given to the function of phrases rather than bar-lines, and the balance of contrast and unity helps to articulate formal

structures. Her writings include *Contemporary Harmony: Romanticism through the Twelve-Tone Row* (New York, 1966/*R*).

WORKS

SAM DI BONAVENTURA

Ulenberg, Kaspar (*b* Lippstadt, Westphalia, 1549; *d* Cologne, 16 Feb 1617). German theologian, poet and composer. He studied theology in Wittenberg and, before his conversion to Catholicism in 1572, was a Lutheran pastor in Lippstadt. From 1575 to 1583 he worked as a priest in Kaiserswerth near Düsseldorf, and later in various churches in Cologne. He was also head of the Lorenz Gymnasium from 1592 to 1615, and rector of the university between 1610 and 1612. The Counter-Reformation had a considerable influence on him, which can be seen in his sole musical publication: *Die Psalmen Davids in allerlei teutsche gesangreimen bracht* (Cologne, 1582; ed. in DRM, iii, 1955; text ed. in Wackernagel).

Ulenberg's psalter is the Catholic counterpart to the various Protestant psalters. The 80 tunes are stylistically similar to the Genevan psalm melodies and may have been composed by Ulenberg himself. Although its musical merit has been questioned, a wide circulation of the psalter attests to its considerable popularity at the time: eleven editions appeared up to 1710, sometimes under different titles. Lassus, with his son Rudolf, published the first 50 psalms in three-part settings under the title *Teutsche Psalmen* (RISM 1588[12]; ed. W. Lipphardt, Kassel, 1928/*R*) and Konrad Hagius published two collections of four-voice settings of the entire psalter (one Düsseldorf, 1589 and the other Oberusel, 1606). Abraham Praetorius based his song motets of 1592 on the Ulenberg psalter. Ulenberg also made a German translation of the Bible (Cologne, 1630) intended as a Catholic alternative to Luther's.

WALTER BLANKENBURG

Ulfung, Ragnar (Sigurd) (*b* Oslo, 28 Feb 1927). Norwegian tenor. He studied at Oslo and Milan, making his stage début in 1952 at Oslo as Magadoff (*The Consul*). He sang Faust at Bergen and in 1955 went to Göteborg, where he sang Jeník, Don Ottavio, the Duke of Mantua, Fra Diavolo and Don José. In 1958 he was engaged at the Royal Opera, Stockholm, where he created the Deaf Mute in Blomdahl's *Aniara* (1959) and sang Canio, Hoffmann, Alfredo, Cavaradossi, Tom Rakewell, Lensky and Gustavus III, which he also sang in Edinburgh (1959) and on the company's visit to Covent Garden (1960). There he returned as Don Carlos (1963), Mime and Herod, and created the title role in *Taverner* (1972). At Hamburg he sang Turiddu, Erik and Števa in *Jenůfa* (also on the company's visit to New York in 1967) and created Christopher in Werle's *Resan* (1969). He made his San Francisco début as Chuck (Schuller's *The Visitation*), returning for Riccardo, Valzacchi and Mime, the role of his Metropolitan début (1972). Ulfung's repertory included Fatty (*Aufstieg und Fall der Stadt Mahagonny*), Captain (*Wozzeck*), Loge, Aegisthus (1972, La Scala), Otello (1983, Stockholm) and Jadidja (American première of Penderecki's *Die schwarze Maske* at Santa Fe, 1988). A brilliant actor with an incisive voice, he excelled as Herod and Mime. He has also directed many operas, including a *Ring* cycle in Seattle.

ALAN BLYTH

Ulhart [Ulhard], **Philipp** (*d* Augsburg, 1567 or 1568). German printer. In 1522 he began printing in Augsburg, using the typefaces of Sigmund Grimm, who had in turn acquired them from Erhard Oeglin. Ulhart's first efforts in publishing, as Schottenloher showed, were devoted almost exclusively to promoting the cause of various Reformed sects then active in Augsburg, particularly that of the Anabaptists, whose leaders included his friends Jacob Dachser and Sigmund Salminger. On 7 March 1523 in an attempt to curb sectarianism, the city council required Ulhart and seven other Augsburg printers to swear a formal oath that they would not publish anonymously. The order was rescinded shortly afterwards, and almost 200 anonymous pamphlets can be traced from typographical evidence to Ulhart's press from the period 1523–9. In connection with the vigorous persecution of the Anabaptists he was imprisoned for eight days in 1526 and arrested again in 1528, but released for lack of evidence. In 1548 he became a citizen of Augsburg, though his reputation as a printer had been established long before. After his death the business was continued by his son, also called Philipp (*d* 1579 or 1580),

and was bought in 1581 by Valentin Schönig, son-in-law of the Augsburg printer Melchior Kriesstein.

As well as religious publications, which included the writings of Luther and other Reformation leaders, Ulhart printed various theoretical works and school plays, many of which contain religious songs. In music, however, he is known principally for issuing collections edited by Sigmund Salminger; the volume of 1537 contains settings of hymns and psalms. The two volumes of 1545 and 1548 contain works for the Catholic liturgy, many of them *unica*, by well-known Netherlandish composers.

MARIE LOUISE GÖLLNER

Ulïbïshev [Oulibicheff], **Aleksandr Dmitryevich** (*b* Dresden, 13 April 1794; *d* Lukino, nr Nizhniy-Novgorod, 24 Jan/5 Feb 1858). Russian writer on music. He was the son of the Russian ambassador at Dresden, and received his early musical education in Germany. In an autobiographical sketch he described himself as being 'a musician since the age of seven, a passable violinist, a singer when necessary, and acquainted with the principles of composition'. In 1810 he moved to Russia and in 1812 entered the civil service. He worked as a translator in the Ministry of Foreign Affairs from 1816 and later was responsible for editing the journal *Le conservateur impartial* and the *Journal de St Pétersbourg*. After resigning from his post in 1830, he retired to his estate at Lukino.

Ulïbïshev is known principally for his articles on music, many of which were published in the *Journal de St Pétersbourg*, and for two important books. In 1830 he began work on a comprehensive biographical and musical study of Mozart. He had known and admired Mozart's works since his early years in Dresden, and did much to encourage their popularity in Germany. His book, written in French, was complete by June 1840, and its three volumes were published in Moscow in 1843 under the title *Nouvelle biographie de Mozart, suivie d'un aperçu sur l'histoire générale de la musique et de l'analyse des principales oeuvres de Mozart*. Wilhelm von Lenz, a Russian of German descent who lived in St Petersburg, in his book *Beethoven et ses trois styles* (St Petersburg, 1852) severely attacked Ulïbïshev for the denunciatory judgment on the works of Beethoven's last period which he had expressed in the 'Aperçu'. Ulïbïshev answered with *Beethoven, ses critiques et ses glossateurs* (Paris, 1857, German version by Ludwig Bischoff, Leipzig, 1859), in which he stoutly defended his previous position, exciting general indignation.

Ulïbïshev was Balakirev's most important early patron. His well stocked music library, which included all the recent works of Russian composers, especially those of Glinka whom he greatly admired, was of incalculable importance to the boy, who lived in nearby Nizhniy-Novgorod. He avidly absorbed the music of most of the composers represented in the library, including, besides Russian composers, Chopin, Schumann, Liszt and the late string quartets of Beethoven. Impressed by his piano playing as well as his precocious compositional ability, Ulïbïshev encouraged him and took him in late 1855 to St Petersburg, where he introduced him to Glinka, Dargomïzhsky, the Stasov brothers and others of importance in the musical world. His death early in 1858 was a blow to Balakirev since the financial support he had hitherto discreetly received from Ulïbïshev ceased after his death.

GEOFFREY NORRIS/EDWARD GARDEN

Ullinger, Augustin (*b* Ranoldsberg, Upper Bavaria, 27 March 1746; *d* Freising, 30 July 1781). German composer, organist and teacher. From 1760 he attended the electoral Gymnasium in Munich and was active as a composer and music teacher. About 1776 he became chamber composer and court organist to the Freising Prince-Bishop Ludwig Josef von Welden. According to Lipowsky he was taught by Placidus von Camerloher. Ullinger was among the best composers of his time in Upper Bavaria. His numerous sacred works were very popular; as late as 1803 they were described in the *Allgemeine musikalische Zeitung* as combining seriousness with dignity and clarity.

Ullinger was probably the brother of the organist Sebastian Ullinger (*b* c1740), who in 1763 married the widow of Bartholomäus Miller and succeeded him as organist of St Jakob at Wasserburg am Inn; a *Salve regina* (*D-WS*) is the only extant work attributable to Sebastian Ullinger, but it shows him to have been an excellent musician. Franz Ullinger (*fl* c1770–80) is credited with a mass, offertory, two litanies and an aria, copied about 1770–89 (*D-WEY*); he may be identifiable with Augustin Ullinger.

WORKS

Sacred: 21 masses (*D-BAR*, *BKH*, *EB*, *Eu*, *FW*, *HR*, *LIM*, *Mf*, *Mm*, *OB*, *WEY*, *WGH*, *WS*, *CH-BM*, *EN*, *SAf*, *Zz*, *SK-BRnm*), 4 lost; Requiem (*D-Mf*; Te Deum (*Mf*); lits, Vespers, other short liturgical works

Stage (mostly lost): Dschem (Trauerspiel), 1772; Der Tod des L. Junii Bruti (Trauerspiel), 1773; 3 Meditationes, 1773, frags. *D-WEY*, 1774, 1776; Temistocle (os), 1777; Victrix filialis pietas (tragoedia), 1777; Artaserse (os), 1777–81; Jolas Metamorphos (singspiel), 1788

Inst: 8 syms., 1 *D-Mbs*, 7 lost; Bn Conc., lost; Allegro, hpd, *D-Ew*

ROBERT MÜNSTER

Ullman [Ullmann, Ulman, Uhlman], **Bernard** (*b* Budapest, ?1817; *d* 2 Oct 1885). American impresario. He probably arrived in America about 1842. He managed Henri Herz (1846–9), Camillo Sivori (1847–8), Henriette Sontag (1852–4), Thalberg (1856–8) and Vieuxtemps (1857–8). From 1857 to 1860 Ullman and Maurice Strakosch, partly financed by Thalberg, produced opera at the Academy of Music in New York, engaging such singers as Anna de La Grange, Elena d'Angri, Marietta Piccolomini and Adelina Patti. Ullman managed the performers both individually and as a company, splitting the troupe for tours and using solo recitals to help offset losses from opera; nevertheless, the company went bankrupt in 1860. In spring 1862 Ullman moved to Europe, where he managed Carlotta Patti (1865–9) and Christine Nilsson (1876–7); he returned to America in 1875–6 as Hans von Bülow's manager. He was one of the first impresarios to measure success commercially rather than artistically; some of his innovations later became standard managerial practice.

WILLIAM BROOKS

Ullmann, Jakob (*b* Freiberg, Saxony, 12 July 1958). German composer and organist. He attended the Naumburg Church Proseminar (1975–8) and studied in Dresden at the School of Sacred Music of the Lutheran Church of Saxony (1979–82). From 1980 to 1982 he was a composition student of Herchet. Denied admission to the masterclass of the DDR Academy of Arts because of his refusal to perform military service, he continued his studies privately with Friedrich Goldmann. In 1982 he settled in Berlin, where he has worked as a freelance composer and author. When Cage's music was first presented in East Berlin in 1990, Ullmann met Cage, and until the latter's death conducted an intensive exchange of ideas with him.

Ullmann has described his compositional development as reflecting a 'search for ways of making peripheral ideas, assumptions and the historically conditioned structure of "sounds themselves" perceptible'. Initially influenced by Schoenberg, he used serialism as the prerequisite for his work on sound (*Komposition für 10 instrumente*, 1982). Later compositions explore the world of silence between noise and sound. His aim has been not to achieve the audibility of unheard sound, but to expose the 'simplest and most natural of tonal realities'. Important tools in his work are mathematical formulas, computer programs and chance; in his compositions scientific and artistic thinking enter into an innovative synthesis. Another important element of his work is political criticism, which he transforms into music: disappearing notes illustrate the fate of the 'disappeared' of Latin American in *la CAnci¢n del †nGEl desaparecido* (1987–8), and non-semantic language memorializes those murdered in the Soviet gulags in *Voice, Books and FIRE* (from 1990). Ullmann understands quiet and a lack of expressivity as prerequisites for preventing the ideological misuse of his music. Both are component parts of a compositional aesthetic based on a rejection of market values and a commitment to the alteration of human emotion and thought.

GISELA NAUCK

Ullmann, Viktor (Josef) (*b* Teschen [now Český Těšín], Czech Republic, 1 Jan 1898; *d* Auschwitz [Oświęcim], 18 Oct 1944). German-Czech composer of Austrian birth. The son of an Austrian officer, he entered Vienna University as a law student in 1918. Late in the same year he enrolled in Arnold Schoenberg's composition seminar, having been prepared for its demands by theory tuition he had received from Josef Polnauer since 1914. He had also studied piano with Eduard Steuermann. At Schoenberg's suggestion, he was made a founder-member of the committee of the Verein für Musikalische Privataufführungen. Ullmann did not complete his university course but moved to Prague in May 1919, and there joined the music staff of the Neues Deutsches Theater under Alexander Zemlinsky, becoming chorus master and répétiteur in 1920 and conductor in 1922. Apart from his work in the opera house he spent his time composing, and enjoyed early successes with performances of the *Sieben Lieder* with piano (performed 1923), the Octet (1924), his incidental music for Klabund's *Kreidekreis* (1925) and the *Symphonische Phantasie* (1925). Also in 1925 he composed the first version of his *Variationen und Doppelfüge über ein Klavierstück von Arnold Schoenberg*, based on Schoenberg's op.19, no.4. His String Quartet no.1 had its first performance in 1927.

In the autumn of 1927 he spent a season as head of the opera in Aussig (now Ústí nad Labem), where he gave dazzling proof of his conducting talent. On his return to Prague he remained without a permanent post for a year. Performances of his Concerto for Orchestra, in Prague (1929) and Frankfurt (1930), aroused great interest. The second version of the *Schoenberg-Variationen*, performed by Franz Langer at the 1929 festival of the ISCM, in Geneva, brought Ullmann to international attention.

He was engaged by the Zürich Schauspielhaus as a conductor and composer of incidental music (1929–31). Coming under the influence of Rudolf Steiner's anthroposophy, he gave up every kind of musical activity over the next two years, and ran an anthroposophical bookshop in Stuttgart 'in order to render direct service to the anthroposophical movement'.

He left Germany after the National Socialist seizure of power, and returned to Prague where, from the middle of 1933, he lived once again the life of a freelance musician. In addition to his teaching, journalism and radio broadcasting, he was active in Leo Kestenberg's Internationale Gesellschaft für Musikerziehung and in Prague's music societies, both German and Czech. He attended Alois Hába's courses in quarter-tone composition from 1935 to 1937, and built on his 1929 success in Geneva with an orchestrated version of the *Schoenberg-Variationen*, which won the Emil Hertzka Prize in 1934. He won the Hertzka prize again in 1936 with his opera *Der Sturz des Antichrist*, based on a dramatic sketch by Albert Steffen, but negotiations to get the work performed in Vienna (1935) or Prague (1937) failed. A number of other works were performed in Prague during the later 1930s, including the Piano Sonata no.1, the Sechs Lieder for soprano and piano op.17 (texts by Albert Steffen), and the String Quartet no.2, which was also given by the Prague Quartet at the 1938 ISCM festival in London. There were, however, no public performances of works composed after 1938 (*Slawische Rhapsodie*, the Piano Concerto, the opera *Der zerbrochene Krug*). In the summer of 1942 he was able to give a set of those of his works which he had published himself to a friend for safe keeping.

On 8 September 1942 Ullmann was sent to the Terezín concentration camp, where he soon became one of the leading figures in the music section of the so-called Freizeitgestaltung, the programme of organizing the inmates' 'leisure'. He had an important influence on musical life in the camp as director of the Studio für neue Musik, as a critic (he wrote 26 reviews: see Schuttz, 'Viktor Ullman', 1993), and as performer and composer. Other prisoners – the singers Walter Windholz and Hedda Grab-Kernmayr, the pianist Edith Steiner-Kraus and the conductor Rafael Schächter – gave able performances of his music. The music for a dramatized version of ballads by Villon, the settings of poems by C.F. Meyer op.37, and the Piano Sonata no.6 received several performances before an appreciative audience. Ullmann's Terezín manuscripts were preserved from destruction by Professor Emil Utitz who gave them to H.G. Adler after the war. Ullmann was taken to Auschwitz on a 'liquidation transport' on 16 October 1944, and died in the gas chamber two days later.

Ullmann's development as a composer falls into three main periods. In the first, from 1920 to the early 1930s, the initial influence on his work was that of Schoenberg, but already from about 1924 he looked increasingly to Berg. He testified to his admiration for *Wozzeck* in a number of letters and articles. *The Schoenberg-Variationen* combine strict formal construction with playful pianistic verve.

The second phase began in about 1933, when he began to change his style. At this point he took up an intermediate stance, with the intention of 'exploring what remains to be discovered in the realms of tonally functional harmony or filling the gap between romantic and "atonal" harmony'. Dissonant harmony which nonetheless retains links to functional tonality and polyphonic writing characterized the structures of the first four piano sonatas and the song cycles of the second half of the 1930s, as well as his most important stage work, *Der Sturz des Antichrist*. In this opera he followed Berg's example in using the formal types of 'absolute' music (such as sonata form and fugue) as the basis of his structures.

In the final years, the primitive and brutal facts of life in Terezín did not succeed in destroying his creativity. The works he composed there were marked on the one hand by the formal and expressive mastery Ullmann had acquired during the last years in Prague, and on the other by the demands of musical life in the concentration camp, where the pre-eminent need was for *Gebrauchsmusik* that was both satisfying and accessible. The songs and choruses on Yiddish and Hebrew texts and the music for a dramatized version of Villon's ballads belong in the latter category. The masterpieces in Ullmann's Terezín output are the String Quartet no.3, the settings of Hölderlin and Meyer, the melodrama on Rilke's *Die Weise von Liebe und Tod des Cornets Christoph Rilke* and the one-act opera *Der Kaiser von Atlantis*.

Like many other artists of the interwar years, Ullmann was a victim of National Socialist racial and social policies. His works had been highly regarded in Prague's musical life, but when the German army entered Czechoslovakia in March 1939 they had come immediately under the ban on performances of Jewish music. The majority of his manuscripts were destroyed during the Protectorate.

Thirty years passed after his violent death before the process of rediscovering his work began with the Amsterdam première of his chamber opera *Der Kaiser von Atlantis* (1975). Performances of other works followed, primarily of works composed in Terezín, but also of the piano sonatas and some of the song cycles, as well as some of the orchestral pieces (Variations op.3b, *Slawische Rhapsodie* op.24, Piano Concerto op.25). Since then, with premières of the Rilke melodrama (1994), *Der Sturz des Antichrist* (1994) and *Der zerbrochene Krug* (1996), all Ullmann's major works have been rescued from the cache of suppressed and forgotten music that was taboo for so many years after the war.

WORKS
(*selective list*)

STAGE

Op: Peer Gynt (H. Ibsen), op.6, 1928/42 [lost]; Der Sturz des Antichrist (A. Steffen), op.9, 1935; Die Heimkehr des Odysseus, op.33, ?1941 [lost]; Der zerbrochene Krug (H. von Kleist), op.36 (Prague, 1942); Der Kaiser von Atlantis (P. Kien), op.49b, 1943

Other: Der Kreidekreis (Klabund), incid music, 1924 [lost]; music for a dramatic setting of F. Villon's ballads, 1943 [lost]

INSTRUMENTAL

Orch: Symphonische Phantasie (movt 3, T, orch, after F. Braun: *Der Abschied des Tantalos*), 1925 [lost]; Conc. for Orch (Symphonietta), op.4, 1928 [lost]; Variationen, Phantasie und

Doppelfuge über ein kleines Klavierstück von A. Schönberg, op.3b, 1933 [version of op.3a]; Slawische Rhapsodie, op.24, a sax, orch (Prague, 1940); Pf Conc., op.25 (Prague, 1940); Don Quixote tanzt Fandango, ov., 1944, inc.; Die Weise von Liebe und Tod des Cornets Christoph Rilke (melodrama, R.M. Rilke), nar, orch, 1944, inc.

Chbr: Str Qt no.1, op.1, 1923 [lost]; Octet, op.2, ob, cl, bn, hn, vn, va, vc, pf, 1924 [lost]; Str Qt no.2, op.7, 1935 [lost]; Sonata, op.16, quarter-tone cl, quarter-tone pf, 1937 [pf part lost]; Sonata, op.39, vn, pf, 1938 [pf part lost]; Str Qt no.3, op.46, 1943

Pf: Variationen und Doppelfuge über ein Klavierstück von A. Schönberg [op.19/4], op.3a, 1925 [lost], rev. with 5 variations, 1929, rev. with 9 variations, 1934; 7 sonatas: no.1, op.10 (Prague, 1936), no.2, op.19 (Prague, 1939), no.3, op.26b (Prague, 1940), no.4, op.38 (Prague, 1941), no.5, op.45, 1943, no.6, op.49a, 1943, no.7, 1944; cadenzas for Beethoven, Pf Conc. no.1 and Pf Conc. no.3, op.54, 1944

VOCAL

Choral: Oster-Kantate (C. Morgenstern, Steffen), op.15, choir, 6 inst, 1936 [lost]; Sym. Mass, op.13, choir, orch, org, 1936; Huttens letzte Tage (C.F. Meyer), lyrische Symphonie, op.12, T, B, orch, 1937 [lost]

Songs: 7 Lieder mit Klavier, 1923 [lost], rev. with orch, 1924 [lost]; 7 kleine Serenaden (Ullmann), op.6, choir, 12 insts, 1929 [lost]; Lieder (O. Brezinas), op.21, ?1930 [lost]; Elegien (after Steffen), op.8, S, orch, 1935 [only no.2 remains]; 7 Humoresken (Morgenstern), op.11, v, nar, pf, 1936 [lost]; 6 Lieder (Steffen), op.17, S, pf (Prague, 1937); [6] Geistliche Lieder (after various authors), op.20, S, pf (Prague, 1940); 5 Liebeslieder (R. Huch), op.26a, S, pf (Prague, 1940); 3 Sonnets (Barrett-Browning, Rilke), op.29, v, pf (Prague, 1940); Liederbuch des Hafis, op.30 (Prague, 1940); 6 Sonnets (L. Labé), op.34, v, pf (Prague, 1941); 3 Lieder (C.F. Meyer), op.37, Bar, pf, 1942; Der Mensch und sein Tag (H.G. Adler), op.47, v, pf, 1943; 3 jiddische Lieder, op.53, S, pf, 1944; 3 Lieder (F. Hölderlin), 1942–3

Other pieces based on Yiddish and Hebrew texts, as well as poems by Trakl, Steffen and Adler, 1942–4

MSS in *CH-DO* (works composed in Terezín); *CZ-Puk*

INGO SCHULTZ

Ulloa, Pedro de (*b* ?Madrid, 1663; *d* ?Madrid, 1721). Spanish mathematician. He became a Jesuit in 1678, taught grammar and philosophy at the college of his order at Oropesa, and later was transferred to Madrid as a professor of mathematics at the Imperial College and cosmographer for the Supreme Council of the Indies. His major work is his two-volume *Elementos matemáticos* (Madrid, 1706). He also published *Música universal, ô principios universales de la música* (Madrid, 1717), a small volume of only 104 pages, despite its ambitious title. The book contains an *Aprobación* by José de Torres. Theoretical rather than practical, it approaches music through the disciplines of mathematics, logic and rhetoric. Its topics include interval ratios, temperament, modulation, modes and their affects, harmonic combinations and musical styles. He touches upon certain topics rarely mentioned in the conservative Spanish theory of his time, including equal temperament (which he recommended for keyboard instruments), the reduction of the modes to major and minor and the doctrine of the Affections. The work was often cited as authoritative by Spanish theorists later in the century.

ALMONTE HOWELL

Ulloa Berrenechea, Ricardo (*b* San José, 15 April 1928). Costa Rican composer, critic and painter. He studied piano at the National Conservatory of Music with Guillermo Aguilar Machado, and took private lessons with Carlos Enrique Vargas. In 1953 he went to Madrid, where he studied painting and aesthetics, and attended the Madrid Royal Conservatory where he obtained the Higher Diploma in Piano Studies.

On his return to Costa Rica he taught piano, harmony and analysis for many years at the Castella Conservatory, taught the piano at the Autonomous University of Central America, and lectured at the University of Costa Rica. At the same time he worked as an art critic for the most important newspapers and reviews in Costa Rica, among them *La nación* and *La república*. As a painter his work has achieved international recognition. He has won numerous awards for his paintings, poetry and compositions, and is the author of *La música y sus secretos* (San José, 1979). His works combine a fundamentally tonal idiom with a modernist use of dissonance. He is the most important composer of lieder in Costa Rica.

JORGE LUIS ACEVEDO VARGAS

Ullrich, Hermann (*b* Mödling, nr Vienna, 15 Aug 1888; *d* Vienna, 27 Oct 1982). Austrian music historian and critic. While he was a law student in Vienna he also studied musicology with Adler. He graduated in law in 1911, and completed his musical education in Salzburg after World War I, with Felix Petyrek (piano) and Bernhard Paumgartner (conducting and instrumentation). He began his work as a music critic in Salzburg (1922) and wrote for the Vienna *Neue Freie Presse* (1926–38). After a break in exile in London (1939–46), he was music critic of the newspaper *Neues Österreich* (1946–67) while working as a judge. He was also a regular contributor to the *Österreichische Musikzeitschrift*. As a music historian he studied the Austrian composer Julius Bittner, the writings of Viennese music critics before the 1848 revolution, and Maria Theresia von Paradis, the blind pianist of Mozart's time (for his articles see PARADIS, MARIA THERESIA VON). He also composed works for orchestra, chamber orchestra and string quartet, other chamber music and lieder, and was second president of the supreme court until 1958.

RUDOLF KLEIN

Ulm. German city on the Danube. An imperial residence in the Middle Ages, and later a free imperial city, Ulm was one of the most important trade centres of southern Germany between the 14th and 16th centuries. Its position on the river Danube linked it with Vienna and eastern Europe. After the Napoleonic Wars it became part of the kingdom of Württemberg and its hinterland was divided between Württemberg and Bavaria.

The minstrel Meinloh von Sevelingen was born in the nearby village of Söflingen, and around 1430 Oswald von Wolkenstein came to the city as a member of the court of Emperor Sigismund. Ulm Minster, the city's principal church, had an organ from about 1416; a second organ was built in 1439 and enlarged in 1488. In 1530 Ulm embraced the Reformation and iconoclasts destroyed the organs in the following year. After Lutheranism was established in the city in 1571, a new organ was built by Kaspar Sturm from Regensburg (1576–8, enlarged 1597–9). A completely new organ was built by E.F. Walcker from Ludwigsburg between 1849 and 1856; it was replaced in 1969 by Walcker's Opus 5000. The minster's outstanding organists, some of whom were also composers, were Adam Steigleder (1595–1625), Sebastian Anton Scherer (1671–1712), Konrad Michael Schneider (1712–52), Johann Kleinknecht (1712–51), Johann Christoph Walther (1751–70) and, in the 20th century, Hans Jakob Haller and Edgar Rabsch. The specification of the organ in the Pauluskirche (built 1910, renewed 1970 and 1996) was influenced by Max Reger.

From about 1600 polyphonic music flourished in the minster. It was performed by 24 choristers, who attended the Gymnasium Academicum, where they received a musical education. Catholic church music was cultivated at St Michael zu den Wengen, a house of Augustinian canons, where Caspar Schollenberger (1673–1735), Joseph Lederer (1733–96), Johann Georg Niederländer (1736–94) and Michel Methic (1748–1807) lived and composed. Plays with music were staged there from the early 16th century.

The city employed musicians from the 14th century; in 1434 it received the imperial patent to maintain trumpeters and trombonists. There were some families of musicians (Maier, Oberhofer, Eberlin, Schmidtberger, Schwartzkopf) whose members were employed by the city for two or more generations. Benedictus Ducis (1532) and Hans Leo Hassler (1604–8) spent short periods in Ulm, but had little effect on its musical life. Members of the Kleinknecht family, Johann Wolfgang, Johann Stephan and the composer Jacob Friedrich (1772–94), held leading positions in the Hofkapelle at Bayreuth.

A guild of Meistersinger existed by 1517; it provided occasional theatrical performances, some with music, and survived until 1839, when the last four members of the guild handed over its flag and insignia to the Liederkranz 'as the natural successor and representative of the old Meistersinger tradition in the new era'. From around 1667 until well after 1700 Baroque instrumental music was cultivated by a collegium musicum made up of professional and amateur musicians. The printed and manuscript music of the Schermar library, representing the music collected by patrician families in about 1600, was catalogued by Clytus Gottwald in 1993.

Music printing and instrument making flourished in Ulm for a time. The organ builders Jörg Falb (*c*1470), Martin Grünbach (*c*1500), Gilg Taiglin (*c*1530), Hans Ehemann (*c*1650) and the Schmahl family (18th and 19th centuries) and the lute and violin makers Konrad Christoph Lacher (*c*1575), Christoph and Georg Unseld (*c*1600), Georg Negele (*c*1615) and one of the Eberlins (*c*1620) all ran workshops in the city. Balthasar Kühn (*d* 1667) and Johann Görlin (*d* 1663) and their heirs printed and published the works of composers living in Ulm and the neighbouring imperial cities.

Before the first theatre was built in the Binderhof by Joseph Furttenbach (1641), the Meistersinger and pupils and students of the Gymnasium staged plays in various rooms in the town. In 1781 the Theater im Binderhof was replaced by the Komödienhaus. Both theatres were frequently visited by touring companies from outside the city. In 1870 the Komödienhaus was granted the status of a Stadttheater (municipal theatre) and in 1920 it established its own orchestra, conducted by Herbert von Karajan from 1929 to 1934. The Stadttheater was

destroyed in 1945; performances continued in a provisional theatre until a new building was opened in 1969. In 1993 a purpose-built concert hall, the Einsteinsaal, was opened at the new congress centre. The following year the theatre orchestra was renamed the Philharmonisches Orchester der Stadt Ulm.

Since the early 19th century concerts have been promoted by musical societies such as the Liederkranz (founded 1824), the Oratorienchor and the Orchesterverein Ulm/Neu-Ulm. In the 19th century military bands also played an important part in the city's musical life: Carl Ludwig Unrath (1828–1908) conducted a band in Ulm between 1851 and 1872 and Carl Teike (1864–1922) composed his famous march *Alte Kameraden* in the city. Musical education in Ulm is provided principally by the Städtisches Schul- und Jugendmusikwerk and the members of the Philharmonisches Orchester.

ADOLF LAYER/CHRISTIAN BROY

Ulrich [Uolrich] **von Liechtenstein** [Liehtenstein, Lichtenstein] (*b* Styria, *c*1200; *d* 26 Jan 1275). German poet and Minnesinger from a famous Styrian family. His political career is amply documented; the rest of his life is described in his principal work, *Frauendienst* (completed 1255; ed. K. Lachmann and T. von Karajan, Berlin, 1941/*R*; ed. F.V. Spechtler, Göppingen, 1987). This long strophic poem also includes his 57 songs (which are also contained in the Manessesche Liederhandschrift) and his one *Leich*, but no music survives. *Frauendienst* contains numerous important references to music, to the art of composition, to methods of making contrafacta and to the use and performance of secular music, both vocal and instrumental. Less attention has been paid to his *Frauenbuch* (ed. F.V. Spechtler, Göppingen, 1989), which was written in the mid-13th century and is transmitted only in one manuscript of the early 16th century.

BURKHARD KIPPENBERG/LORENZ WELKER

Ulster Orchestra. Orchestra founded in 1966 in BELFAST.

Ultraphon. German and Dutch record company. It was founded in Berlin in 1921 by the scientist Heinrich J. Kuechenmeister. Initially it was concerned with instruments and sound reproduction; in 1925 it marketed, through its subsidiary Tonapparate, a record player with paired pickup arms, soundboxes and horns working with a time lapse of one-sixth of a second. From 1927, working with Herbert Grenzebach of Elektrophon, it set new standards of recorded quality, and in 1929 it began issuing records. For orchestral recordings, Grenzebach used multiple microphones including one at 20 metres' distance for echo effects. Records of standard groovecut were 30 and 25 cm, 78 r.p.m. but 20 cm discs with narrow groove were also made (on the Orchestrola label), as were 40cm discs at 33 r.p.m. with an inside start, for use with films.

Soon after its first records were issued, the firm merged with Orchestrola-Vocalion (including the Clausophon, Adler and Orchestrola labels). The firm set up numerous subsidiaries abroad, including the group of firms in Czechoslovakia that in 1946 were amalgamated as Supraphon. More than 2000 titles were produced in two and a half years, but the policy of high quality and cost led to the firm's being unable to weather the economic crisis and in 1932 it went out of business and its stock was taken over by Telefunken, who abandoned the Ultraphon label in 1933.

The company had access to salon and dance music through Orchestrola-Vocalion. Its own recordings covered a wide spectrum, with artists including Paul Bender, Paul Schöffler, Erich Kleiber, Carl Schuricht, Alexander von Zemlinsky, Georg Kulenkampff and Moriz Rosenthal; *Die Dreigroschenoper* was recorded in 1930 with its original cast, including Lotte Lenya, and sacred music recorded in churches was issued on the Musica Sacra label. There were also recordings of dance music and cabaret.

Um-Kalthoum, Ibrahim. *See* UMM KULTHUM.

Umkehrung (Ger.). *See* INVERSION.

Umlauf, Carl Ignaz Franz (*b* Baden, nr Vienna, 19 Sept 1824; *d* Vienna, 25 Feb 1902). Austrian zither player, composer and teacher. After completing a tradesman's training to comply with his father's wish he studied the violin with Jansa and music theory with Sechter and made music his career. Inspired by popular enthusiasm for the zither he became absorbed in designing as well as playing the instrument and, together with the zither manufacturer Anton Kiendl, developed the 'Viennese zither', distinguished from other, usually Bavarian, instruments by its

tuning and number of strings. He also drew attention to the bowed zither and to the *Elegiezither*, a larger instrument particularly suited to concert performance because of its fuller tone. In Vienna he directed the first public zither school, and from 1844 made concert tours throughout Europe; he was appointed *Hofmusikus* by the Austrian imperial court. His 18 volumes entitled *Salon-Album für Zitherspieler*, containing original compositions and transcriptions, were popular in his day. Although his 'Viennese tuning' has been replaced by so-called 'normal tuning', his zither method, *Neue vollständige theoretisch-praktische Zitherschule* (Vienna, 1859), superseded other famous zither methods of his time (Weigel, 1838; Ruthardt, 1846 and Buchecker, 1854), and has held its place to the present day.

HORST LEUCHTMANN

Umlauf [Umlauff], **Ignaz** (*b* Vienna, 1746; *d* Meidling, nr Vienna, 8 June 1796). Austrian composer, conductor and viola player, father of MICHAEL UMLAUF. His name first appears as fourth viola player in the Vienna court orchestra in 1772, from which year his Singspiel *Die Insul der Liebe* probably dates. By 1775 he had advanced to the post of principal viola player in the German Theatre orchestra, and by 1778 he was highly enough regarded to be given the commission to write the first work for Joseph II's new 'German National Singspiel', *Die Bergknappen,* to a libretto by Joseph Weidmann. Umlauf was appointed Kapellmeister to the new venture at a modest 600 florins a year, less than some of the singers received. Four further works by him were given before the first closure of the Singspiel company in 1783, including *Die schöne Schusterin oder Die pücefarbenen Schuhe* (1779), which, partly because of the much-loved Marianna Weiss in the title role, had over 60 performances in 23 years and was also staged in at least four other Vienna theatres, and *Das Irrlicht* (1782), which also exceeded the 30 repetitions of *Die Bergknappen.*

By 1783 Umlauf had advanced to the position of Salieri's deputy Kapellmeister at a salary of 850 florins a year, and he also had the responsibility (and additional remuneration) for instructing seven boy choristers. After the closure of the National-Singspiel in 1788 he was appointed second Kapellmeister to the Hofkapelle. He played the keyboard continuo at the performance Mozart conducted on 26 February 1788 of C.P.E. Bach's oratorio *Die Auferstehung und Himmelfahrt Jesu*; and on 6 March 1789 he directed the singers in the *Messiah* performance in Mozart's orchestration and under his direction. On the occasion of Leopold's coronation at Frankfurt in 1790 Umlauf made his only lengthy journey from Vienna, being part of the official entourage of the emperor. He died shortly after his appointment as music teacher to the imperial children.

Umlauf was the most successful Viennese Singspiel composer before Dittersdorf began to establish himself in this popular genre in the mid-1780s; he was studious and careful and had a marked melodic gift (his air 'Zu Steffen sprach im Traume' from *Das Irrlicht* was a particular favourite, as witness Eberl's set of variations long attributed to Mozart). His tendency to juxtapose such stylistic features as Italian coloratura arias and homely Austrian songs and dances is characteristic but by no means original; the best of his scores would still prove viable, not only because of their effective orchestration but also because, despite the occasionally jerky effect of rapid key change, they reveal sufficiently marked gifts of dramatic timing and musical characterization to make Mozart's comments (e.g. the letters of 21 December 1782 and 5 February 1783, admittedly discussing *Welche[s] ist die beste Nation?*, one of his least successful scores) seem rather intolerant. It was no doubt mainly due to a lack of resilience and power of development, however, that his last success dates from his 36th year, a few months before the première of Mozart's *Die Entführung aus dem Serail*: none of Umlauf's last three Singspiele achieved double figures in the repertory lists, and by the time of his death only *Die schöne Schusterin* and *Das Irrlicht* were still being performed.

PETER BRANSCOMBE

Umlauf [Umlauff], **Michael** (*b* Vienna, 9 Aug 1781; *d* Baden, nr Vienna, 20 June 1842). Austrian composer, conductor and violinist, son of IGNAZ UMLAUF. At an early age he became a violinist in the Vienna court orchestra; the first of a series of ballet scores for the court theatres dates from 1804. He is listed in the theatre almanac of 1809 as Kapellmeister Gyrowetz's deputy, and by the 1815 almanac he had advanced to fourth of the six Kapellmeister at the court theatres. Umlauf retired in 1825 during Barbaia's direction of the court opera, and applied without success for the post of second Kapellmeister at the Stephansdom. It was 1840 before he again came to the fore, this time as music director at the two court theatres, but his lengthy absence had left him quite out of touch and he soon retired again, dying not long after.

Umlauf's name is most familiar from his connections with Beethoven, whose works he several times conducted. In 1814 it was he who, at the revival of *Fidelio*, directed the performance; on other occasions, too, it was Umlauf whom the orchestra and singers followed, rather than the deaf and impetuously conducting composer. As a composer Michael Umlauf enjoyed less esteem than his father, but his ballet scores (especially *Paul und Rosette*, which was played 65 times in the court theatres and was also given in the Leopoldstadt Theatre) were popular in their day. He wrote three Singspiele.

WORKS

STAGE

first performed at Vienna, Kärntnertortheater, unless otherwise stated

Das Fest der Liebe und der Freude (Spl, 2, J. Perinet), Eisenstadt, 12 April 1806

PETER BRANSCOMBE

Umm Kulthum [Ibrāhīm Um Kalthum] (*b* Tammay al-Zuhayra, El Mansura, Egypt, ?1904; *d* Cairo, 3 Feb 1975). Egyptian singer. She was born to a poor family. Her father, al-Shaykh Ibrāhīm al-Baltājī, was an official of the local mosque; he sang religious songs (*al-inshād al-dīnī*) and recited the story of the Prophet Muhammad's life (*al-qiṣṣa al-nabawiyya*) for weddings and other festive occasions in nearby villages. Umm Kulthum learned to sing as a child by listening to him teaching her older brother Khālid. When he discovered the unusual strength of his daughter's voice, her father asked her to join the family ensemble. She sang religious songs normally performed by males and appeared dressed as a boy to avoid the disapprobation that her father might face as a result of putting his daughter on stage. Other singers began to encourage al-Shaykh Ibrāhīm to move the family to Cairo, which was a centre of musical performance and commercial recording.

After more than five years of performing in the north-eastern cities of Egypt and in Cairo, the family moved to the capital in 1923. The requirements of performance in a cosmopolitan city prompted Umm Kulthum to alter her musical style and her appearance. She added new popular songs and historic Arabic poems to her repertory and replaced the vocal accompaniment provided by her father and brother with a prestigious *takht*, a small ensemble consisting of violin, *qānūn*, *riqq* and *'ūd*. She adopted the modest yet rich and Europeanized dress of the wealthy Muslim ladies of the city.

Her first success came with commercial recording. In 1924 and 1925 she recorded 14 songs for Odeon. These sold remarkably well, probably because of her large audience in the countryside and the fact that record players and recordings were appearing in public places such as coffee houses. Subsequent contracts with Gramophone and Odeon provided Umm Kulthum with a growing audience beyond the concert halls of Cairo and a substantial income that allowed her to choose her performing venues. By 1928 she was one of the most successful performers in Cairo.

In 1934 Umm Kulthum performed for the inaugural broadcast of the Egyptian state radio station, and radio became her principal means of reaching her audience. In the late 1930s she arranged for live broadcasts of her Thursday night concerts, which carried these events into homes and coffee houses during 'prime time'. These concerts developed into a series held on the first Thursday of every month from October or November until June; they became Umm Kulthum's most famous activity and lasted until the onset of her final illness in 1973. She also appeared in six musical films, beginning with *Widād* in 1935 and ending with *Faṭma* in 1948, but film never became a primary medium for her.

She worked with the major composers of her day, presenting them with poetry of her choice and supervising the composition of her repertory. Riyāḍ al-Sunbāṭī, Muḥammad al-Qaṣabjī, Zakariyyāḥ Aḥmad and Muḥammad 'Abd al-Wahāb, among others, wrote songs for her. She recorded almost 300 songs, among the most famous of which are *al-Aṭlāl* (written by al-Sunbāṭī), *Inta 'Umrī ('Abd al-Wahhāb)*, *Raqq al-Ḥabīb* (al-Qaṣabjī) and *Huwa Ṣaḥīḥ* (Aḥmad).

Umm Kulthum with her firqah, including (right) the qānūn player Muhammad Abdu Salih and the composer and 'ūd player Muhammad Al-Qasabgi

Umm Kulthum had a powerful voice and wide range with uniform strength throughout. She developed control that allowed her to extend phrases and to alter resonance and placement in delicate and artistic ways, and she applied these skills to the affective delivery of lines of poetry, inventing multiple renditions of important lines. In so doing, she advanced the historic Arab art of sung poetry.

During the 1950s and 60s she became a major cultural figure. She supported the initiatives of President Jamāl 'Abd al-Nāṣir and, following Egypt's defeat in the 1967 war, launched a series of concerts to replenish the Egyptian treasury, beginning in Paris and continuing throughout the Arab world. When she died, she was called 'the voice and face of Egypt'.

UMP. *See* UNITED MUSIC PUBLISHERS.

Umstatt, Joseph (*b* Vienna, 5 Feb 1711; *d* Bamberg, 24 May 1762). Austrian composer. According to the parish register in St Stephen's, Vienna, he was the second of five children of the court painter to the widowed Empress Anna Amalia of Austria. He was probably educated in Vienna. In 1749 he held an appointment in Dresden as musical director at the court of Count Brühl, where he became acquainted with J.A. Hasse and J.C.F. Bach. On 20 October 1752 he was appointed Kapellmeister and court composer to the Prince-Bishop J.P. von Frankenstein and his successor in Bamberg. The following years, up to his death, were his most creative.

Umstatt composed in nearly all the forms of his time, both sacred and secular, and his works demonstrate the gradual change from Baroque polyphony to the Classical style. This can be seen in his masses (which include cantata masses in several movements, of both the *missa solemnis* and *missa brevis* types) where fugues stand alongside homophonic and cantabile sections. In his *Missa pastoritia* he made extensive use of folksong melodies and shepherd calls. The 'stylus mixtus' of J.J. Fux is Umstatt's starting-point, but he also attempted to develop an individual style. He composed solo concertos for violin, flute, harpsichord and pantaleon. In his concertos Umstatt modified the Vivaldian concerto form, giving the solo episodes greater weight and prolonging them by comparison with the tuttis; virtuoso passages for the soloist play an important part in the harpsichord concertos. Umstatt's use of sequence may be seen as conservative, but various flourishes, figurations and rhythmical formulas are a part of *galant* style.

His 11 surviving symphonies are mostly in three movements (two have an additional minuet and trio). Most of his thematic material is of broken-chord, triadic matter; his music sometimes remains on this harmonic plane, whereas in the works of his contemporaries (such as Monn or Wagenseil) melodic lines often follow the opening chordal flourishes. In most of his symphonic movements there is a second theme in the dominant key, which does not return later in the movement. His development sections, in the common manner of the time, consist of modulating sequences with occasional use of motifs from the principal theme; and the reprises are short

and incomplete, repeating only the closing section of the exposition.

Umstatt's music is typical of the older generation of the Viennese school; stylistically, his music stands alongside that of Monn and other better-known contemporaries, though Umstatt's works do not reflect a special personal style.

WORKS

EXTANT

1 kbd sonata in Oeuvre mêlée, iv (Nuremberg, 1755); 4 pieces in Raccolta della megliore sinfonie (Leipzig, 1762); Voluntary and Fugue in Clementi: *Selection of Practical Harmony for the Organ or Piano Forte* (London, 1801)

8 masses; Ky and Gl; 3 requiems; 1 Stabat mater; 6 short sacred works; 2 cants.

11 syms; 9 concs. for hpd, 6 for vn, 4 for fl; 2 trio sonatas; 2 parthias with clarinos; 11 intradas; 1 sonata, vc, hpd; 13 sonatas and partitas, other short pieces, hpd

MS sources: *A-GÖ, KR, Wgm, Wn; CZ-Bm, Pnm; D-Bsb, Dl, EB, KA; F-Pn*

LOST

Works by Umstatt, possibly including some of the surviving ones mentioned above, are listed in two catalogues in *D-BAa* as follows:

Musica composta in Dresda: 3 syms; 5 concs. for hpd, 1 for org, 1 for fl, 4 for pantaleon; 6 minuets; 1 partita, str; 3 duets, 2 hpd; 1 sonatina, 1 arietta, hpd; 2 trios with lute; 1 solo, vc; 3 cants.; 2 masses; 1 motet; 1 alleluia

Inventario della musica composta per la corte di Bamberg ... 1752–62: 34 syms.; 13 syms. and church sonatas; 12 concs. and partitas; 11 masses; 3 requiems; 7 Vespers; 17 offs; 8 hymns; 2 orats; 1 TeD; 14 cants.

Breitkopf thematic catalogue: 6 syms.; 3 sonatas, 2 vc, db; 4 sonatas, db; 2 arias

Other lost works: 1 symphony, formerly *A-LA*; 1 fugue, *Wn*; La vittima d'amore (orat), *D-LEt*; 6 parthias, 6 pf sonatas, *FétisB*; 4 pf sonatas, *GerberL*

Ün, Ekrem Zeki (*b* Istanbul, 23 Nov 1910; *d* Dublin, 24 March 1987). Turkish composer, violinist and conductor. He studied the violin with Line Talluel, Marcel Chailley and Jacques Thibaud and harmony with L. Laurant and Alexandre Cellier at the Ecole Normale de Musique in Paris; he also took composition lessons from Dandelot. His compositional style evolved throughout his career. His impressionistic early compositions reflect his education in Paris; later he was influenced by the philosophy of Henri Bergson and began to incorporate the melodic and rhythmic modal systems of Turkish traditional music. While Ün considered his works written after 1965 to be images of Eastern mysticism, his earlier compositions often cultivated national themes, as in his symphonic poem *Yurdum* ('My Country'). Ün also wrote several books on music education in Turkey.

MÜNİR NURETTİN BEKEN

Una corda (Ger. *Verschiebung*). A name often used for the left or 'soft' pedal on the piano, or, in piano music, a direction to play with this pedal depressed. In a modern grand piano this pedal shifts the action sideways so that the hammers strike only two of the three strings provided for each note in the treble and only one of the two strings provided for each note in the bass, while continuing to strike the single strings of the extreme bass. In pianos of the 18th and early 19th centuries, the una corda pedal caused the action to be shifted so far that the hammers struck only one string throughout the entire range of the instrument, giving the pianist a choice between 'tre corde' (when the pedal was not depressed), 'due corde' (partly depressed) and 'una corda' (depressed completely). In some instruments a stop could be set to limit the shifting of the action to the 'due corde' position, but several composers, most notably Beethoven, wrote explicitly for both 'due corde' and 'una corda'.

The effect produced by depressing the una corda pedal on a grand piano is not merely one of reduced volume, but also of a change in timbre, so that the sound is not only softer but less brilliant than that from all three strings. (On an upright piano the corresponding pedal merely moves the hammers closer to the strings, so as to shorten their stroke, and the resulting reduction in volume is not accompanied by any change in timbre.)

The una corda is found on two of the three surviving Cristofori pianos (1722, 1726), but is incompatible with the design of the first (1720). It has been a feature of most grand pianos since the latter part of the 18th century, becoming standard on English instruments rather earlier than on German or Austrian ones.

Underworld. British techno group. It was originally formed as a duo in 1988 by Karl Hyde (vocals and technology) and Rick Smith (guitars and technology), who had performed together as a 1980s synth-pop band, Freuer. A début album *Underneath the Radar* (Sire, 1988) and the subsequent *Change the Weather* (Sire, 1989) fared badly, and the pair temporarily disbanded. After the advent of acid house, they began working with the London DJ Darren Emmerson as Lemon Interrupt, and the Underworld name was resurrected for the single *Rez* which became a seminal post-rave anthem. They developed largely instrumental techno and 'big beat' music with trademark rhythm and processed vocal effects, a combination that has been recreated live to acclaim. They released two singles as Lemon Interrupt on the influential

Junior Boys Own label (*Dirty/Minneapolis* and *Bigmouth/Eclipse*). The band's three albums – *Dubnobasswithmyheadman* (JBO 1993), *Second Toughest in the Infants* (JBO 1995) and *Beaucoup Fish* (JBO 1999) – explored ambient and chill-out territories and saw them gain commercial success, not least through many festival and concert appearances and the massive exposure gained when the director Danny Boyle chose *Born Slippy* as the main theme for his film *Trainspotting*. Like many bands of their era, some of their greatest moments can also be heard in their remixes of other artists, most notably Björk, Sven Väth and Leftfield.

Unfolding (Ger. *Ausfaltung*). In Schenkerian analysis (*see* ANALYSIS, §II), a method of PROLONGATION whereby the separate voices of a contrapuntal idea are amalgamated as a single line. Ex.1 shows the derivation by unfolding of

the opening bars of the first theme from the finale of Beethoven's Cello Sonata in A op.69.

WILLIAM DRABKIN

Ung, Chinary (*b* Takeo, 24 Nov 1942). American composer of Cambodian birth. Having heard no Western classical music until his late teens, he was first attracted to 19th-century Romanticism and then to a wider spectrum of Western music. One of the first graduates of the Ecole de Musique, Phnom Penh, he received a diploma in clarinet performance (1963) before emigrating to the USA on an Asia Foundation scholarship the following year. He continued his studies at the Manhattan School and received a DMA with distinction from Columbia University (1974), where his principal composition teacher was Chou Wen-chung. During a hiatus from composing (1974–85), he assisted family members in escaping from Cambodia, and turned his attention to the study of Khmer cultural and musical traditions. He has taught at the University of Pennsylvania, Arizona State University and the University of California, San Diego, among others. His numerous honours include awards from such institutions as the American Academy of Arts and Letters, the NEA, and the Guggenheim, Koussevitzky, Ford, Rockefeller and Barlow foundations. The 1989 University of Louisville Grawemeyer Award for composition (*Inner Voices*, 1986), brought him international recognition.

Ung's music is a blend of Asian aesthetics and contemporary Western techniques. He has remarked, 'If East is yellow, and West is blue, then my music is green'. His works are often influenced by mental images of geometrical shapes, past events or natural phenomena. A skilled orchestrator, he combines instrumental timbres in a unique and colourful way. In 1987 he began a series of compositions employing a musical spiral concept. In these works, groups of notes or extended phrases are continually expanded to create 'new and newer' forms.

JOHN KAYS

Ungarelli [Ungherelli, Ongarelli], **Rosa** (*b* Bologna; *fl* 1709–32). Italian singer. She was the wife of Antonio Maria Ristorini, with whom she achieved international fame as an interpreter of comic intermezzos. Troy writes that she was a soprano, but according to Strohm she was a contralto. She began as a singer of *opera seria*, appearing in three productions at Florence in winter 1709–10; but in spring 1714 she performed intermezzos at Parma with Giovanni Battista Cavana and by 1716 had formed a partnership with Ristorini that was to last for at least 17 years.

Their performance of Niccolò Orlandini's *Il marito giocatore e la moglie bacchettona* at Pistoia in 1725 is described at length by the diarist Giovanni Cosimo Rossi-Melocchi. He particularly admired Ungarelli's acting: she used 'gestures that would have moved a stone' and 'words that would have liquefied bronze ... her gestures and manner on the stage are something that cannot be believed by one who has not seen them. For this reason I gave her the name "Man-killer". And she really is not pretty; God help us if she were'.

COLIN TIMMS

Ungaresca [ungarescha] (It.). A name used outside Hungary for a dance in the Hungarian style. In western Europe Hungarian dances appeared by the late 14th century in the *ballet des nations* (dances in a variety of national styles staged in court entertainments). The *ungaresca* is first mentioned by name in Milan in 1490, but at that time it probably had not acquired the lively, heavily accented character of 16th-century examples: a report of a Sforza wedding in 1494 notes that the allemande was danced '*andante*, like an *ungaresco*' (cited in Pirro,

Histoire de la musique). No choreography for the dance is known. The earliest printed *ungaresche*, dating from the late 16th century, are found in dance collections for viol consort (Mainerio's *Primo libro de balli*, 1578) and in lute and keyboard tablatures (Wolff Heckel's *Lautten Buch* of 1556 and Jakob Paix's *Orgel Tabulaturbuch*, 1583). Two *Ungarische Paraden* in Nörmiger's *Tabulaturbuch* (1598) exhibit the accented anapaests and dotted rhythms that became characteristic of the STYLE HONGROIS in the 19th century. There seems to be no relationship between the *ungaresca* and several dances called 'Ungaro' or 'Ongaro' (e.g. by Bernhard Jobin and Giovanni Picchi) which are based on a single tune.

MATTHEW HEAD

Ungarischer Tanz (Ger.). *See* VERBUNKOS.

Ungaro, Jacomo (*fl c*1473–1513). Type cutter, active in Italy. On 26 September 1513 he submitted a petition to the Venetian senate requesting a 15-year privilege to print mensural music. In the petition he expressed concern that others would 'harvest the fruits of his labour' after he had 'discovered the way to print mensural music [*canto figurato*]' in the city where he had been a cutter of letters for 40 years. The previous privilege holder, Petrucci, was by then living in Fossombrone in the papal states. The senate awarded Ungaro an exclusive privilege, but he is not known to have exercised it. Apparently he had cut Petrucci's music type; Petrucci had been awarded a privilege for printing music in Venice in 1498. Because of his long tenure in Venice, Ungaro may well have been responsible for the first mensural music type used in Venice in 1480 and for several of the 24 plainchant types used there between 1482 and 1500, some of which are remarkably similar. Under the name Magistro Jacomo Todesco he was employed as a type founder by Aldo Manuzio and was remembered in Manuzio's will of 1506.

M.K. DUGGAN

Unger, Andreas (*b* in or nr Augustusburg, Saxony, *c*1605; *d* Naumburg, bur. 29 Dec 1657). German composer. He attended the Thomasschule, Leipzig, and then Leipzig University, where he matriculated in 1625 and took the master's degree in 1631. After several years in minor educational posts in Leipzig he was from 1633–4 until his death civic Kantor at St Wenzel, Naumburg; however, his applications of 1630 and 1657 for the post of Thomaskantor at Leipzig appear to indicate that he felt himself to be suited to that important position. Unger's enthusiasm as a music collector, his delight in new sonorities and his artistic taste made Naumburg an important centre in Thuringia for the transmission of the new central German church music of the first half of the 17th century. His musical legacy to St Wenzel included musical instruments that still survive today (*D-Bim*); his very valuable music library, including numerous unica – among them individual works by Schütz, autographs, and works of Leipzig musicians that they presented to him – was available only in part and for a limited period (in Königsberg from about 1870 to 1945). In the late manuscript works, of which only the continuo parts survive, Unger wanted to demonstrate to student composers the art of setting sacred texts to music.

WORKS

Vogelfang der Schäferin Filli, wedding song, 3vv, bc (Leipzig, 1630), lost
Hüpferling oder Hopfen-König, Frau Venus und ihr Sohn, wedding song, 3vv, bc (Leipzig, 1633); ed. in Wustmann
Iterinarium amatorium spirituale, geistliche Liebes-Reise, Wo ist dein Freund hingegangen, 3–20vv, bc (Leipzig, 1633), lost
Anxietas Davidica spiritualis, Herr, die Angst meines Herzens ist gross, funeral song, 5–10vv (Jena, 1650), lost
Da er solches mit ihnen redet, madrigal, 5 or 10vv, bc, *c*1650, *D-NAUs** (b only)
Ich habs gesagt und zugesagt, conc., 3–46vv, *c*1650, *NAUs** (b only)
Wohl dem, der in Gottes Furcht steht, conc., 3–46vv, *c*1650, *NAUs** (b only)
Die Aufferstehung Jesu Christi, 5, 6, 10vv, *c*1650, *NAUs** (b only)
Passion, lost, cited in Werner

WERNER BRAUN

Unger [Ungher], **Caroline** [Karoline, Carolina, Carlotta] (*b* Stuhlweissenburg [now Székesfehérvár], 28 Oct 1803; *d* Florence, 23 March 1877). Austrian mezzo-soprano. The daughter of Johann Karl Unger, a professor at the Theresian Academy, she had her first singing lessons with Joseph Mozatti and Ugo Bassi. Later she studied with Aloysia Weber, J.M. Vogl and finally with Domenico Roncini in Milan. She made her début on 24 February 1824 in Vienna at the Kärntnertortheater as Dorabella in *Così fan tutte*. She and Henriette Sontag sang in the première of Beethoven's Ninth Symphony on 7 May 1824.

The next year Unger followed the impresario Domenico Barbaia to Italy; as early as 1825, the *cartellone* of Naples listed her as one of the *prime donne* among the women singers engaged for the season. She enjoyed further success in Turin, Bologna, Genoa, Milan and Rome. At La Scala she sang Isoletta in the première of Bellini's *La straniera* on 14 January 1829. In May 1830 she shone in Rossini's *Il turco in Italia* and Pacini's *La sposa fedele*. Early in 1833 she was engaged by the Teatro della Pergola in Florence, and from October 1833 she sang in the Théâtre Italien in Paris, where she was acclaimed in Bellini's *I Capuleti ed i Montecchi*. After nine years of absence she returned to Naples in May 1834, and in autumn 1835 was the first German-speaking singer there in the role of Norma. On 4 February 1836 she sang in the première of Donizetti's *Belisario* at the Teatro La Fenice in Venice, where two years later she created the title role of Donizetti's *Maria di Rudenz*. By 1837 she had a repertory of more than 100 roles. She made guest appearances in

1839 as Anna Bolena and Norma in Dresden, where the contemporary music press wrote of 'her excellent method of singing, and the truth and ardour of her dramatic expression'. In 1841 she married the French writer and translator of Goethe's *Faust* François Sabatier, and ended her stage career in Italy, laden with honours. She continued to sing on the concert platform, and besides her performances in opera, became an outstanding interpreter of lieder by Mozart and Schubert. After her retirement from the operatic stage, Unger began to reveal a considerable talent as a composer of lieder. A British private collector owns two autograph volumes (one of them subsequently printed for private circulation; copy in *A-Wgm*) that bear witness to her ability in a repertory extending from brief settings of Goethe, Heine and other Romantic poets, to lengthy ballad-like settings of French poems by her husband.

One of the few 19th-century Austrian singers to enjoy her greatest triumphs in Italy, Unger was an outstanding exponent of *bel canto*. Donizetti and Bellini wrote parts for her, and Rossini, who spoke of her possessing 'the ardour of the south, the energy of the north, brazen lungs, a silver voice and a golden talent', engaged her to sing in his operas. According to Fétis she was large and attractive, and had a fine, broad tone except in her upper register, in which there was some harshness and forcing. Her greatest strength, however, was her power of expression, which allowed her to triumph over such rivals as Wilhelmine Schröder-Devrient.

URSULA KRAMER (with PETER BRANSCOMBE)

Unger, Georg (*b* Leipzig, 6 March 1837; *d* Leipzig, 2 Feb 1887). German tenor. Having abandoned theological studies, he made a successful début as an opera singer at Leipzig in 1867, which led to further engagements in several German cities. At Mannheim in June 1874, on the recommendation of Ernst Frank, Unger sang to Hans Richter, who was touring Germany auditioning singers for the première of Wagner's *Ring* in 1876. Unger sang from *Tannhäuser* and went to Bayreuth in July 1874 to learn the part of Loge with Richter. Eventually, however, he was given the roles of Froh and Siegfried, although performing both roles proved too demanding and caused Unger to miss performances, and he was replaced as Froh in the second cycle to save his voice for the more taxing role of Siegfried. After his appearance in London at the Wagner Festival of 1877, the composer no longer used him. He returned to Leipzig, where he sang until 1881.

J.A. FULLER MAITLAND/CHRISTOPHER FIFIELD

Unger, Gerhard (*b* Bad Salzungen, Thuringia, 26 Nov 1916). German tenor. He studied in Eisenach and at the Berlin Hochschule für Musik, and in 1947 was engaged at Weimar, where he sang lyric roles such as Tamino, Alfredo and Pinkerton, and David, his most popular role at that period of his career, at Bayreuth (1951–2). In 1952 he moved to the Berlin Staatsoper and in 1961 to Stuttgart, where he remained until 1982. A member of the Hamburg Staatsoper (1962–73), he appeared at the Vienna Staatsoper, La Scala, the Paris Opéra, the Metropolitan and in Salzburg, where in 1961 he sang Pedrillo (*Die Entführung aus dem Serail*), another favourite role, which he repeated over 300 times. In the 1970s and 80s he specialized in character roles, such as the Captain (*Wozzeck*), Skuratov (*From the House of the Dead*), Brighella (*Ariadne auf Naxos*), the Italian Singer (*Der Rosenkavalier*) and, above all, Mime in both *Das Rheingold* and *Siegfried*, which he sang widely in Europe and North and South America. Unger was also admired as a singer of Bach. His highly placed, bright, clear-toned voice hardly changed as he grew older, so that in 1980 he could still carry conviction as Pedrillo at Bregenz. He recorded many of his roles, including Pedrillo, Monostatos, Brighella, David and Alwa (*Lulu*).

WOLFRAM SCHWINGER/ELIZABETH FORBES

Unger, (Ernst) Max (*b* Taura, Saxony, 28 May 1883; *d* Zürich, 1 Dec 1959). German musicologist and conductor. He went to the Leipzig Conservatory in 1904, studying piano with A. Ruthardt, composition with H. Zöllner, musical aesthetics with A. Seidl, at the same time attending Riemann's lectures on music history at the university. In 1906 he became conductor at the Vereinigte Leipziger Schauspielhäuser and a year later a teacher at the Bromberg Conservatory. He spent a year in London carrying out research on Clementi. After his return to Leipzig in 1908 he continued his studies with Riemann and took the doctorate in 1911 with a dissertation on Clementi. He was conductor of the Leipzig Madrigal Society (1912–14) and editor of the *Neue Zeitschrift für Musik* (1919–20). From 1932 to 1939 he lived in Zürich, where he made a catalogue of H.L. Bodmer's collection of Beethoven manuscripts. He lived in Volterra between 1939 and 1957, then returning to Zürich.

His research on Clementi, who had met Beethoven in 1807, enabled Unger to date several problematic Beethoven letters. This directed him to Beethoven's letters in general and he collected material for a new complete edition. His study of Clementi's correspondence also enabled Unger to prove that Beethoven's prospect of marriage in 1810 concerned Therese Malfatti. On his death, his library and notes were acquired by the Beethoven Archives in Bonn.

Ungher, Karoline. *See* UNGER, CAROLINE.

Ungler, Florian (*b* Bavaria; *d* Kraków, 1536). Polish printer of German birth active in Kraków. From 1510 to 1516 he worked with other printers, including JAN HALLER, but later he established his own printing house. He was the first in Poland to publish music in mensural notation (printed from woodblock), in his editions of musical theorists. His total output was over 240 titles. When he died his widow continued the business until her death in 1551, when Siebeneicher acquired the firm for the Szarfenberg publishing house (*see* SZARFENBERG, MACIEJ).

Unión Musical Ediciones. Spanish firm of music publishers. *See under* UNIÓN MUSICAL ESPAÑOLA.

Unión Musical Española. Spanish firm of music publishers. At the end of the 19th century Ernesto Dotesio Paynter established a music shop in Bilbao, and also engaged in music publishing. On 14 March 1900 he founded the music publishing firm Casa Dotesio, having in 1898 bought the Casa Romero, one of the most important publishing houses in Spain; this was founded by Antonio Romero y Andía in 1856, and was active throughout the second half of the 19th century. In the weeks following its foundation the Casa Dotesio absorbed other important houses, including Zozaya, Fuentes y Asenjo and, most significant, Eslava (founded by Bonifacio San Martín Eslava); the Casa Romero and Eslava are notable for having published many 19th-century Spanish works, not only in large numbers but also exquisitely printed. In the following years the Casa Dotesio continued to absorb other smaller publishers. On 26 May 1914 it changed its name to Unión Musical Española, a name that better reflected the character of the firm, since it had united all the previously disparate parts of the nation's music publishing under one roof, and continued to do so in subsequent years. In 1942 it acquired the Editorial Orfeo Tracio, which in turn had absorbed such important houses as Vidal Llimona y Boceta, Luis Tena and Salvat. The firm also serves as a music shop, and was for many years the most important in Spain. In 1993 the firm's archive was transferred to the Instituto de Ciencias Musicales (in *E-Msa*). The publishing side of the firm was purchased in 1990 by Music Sales and thereafter operated as Unión Musical Ediciones.

The Unión Musical Española and Unión Musical Ediciones have continually fostered the development of Spanish music. They have published works by all the major 20th-century Spanish composers, notably Eduardo Toldrá, Regino Sainz de la Maza and Graciano Tarragó, the sole publisher. Most important possibly are the editions of historic Spanish music, including such monumental collections as *La Tonadilla Escénica*, edited by José Subirá, the sonatas of Antonio Soler, edited by Samuel Rubio, and numerous editions of songs, as well as music for guitar, organ and other instruments (C.J. Gosálvez Lara: *La edición musical española hasta 1936*, Madrid, 1995).

Unison [prime] (Fr. *unisson*; Ger. *Prime*; It. *prima*). (1) Two or more notes sounding the identical pitch, usually though not necessarily at the same time. In a number system with semitone = 1, tone = 2, the unison 'interval' is equivalent to zero. It would be theoretically possible to call the interval C–C♯ an 'augmented unison' but in practice it is normally referred to simply as a chromatic semitone. Similarly, ENHARMONIC notation may produce unison between notes with different letter names (e.g. F♯ = G♭).

(2) The simultaneous execution of one polyphonic part by more than one performer or performing group (e.g. the first violin section of an orchestra), either at exactly the same pitch or at the interval of an octave, double octave etc. (*see also* DOUBLING (ii)); such execution is said to be 'in unison' and is often indicated in scores by the Italian *all'unisono*.

(3) 'Rhythmic unison' is an informal equivalent for a HOMORHYTHMIC texture.

JULIAN RUSHTON

Unisono, all'. *See* ALL'UNISONO.

Unitarian church music. Unitarianism is a religious movement whose origins lie in the Reformation, when dissenting groups of anti-Trinitarian believers emerged in Switzerland, Poland and Transylvannia. The Unitarian Church has traditionally subscribed to no formal creed, rejecting the doctrines of the Trinity and the Divinity of Christ and stressing the unipersonality of God. In America the Church has formally adopted the Universalist belief that no one is condemned to eternal punishment, salvation being ultimately granted to all. The dominant characteristic of present-day Unitarianism is the emphasis on individual responisbility in spiritual matters. This recognition of individual belief has encouraged the toleration and acceptance of a variety of practices and forms or worship and the use of different musical styles. Unitarian believers are found in more than 20 countries throughout the world, including Transylvania, where there is still a strong presence, but the following discussion is limited to Great Britain and the USA.

1. Great Britain. 2. USA.

1. GREAT BRITAIN. The first anti-Trinitarian congregation in England and Wales was organized in 1651 by John Biddle (1615–62), but the formal beginnings of the Unitarian Church may be dated to 1662, when about 2000 ministers were ejected from the Church of England for refusing to accept the new Book of Common Prayer. These early Nonconformists or Dissenters were originally known mainly as Presbyterians or Independents. In 1689 an Act of Toleration granted them freedom of worship but not of doctrine. Penal Acts against Unitarians continued in force in England until 1813, when the Trinity Acts made legal the use of the term 'Unitarian'. During the 18th and 19th centuries, however, Unitarian views were often accepted by other Nonconformist Churches in England. Throughout the 19th century and the early 20th

two strands of Unitarianism existed side by side, one Presbyterian and more ecumenical, the other distinctively more sectarian and at times militantly Unitarian. Each had its own worship style, hymnbooks and national body. In 1928 the two branches united in the General Assembly of Unitarian and Free Christian Churches.

During the latter part of the 17th century and throughout the 18th and 19th centuries the progress of Unitarian Dissent in England and Wales coincided with the development of the hymn as a replacement for the metrical psalm. Unitarians undoubtedly played an active role in the emergence of the hymn – the Nonconformists' greatest contribution to worship – although it is difficult to ascribe any particular developments to the Unitarians before the Trinity Acts of 1813. The English Unitarian Church contributed to the large number of hymnbooks published in the 19th century, notably James Martineau's *Hymns for the Christian Church and Home* (1840) and the influential *Hymns of Faith and Prayer* (1874); hymn tunes for the latter were composed by Russell and Basil Martineau. The *Essex Hall Hymnal* was published in 1902, followed in 1927 by *Hymns of Worship*, which was the main Unitarian hymnbook in England for over 50 years (a supplement was issued in 1951 and a revision in 1962). Several 19th-century hymn writers achieved recognition beyond the Unitarian Church itself, notably, Sarah Flower Adams (1805–48; composer of *Nearer my God to Thee*) and John White Chadwick (1840–1904; *Eternal Ruler of the Ceasless Round*).

The 19th century was also the period when Unitarians sought a more structured approach to worship through the use of liturgies, often with psalms and sung responses. In larger churches the liturgical tradition was particularly strong and usually supported by a large organ and a professional choir. The use of the organ was very much a 19th-century practice, as, for example, at the Old Chapel, Dukinfield, where an organ was installed in 1816 replacing a small group of instrumentalists.

The diverse background of Unitarianism means that the church buildings vary from simple Meeting Houses to quasi-parish churches, and the variation in architecture is reflected in the use of different forms of worship. Unitarian congregations are autonomous, with each church free to organize its own worship and music. Despite this freedom, general patterns of worship have emerged, through the need for a balanced combination of certain common elements, such as hymns, readings, prayers, sermons, music and silence. Some congregations, exceptionally, use a set liturgy (with changing elements) that might include the chanting of psalms and sung responses, but most Unitarian worship is centred on hymns, with various forms of incidental music before, during and after the service. With the decrease in the number of church choirs, the singing of introits and anthems is mostly restricted to special services and occasions.

As in most Nonconformist denominations, congregational singing of hymns is the principal means whereby worshippers can be actively involved in services. Because Unitarianism has no creed, written material takes on a greater significance than in other denominations, and throughout the Church's history hymnbooks have been an important indicator of belief. Two hymnbooks produced in Britain towards the end of the 20th century, *Hymns for Living* (1985) and *Hymns of Faith and Freedom* (1991), express the variety that still exists within Unitarianism, but they are also a response to the need for hymns, and particularly words, that address new issues and use contemporary ideas and symbolism. Of these two books, only *Hymns for Living* is available with words and music; the texts aim to express contemporary Unitarian thought, ideals and principles, but the music is generally more conservative and familiar, with new material introduced only where necessary.

In Britain there is a 19th-century legacy of large buildings with fine organs (e.g. Mill Hill, Leeds), but the number of such instruments has dimished as congregations have moved to establishments more appropriate to their size and financial resources. Where possible, organs have been modified to suit the new church buildings, as, for example, at the New Meeting (formerly Church of the Messiah) in Birmingham. A number of particularly fine historic instruments have also been relocated, such as the Snetzler organ that was moved from Glasgow Unitarian Church to Glasgow University. In some congregations the musical accompaniment is provided by the piano or, more rarely, by other instruments; recorded music may also be used for accompanying hymns and as occasional music.

The Unitarian Church Music Society, founded during the 1930s at Manchester College, Oxford, largely at the instigation of the then director of music, Harold Spicer, provides a forum for sharing ideas and a stimulus for the more effective use of music in worship. The society's magazine, *Cantemus*, often includes a music supplement.

2. USA. The first Unitarian church to be established in America was the King's Chapel at Boston, an Episcopalian congregation that formally adopted Unitarianism in 1782. The movement spread during the last years of the 18th century and in the 19th, especially throughout the Puritan settlements in New England, and the American Unitarian Association was formed in 1825. During the 19th century many Unitarians came to recognize that they shared much common ground with members of the Universalist Church, a movement that had emerged from radical Pietism in 18th-century Germany and was officially established in America in 1793. Hosea Ballou (1771–1852) converted many Universalist ministers to Unitarianism in 1805 with the publication of his *Treatise on Atonement*, and in 1893 the Unitarian Free Religious Association declared that Universalist doctrine formed the basis of all religions. During the first half of the 20th century the two Churches moved closer together, and in 1961 the Unitarian Universalist Association was founded.

During the late 18th century and the 19th Unitarians and Universalists used similar forms of worship, with an emphasis on hymnody as a means of expressing their beliefs. The Universalist Church issued *New Hymns for Various Subjects* by Silas Ballou in 1785, and the first Unitarian hymnal was *A Collection of Psalms and Hymns for Public Worship* published in 1799 for use in King's Chapel, Boston. Such early hymnbooks contained no tunes, and comparatively few of the texts were newly composed, most being adaptations of existing hymns. Later 19th-century hymnals increasingly contained new works, notably, *A Collection of Psalms and Hymns for Sacred Worship*, which was published in 1830 by the Rev. Francis Greenwood for the Unitarian congregation of King's Chapel, Boston, and remained in use for many decades. Several writers associated with the Transcendentalist movement in New England made a particularly important contribution to Unitarian hymn writing; they

included Ralph Waldo Emerson (1814–82), Oliver Wendell Holmes (1809–94; *Lord of All Being Throned Afar*), Edward Hamilton Sears (1810–76; *It Came upon the Midnight Clear*), Samuel Johnson (*Book of Hymns*, 1846) and Samuel Longfellow (*Hymns of the Spirit*, 1864).

Since the late 19th century, Unitarian hymn texts have become gradually more ecumenical, showing a concern for the wider interests of humanity. The *Pilgrim Hymnal*, published by the Congregational Church in 1904 and designed to reflect the contemporary 'new theology', contained 547 hymns, of which over 100 were written by Unitarians. In 1937 the Unitarian and Universalist Commissions on Hymns and Services issued a joint hymnbook, *Hymns of the Spirit*, which drew on music from diverse sources, such as chorales, plainchant, Jewish cantillation and traditional American tunes; in their appeal to humanists as well as theists, the texts of some of the hymns show the influence of Universalism.

Since the foundation of the Unitarian Universalist Church in 1961 both texts and music of the hymns have continued to reflect Universalist doctrine. In 1964 *Hymns for the Celebration of Life* included words attributed to the Buddha and a poem from the *Bhagavad Gītā*. This and later hymnbooks, such as *Singing the Living Tradition* (1993), contain mainly traditional tunes but also include music of Eastern religions, Hebrew chant and secular music of various periods. The folk style of hymn writing is represented in the works of Universalist composers such as Malvina Reynolds and Carolyn McDade.

Unitarian Universalist churches employ a wide range of styles in their choral and solo vocal repertories, drawing on the traditions of other faiths as well as Western sacred and secular music from the Middle Ages to the present. Instrumental music is also not unusual in services, whether for solo performer, chamber ensemble or a combination of instruments and choir. The choice of texts and music is always determined by the individual congregations according to their particular concerns and musical resources.

United Music Publishers [UMP]. English music publishers and French music agents, active in London. It was founded in 1932 by Durand, Lemoine and Labbé to promote their catalogues, and French music in general, in the UK. James Henry Wood became director in 1936 and in the following four years several more French publishers joined the group: Costallat, Rouart-Lerolle, Joubert, Herelle, Hamelle, Enoch and Elkan-Vogel. State financial support was given in 1938 and the Centre de la Musique Française was established. From 1939 the company was run by Wood's daughter Pauline who added the representation of several more French firms to the company. It obtained the first UK performances of works by Messiaen, Dutilleux and Duruflé, and helped organize the 'Concerts de musique Française' at the Wigmore Hall. Works by contemporary British composers, such as Edwin Roxburgh and Simon Bainbridge, started to be published in the 1970s and from 1982 UMP significantly expanded its role as an agent of French (and occasionally Spanish) music as well as a music publisher in its own right. It publishes the Organ Repertoire Series, and its contemporary repertory has been augmented with works by Richard Barrett, Diana Burrell, Chris Dench, Michael Finnissy and Stephen Montague. □

United States of America. Country composed of 50 states, 48 of them contiguous and bordered by the Atlantic and Pacific oceans to the east and west, and by Canada and Mexico to the north and south. The 49th state, Alaska, is located at the extreme north-west edge of the North American continent, and the 50th, HAWAII, comprises a group of islands in the North Pacific Ocean, *c*3800 km off the western American coast (*see also* POLYNESIA, §II, 4). The total area of the USA is *c*9,370,000 km², and it has a population (2000 est.) of 274·63 million.

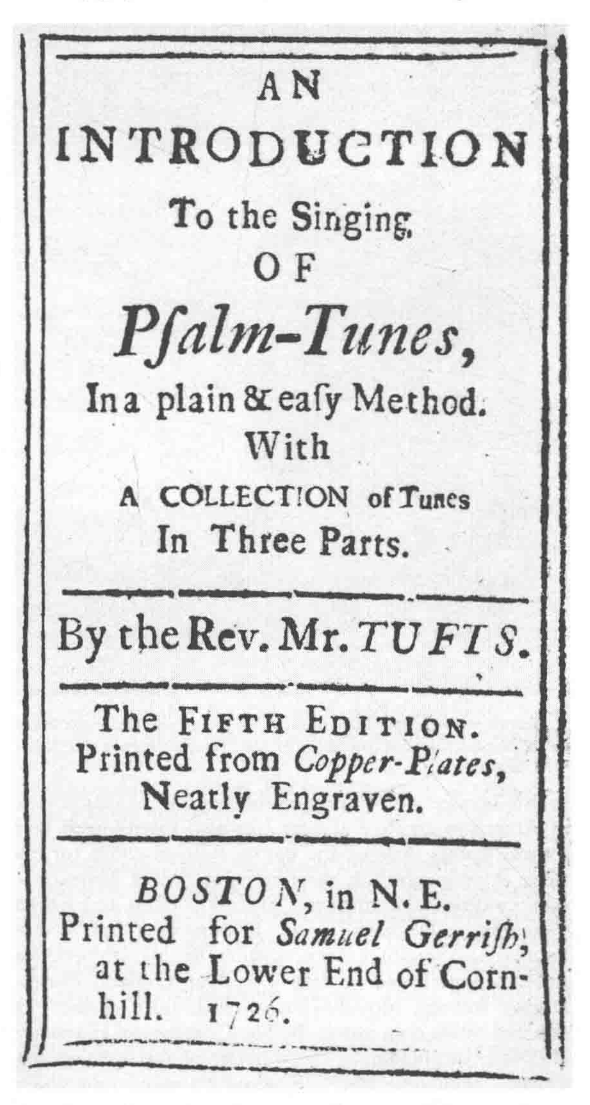
American music has been most strongly influenced by the cultures of Europe and Africa. Indigenous Amerindian culture (*see* AMERINDIAN MUSIC) remains isolated, and little Asian impact was felt until the 20th century; contributing currents from Latin America have been mainly Afro-Hispanic, diffusing from the Caribbean. African slaves were brought to Virginia in 1619, one year before the founding of Plymouth Colony by the British. It is at this point that the history of American music properly begins.

I. Art music. II. Traditional music.

I. Art music

The composition of art music in the region of North America now called the United States has taken place within an infrastructure of performance created chiefly by European settlers. In the areas of New Mexico (perhaps as early as 1540) and Florida (1559), and later in Texas (1716) and California (1769), Spanish missionaries taught local Indians to sing the Roman Catholic liturgy. Meanwhile, arriving in Massachusetts in 1620 to found the Plymouth Colony, the Pilgrims brought British psalm singing to the continent. The first of these efforts eventually inspired a few European-born musicians in the South-west and west to compose music for Roman Catholic worship. The second laid the groundwork for a tradition of Protestant psalmody in which American-born composers seized creative leadership. But for all their differences, these beginnings together illustrate a fundamental point: from the start of the European settlement, music makers in North America have relied on the availability of music created elsewhere. Given the steady

supply from Europe, demand for music by American composers has been relatively small, especially in the realm of art music.



The story of American art music chronicles the rise of the composer in the United States. At no time have such composers controlled or dominated American concert life, however. Their historical role has been to take Old World practices as a starting point and to complement repertories that are chiefly European with works of their own. Although some 20th-century American composers have opened up fresh artistic territory, art music in America, even into the later years of the 20th century, has continued to revolve around the performance of European classics.

1. 18th century. 2. 19th century. 3. 20th century.

1. 18TH CENTURY. In the English-speaking colonies the impulse to compose was first encouraged in a practice that grew up around Protestant meeting-houses in New England. Shaped by the Calvinist view that musical elaboration might distract Christians from contemplating God's greatness and human imperfection, public worship in the meeting-house prohibited the use of instruments and limited music to congregational singing. The psalms sung by worshippers in the 1600s and 1700s were set down in metrical psalters: wordbooks carrying the Old Testament texts in the familiar verse patterns of popular balladry. The ninth edition of *The Psalms, Hymns, and Spiritual Songs of the Old and New Testament* (Boston, 1698), sometimes called 'The Bay Psalm Book', contained the colonies' first published music: a supplement of 13 tunes to which the psalms were to be sung. Bearing names such as 'St David's' and 'Old Hundred', the tunes were all European in origin. Their metres reflected the verse forms of the psalms, cast chiefly in four-line stanzas with standard patterns of iambic feet. With tunes printed separately from texts and many texts sung to the same tune, this approach to psalmody used music as a vehicle for collectively singing God's praise.

In the early 1700s several clergymen in and around Boston complained that oral circulation of the psalm tunes had turned congregational singing into an undisciplined noise. By 1720, a reform movement was underway: a process that brought elements into psalm singing that would eventually encourage composition. 'Regular singing' – singing 'by rule' rather than personal fancy – was the reformers' rallying cry, education their method. Singing schools were formed: instructional sessions, taught by a singing master, that laid a foundation for musical literacy and marked the start of the music teaching profession in America. Instructional tune books were compiled to serve them. The first such books, John Tufts's *A Very Plain and Easy Introduction to the Art of Singing Psalm Tunes* (in later editions known as *An Introduction to the Singing of Psalm Tunes*; fig.1) and Thomas Walter's *The Grounds and Rules of Musick Explained*, both published in Boston in 1721, introduced the rudiments of music and offered a collection of psalm tunes harmonized in three parts. Note-reading seems not to have been a focus of the early singing schools. Rather, by teaching 'scholars' the tunes in standard form, their goal was to bring congregational singing under control of the book.

Dedicated chiefly to performance instruction, singing schools fostered the development of musical skill. But in a largely rural society whose intellectual life was dominated by organized religion, proposals for change brought

resistance, and regular singing was no exception. Because some congregation members, and some clergymen too, feared that the cultivation of music would secularize worship, regular singing was slow to be adopted in many New England centres. By the 1760s, however, singing schools had grown more common, whether in cities such as Boston and Providence, or in towns and villages. In some communities, the more skilful, enthusiastic singers were also forming choirs. Tune books compiled for singing schools began adding to their stock of congregational favourites a few more elaborate pieces for choirs and musical societies.

Until 1770 virtually all the music printed in the English-speaking colonies came from British tune books. In that year, however, William Billings, a 24-year-old Boston tanner, singing master and self-taught composer, published *The New-England Psalm-Singer*, containing 127 of his own compositions: psalm and hymn tunes and anthems, set primarily for four unaccompanied voice parts and intended for singing school use. Issued at a time of rising tension between England and her colonies,

Billing's collection was remarkable not only as a landmark of American creative artistry but also for its local and topical stamp. Among the names Billings chose for his tunes were geographic references, including Massachusetts counties ('Hampshire', 'Suffolk'), cities and towns ('Amherst', 'Dedham'), and Boston churches ('New South', 'Old Brick'). Later admitting that his inexperience as a composer had marred *The New-England Psalm-Singer*, Billings brought out several more collections devoted to his own music. In *The Continental Harmony* (1794) he outlined his method of composition. Assigning primary value to 'nature', by which he meant God-given inspiration, Billings told his readers that he began by writing the melody voice – the tenor or 'first part', as 'nothing more than a flight of fancy' to which other voices were 'forced to comply and conform'. Once nature had helped him create his melody, Billings turned to 'art' (i.e. 'the rules of composition') in harmonizing it. The rest of the voices were composed to partake of the 'same air', or 'at least, as much of it as they can get'. But because they were composed after the tenor voice, 'the last parts' were 'seldom so good as the first', he admitted, 'for the second part [the bass] is subservient to the first, the third part [the treble or soprano] must conform to first and second, and the fourth part [the counter or alto] must conform to the other three'. By writing voice parts that engaged singers while still following accepted harmonic practice, Billings strove to reconcile the claims of inspiration and technique. 'The grand difficulty in composition', he wrote, was 'to preserve the air through each part separately, and yet cause them to harmonize with each other at the same time'.

The Revolutionary War (1775–81) slowed the publication of tune books. But in the years that followed, singing schools and choirs flourished, as did musical societies: groups of musical amateurs (i.e. lovers of the art) formed for the recreational singing of sacred music. During the 1780s, 1790s and early 1800s, hundreds of tune books were published to serve these institutions. Billings's works, together with music taken from British collections, were well represented in them. Moreover, by the mid-1780s Billings had been joined by Daniel Read, Timothy Swan, Abraham Wood, Lewis Edson and a host of other American psalmodists. Between 1770 and 1810, more than 250 Americans, most of them New Englanders, composed almost 5000 pieces that were printed in sacred tune books. Musical composition took root in New England by the century's end as an endeavour that required no formal training and was linked to Protestantism by its favoured texts, chiefly psalm paraphrases and hymns.

At first glance, calling the results of this activity art music may seem to be stretching a point, for the composers were untutored and their music essentially functional. Yet the latter is also true of many European repertories that are now considered art music, including music for the church. On the other hand, it is not quite accurate to label New England psalmody church music. Most tune books were too expensive for church use and their music too elaborate for any congregation to sing. The singing schools and musical societies that relied on tune books emphasized instruction and recreation, not worship. Irving Lowens, a scholar of the New England psalmody, once cautioned that sacredness should not be defined narrowly in a culture where psalms and hymns were 'popular poetry', and 'the artisan hummed snatches of Read's *Sherburne* ... or Billings's *Jordan* as he drank his dram or sawed his wood'. While the literal truth of these words cannot be tested, they warn against too strict a definition of art in a society that lacked formal settings devoted to artistic cultivation. Indeed, one can find in the music of New England psalmodists, conceived for instruction

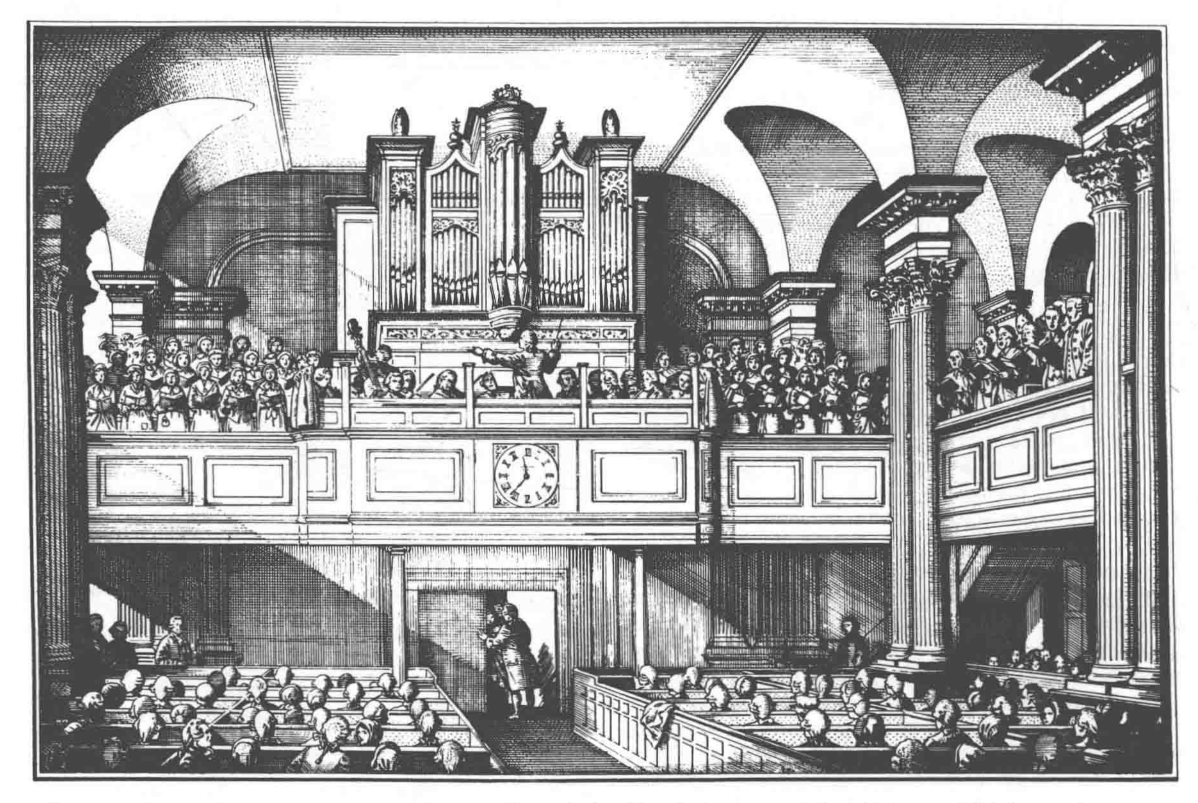
and recreation pursued in the name of glorifying God, an originality and vigour that, in the manner of art music, invite aesthetic appreciation even today.

The Yankee psalmodists, sometimes called 'the First New England School', have in recent years been granted a historical niche as founding fathers of American composition. That status owes much to historians' idea that in American music, difference from European music is a key measure of value. It also owes something to the persistence of unaccompanied Protestant choral singing, which with its singing schools, tune books and musical societies was displaced from the urban East by more up-to-date musical approaches and styles, and moved west and south in the early 1800s, taking root in the Ohio River Valley during the 1810s and the Southern uplands by the 1840s. In isolated rural regions well into the 1900s, that tradition continued to foster the composition of more sacred music by untutored composers, published in shape-note tune books.

Viewing art music from a more cosmopolitan perspective, the pioneering musicologist Oscar G.T. Sonneck made a case for *My Days Have Been So Wondrous Free*, a parlour song written in 1759 by FRANCIS HOPKINSON of Philadelphia, as the first piece of American music. Nearly three decades later, in the dedication to his *Seven Songs* (Philadelphia, 1788), Hopkinson declared himself 'the first Native of the United States who has produced a Musical Composition', basing his claim on the recent establishment of the Federal Constitution. A lawyer by trade, signer of the Declaration of Independence, and a 'gentleman amateur' musician, Hopkinson seems to have fit easily into the cosmopolitan musical life that took root in such cities as Philadelphia, New York, Boston and Baltimore. Among the leaders in that milieu were RAYNER TAYLOR, Alexander Reinagle (*see* REINAGLE family, (2)), Benjamin Carr (*see* CARR family, (2)) and JAMES HEWITT, all British musicians who settled in America after the War. These 'emigrant professionals' found employment as composers and directors in the theatre, a colonial extension of the London stage. They also taught, gave concerts that included compositions of their own and worked in church music, especially as organists. When sheet music began to be published in America around 1790, their songs and keyboard pieces were its chief domestic product. Their effort helped to bring the United States into a network of Old World musical activity centred in the British Isles.

Perhaps the most musically active Americans of the age, however, were neither home-grown Americans nor British immigrants but the German-speaking Unitas Fratrum or Moravians. These religious separatists founded New World communities in Pennsylvania (Bethlehem, 1741; Nazareth, 1748; Lititz, 1756) and North Carolina (Salem, 1766, now Winston-Salem), and they emphasized music-making in community life. Unlike the Puritans in New England, the Moravians saw no conflict between religion and musical skill. They welcomed instruments, even for the accompaniment of hymn singing. Moreover, although the Moravians brought over a stock of musical manuscripts from Europe and were regularly supplied from there well into the 1800s, a substantial part of their music was locally composed. American-Moravian composers included several who were born and musically trained in Europe, such as the Reverend Johannes Herbst, a German who came to America in 1786, and Dutch-born Johann Friedrich Peter, who lived in America from 1770 and worked as both a schoolmaster and musician. It also included John Antes, a Pennsylvania native educated musically by a European-trained Moravian in the New World. At a time when few Americans were composing outside the realm of psalmody, Moravian communities boasted several who wrote music, both sacred and secular, with convincing facility in an up-to-date European idiom.

2. 19TH CENTURY. The infrastructure needed to support a growing public of American listeners evolved as a collaborative effort between musicians and entrepreneurs from abroad. In the century's early years concert life was established by urban theatre companies and musical societies in both cities and smaller settlements. The former presented whole seasons of stage entertainment. The latter, sometimes enlisting singers and players from the theatre, sponsored a variety of activities, including public performances. Religious institutions also contributed. During the previous century Anglicans (Episcopalians) and Lutherans had used organs in their worship, often played by musicians hired from overseas. In the early 19th century some churches supported elaborate music-making, both during worship and in organ recitals and cantatas performed outside it. A few urban musical societies, notably the Boston Handel and Haydn Society (founded 1815), emphasized the performance of large choral works. The country's best orchestras in these years were theatre ensembles. But in the name of education (e.g. the Boston Academy of Music, founded 1833) or under the aegis of musical societies (e.g. the New York Philharmonic Symphony Society, founded 1842), orchestras were also assembled from local professionals and amateurs to play overtures, concertos and symphonies in public. During the 1840s a concert circuit developed to present travelling soloists and musical troupes to audiences in many different locales. Thus, in the larger



3. The Moravian bishop Jacob van Vleck and girls, probably from the Pennsylvania School for Young Ladies, Bethlehem, of which he was principal; birthday greeting in watercolour and ink, 1795

American cities during the years leading up to the Civil War, art music enjoyed a presence but no independent economic base. Solo performers and troupes were obliged to make their way in the commercial market place. Concerts organized by musical societies in the name of art usually offered only token pay for professionals. In such a setting, dominated by European entrepreneurs and performers, there was little or no place for American composers of art music.

Nevertheless, a few Americans did compose. One was ANTHONY PHILIP HEINRICH, born into an affluent family in Bohemia, who decided to devote himself to music at the age of 36 after the family business failed. Heinrich launched his career in unique circumstances. In 1817 he travelled more than 1100 km westward from Philadelphia, where he had once played violin in a theatre orchestra, to Kentucky. Apparently under the spell of his journey, Heinrich then made a decision that shaped the rest of his life. Not only would he seek his fortune in music; he would be a composer. Dwelling alone in a log cabin near the village of Bardstown, and guided by intuition, Heinrich discovered his muse. In 1820 he published his op.1, *The Dawning of Music in Kentucky*, a collection of songs and piano pieces, some with violin. In a review of a later Heinrich collection, *The Sylviad, or Minstrelsy of Nature in the Wilds of N. America* (Boston, 1823), a Boston commentator wrote that all of his works 'abound in boldness, originality, science, and even sublimity; and embrace all styles of composition, from a waltz or song up to the acme of chromatic frenzy'. The reviewer added that Heinrich 'may be justly styled the Beethoven of America', indicating that his music's complexity tended to puzzle audiences.

Calling himself the American 'loghouse composer', although he spoke English with a thick Middle European accent, Heinrich furthered his image in writings replete with jokes, puns and self-depreciation. His music often quotes national tunes. And his larger instrumental compositions are more descriptive than abstract, many of them inspired by nature or the American wilderness. Beginning in 1831 with *Pushmataha, a Venerable Chief of a Western Tribe of Indians*, he tried to capture the landscape's majesty in works for large orchestra. Although performances of these works were few and far between, he kept on writing them into his eighth decade. In 1846, supporting himself in New York City as a piano teacher, Heinrich described his music as 'full of strange ideal somersets and capriccios'. Convinced that it also contained 'some beauty, whether of regular or irregular features', he mused: 'Possibly the public may acknowledge this, when I am dead and gone'.

WILLIAM HENRY FRY, born into a newspaper publishing family in Philadelphia, was already writing music in his early teenage years. Studying privately with Leopold Meingen, a French-born composer, conductor and teacher, he fixed on the notion of English-language opera modelled after Bellini. Fry's *Leonora*, first performed in Philadelphia (1845), marked the first public performance of a through-composed opera by an American-born composer. From 1846 to 1852, Fry served as foreign correspondent for the *New York Tribune*. He returned to the United States in 1852 and began a stint as the *Tribune*'s music critic, also delivering a series of lectures

4. Engraving showing the interior of Kings Chapel, Boston, during the first New England music festival, 10 January 1786; the American première of Handel's 'Messiah' was performed here, sponsored by the Handel and Haydn Society, on 6 December 1818

on music. Fry's last lecture probed faults in America's musical life, with two receiving special attention: the ignorance of American audiences and the invisibility of American composers. Because of the first, musical appetites were being starved. 'We pay enormous sums to hear a single voice, or a single instrument', Fry proclaimed, but 'we will pay nothing to hear a sublime work of art performed'. As for the second, he blamed economic conditions. With no financial base to support their work, only people of independent means, like Fry himself, could afford to take composition seriously. Even in the largest cities, barely one or two composers – musicians who could 'detail with the pen, on paper, the abstract sonorousness and expression of musical effects' – could be found. Outside the cities there were no composers at all. Furthermore, the few Americans who qualified lacked creative boldness. Having long ago won political autonomy, Fry counselled, the United States now needed 'a Declaration of Independence in Art'.

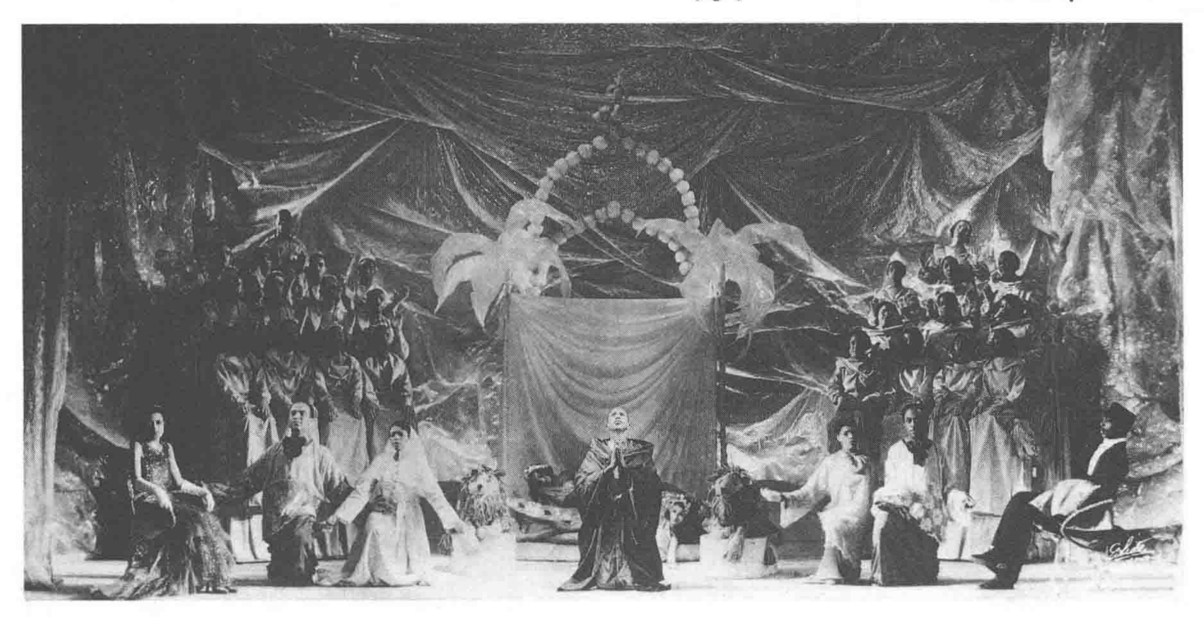
Early in 1854 Fry attacked on the pages of the *Tribune* the New York Philharmonic Symphony Society, among others, for neglecting American orchestral works, especially his own. His complaint was seconded, with a small correction, by George Frederick Bristow, himself an American composer and one of the orchestra's violinists. 'During the eleven years the Philharmonic Society has been operating in this city', Bristow reported, 'it played once, either by mistake or accident, one single American composition, an overture of mine'. A spokesman for the orchestra replied to this charge, and an often fiery debate continued in the city's newspapers, with no visible effect on concert programming. The foreign-born musicians who ran the Philharmonic considered their project precarious enough without risking a loss of audience support by seeming to favour untested American works over European ones of proven quality. Performers, impresarios and institutions would sound variations on this theme through the century that followed and beyond.

The best-known American composer of the era was LOUIS MOREAU GOTTSCHALK, born in New Orleans into a family that traced its roots to the French colonial regime that had ruled the Caribbean island of Santo Domingo until the slave rebellion of the 1790s. As the composer later wrote, he never lost his feeling for the 'inexpressible charm' in the 'legends of our old Negroes', or the 'picturesque language' and 'exquisite originality' in 'some of those Creole ballads whose simple and touching melody goes right to the heart and makes you dream of unknown worlds'. In 1841 Gottschalk's parents sent their precocious son to study the piano in Paris at the age of 12; his début concert there in 1845 was attended by Chopin and Thalberg. Gottschalk returned to America in 1853, marking his arrival with a series of New York concerts. During the next dozen years he toured as a concert pianist, chiefly in the United States but with interludes in the Caribbean, including Cuba.

Gottschalk's career as a pianist guaranteed a performance outlet for his music while also ensuring that it would be tailored to suit audience taste. After an op.1 (*Polka de salon*, *c*1847) that paid homage to Chopin, he based four new compositions on melodies he had known in America: *Bamboula*, *La Savane*, *Le Bananier*, and *Le Mancenillier*, publishing them in Paris (1849–51) under the name 'Gottschalk of Louisiana'. *La Savane*, the West Indian melody of which sounds like the Appalachian folksong *Skip To My Lou* in the minor, follows many of Gottschalk's other piano pieces in being hard to play but easy on listeners. Through its many repetitions, the melody never changes key, register or character, yet each repetition brings a new accompaniment, the growing complexity of which seems intended to dazzle the audience. A complementary side of Gottschalk's imagination appears in *Le Banjo* (1855). Seeking material with immediate impact, he again borrowed from the vernacular, this time choosing the sound of the banjo and Stephen Foster's minstrel song *Camptown Races*, and uniting the two in a piano piece that evokes the popular minstrel stage. Though *La Savane* and *Le Banjo* are only two of his many works (he composed around 300 in total), they point to Gottschalk's priorities as a devotee of the modern piano. 'Many pianists whose thundering execution astonishes us still do not move us', he once explained, because 'they are ignorant of sound' – the surest means of touching listeners' hearts. Musicians who worked hard enough could learn to play the notes. But sound, the essence of music's spiritual side, depended on intuition. 'Color and sound are born in us', according to Gottschalk, who took these elements to be 'the outward expressions of our sensibility and of our souls'.

In the years after the Civil War, the idea of cultivating music as an art took hold in the United States. It did so with the help of patronage: the giving of money to support musical endeavour, in this case chiefly performance. The growing concentration of wealth made such money available. The growing prestige of Western art music – Boston critic John Sullivan Dwight declared Beethoven and Bach the musical equivalents of Dante, Newton and Shakespeare, and likened Beethoven's symphonies to sacred expression – made it a cause worthy of patrons' support. In the view of this music's champions, the experience it offered was so satisfying that Americans deserved a chance to hear it, even if performances could

5. Cover of Louis Moreau Gottschalk's 'Murmures éoliensi', lithograph, 1862



not pay for themselves. With subsidies secured, symphony orchestras were formed in American cities as testimony to civic pride. Halls were built for them: the Music Hall in Cincinnati (1878), Carnegie Hall (New York, 1891), Boston Music Hall (1852; Symphony Hall from 1900) and Orchestra Hall (Chicago, 1904). Resident companies in New York, most notably the Metropolitan Opera Company (founded 1883), performed whole seasons of grand opera, and the Metropolitan also visited other cities. Opera singers were among the day's leading celebrities. Travelling singers, pianists and violinists brought their peformances to communities large and small. Concert life proliferated, combining edification and a repertory of 'classics' with an appreciation of virtuoso performance and the notion that art could be glamorous as well as dignified. Metropolitan daily newspapers employed well-informed critics, providing a forum in which serious musical issues were discussed. Conservatories of music, founded chiefly to teach beginners, added more skilled musicians to their staffs. Pedagogy was being democraticized as more Americans took part in a musical sphere whose roots lay in Europe.

In this context, teaching served American composers as a professional beachhead. A key step took place in the 1870s, when Harvard College made JOHN KNOWLES PAINE a professor of music. Other colleges later followed suit (HORATIO PARKER at Yale, 1894; EDWARD MACDOWELL at Columbia, 1896), and the New England Conservatory named GEORGE WHITEFIELD CHADWICK its director in 1897. Paine, Parker and Chadwick were all skilled composers and MacDowell the most widely revered American composer of his day. Creative achievement won them their appointments in the first place, and as academics they kept on composing, with such works as Parker's *Mona* (given its première at the Metropolitan Opera in 1912), MacDowell's *New England Idyls* for piano (1902), and Chadwick's *Symphonic Sketches* (first performed in 1904) among the results. Yet it was not composing but their work as music educators that earned them a livelihood. These men struck a bargain when they joined the teaching profession, trading freedom for security and taking on pedagogical tasks they may or may not have relished. Their example set a precedent that many later American musicians have followed. The United States can boast neither a long tradition of patronage nor a large audience for art music, but Americans have always believed strongly in education and its power to elevate and edify. More in the name of education than of art, the classical sphere won a place in the academy, which has served as an unofficial but potent patron ever since.

A prominent teaching appointment in the century's latter years focussed public attention on musical nationalism in the concert hall. In 1892 Dvořák arrived in New York to serve as director of the National Conservatory of Music. Charged with encouraging the development of art music in the United States, Dvořák urged American composers to base their work on indigenous and folk traditions. In 1893 he composed his Symphony no.9 ('From the New World'), inspired at least partly by African American melody. Shortly before returning to his European homeland in 1895, Dvořák wrote that although it mattered little 'whether the inspiration for the coming folk songs of America is derived from the Negro melodies, the songs of the creoles, the red man's chant, or the plaintive ditties of the homesick German or Norwegian', he believed that 'the germs for the best' American music lay 'hidden among all the races that are commingled in this great country'. Whatever the impact of Dvořák's pronouncements, the years after his visit saw an increase in the number of American concert works that borrowed subject-matter, melodies, rhythms and sounds from native American and other indigenous or folk sources. MacDowell, ARTHUR FARWELL and the New England composer and pianist AMY BEACH were three of the many Americans who wrote 'Indianist' works for the concert hall. Henry F. Gilbert based works on black creole themes, and the Black American singer and composer Henry T. Burleigh, among others, made concert settings of 'negro' melodies. By the early 20th century the idea of an American art music was in the air – a music blending Old and New World elements and practices into hybrid forms, distinguished not simply by geography but also by style.

3. 20TH CENTURY. CHARLES IVES is now considered one of America's foremost composers. This judgement would have astounded his contemporaries, for after receiving a thorough musical education from his father George Ives, and from Horatio Parker at Yale, he followed a career in business. Neither a public performer nor a teacher by temperament (though he worked for a time as a church organist), Ives recognized early that no satisfying musical livelihood lay open to him. After finishing college in 1898 he entered New York's business world, succeeded there, and composed in his spare time until his creative inspiration ran dry in the early 1920s. Ives composed in standard European genres: art songs, sonatas, symphonies. Yet, admiring the open-hearted spirit that many musically untutored Americans brought to their singing and playing, he staked out territory where classical, popular and folk music seemed to merge. Ives's impatience with hierarchies and boundaries could lead in his music to jarring juxtapositions – quotations from Beethoven symphonies, for example, next to fiddle tunes and gospel hymns – and opaque overlappings, such as two tonally unrelated events occurring simultaneously. In 'Putnam's Camp', the second movement of *Three Places in New England* for orchestra (premiered 1931), Ives creates the illusion of two bands, each playing a different piece, marching towards each other. In *The Unanswered Question* (1908), a single trumpet intones repeatedly the same angular figure over a string ensemble's consonant, organ-like background, while four flutes respond with growing agitation to the trumpet's calls. Harmonic dissonance in the former is brought to a head in a cacophonous roar; in the latter, dissonance comes and goes, yielding to serene string consonances. In both, Ives's use of sounds that stretch the ears allow him, following the lead of his spiritual mentors Emerson and Thoreau, to probe hidden unities and mysteries of human existence. Ives paid a price for isolation and originality; his music enjoyed few public performances during his lifetime. In retrospect, it looms as a remarkable accomplishment and resource: a quintessentially American contribution to the repertory of art music, a challenge to the boundaries separating classical music from popular and folk music, and even a critique of music itself, questioning where sound and nature stop and music begins.

The great names in American art music between the two world wars were not composers, but rather the star performers whose singing, playing and conducting, thanks in large part to new technology, were heard more widely

6. Virgil Thompsons's 'Four Saints in Three Acts'; Prologue from the first production, Hartford, CT, 1934

than ever before. The 1920s saw radio transmission grow from a local into a national enterprise. Midway through the decade, electric recording replaced the acoustic process with better facsimilies of live musical sound. The first sound film was released in 1927. During the 1930s network broadcasts by the Metropolitan Opera and various symphony orchestras, especially one formed by the NBC for the conductor Arturo Toscanini, brought classical music into homes across the country.

A new crop of American composers – AARON COPLAND, VIRGIL THOMSON, WALTER PISTON, ROY HARRIS and ROGER SESSIONS were the most prominent among them – also came to maturity in these years. Inspired by modern European styles slow to be accepted by established performers, they had difficulty getting their music heard. Occasionally, as in the conductor Sergey Koussevitzky's performances of Copland, Piston and Harris after he took over the Boston SO in 1924, the Americans encountered a champion in the concert hall. But the promotion of their work depended heavily on their own efforts, aided by private patrons and organizers, many of them women. In 1921 the French expatriate composer Edgard Varèse, assisted by Carlos Salzédo, founded the International Composers' Guild to sponsor performances in New York of modern works. Two years later the League of Composers was established, devoted to promoting and performing new American music. In 1925 Aaron Copland received the first year-long fellowship awarded to a composer by the Guggenheim Foundation, and in 1928 the Copland-Sessions concerts were inaugurated to bring to the public new music that might otherwise not get a hearing. Virgil Thomson's opera *Four Saints in Three Acts*, set to a libretto by Gertrude Stein, was staged in Hartford, Connecticut, in 1934, with money raised in part by the local art museum in which the performance took place. In the meantime, Henry Cowell had started a publishing venture, *New Music* (1927), centred on 'noncommercial works of artistic value' by such composers as Ives, Carl Ruggles, Ruth Crawford and even Schoenberg, and financially supported by Ives himself. *Modern Music*, the League of Composers' quarterly journal (1924–46), surveyed the current scene from a composer's point of view. Taken together, these activities amounted to a critique of the classical establishment's resistance to contemporary expression. In fact, the era's most enthusiastically received American composer was GEORGE GERSHWIN, who approached the concert hall and opera house from the Broadway stage, and whose hybrid 'jazz concerto' *Rhapsody in Blue* (1924) and opera *Porgy and Bess* (1935) have since become American classics.

Copland's music reflects one composer's attempts to meet the challenges of musical life in America between the wars. Born in Brooklyn and musically educated in New York and Paris, he returned from France in 1924 determined to write modern music reflecting the American character. He turned first to the popular sphere: to jazz, with which he had had little previous contact. In *Music for the Theater* (1925) and his Piano Concerto (1926), Copland borrowed jazz-inspired rhythms and melodic gestures, producing hybrid works whose verve and vernacular strut sought to reconcile American mannerisms with European neo-classicism, especially that of Stravinsky. Piano Variations (1930), though not serially organized, employs a more dissonant idiom akin to that of Schoenberg, whose music Copland came in the latter 1920s to admire. But by the end of the 1930s he set modernist aspirations aside as the Depression era's economic hard times eased. Radio, recordings and film had opened up a vast new audience, which Copland now hoped to reach by broadening his music's appeal. Influenced by Thomson, whose film scores *The Plow that Broke the Plains* (1936) and *The River* (1937) quoted folk and popular tunes, he looked to the American landscape for subjects and materials. He simplified his style, presenting borrowed melodies in uncomplicated harmonic dress while maintaining the rhythmic jolts and transparent texture of his earlier music. Copland in these years celebrated rural America in commissioned ballets, including *Appalachian Spring* (1944) for Martha Graham (fig.7), and he wrote several film scores. All of these works blended modern elements with more old-fashioned ones, appealing to national identity and widening Copland's

7. Scene from the premiere of Aaron Copland's 'Appalachian Spring', performed by the Martha Graham Dance Company at the Coolidge Auditorium, Library of Congress, 30 October 1944

audience without forfeiting his position as a serious creative artist. He also championed the music of other composers, especially Americans. Copland's success led some to see his folkloric approach not as one artist's response to a historical moment but as a recipe for American art music. Even for Copland, however, that approach proved confining, and in the 1950s he returned to a more modernist style. As for his contemporaries and colleagues, there were others who had little interest in 'sounding American' or courting a larger audience. Sessions, for example, seemed willing to accept a place on the periphery of concert life, working in a dense, highly chromatic idiom, trusting that performers and listeners would ultimately find merit in his music.

America's investment in classical music increased after World War II. Many of the West's leading musicians, including Schoenberg, Stravinsky, Bartók and Hindemith, had settled in the United States as a result of the war's dislocations. More American-born singers and players were finding places in the performance infrastructure, and the network of schools serving it grew. In both private conservatories and state universities, music programmes were enlarged as military veterans re-entered civilian life. Teachers and students alike benefited from Americans' willingness to pay for musical instruction, and teaching remained a way to support musical activity that did not pay. Some colleges and universities now began treating music both as a performing art and a research-based endeavour. Musical research could involve not only scholars but creative artists: composers free to explore the nature of sound and to seek new ways of organizing, presenting, even inventing it, including electronic means. These opportunities drew many composers into teaching positions.

With Sessions at Princeton and Berkeley, Piston at Harvard, William Schuman at Juilliard, Howard Hanson at Eastman-Rochester, Ross Lee Finney at Michigan and Milton Babbitt at Princeton, music colleges by the 1950s were taking seriously the education of American composers. With that mission came a growing autonomy: not only the freedom to pursue composition as research, but the right to judge each other's work and to participate in the awarding of grants, prizes and jobs, independent of other musicians' views or audience approval. In large part, the economic resources of higher education made such autonomy possible. Until the postwar era, art music had had to prove itself in the concert hall. As the one locus where the priorities of composers, performers, critics, impresarios and audiences all had to be considered and reconciled, the concert hall had long served classical musicians both as a market place and an arbiter of lasting artistic worth. (Even the new-music societies of the 1920s and 1930s confirmed the concert hall's authority, for they were forums where modern works made their case for a niche in standard repertories.) Now, however, the academy was setting up a subsidized alternative. By backing composers and new music outside the concert hall, academia cut itself loose from the influence and support of impresarios and the general classical music audience. Composers in academic institutions could, if they chose, practise their craft free from the need to please unprepared listeners. Such freedom could lead to extreme complexity, as with Babbitt, who admitted that to grasp the serial construction of his works one should already know the music of Schoenberg and Webern. The idea of composers as specialists, pushing the boundaries of imagination, perception and technology, and letting reception take care of itself, blossomed in academia. The contrast with the earlier arch-explorer Schoenberg, himself a teacher by profession, is striking. For Schoenberg, claiming his serial technique as a logical step in an 'emancipation of the dissonance' that had evolved over several centuries of Western music history, also believed that concert-hall audiences would appreciate his music as its dissonant idiom grew more familiar.

Not all challenges to the concert hall were being mounted from campuses, however. By the 1960s critics were writing about an 'American experimental tradition' of outsiders who rejected, or perhaps had failed to receive, principles long accepted as fundamental to Western music-making. Ives was nominated this group's spiritual godfather. HENRY COWELL, whose piano recitals in the 1920s had featured fists, elbows and string-strumming, and who also gravitated towards non-Western music, was an active musical tinkerer. HARRY PARTCH – a hobo during parts of the 1930s and 40s as a self-taught composer – invented, to accompany his own vocal declamation, instruments dividing the octave into as many

as 43 pitches. But the most radically contrary New World composer was JOHN CAGE, who defined an 'experimental' action as one 'the outcome of which is unforeseen'

The California-born Cage traced his compositional approach partly to a weakness. Discovering as a student of Schoenberg's in the early 1930s that he lacked a feeling for standard harmony, he began emphasizing rhythm ('duration') in his compositions. Later in the decade he became involved with a dance troupe and from then on composed often for dancers, sometimes with visual artists as collaborators. Cage showed a strong affinity for percussion. One innovation was his 'prepared piano', in essence a new percussion instrument, with sounds determined by the insertion of screws, nails, pencils, erasers and other objects between a conventional piano's strings. After the war Cage also explored the use of pre-recorded sounds, microphones to distort and alter natural sounds, and electronically synthesized sounds. A turning point in his artistic life occurred when he entered a soundproof anechoic chamber and heard two sounds. The high one, he learned, was his nervous system in operation, the lower his circulatory system. The experience taught Cage that there was no such thing as silence; there were only intended and non-intended sounds.

Cage began in the early 1950s to apply to composing what he had learned by studying Eastern philosophy and Japanese Zen Buddhism. He wrote his last 'intentionally expressive' works in 1951. As he later explained (1966): 'I had been taught in the schools that art was a question of communication. I observed that all of the composers were writing differently. If art was communication, we were using different languages. We were, therefore, in a Tower of Babel situation where no one understood anyone else'. Against that background, Cage discovered in early texts from both East and West a reason to compose music that he found better than either expressiveness or communication: 'to quiet the mind, thus making it susceptible to divine influences'. From the early 1950s onwards he exercised his imagination and craft to devise schemes reducing the role of intended sounds in his compositions. To 'let sounds be themselves', as he put it, became an ideal. Cage encouraged listeners to treat their environment as music. He composed, in other words, to foster listening as an act of 'a sober and quiet mind' in which 'the ego does not obstruct the fluency of the things that come into our senses and up through our dreams'. Accordingly, he once named as favourite among his many compositions, *4'33"* (1952), a three-movement work that, because the performer remains silent, depends entirely upon sounds present in the hall during its performance.

When the performers and managers who dominated the postwar concert hall offered their audiences new American music, they were far more likely to programme concertos and songs by Samuel Barber, or opera by Gian Carlo Menotti, than the 'experiments' of Cage, Earle Brown or Morton Feldman. But the latter group's presence on the scene broadened the range of styles and philosophies open to younger composers who came of age in the 1960s.

It is a mark of Western art music's prestige in American culture that when the federal government began to dispense patronage with the founding of the National Endowment for the Arts (1965), institutions such as the Metropolitan Opera Company and leading symphony orchestras received much of it. By the 1970s, economic inflation had made it impossible for most classical ensembles or troupes to support themselves through ticket sales. Deficits were now expected; money from corporations, the government and private donors was raised to meet them. Nevertheless, admiration for the classics endured, justifying patronage as it had for more than a century.

The connection of American composers to this tradition, however, remains problematic. On one hand, the composer's role in the classical sphere is secure. Higher education offers employment; private foundations, other funding agencies and the government's arts endowment provide more support; ensembles specializing in new music offer chances for performances and recording; and new works are regularly commissioned. All these events recognize that living composers are essential to a healthy musical culture. On the other hand, the appetite for new music by living American composers in the classical sphere remains relatively small. Perhaps no fact about art music in late 20th-century America is more striking than the contradiction between composers' secure role and the shadowy presence of their work, except perhaps for those who – in the spirit of Gottschalk, Ives, Gershwin and Copland – have brought techniques or materials into the classical sphere from outside it.

From one perspective, it seems only natural that the pedigree carried by composers has made their role secure. Although some works now considered classic were resisted when new, the modern concert hall is built around the idea that composers in each era have found fresh ways to illuminate the human condition through works belonging to the Western art music tradition. From another perspective, however, the rise of musical academia and the concert hall's limited involvement with new music have weakened many links between society and that tradition. The freedom to compose without regard for a general audience has led, according to this viewpoint, to a congeries of sounds, styles and approaches so diverse that no composer, nor indeed any work – or even body – of new art music can be expected to speak to or for more than a small segment of the American public. The supply of new composers and new music, always greater than the demand, has overwhelmed the means of cultivating new listeners. And the vast quantity of new works has greatly complicated the process of choosing which ones deserve to be repeated.

A third perspective, questioning whether recent American art music can be considered apart from popular and folk traditions that rival it for public attention, offers a view focussed not on styles or roles but on sound. From this perspective, technological developments since World War II have triggered a sound revolution transforming American musical life, from the listening public's experience to the sensibilities of composers. Where once a command of performing technique, or musical notation, or both, was required for entry into the composer's realm, the home synthesizer and a tape recorder now provide access. Moreover, the idea that only notated music deserves artistic respect was long ago undermined by two discoveries pioneered by jazz writers: (1) that recordings turn ephemeral performances into permanent works, and (2) that critical-historical writing can invest popular and folk traditions with an aura of artistic seriousness. The sound revolution has sparked a re-evaluation of styles, cutting in new ways across the boundaries separating the

8. The Philip Glass Ensemble in 1981 (clockwise from far right): Philip Glass, Kurt Munkacsi, Michael Reisman, Jack Kripl, Jon Gibson, Richard Peck, Iris Hiskey

classical, popular and traditional (folk) spheres. To cite just one example, the 'minimalist' music of a composer with a classical pedigree like PHILIP GLASS shares enough traits with rock music – electronics, simple harmonies, pulsating rhythms, a faith in the impact of repetition – to explain the substantial size of its audience.

As recently as the 1960s, Western music still seemed an art whose essence was periodically redefined by great composers. Schoenberg and Stravinsky were thought to have filled that role for the earlier 20th century – heroic figures who, through talent, vision and strength of will sought to embrace the aspects of music that mattered most to their age. Today, however, the possibility of such grand syntheses seems remote. Among living American composers, connections linking William Bolcom, Paul Chihara, George Crumb, Charles Dodge, Lou Harrison, Libby Larsen, Daniel K. Lentz, Meredith Monk, Steve Reich, Roger Reynolds, Christopher Rouse, Bright Sheng, George Walker, Olly Wilson and John Zorn to any common musical essence are hard to imagine. If the leading composers of previous ages are valued for bringing together the currents and counter-currents of their pasts, those of today seem more like separate individuals, each negotiating his or her own link with tradition and with the public. Yet, as if to counter the value placed on autonomy by some of their elders, many contemporary American composers of art music seem committed to addressing new works to non-academic audiences and presenting them in venues that include the concert hall.

II. Traditional music

1. European American.

(i) Introduction. The music of European American ethnic groups is very diverse and has a variety more representative of American history and culture than of pre-immigration experience in Europe. Both the musical style and the cultural settings of a repertory are altered, often dramatically, by immigration. Despite this shift of cultural orientation from the many nations of Europe to the single locus of the USA, European American musics have tended to increase in variety and number, and they continue to thrive generations after transplantation to American soil.

This article deals with the music of immigrant groups from Western and Eastern Europe. For convenience, traditions are discussed under geographical headings, although this organization may not always reflect modern political boundaries. Hispanic and Portuguese traditions, because they are the result of immigration from Latin America as well as from Iberia, are treated separately (see Hispanic-American music). *See also* Folk music.

(a) Historical influences. The music of European American ethnic groups often reflects patterns of historical change in both the USA and Europe. On arrival in the USA most immigrants sought those areas that afforded the greatest economic opportunity (as well as living conditions akin to those from which they came). Immigrants tended to form groups and build up new ethnic communities, postponing, sometimes indefinitely, assimilation to the supposed Anglo-Saxon national culture. European historical developments shaped the ways in which American ethnic groups were formed. Throughout the centuries of European immigration the boundaries of European nations have been in flux. Many immigrants to the USA had an ethnicity more regional than national, often defined by customs and even languages that are no longer found in Europe. But to acquire a German ethnicity in the American Midwest during the mid-19th century was to do so before a German nation existed in Europe.

Most theories of ethnicity stress either homogeneity (assimilation) or heterogeneity (pluralism). The great variety of European American ethnic musics attests pluralism, the many forms of which bear witness to the complex factors affecting the ethnicity of individual groups: place of origin, language, religion and common history since departure from a homeland, for example. There has been greater mixing of European ethnic groups in the USA than in Europe, producing patterns of consolidation that break down cultural barriers and often yield new groups. These may be unified by geographic proximity, a shared religion or a common – sometimes new – language. Consolidation often produces a new musical repertory drawn from the different constituents of the larger group. It has, moreover, been a major factor in the ethnic regionalism of the USA: certain groups concentrated in specific regions soon after arrival and have continued to attract new immigrants.

(b) Institutions of ethnic culture. As immigrant groups redefined their ethnicity in terms of the American cultural environment, they found new means and established new institutions (local, national, and international) for organizing their ethnic culture. Music has been one of the most pervasive elements in these institutions, through whose activities it often acquired new functions. Religion, too, has consolidated ethnic groups. Groups from central and northern Europe that settled in the Midwest during the mid-19th century formed denominations along ethnic lines, many of which persist in the early 21st century. Religious music acquired specific ethnic connotations and thereby strengthened the sense of ethnicity.

Music also played a central role in the new secular organizations of European immigrants. The Polish Falcon, the Welsh Eisteddfod and the Czechoslovak Sokol, for example, provided a web of nationwide contact for their respective immigrant groups while supporting activities in the local community through meeting halls or lodges. Some groups, such as eastern European Jews, have maintained their own theatres through several generations. Singing societies have consolidated and disseminated ethnic musical traditions.

The recording industry has been a major influence on folk music. Recordings of ethnic groups were made in the USA long before similar efforts were undertaken in Europe, and they usually drew on many genres, thus presenting a cross-section of the group's musical culture. Publication of music has also flourished in some groups. Although it ostensibly establishes written traditions, publication of ethnic music also provides a core that bolsters oral traditions. The media of the American

9. German singing society Liederkranz of Wausau, Wisconsin, c1913

environment have stimulated musical professionalism as a response to the new audiences that traditional performers found in the USA.

(c) Genres. The new institutions of European American culture and the mass media have caused a blurring and shifting of traditional genres and styles of ethnic music. Changes in function have also been caused by acculturation; for example, the distinctions between urban and rural folksongs, quite marked in European cultures, are less obvious in the USA. Some previously rural ethnic groups, such as the Slovaks, settled in industrialized urban centres and thus lacked the context for songs referring to agricultural activity. American cities have, in fact, proved to be among the most important crucibles for the maintenance of European American folk music.

Religious music has also undergone changes of function in ethnic communities. In some cases, it has proved to be one of the most important conservators of language. For those groups whose motivation to emigrate was primarily religious, the music of the church is often bound to other genres and thus serves to strengthen the entire musical culture. This has especially been true of enclaves like the Amish and Mennonite sects, virtually all of whose music is in some respect religious (see §(ii)(g) below).

Certain ethnic groups contributed to art music. In many areas of the USA during the mid-19th century, 'art music' meant German music, and it was performed almost exclusively by German American musicians. Operetta and light classical music were also performed by ethnic ensembles; such ensembles further contributed to musical professionalism within the group.

Through the blurring of boundaries between musical genres, some music has come to represent an ethnic group itself, stripped of old-country trappings. The *klezmer* band, for example, is a symbol of Jewish culture in general in the USA rather than only of eastern European Jewish communities. The meaning of tradition is thus recast according to an ethnic group's relationship to American culture.

(d) Survival and revival. Whichever paths of change traditional European American musics may follow, a significant amount of ethnic music has managed to survive the initial immigrant generations. Its diversity is in part a result of the continued pluralism of American ethnic groups: few have entered into a homogeneous relationship with the dominant culture. This pluralism has not, however, prevented change in the musical cultures of ethnic groups, especially by comparison with the repertories of Europe. An ability to adopt a cultural function more appropriate to conditions and circumstances in the USA has often resulted in various forms of preservation. The best example may be the Appalachian traditions, in which songs from the English and Scottish repertory were discovered after they had disappeared from the British Isles; the possible link of Amish traditions to medieval German hymnody may be an even more dramatic case, indeed one of marginal survival (i.e. the preservation in a community detached from its ethnic roots of a repertory or performing tradition that has died out or altered significantly in the parent culture).

The direction of change in the musical culture of most European American groups has been towards the creation and consolidation of new repertories. Since the 1960s increased attention has been focussed on the ethnic backgrounds of American pluralism. Many groups have recognized their music as a valuable symbol of their origins and have provided the impetus for a resurgence of interest. The revival of ethnic music further benefited from the popular folksong revival of the 1950s and 1960s, again reflecting the changing history and culture of the USA.

(ii) Western.

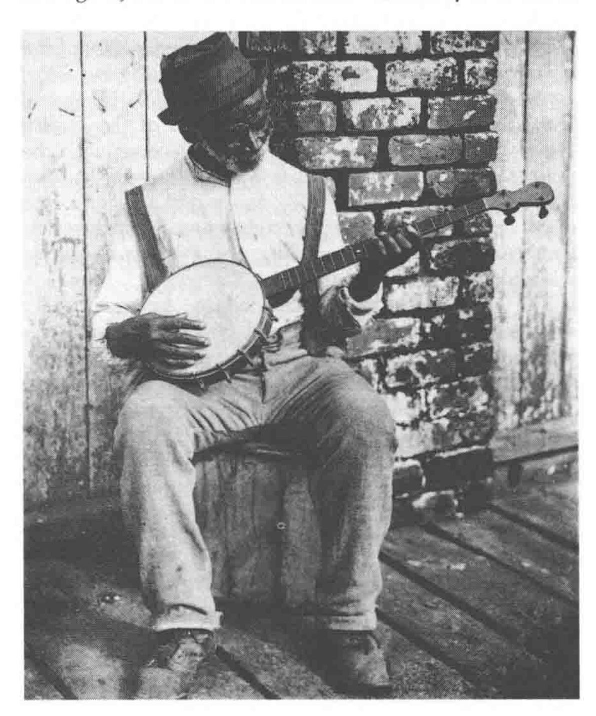
(a) British.

Instrumental. Traditional instrumentalists in the colonies that would become the USA drew on British traditions (initially Scottish and English, later also Irish) for tunes, ways to compose tunes and shape repertories, and playing styles. The young USA then formed its own regional styles: the North drew closely on English models that required musical literacy, while the South used an array of performing styles that were more strongly linked to Scottish repertories, were transmitted both through print and aurally, and had absorbed black American influences. Both imported tunes and those based on imported models but created locally were usually linked with dance genres. Throughout the early 19th century, a fiddler's repertory probably supplemented these dances with vocal airs, marches and other popular tunes. As decades passed and the solo fiddler, fifer or flautist was replaced in cultivated circles by ensembles or keyboard instruments, fiddle music emerged with a repertory of older rural dance tunes, together with a few descriptive airs and hymn tunes. The British HORNPIPE and REEL became the American HOEDOWN, other duple-time social dance tunes became polkas, and various triple-time dances were reworked as waltzes.

The fiddle (*see* VIOLIN, §II, 4) was the main instrument used to perform British American folk music from the late 18th century until well into the 20th. Although the instrument, the violin, is the same as that of its art music counterpart, traditional 'fiddling' was (and is) quite different. The instrument is held against the chest as well as chin, with short bows, various tunings, little or no vibrato and rarely more than first position used. The music became less British and more American, as different instruments were introduced. The FIFE has been closely associated with the fiddle since the Revolutionary War, where it was played by local militia units in fife and drum corps. Many fifers were also fiddlers, and tunes from the military and dance repertories were shared between these instruments. The banjo, a New World conflation of West African survivals, became widespread in the wake of the popularity of blackface minstrelsy from 1843 and significantly more common when late 19th-century mail-order

10. American fiddler

catalogues helped disseminate a wide range of products, including families of instruments that had recently become cheaply available. Although minstrel-style banjo playing included African-derived playing techniques that survive as clawhammer and frailing styles in the upper South, the usual repertory for ensembles (fiddle, banjo and perhaps a few supplementary percussion or string instruments) has always focussed on British American dance tunes.



Other instruments had regional currency. The hammer (hammered) DULCIMER was popular in the North and Midwest (and to a lesser extent the South), and the plucked or strummed dulcimer (unrelated historically to the hammered dulcimer) was a rare but longstanding feature of the music of the central and southern Appalachian region. By the late 19th century, other instruments incorporated in the developing British American dance-music tradition included the organ, piano, guitar, harmonica and mandolin, and wind instruments such as clarinet and trumpet, originally associated with marching and concert bands.

The common-time reel and BREAKDOWN usually consists of two (or, rarely, more) eight-measure strains that contrast in tessitura. A typical performance in older, dance-orientated style follows the structural pattern *AABBAABB*. While a few Northern contradances preserve a formerly more common connection of specific tunes with specific sets of dance figures, many tunes are used interchangeably for dances. That a considerable number of tunes are irregularly phrased or are otherwise not suitable for dance accompaniment attests the existence of an independent fiddle repertory. Regional styles are characterized by the degree of melodic ornamentation and variation used (Texas style leads in these aspects), affinity with older published models (as in the New England style), and amount of African- and Scottish-derived syncopation (emphasized in the various styles of the South-east), which are in turn differentiated by whether the high or low strain is played first, and other factors.

Although most other dance genres (e.g. quicksteps and quadrilles) have been assimilated into the breakdown, the British hornpipe remains vital in New England, and a few marches, jigs and descriptive pieces have survived. The most widespread alternative to the breakdown remains the waltz, which arrived in the USA during the period 1810–30, received new impetus around the turn of the 20th century from the new pop styles of Tin Pan Alley, and has returned as a standard ingredient in modern fiddle contests in most of the country.

The taste for instrumental folk music continues unabated in the USA. In the South, innovations include the upbeat BLUEGRASS MUSIC of the upper South and the slower, highly ornamented and varied 'contest' style, which has spread from Texas throughout the centre of the country. In the North a revival of interest in the country dance in New England has stimulated a parallel revival of instrumental music, and there is pronounced interchange of instrumental folk music along the Canadian border from Maine to Puget Sound. A strong revival of interest in the older repertory of the upper South has spread through both the South and the urban North and West since the 1960s. Among various ethnic groups there appears to be a comparable strength of interest in instrumental traditions, stimulated in part by the general hospitality to instrumental music throughout the USA.

Vocal. American traditional singers, or folk-singers, have inherited from successive waves of Anglo-Celtic immigrants a basic tune stock that has been used almost indiscriminately for secular and sacred, lyric and narrative texts, and is identifiable regardless of style (mode, range, rhythm, phrase order, embellishment and the like). The age of the tune stock is largely unknown. A few tunes can be traced to medieval records, and some have continental analogues, but little is known about this body of music in

11. Four-string banjo player, c1902

the British Isles before the 18th century. One cannot judge whether some characteristics of American forms are New World developments or preservations of earlier British forms that have been altered or lost.

Early American traditional vocal forms are monophonic and were performed unaccompanied. The melodies correspond to the strophic (stanzaic) textual form, the melody being repeated (sometimes with variations) for each textual unit. Tunes are composed of strains (usually eight bars long) and phrases usually organized bisymmetrically (*A* + *B*). Scales are diatonic and related to the medieval modes. Many tune variants are not in the full heptatonic scales but in 'gapped' forms (pentatonic and hexatonic), though more than half the tune variants are in a major tonality. 'Neutral' 3rds and 7ths (between tempered major and minor) occur. An apparently older style, which has been termed 'parlando-rubato', involves irregular metre, which may be combined with melodic ornamentation.

The tune stock is composed of a relatively limited number of melodic ideas, called 'tune families'; a tune family is defined by Bayard (1950) as 'a group of melodies showing basic interrelation by means of constant melodic correspondence and presumably owing their mutual likeness to a descent from a single air which has assumed multiple forms through processes of variation, imitation, and assimilation'. Members of a family may vary in style – mode, range, rhythm, phrase order – but are related by melodic contour and order of stressed tones within phrases. There are over 40 of these families, seven of which are dominant throughout the older tradition. They have been named somewhat arbitrarily after their textual associations. (Bayard named them for secular texts, e.g. *The Bailiff's Daughter* (Child 105); G.P. Jackson for religious texts, e.g. *I Will Arise*.) A musical idea, though associated with a particular family of texts, can furnish the vehicle for a variety of textual groups. Members of the *Bailiff's Daughter* family are found with such diverse texts as *Geordie* (Child 299), *Amazing Grace*, *How Firm a Foundation*, *One More River to Cross*, *Swing Low, Sweet Chariot*, *The Titanic I* (Laws, 1950, D24) and *Delta Dawn* (a country song). Members of the *Todlen Hame* family (*On Top of Old Smoky*) occur with the texts *The Cuckoo Bird*, *Little Mohea* (Laws H8), *Ten Broeck and Molly* (Laws H27), *Moonlight and Skies*, and many others from different textual groups. On the other hand, members of one textual group may be associated with different melodic families.

The textual traditions inherited by American folksingers were both narrative and lyric. Most scholarly attention has been devoted to narrative songs or 'ballads'. The line between ballad and lyric is blurred, since most American traditional songs tend to be story-orientated in that there is at least implicit narrative content. But one can recognize a number of narrative ideas (i.e. ways of telling a story in song) that have been inherited and developed by American singers. Manifestations of these ballad ideas have been in the past too often seen as mutually exclusive, and scholars have established canons devoted to types instead of recognizing that different ideas may inform different members of the same textual family or even a single variant text.

(b) French.

North-eastern. French Americans in the north-eastern USA, descendants of mid-18th-century Acadian exiles and 19th-century Québécois immigrants, have retained a rich musical heritage. Their folk-songs may be divided into four groups according to the themes of their texts. Some songs recall France, the land of the people's origins three to four centuries ago: for example, *A St.-Malo beau port de mer*, *M'en revenant de la jolie Rochelle*, *En passant par la Lorraine* and *C'était Anne de Bretagne*. These and other songs of old France were sung by successive generations of explorers as they journeyed across the North American continent and down the Mississippi to the Gulf of Mexico. Songs particularly associated with the *voyageurs* as well as with the *habitants* (French Canadian farmers) include *Alouette*, *En roulant ma boule*, *Dans les prisons de Nantes* and *A la claire fontaine*. Still others had their origins in new France; they reflect a simpler way of life on the farm or at sea, nostalgically remembered by the New World factory worker: *Mon Merle*, *Youppe! Youppe! sur la rivière*, *Mon père n'avait fille que moi* and the Acadian *Partons, la mer est belle*. Finally, other songs of the French American tradition were born in the USA; they are less well known and have remained more localized.

French Americans also brought with them from Canada their dance-music, notably quadrilles with two-step melodies, played on traditional instruments – harmonica (*musique à bouche*), jew's harp (*bombarde*), accordion, spoons and fiddle – to the rhythm of the clogger (*tapper du pied*). The diverse origins of so-called French Canadian dance-music and fiddle music are reflected in the repertory of the fiddler Omer Marcoux (*d* Concord, New Hampshire, 1982). Marcoux learnt fiddle from his father on a Quebec farm and from fellow loggers in camps in both the USA and Canada. The best-known dance tunes in his repertory included *Le reel de Sherbrooke*, *Rouyn Reel*, *Labrador* and *Fisher's Hornpipe*.

Another aspect of French American folk music is the *gaulois* and bawdy tradition, as in the drinking song *Prends donc ton verre* and the anticlerical ditty *La bonnefemme Robert*. Among Acadians there also remains an oral tradition of the sad *complainte* (e.g. *La complainte du Juif errant*).

The Catholic Church and its liturgy have played an important role in the development of French American musical traditions. In years past the Kyrie and Gloria were sometimes sung by men and women at work, but the demise of the Latin liturgy has caused a decline in this tradition. There remain some Gregorian melodies with tongue-in-cheek secular verses, for example, the folk-song *Mon père, j' voudrais m' marier*, sung to the vespers Psalm cix. French-language hymns, particularly those for Christmas, such as *Il est né, le Divin Enfant* and *Dans cette étable*, are widely known.

During the period 1890–1930 original composition of songs, operas and instrumental pieces flourished, and French American choirs were organized. Some of the new pieces found their way from the concert hall into the home and marketplace, and gradually into musical folklore, for example, *L'amour, c'est comme d' la salade*, composed in 1916 by Philias Champagne of Lowell, Massachusetts.

Cajun. The traditional folk music of the French-speaking Acadians (i.e. 'Cajuns') of south-western Louisiana, whose ancestors migrated to Louisiana after 1755 from what is now Nova Scotia, was originally French, but has interacted with and often absorbed the music of

southern whites and blacks. In the 1920s and 30s the discovery of oil in the region attracted new people and cultures, and young Cajuns left to work elsewhere. Cajun culture, always powerfully absorptive, now extends from Louisiana into Texas and is particularly strong in such cities as Beaumont and Port Arthur, where communities of Cajuns have maintained a continuous tradition, preserving, though in modified form, the music of their forebears.

Early Cajun music was vocal and included French traditional unaccompanied ballads and drinking songs that soon took on imagery from the American frontier. The experience of exile was expressed in songs of frustrated courtship, lost love and broken families. Many foreign elements blended to create the new music that came to be called Cajun. The Cajuns adopted 'terraced' singing styles from the Amerindians. From Black American music they adopted syncopation, percussion idioms, improvisational singing and blues style. The most popular instrument was the fiddle, for which Cajuns developed idiosyncratic techniques, such as a self-accompanying drone. From British Americans they adopted new tunes for reels, hoedowns and square dances. Spanish influences include the guitar and a few folk tunes. Immigrants from Saint-Domingue at the turn of the 19th century brought with them a syncopated Caribbean beat. Jewish German merchants began importing diatonic accordions not long after its invention in Vienna in 1828; the accordion was popularized by Cajun and Creole musicians such as Joseph Falcon and Amédé Ardoin.

The first commercial recordings of Cajun music, produced in 1928, tended to standardize this highly innovative tradition, popularizing favourite artists and styles. Accordions displaced fiddles as the lead instrument for both domestic and public bands, and complex fiddle tunes faded from the active repertory. Fiddlers were often relegated to a duet accompaniment or simple percussive line below the melodic lead of the accordion. The duo of the Cajun fiddler Dennis McGee and the Creole accordionist Amédé Ardoin brought a strong rural blues element to Cajun music. *Allons à Lafayette* (a tribute to one of the principal Cajun cities), the first Cajun record by Falcon and his wife Cleoma, was typical of the new style, featuring an accordion lead with percussive guitar accompaniment and high-pitched, emotionally intense vocals reminiscent of the noisy dance halls before electric amplification. Outstanding Cajun fiddlers include Leo Soileau (1930s), Harry Choates (1940s), and Dewey Balfa and Rufus Thibodeaux (after World War II), who have preserved the instrument and Louisiana French styles.

By the 1930s, changes in Cajun music reflected the Americanization of the repertory. Cajun bands abandoned the accordion in favour of string instruments that could imitate the sounds of western swing and country music. Amplification allowed fiddlers to lighten their bow strokes producing an airy, lilting style. By the 1940s, commercial recordings of Cajun music combined American styles with remnants of traditional French influence as English lyrics came to displace the traditional French lyrics. A revival of traditional Cajun music began with the music of Iry Le Jeune in 1948 and continued with Austin Pitre, Lawrence Walker and Nathan Abshire. In the 1950s, young Cajun musicians blended elements of rock and roll and country music in a new style called 'swamp pop'. In the 1960s at the Newport Folk Festival, Cajun bands performed traditional styles reflecting traits of the American folk music revival. In the 1970s and 80s, Cajun music was featured at the Smithsonian Institution Festival of American Folklife and the National Folk Festival, helping to inspire a Cajun renaissance in southern Louisiana. The Cajun fiddler Dewey Balfa and his Balfa Brothers Band promoted this revival, reintroducing Cajun music in school programmes, local festivals, and on local radio and television programmes. The new generation of Cajun musicians includes Beausoleil, the Mamou Playboys and Ossun Express, who are replacing their elders on the southern Louisiana dance-hall circuit. The style of these younger musicians reflects contemporary influences, as the blending process at the heart of this tradition continues. (*See also* ZYDECO.)

(c) German. In the US census of 1990 the ethnic category German American' was chosen more often than any other ethnic designation. Although German American ethnicity from evidence such as census reports and from immigration statistics at various historical moments would suggest a dominant group presence, German American music and music history are difficult to define. The Germanness of German American music must be questioned, because many German-speaking ethnic communities do not trace their cultural origins to Germany; moreover, many non- or mixed-ethnic musical domains (e.g. American art music, Lutheran church music and the liturgy of Reform Judaism) are inseparable from German ethnic experiences.

German American music includes distinctive music histories, diverse genres and cultural practices, and various neighbouring ethnic communities such as Austrian Americans, Jewish Americans with central European origins, and German-speaking immigrants from non-German regions (e.g. the Baltic countries or Romania) where they constituted minority or even occasionally majority groups. German Americans from these diverse backgrounds have maintained cultural activities since colonial times, to which successive groups of immigrants have made unique but related contributions. Music has served to maintain community identity and expand the nation's cultural horizons.

History. Germans immigrated to the American colonies sporadically throughout the 17th century, establishing their first permanent settlement at Germantown, Pennsylvania, in 1683. Colonial German religious groups were bound to the German language and liturgy, and early in the 18th century they began publishing German hymnbooks, chorale books and sacred instrumental music. Large groups of German immigrants arrived in the 1850s, the early 1870s and the 1880s; immigration continued at reduced levels into the 20th century. By the late 20th century German American cultural expressions had largely subsided or were preserved in revived and hybrid forms; some communities, especially in rural areas or in urban neighbourhoods formed from residents of formerly German-speaking areas of pre-World War II eastern Europe (e.g. the Danube-Swabians and Banat Germans from Romania and former Yugoslavia), remain rooted in immigrant ethnicity.

German American ethnicity was often characterized by the co-existence of several languages within the same community, usually High German, a German dialect and English. This linguistic distinctiveness in German traditional music reflected the variety of functions that music

served. High German was used in the church and other religious institutions, and these also provided centres for religious, educational, social and musical activities. German was tenaciously maintained by several denominations; the Lutheran Church–Missouri Synod, which claimed two-thirds of all German American Protestants as members, still used German in half of its parishes in 1925. Musical literacy was highly valued by almost all German religious groups and was taught in German American schools. Several denominations maintained large publishing houses for German music at the end of the 20th century.

Distribution. German American musical styles vary according to the area in which they arose. Eastern Pennsylvania, the first area of intensive settlement, has a number of styles reflecting the diverse influences affecting the Pennsylvania Germans during 300 years. Folksongs with old German origins are sung, as well as a genre of German spiritual influenced by the American Protestant religious awakenings of the late 18th century and early 19th. In the 20th century, the intensive settlement of Burgenland Austrians stimulated the formation of new popular musics in eastern Pennsylvania.

Most Germans settled in the Midwest, where they are the dominant ethnic group in several states. Milwaukee, Cincinnati, St Louis, Louisville and Chicago all have large German populations. Most Midwestern Germans immigrated during the 19th century, when the major waves of immigration coincided with the initial years of statehood in the Midwest. Often groups of immigrants from the same German region settled together in American communities, for example the Pomeranians in Wisconsin and the Saxons in Missouri, such patterns tending to strengthen ethnic ties. The music of the ethnic church was particularly important in the Midwest, and the liturgy of Reform Judaism underpinned the cultural life of Midwestern Jewish communities of German origin, especially in Cincinnati and Chicago. The largest church organizations created their own musical styles and repertories soon after settlement in an attempt to revive the music of the Reformation (*see* LUTHERAN CHURCH MUSIC; for a discussion of metrical psalms of the German Reformed Church *see* PSALMS, METRICAL, §V, 1(vi)).

Several German-speaking sects survive, of which the Old Order Amish, the Mennonites and the Hutterites are the best known. These groups usually live in relative isolation, and their music is probably the best example of marginal survival in the USA. In their music the Old Order Amish preserves elements of style and language from the early 16th-century tradition of their precedecessors, the Anabaptists (*see* AMISH AND MENNONITE MUSIC; see also § (g) below). German-speaking immigrants from other countries, such as the Moravians (*see* MORAVIANS, MUSIC OF THE; see also §3(iii)(e) below) have also contributed to American music. The labours of German Jewish musicians often raised the standards of American music to the highest levels (*see* JEWISH MUSIC §§IV, 2(iii), IV, 2(iv)(b); IV, 3).

Musical organizations. The musical traditions of the ethnic church are characterized by two practices: one that draws upon non-German religious music in the USA and one that is rooted in German music long since abandoned in European churches. The dominance of religious music may account for the paucity of instrumental folk music. The social importance of the ethnic church is shown by its support of parish instrumental ensembles. German instrumentalists are often members of mixed-ethnic bands, and German instrumental styles (e.g. dominant low brass parts, especially tuba and trombone) are conspicuous in ethnic popular musics, such as those of the 'polka belt' from New York to the Dakotas.

The most institutionalized form of German American secular music is the choral society. Known by a variety of names, such as Liederkranz (fig.9) or Männerchor, it cuts across economic, class and occupational boundaries. Male choruses predominated at first, but by the beginning of the 20th century mixed choruses were also common. Choral societies are organized on local, state, national and even international levels, and the participating societies of Sängerbünde ('singing leagues') gather for competitions and festivals (Sängerfeste). In cities choral societies serve as the basis for dramatic or instrumental groups or for a German opera company. Since World War II, North American singing societies have formed partnerships with European singing societies and make occasional European tours.

German influence is felt in American orchestral, choral and chamber organizations, as well as in music academies and university schools of music. Germans dominated classical music by the mid-19th century (and still do to some extent). Most orchestras had German performers (in 1890, 89 of the 94 players in the New York PO were German), and many organizations were founded by German-born conductors, such as Theodore Thomas of the Chicago SO.

German American music in multicultural and post-ethnic America. The last major influx of German-speaking immigrants to North America took place during and after World War II, until around 1960. With few exceptions, such as the Burgenland Austrians who immigrated mainly to Chicago, Toronto and the Lehigh Valley in Pennsylvania, postwar immigrants settled throughout North America, and older institutional structures in German American music culture declined, especially as fluency in German diminished. New forms of German American music developed, responding to new patterns of American multiculturalism. The music of previously isolated German-speaking communities was integrated with that of other communities. German Lutheran repertories, after World War II almost entirely in English, were consolidated with Lutheran musics. Popular ethnic dance-music such as the polka burgeoned with the advent of inexpensive long-playing records from the late 1940s until the early 1970s, and German American repertories were enriched by the musics of other groups to form an 'ethnic mainstream' of popular music. German American Dutchman polka bands, such as that of 'Whoopee John' Hans Wilfahrt in New Ulm, Minnesota, expanded their repertories and audiences by drawing extensively from this mainstream.

In the late 20th century German American music continued to contribute to the expression of ethnicity in popular culture. German festivals, such as Oktoberfest and Steuben Day, honouring German participation in the American War of Independence, were occasions for reviving German American repertories and inventing new music. North American festival culture stimulated the revival of certain genres, especially choral music, and tours of musical ensembles from central Europe. German American music enjoyed a new presence in the public

sphere of late 20th-century North America but was largely separated from the social and community functions that supported community cohesion before World War II.

Few ethnic musics have influenced American musical traditions in so many ways. Indeed, the German American recognition of this influence has consistently produced creative ways of weaving German culture into the larger fabric of American culture and history for over three centuries.

(d) Irish. Irish traditional music comprises dance pieces including jigs, reels, hornpipes, polkas, mazurkas, flings, barn dances and waltzes, and other instrumental forms such as slow airs, marches and planxties. It is characteristically played on such instruments as the fiddle, uilleann pipes, harp, wooden flute, tin whistle, accordion, concertina, tenor banjo and mandolin, often accompanied by guitar, piano, *bouzouki*, bodhran or bones. Some pieces date from as early as the 16th century and were brought to North America by Irish immigrants in the 17th and 18th centuries. However, little is known about Irish music in America before 1700. Throughout the 18th century hundreds of thousands of Irish immigrants, many from the north of Ireland, settled in the Appalachian region. Their music helped shape the development of 'old-time' or hillbilly music, and in the 20th century this music in turn contributed to the evolution of COUNTRY MUSIC and BLUEGRASS MUSIC. In the 19th century most immigrant Irish musicians gravitated towards the towns and cities of the USA, creating an urban-based tradition that was revitalized by successive generations of immigrants until the early 1970s. In the latter half of the 1800s many came from the western countries of Ireland, the home of much traditional Irish music.

In large American cities such as Boston, Chicago, Philadelphia and New York, there was a rich cross-fertilization of styles and repertories. Virtuoso soloists such as uilleann pipers Patsy Tuohey and Tom Ennis, flautist John McKenna and Sligo fiddlers Paddy Sweeney, Paddy Killoran, James Morrison and Michael Coleman made recordings of such brilliance and sophistication in the 1920s and 30s that they continue to serve as exemplars in Irish music on both sides of the Atlantic; they also helped create a kind of national repertory of traditional tunes. Another important figure was Francis O'Neill, the police chief of Chicago, who wrote extensively on Irish traditional music in the USA in the early 20th century. He published several collections of traditional tunes, many of which he heard played in Chicago. These collections, notably *O'Neill's Music of Ireland*, became veritable bibles for Irish traditional musicians.

Urban dance bands, many made up of Irish musicians, provided further outlets for traditional Irish music in the years between the world wars. In hundreds of ethnic dance halls throughout the USA, these bands forged a hybrid Irish American idiom in which traditional instruments were combined with the piccolo, saxophone and piano. Notable groups included the Four Provinces Orchestra in Philadelphia, Dan Sullivan's Shamrock Band in Boston, the Harp and Shamrock Orchestra in Chicago and the Flanagan Brothers in New York. All recorded extensively for Victor, Columbia, Decca and other companies that specialized in ethnic recordings.

Vocal traditions have also been an important component of Irish American culture. The oldest styles of Irish traditional singing are solo and *a cappella*; the finest singers apply elaborate embellishments to skeletal melodic lines. This style of singing, called *sean nòs* ('old style'), has always been associated with rural Ireland. Generally performed in private contexts such as intimate house parties, it did not readily lend itself in the USA to public performance. However, other varieties of Irish vocal music have achieved popularity in America, including stage skits and comic songs, vaudeville routines and the sentimental, nostalgic creations of Tin Pan Alley songwriters. The commercial success of the Clancy Brothers and Tommy Makem in the early 1960s sparked a resurgence of interest in Irish songs and singing in both the USA and Ireland. Their style, strongly influenced by the American folk revival, was characterized by song arrangements that were rhythmic rather than free style, the introduction of harmonies new to the Irish singing tradition and guitar and five-string banjo accompaniments. A profusion of Irish groups can now be heard performing in a similar style in Irish bars across the USA.

By the 1960s traditional music (which had been an almost exclusively male preserve) had declined as a force in Irish American social and cultural life; it was displaced by commercial Irish American music popularized by such performers as Bing Crosby and Dennis Day. In the mid-1970s, however, young American-born Irish of both genders took up traditional music and quickly excelled. As a result of their efforts, the older music has made a successful transition from the home to the concert stage, and social music-making in small quasi-public sessions has become increasingly central to the ongoing evolution of the traditional style and repertory. Musical links between Ireland and the USA are closer than ever before. Irish American musicians such as Ed Reavy in Philadelphia have composed hundreds of tunes that have passed into the traditional repertory, which now ranges from old-style music to rock. Other factors contributing to the renaissance of Irish traditional music in the USA are the many festivals and concerts sponsored by folk-music societies, arts organizations, colleges, museums and historical societies; performance on public radio and television; and commercial dance extravaganzas such as *Riverdance* and *Lord of the Dance*.

Irish music has frequently been used by American composers of classical music in their symphonic, chamber and solo compositions. Both the folk and stage idioms of Irish music served as inspiration for composers such as Victor Herbert, Henry Cowell and Samuel Barber. However, the work of these and other composers using Irish and Irish American musical motifs has had little reciprocal impact on traditional music.

(e) Italian. Of the many Italian American communities scattered across the USA, the largest are in major urban centres such as New York, Boston, Philadelphia, Chicago, Pittsburgh, San Francisco and Los Angeles. Other enclaves are in agricultural or mining towns, including Tontitown, Arkansas; Asti, California; Clinton, Indiana; and Roseto, Pennsylvania.

The Italian American repertory is large and varied, reflecting the diversity of Italian styles. Songs of Lombardy and Piedmont belong to the European mainstream, while those of Calabria and Sicily share many traits with the music of Islamic Africa. The traditions of northern and southern Italy are so distinct that in the American context they have not influenced each other to any noticeable

degree. Regional repertories, in so far as they are still remembered, remain as distinct as they were in Italy. However, since most of the immigrants came from the impoverished central and southern regions of Italy, it is the traditional music of these areas that is most frequently heard in the Italian American communities of, for example, New York, Chicago, New Jersey and Rhode Island. Often their repertory illustrates marginal survival, whereby traditions are maintained longer (and subjected to less change) among immigrant communities than in their home environment. This conservative attitude stems in part from the desire to maintain a strong ethnic identity. Therefore, music that is valued as a symbol of identity is less likely to undergo development than it would in the home country, where such a symbolic role is much less important.

Although the southern Italian repertory is prevalent in the USA, northern Italian styles and practices have also been documented. Ballads (*canti epico-lirici*) are still sung by the older immigrants from northern Italy. The narrative content of many of these correspond to songs of the British American tradition: *L'eroina* corresponds to *Lady Isabel and the Elf Knight*, *Donna Lombarda* to *Dame lombarde* and *La mia mamma l'è vecchiarella* to *The Sleeping Potion*. Some of these narrative songs, as well as other song forms, are at times sung chorally in the Alpine style. Such choral singing survives in the USA in a simpler, more straightforward form than in modern Italy, where more complex harmonies have been adopted from choral practice. Among immigrants from the south, songs (*canti lirico monostrofici*) predominate, including *stornelli* and *strambotti*.

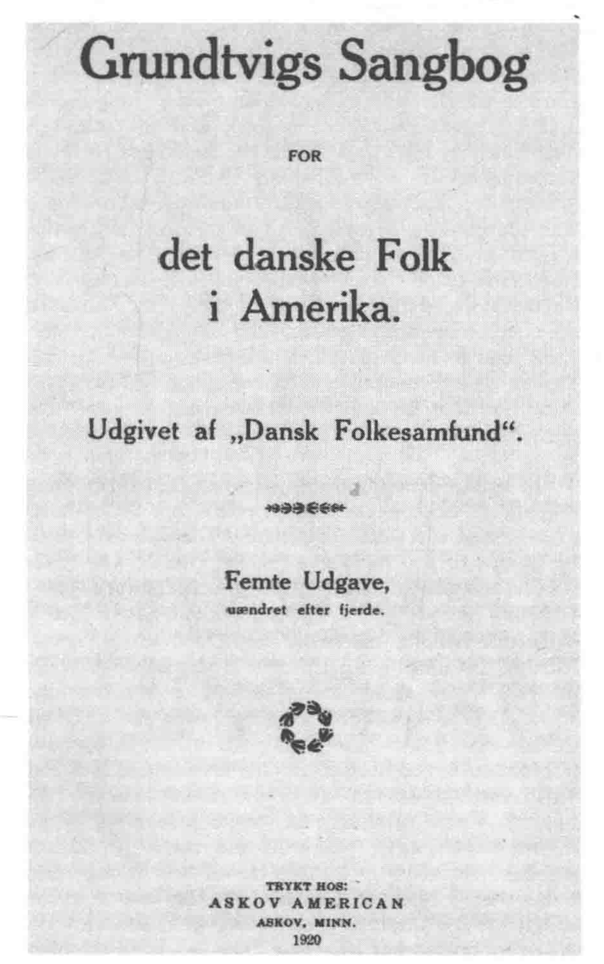
Italian American traditional music has been much influenced by Italian popular songs of the 1920s and 30s. In Italy some of this repertory is associated with the fascist regime and is recalled with mixed feelings; it is remembered by older Italian Americans with nostalgia. Americans of Italian origin, especially those who still speak Italian, enjoy contemporary Italian popular music, widely available through Italian-speaking radio stations in the USA and Canada, record shops in Italian neighbourhoods, satellite television and concert tours of Italian pop stars such as Lucio Dalla and Gianni Morandi, whose concerts are attended almost entirely by Italian Americans.

Mass Italian immigration to the USA took place between 1880 and 1920; more recent immigrants, generally from urban areas, rarely join the established Italian American communities. Most Italian traditional music recorded in America was documented in the 1960s and 70s. In the 1990s, Italian contemporary recordings, along with radio and television programmes, helped maintain contact with the current popular culture in Italy. At the other end of the spectrum, such organizations as the Italian Folk Arts Federation of American helped to preserve the older traditional music and customs.

(f) Scandinavian. Although Scandinavians began to immigrate to the Americas in the 1600s, the principal influx was in the decades spanning the turn of the 20th century. Indeed, the US census of 1910 indicated about 815,000 Norwegian-born and American-born of Norwegian-born parents – a number roughly equal to one third of Norways's population at the time. Most Scandinavian immigrants settled in the upper Midwest, especially in Minnesota, Wisconsin and Michigan, areas also that were popular with immigrants from Germany and eastern Europe. Patterns of culture in Scandinavia had emphasized local identity to a degree difficult to maintain in the USA. When villages relocated nearly intact, village-specific musical repertories could be and were briefly retained. Much more frequently, however, national, pan-Scandinavian, pan-immigrant, or more generally assimilated patterns prevailed soon after resettling.

A variety of long-lived and vital secular and religious ballad traditions from each Scandinavian country were soon widely circulated in the USA. The boundary between oral and written traditions was never clear – that is, handwritten or published texts were often used as memory aids, though supplementing texts with musical notation remained much less common. New emigrant ballads, many distributed as broadsides at the same time that they were transmitted orally, recorded personal and group experiences vividly. Some of these ballads offered encouragement to the prospective immigrant, while bleaker texts may have had the opposite effect. Transplanted ballad traditions naturally experienced change in both content and meaning in their new homes. On the broadest level, the connotations of all tunes and repertories tended to de-emphasize specific inherited meanings in favour of a more general evocation of rosy memories of their singers' original homes. During the course of the 20th century, balladry gradually declined, partly as a result of the growth of mass media but also as a consequence of the gradual abandonment of the Scandinavian languages.

Hymns and various types of religious songs were very important in the lives of Scandinavian immigrants. This was due both to the strength in the Old and New Worlds of Scandinavian Lutheranism and to the waves of Pietism that had swept parts of Scandinavia during the second half of the 19th century (many immigrants came from areas where Pietism had been especially influential). While many Scandinavian communities in the Old World possessed distinctive repertories of older secular music, church hymnody was more standard, and therefore apt for the mixed Scandinavian communities of the New World. At the same time, religious tunes whose main life was in oral tradition (these came to be called *folketonar* in Norway) were initially healthy transplants to the Midwestern USA, although institutional hymnody persisted more vigorously, since the church became central to the generalized Scandinavian immigrant experience.



Scandinavian instrumental music was initially a weaker transplant than religious music. The weight of religion that had discouraged the nurturing of dance and dance-tunes late in the 19th century in much of Scandinavia lifted more slowly in immigrant communities than in Scandinavia itself, but the conservative pressure did gradually subside.

Most Scandinavian instrumental music falls into two broad historical layers (both centred on dancing), which have fared differently in the New World. The older set of repertories centres on a family of dances in a metre freely mixing 9/8 and 3/4, including the Swedish *polska* and, in Norway, the *pols*, *springar*, *springleik* and so on, with each of these names actually an umbrella term for regionally defined arrays of music and dance dialects. These dance-tunes were traditionally performed on fiddles, generally the standard violin but in western Norway on the Hardanger fiddle, a highly ornamented instrument with four bowed and four sympathetic strings. More than a few fiddlers (on either type of fiddle) who emigrated to

the USA either visited or moved back to Scandinavia, so that musical influence flowed in both directions.

In Scandinavia, fiddle music has been revived with an emphasis on local tradition: most fiddlers publicly perform only tunes and versions of tunes inherited within their own town's tradition. In the Midwest, fading memories and marriages between individuals whose parents came from different locations in Scandinavia have blurred such specific Old World affiliations. Many young instrumentalists whose ancestors came from areas of Norway where the standard fiddle was played have taken up the Hardanger fiddle, since the latter instrument is more distinctively Norwegian. Thus national identity is gaining precedence over the local loyalties that were more important before emigration. Other fiddle-playing descendants of Scandinavian immigrants participate in the American fiddle revival and, in many cases, play repertories and use styles that are either compromises between Scandinavian and American fiddling or that largely abandon any distinctively Scandinavian element.

A younger layer of Scandinavian instrumental music met a different fate in the Midwest. The Scandinavian versions of pan-European 19th-century social dances, collectively known as *gammaldans* (with minor re-spellings in different Scandinavian dialects), inspired the formation of New World Scandinavian bands (often including violins, but centring on accordions) to play these polkas, waltzes, schottisches etc. Over time, the polka has become the most important dance among these, and bands led and dominated by eastern Europeans are pre-eminent in the polka band market. When young American descendants of Scandinavians dance polkas and waltzes to these bands, their pan-immigrant Midwest identity comes to the fore.

12. Title page of F.L. Grundtvig's 'Sangbog for det danske folk i Amerika' (1920 edition), a collection of Danish songs published by the Danish music publisher Askov American in Minnesota

Other instruments, including the Swedish keyed fiddle (*nyckelharpa*) and plucked zithers such as the Norwegian *langeleik*, Swedish *hommel* and Finnish *kantele*, are more common in revival than they ever had been previously, both in Scandinavia and in the USA.

Scandinavian American social organizations generally include music as an integral part of most activities. Throughout the 1880s, such organizations tended to be pan-Scandinavian. Later, increasing populations of immigrants allowed specialization by national group. Some organizations remain specialized – at least one large organization per national group – while others have reverted to being pan-Scandinavian, either because of intermarriage between later-generation immigrant descendants or because a given organization is located where there are few interested immigrant descendants. The larger nation-specific organizations often support choral societies with traditional repertories. These societies may sponsor annual festivals, with both society and festival following German models. Smaller, pan-Scandinavian groups often restrict their singing to broadsides that join texts celebrating *lutefisk* – a widespread, somewhat humorous cod-based cultural icon – to tunes widespread in the USA, such as Christmas carols.

Scandinavian American music publishers and recording companies were once busy disseminating traditional music by both Scandinavian and Scandinavian American composers and performers. This echoed similar endeavours involving nearly every ethnic group in the USA large enough to support in-group commercial activity. The Scandinavian American synods of the Lutheran Church were central to this effort, and local newspapers helped too. An important Midwestern Danish music publisher was Askov American of Askov, Minnesota, which issued F.L. Grundtvig's *Sangbog for det danske folk i Amerika*, first published in 1889 (fig.12). Sparsely populated areas such as the Finnish communities of northern Minnesota and Michigan received traditional music by radio.

The 1970s to 90s witnessed a Scandinavian American ethnic revival with music at its core. Refreshed interest in both the collection of older traditions and performance of reshaped ones can be witnessed in the activities of well-known figures such as Leroy Larsen of Minneapolis and by hosts of younger musicians. Most of this activity concerns secular dance music. Some of these individuals are seeking links with their own heritages, while others – not all with Scandinavian backgrounds – are simply looking for interesting and attractive alternatives to the modern mass media. A young national society nurturing the Hardanger fiddle, numerous folk-dance clubs, and older ethnic-specific groups continue to find pleasure and meaning through cultivating Scandinavian song and dance.

(g) Swiss. Since 1700, Swiss immigrants have arrived in the USA steadily, and they numbered approximately 400,000 at the end of the 20th century. This group is

characterized by diversity, reflecting the many cultural, linguistic, regional and religious groups of Switzerland. Diversity was initially apparent in the music of Swiss Americans, but few regional genres have survived the tendency towards a consolidation of styles. Hybrid musics have developed particularly in those regions where Swiss American culture has been consciously maintained; they reflect influences from other European ethnic and popular musics, as well as the impact of tourism.

During the colonial era the dominant groups were the religiously motivated Swiss Brethren, who settled in eastern Pennsylvania. There they constitute the majority of two groups, the Amish and the Mennonites (the distinction between these two disappeared long ago in Switzerland), whose musical cultures have been among the most dramatic examples of preservation and marginal survival in the USA. Their hymnody, sung in High German rather than Swiss dialects, consists primarily of psalm texts and of martyrdom narratives that recount the genealogy and history of the churches, often with well over 100 verses. This repertory is sung in a style that uses lining-out, in which a lead singer states the initial melody, followed by a group of worshippers. Because these hymns have been transmitted orally for approximately five centuries, some scholars believe that many melodies might be similar to the chorale melodies of the Reformation in central Europe (*see* AMISH AND MENNONITE MUSIC). Other Swiss American religious groups, such as the Swiss Reformed Church, have also made significant contributions to American church music.

Secular Swiss American vocal music often comprises songs that reflect on the experience of immigration; these were historically complemented by repertories of emigrant songs, which circulated orally or in printed versions in Switzerland. The development of Swiss American choral repertories continued to use the themes in immigrant songs but transformed these to diverse and nuanced commentaries on the homeland from a New World perspective. Swiss American traditional instrumental music emphasizes a distinctive group of instruments, among them the zither and the piano accordion. Dance bands draw upon central European ethnic repertories but adapt and embellish them to make them distinctively Swiss American. Swiss Americans have made considerable contributions to American art music; Ernest Bloch, for example, integrated Swiss, Jewish and American themes into works at once cosmopolitan and diverse.

Small areas of Wisconsin, Ohio, Oregon and California attracted Swiss settlement from the mid-19th century onwards. Swiss traditional music often influenced other ethnic musics in these regions, often more extensively than the relatively small Swiss populations when compared to the larger ethnic cultural mainstream. For example, the Scandinavian repertory in Minnesota and the German in Wisconsin have many dances and instrumental tunes arranged or composed by Otto Rindlisbacher (1895–1975) and Rudy Burkhalter (*b* 1911), both prominent figures in the ethnic popular music of the upper Midwest. During the 20th century Swiss American cultural organizations, such as the Grütli-Bund (or North American Alliance), have promoted revivals of Swiss music. These revivals usually combine the cultural traditions of diverse Swiss ethnic groups, projecting a picture of Swiss culture that is far more representative of the consolidation inherent in the American ethnic experience and the response to mass culture and popular multiculturalism than of the different cultural backgrounds that existed in Switzerland before emigration.

(iii) Eastern.

(a) Albanian. Traditional music may be heard in numerous forms and on many occasions in the communities of ethnic Albanian Americans in Boston and nearby, where numerous immigrants have settled since the early 20th century. The music of this ethnic minority shows striking differences in style according to the immigrants' origins. Most immigrants came from central Albania and speak the Tosk dialect; others came from the northern Geg-speaking region and the southern Lab-speaking region. Each of these groups has, in addition to its own dialect, a distinct musical style, features of which have been retained in the New World setting.

Albanian traditional music and dancing are performed at picnics, community events, calendrical day celebrations, weddings and private entertainments. Dance tunes consist of short phrases, often with a pentatonic melody of narrow range; some are derived from the bagpipe repertory, others from vocal forms. The musicians usually accompany a singer in unison, adding rhythmic variations. The use of augmented 2nds in some of these tunes suggests Turkish and Balkan influence, while the 5/8, 7/8 and 10/8 metre of others shows Greek influence. The instrumentation of dance ensembles differs from groups in Albania; the melody is usually played by a reed aerophone, often a clarinet, the rhythmic texture is supplied by long gourds and side drums (without snares), and the sound is augmented by lutes that double the melody or rhythmic accompaniment. Some Albanian American dance music is borrowed from other Balkan traditions. According to Ramadan Sokoli, a leading Albanian folklorist, instrumental music was not widely practised in Albania. Musicians from Greece, Macedonia and Hercegovina often performed for dances, and from them the Albanians acquired many foreign genres. Likewise, Albanian Americans tend to invite Greek, South Slavic and Armenian groups to perform at their social functions. The dances at these functions are usually chain dances, in which the participants enjoy considerable freedom in the choice of steps.

The older generation of Albanian Americans sing polyphonic *iso* songs (the term refers to a drone note) from central and southern Albania. They are performed by groups of five to twelve singers, two of whom are soloists and share the melody. The others sustain a drone, vocalized on the vowel *e*. The *iso* melodies have a variety of forms. Among the Tosk immigrants from central Albania, *iso* songs are performed in free parlando style; the two soloists complement each other with canonic entrances, the second voice paraphrasing the text and melody of the first or repeating the melody in ostinato fashion. At the end of each section the harmonic 2nds and 4ths created against the drone are resolved. In the Lab singing style the rhythm of the song is determined by the rhythm of the text, which all the voices pronounce together. The effect of Lab *iso* melodies is homophonic rather than polyphonic. In contrast to the Tosk style, the second melody part is sung by several voices and is always lower in range than the first. The *iso* tone is either sustained or articulated with the same text as the upper parts. A characteristic of Lab tunes is the abrupt stopping of all voices at section endings. In both regions, men and

women have separate repertories of *iso* tunes. However, mixed groups do occur in the USA, where the aging immigrant generation is attempting to keep this musical heritage alive.

Albanian religious music, particularly hymn tunes, has also been preserved in the USA. These hymns belong to a large family of tunes diffused along the Adriatic coast and through central and eastern Europe. The melodies are usually in a major mode and are sung in parallel 3rds, ending with a dominant–tonic cadence.

At the end of the 20th century Albanian communities in the USA underwent considerable change, with the passing of an older generation of expert musicians, including the *iso* singers, and the rise of a new generation who left their traditional communities. Older repertory from rural Albania was abandoned in favour of pop music, and the younger generation showed more interest in cultural events in Albania itself than in neighbourhood culture.

(b) Armenian. Armenians have contributed greatly to the enrichment of American musical culture, and a large number participate in the artistic life of the USA. According to the records of the Virginia Company of London, 'Martin the Armenian', a member of the colony at Jamestown, Virginia, reached the USA in 1618 to serve as an aid to Governor George Yeardley. A small group of Armenians began arriving in the USA in the 1830s, principally to get an education, learn trades and engage in commerce, with the intention of returning to their country within a short time. It is estimated that by 1894 there were about 3000 Armenians in the USA. The first significant wave of immigration began immediately after the 1894 massacres of Armenians in the town of Sassoun, Turkey. Many more came after the 1915 Ottoman Turkish genocide of Armenians, World War II, political upheavals in the 1970s in the Middle East, and as a result of the economic uncertainties in the Caucasus in the late 20th century. Armenians in the USA now number more than one million. The majority reside in the metropolitan regions of New York, Boston, Providence, Philadelphia, Detroit, Chicago, Los Angeles, San Francisco and Fresno, California. Significant numbers of recent arrivals, however, have settled in small towns.

Soon after the early Armenian communities were established, a church was built in each town; the first Armenian Apostolic Orthodox Church in America was built in 1891 in Worcester, Massachusetts. During the religious service a deacon would intone traditional liturgical chants, which were grouped according to a system of eight melody modes identified by such characteristics as tonal progressions, ornamentation and rhythmic patterns. On occasion a group of choristers would join the deacon and sustain a drone or sing the melody in unison. In 1896, following a trend to adopt Western ways, a polyphonic version of the liturgy was composed by Makar Ekmalian in Tiflis (now Tbilisi) and was printed by Breitkopf & Härtel. This arrangement was gradually accepted in many Armenian churches, including those in the USA. A different setting of the liturgy for *a cappella* male chorus by Komitas was introduced to the USA in 1948. Most Armenian churches now maintain a permanent choir.

The singing of folksongs was also an integral part of the cultural life in many communities. However, because such melodies were handed down orally they were subject to continuous change. In addition, when Armenians from urban centres immigrated to the USA, they injected musical elements and mannerisms such as unidiomatic melismas, embellishments and melodic idiosyncrasies into their folklore, further blurring its character. In the 1960s traditional melodies were reintroduced to the Armenian Americans, largely owing to improved relations with the former Armenian SSR. Occasionally singing groups made a public appearance, highlighting a *hantes* (social-cultural event).

By the 1920s Armenian music stores included the Sohag [Nightingale] Record Company of New York City and the Yaghubian Royal Piano Company of Worcester, Massachusetts, as well as the instrument maker Pakrad Mahjoubian of New York City and the music editor and agent Prof. James Moscofian of Astoria, New York.

Armenian music has a strong foothold in American culture. As early as the 1890s, Alexia Bassian ('the Armenian Nightingale') majored in music at the Mills College, Oakland, California, and later settled in London to pursue a musical career. A semi-professional group of musicians, the Armenian Instrumental Ensemble of Rhode Island, performed for 14 years until about 1910. During the early 1920s, two Armenian singers – the tenor Arman Tokatyan and bass Paolo Ananian – joined the Metropolitan Opera. Following World War II, the Armenian National Chorus of Boston and the New York Armenian National Chorus were among the prominent vocal groups to disseminate Armenian vocal music. Philanthropic and educational organizations, such as the AGBU Alex Manoogian Cultural Fund, Tekeyan Cultural Association and Hamazkayin Armenian Cultural Association, have encouraged many to pursue their interest in Armenian culture. From 1971 to 1991 the Aram Khachaturian Music Competition, restricted to musicians of Armenian parentage, was a source of encouragement for young musicians. Radio programmes of Armenian music, some produced by the Heritage of Armenian Culture, are made available weekly on National Public Radio, though not all station affiliates broadcast them. The Armenian Allied Arts Association of Los Angeles and the Friends of Armenian Culture Society of Boston promote talented students, performers and composers. The Zohrab Information Center of New York and the music library at the University of Southern California serve as extensive resource centres for Armenian music.

(c) Baltic. Immigration to the USA from the Baltic States began in the late 19th century, and by World War I had reached large proportions, particularly among Lithuanians, who remain the largest Baltic ethnic group. Amid Catholic and socialist factionalism and hard economic conditions, the early immigrants could not afford the reconstruction of Baltic culture in the USA as their primary interest. After World War II the necessary organizational base for cultural revitalization was broadened by middle-class nationalists who arrived as political exiles (from 1948 to 1950 approximately 10,000 Estonians and 45,000 Latvians).

The early Lithuanian immigrants retained from their rural background a repertory of traditional songs. A large sample of these, characterized by a narrow melodic range and variable metre, was recorded in 1949–50 by the folklorist Jonas Balys, who recognized their value in the light of encroaching harmonized styles. In Pennsylvanian mining towns of the 1880s, Lithuanian singing and fiddle

and accordion music resounded in meeting halls and taverns. At this time brass bands and parish choirs were formed and soon afterwards the first secular choral groups. This activity led to the first Lithuanian American song festival in 1916, which preceded the mother country's first festival (1924).

Although they date back to the 19th century, Estonian and Latvian song festivals were transplanted to America only in 1953, as a result of postwar immigration. The later immigrants brought with them the traditions of urban cultural organizations, as well as the experience of a period of intense concert activity in displaced persons' camps (1944–50). Cleveland's prominent folksong and folkdance ensemble, Čiurlionis, was started in Lithuania's capital, and Dainava, based in Chicago, was created in the camps. Because of its prominence in camp functions, the Latvian choir Dziesmu Vairogs received sponsorship to immigrate in its entirety to Kalamazoo, Michigan.

The native Baltic zithers, revived and modernized in the early part of the century, were carried to the USA with the Lithuanian ensembles and became a distinctive feature of Baltic American music-making. An orchestra of *kanklės* supports Čiurlionis, and there is an academy in Cleveland for its instruction. Family traditions also make for continuity. Balys Pakštas, the leader of a folk instrument orchestra in Vilnius, founded an ensemble in the large Chicago Lithuanian community that was later led by his daughter. An initiator of the still-modest movement in Estonian *kannel* playing, Lilian Esop, was taught by her father, using the instrument he had brought out of Estonia after World War II.

While some Estonian and Lithuanian players employ zithers (with up to 37 strings) that were adapted to the performance needs of larger urban ensembles, amateur ethnologists and craftsmen have turned instead to indigenous rural models. The Latvian *kokle*, with 13 strings and wooden tuning pegs, began to be built in the 1960s; smaller Estonian *kannel*s, with five to twelve strings, have appeared since 1975. A playing method and manual were soon developed by Andrejs Jansons, and this new idiom was popularized by the Latvian Folk Ensemble of New York under his direction. Annual *kokle* festivals have brought together a growing number of ensembles since 1965.

After a period of stability during which the familiar choral repertory dominated musical performance, the zither revival indicated a search for new forms. The first seminar dealing with the *kannel* (1981) also included demonstrations of Estonian runic singing and shepherds' calls. Groups of singers and instrumentalists, including the Latvian Kolibri (formed in Boston in 1979), recreated traditional styles from printed collections. The Boston-based group Sodauto specializes in simple unaccompanied songs learnt from an older member of the Lithuanian community. It has also revived the art of the *sutartinė*, two-part singing characterized by distinctive hocketting rhythms and intervals of a 2nd.

A contrast to the nationalistic basis of most of the song festivals is found in the Latvian celebration of St John's Day, the summer solstice. Members of each community gather at a nearby rural site and, draped in garlands of oak leaves, sing the traditional *līgo* songs. The Dievturi, a non-Christian Latvian sect that has been in the forefront of the ethnographic revival, has assiduously reconstructed the ritual and bases its religious services on folksong texts.

Estonian, Latvian and Lithuanian national song festivals take place every four to five years and are supplemented by numerous offshoots: festivals for Estonian male choruses, young Latvians and Lithuanian dance troupes, and regional Midwest and West Coast festivals. Throughout the year local community centres stage traditional music performances to commemorate anniversaries of political and cultural significance. Estonian and Lithuanian international festivals attended by Baltic émigrés from all over the western world have also been held in the USA.

The ethnic identity of Estonians, Latvians and Lithuanians was heightened in the late 1980s by appeals to restore the Baltic nations as autonomous states and by the protests emanating from folklore ensembles in Latvia, a movement known as the Singing Revolution. Connections to the homeland were strengthened by Baltic Americans who repatriated and by the large number who participated in song festivals, notably the dramatic 1990 song festival in Riga, which took place in the violent year preceding the dissolution of the Soviet Union. As a result of *glasnost* in the 1980s, newly immigrated ethnic Lithuanians who arrived in North America included folk

13. Title page of 'Nebrauc tik dikti' and 'Kā gan tas var būt?', two folksongs for mixed choir by Jānis Norvilis, published in 1971 by the Latvian choir Dziesmu Vairogs in Kalamazoo, Michigan

musicians who found a sense of belonging by joining folk music groups.

The popular 'post-folklore' movement in the Baltic – an innovative fusion of 'new wave', jazz, minimalist, Celtic and other styles – has also influenced American groups both old and new. The founders of Kolibri, Martins Aldins and Peteris Aldins, apply expertise in early music to Latvian source materials and develop the content of folk music in 'high art' fashion. Jūrmalnieki, from Denver, formed by brothers who are half Amerindian, is a *lauku kapelle* (country band) consisting of violin, autoharp, accordion, drums and *trideksnis* (a sistrum). This group reacted against standardized Latvian dance music on recordings and drew instead on tunes from the eastern province of Latgale and on their experience in playing rock and Irish music. Begun in 1992 by Zinta Pone, formerly of Teiksma, the female group Lini ('flax', a symbol of womanhood) prefers a larger variety of instruments than the earlier *kokle* and voice ensembles – fiddle, recorder (*stabule*), clarinet, *kokle* and *g'iga* or bowed monochord – developing the Latvian material in non-traditional ways. Similar Estonian groups have also appeared: in Seattle a folk band accompanies the Murakaruo ('rowdy bears') folk-dance group on the *kannel*, violin, guitar, accordion, and bass. These recent offshoots of traditional Baltic folk-music performance, directly inspired by the cultural events of a newly independent homeland, signify the vital creative growth of this genre among second- and third-generation Baltic Americans.

(d) Bulgarian and Macedonian. The Macedonian and Bulgarian American population in the USA is small, probably at no time exceeding 70–80,000. Approximately 50,000 of these are Slavic-speaking Macedonians from the former Yugoslavia and northern Greece. Macedonian Slavs and Bulgarians are closely related in language, customs and music and dance traditions, and as a result have formed mixed communities in North America. A number of churches and cultural organizations in the USA, especially those formed before World War II, begin their names with 'Macedonian-Bulgarian' or 'Bulgarian-Macedonian'. The first significant waves of immigration occurred around 1907–13 and after World War I, with another wave after World War II. Communities were established during the 1920s in the industrial centres of the Midwest, especially in Ohio, Indiana and Michigan.

After the fall of the socialist state in 1989, a number of professional musicians from Bulgaria emigrated temporarily or permanently to the USA. Some were trained in the state-sponsored folk music schools established in Bulgaria during the postwar socialist period, where they learnt a state-sanctioned version of Bulgarian folk music, which they brought to the USA. Others were specialists in the contemporary 'wedding music' popularized by amplified bands in Bulgaria in the 1970s and 80s.

The musical repertory of Bulgarian Americans in North America is not as prominent in social contexts as that of other south-east European immigrants such as Greeks, Serbs or Macedonian Slavs. First, the small numbers of Bulgarian Americans, their internal political factionalism, wide geographical dispersion and frequent relocation in the USA have discouraged the establishment of concentrated communities. Second, because Bulgarian Americans come from many regions, they have very little shared vocal, instrumental or dance repertory. Third, when most Bulgarians emigrated during the early decades of the 20th century, there was no established tradition of Bulgarian instrumental or vocal ensemble music that could be adapted to communal music-making in the USA. Fourth, unlike the situation among Yugoslav and Greek immigrants, there has been relatively little contact with the homeland (until the 1990s), and little exchange of musicians or recordings.

Conditions among Macedonian Americans, however, have been more conducive to a prolific musical life. Their numbers are greater, and immigrants from particular regions have tended to settle together in communities. Most trace their background to a few regions along the former Yugoslav-Greek border ('Aegian Macedonia') that share a common music and dance style and repertory. There is considerable contact between the USA and Macedonia (after 1991, the Former Yugoslav Republic of Macedonia), and American musicians are constantly exposed to trends in popular urban folk music from their homeland. As a result, public music-making in Bulgarian and Macedonian American communities is largely dominated by Macedonians.

Contexts for music and dance in Macedonian-Bulgarian communities in the USA in the late 20th century include weddings, evening social gatherings (*vecherinki* or *igranki*), picnics, meetings of cultural and political organizations and holidays such as Christmas, New Year's Day, Valentine's Day and Easter. Events such as saints' days in the Eastern Orthodox liturgical calendar are observed, along with American holidays such as Thanksgiving and Independence Day. (Music and dance are not performed during Lent.) Formal concerts may be held with the participation of community music and dance groups. Costumed dance groups tend to perform choreographed versions of folkdances for a seated audience and are generally composed of elementary and high school children. Informal singing may occur in homes, especially on name days and during the period immediately before a wedding.

Macedonian and Bulgarian immigrants generally do not perform older ritual, calendrical or occupational songs, possibly because in North America this music has lost its original function and meaning. This repertory has been preserved as nostalgic reminders of the homeland by older first-generation immigrants with rural origins, who recall these songs at social gatherings such as christenings, engagement parties, weddings, picnics, name days and organized church-sponsored cultural gatherings, where they serve an entertainment function and reinforce group identity.

The only songs that are commonly shared by Bulgarian immigrants from diverse regional backgrounds are the *gradski pesni* (urban songs) that were popular in Bulgaria in the early 20th century. This genre binds and stabilizes an ethnic group that is socially and politically fragmented. Most are composed urban songs with texts by European-educated 19th-century Bulgarian or foreign poets, and melodies usually based on Western, Turkish or Greek models. Texts were published in small songbooks known as *pesnopoiki* and popularized through gramophone recordings during the early 20th century. These songs were enormously popular during the period when many Bulgarians emigrated to the USA. They are enjoyed in North America primarily for their patriotic and nationalistic significance rather than regional character. They are easily memorized and tend to be in central and western

European metric patterns and modes, with harmony in parallel 3rds; as opposed to the monophonic or drone-based texture, asymmetric additive metric patterns and melodic modes with augmented second and lowered seventh degrees prevalent in Macedonian and Bulgarian rural music.

Post-World War II urban songs from former Yugoslav Macedonia, such as *Liliana platno beleshe* and *Shto mi e milo*, are well known among Macedonians and Bulgarians in North America, including the younger generation. Because they are not highly ornamented and have a very straightforward tonic-dominant harmonic structure, such songs are conducive to communal singing. Polyphonic arrangements of folksongs are performed by church-affiliated choirs, which are usually directed by classically trained musicians.

The most common music-making context is the dance event at a church, community hall, picnic or wedding banquet. The American Canadian Macedonian Orthodox Diocese sponsors an annual music and dance festival attended by thousands of Macedonian Americans from the USA and Canada, held at various locations in Ontario and the north-eastern USA. Music at community events is generally provided by a four- or five-piece band of instruments such as clarinet, accordion, trumpet, trombone, saxophone, electric guitar, electric bass, electric keyboard and drum set – instruments that were also popular in the Balkans in the late 20th century. Indigenous Macedonian Bulgarian instruments such as the *gaida* (bagpipe), *kaval* (end-blown flute) and *gadulka* or *kemene* (vertically held fiddles) are rarely played, although the *tapan* (double-headed cylindrical drum) or *tarambuka* (goblet-shaped hand drum) may be used if a drum set is unavailable. Bands are almost always dominated by Macedonian musicians.

The style of music performed by musicians who settled in the USA before World War II is known in the community as the 'old style'. This repertory consists of traditional Macedonian, Bulgarian, Greek and Serbian dances, and includes little vocal music. Bands in this prewar style play Greek dances such as *kalamatianos* (3+2+2), *sirtos* (4+2+2 or 3+3+2) and *tsamikos* (3/4 or 6/4); Macedonian dances such as *kasapsko* (2/4), *shareni chorapi* or *nishka banya* (2+2+2+3), *gaida* (2/4) and *nesho* or *beranche* (3+2+2+3+2); Bulgarian-Macedonian dances such as *pravo* (2/4 or 3+3), *paydushko* (2+3), *daychovo* (2+2+2+3), *eleno mome* (2+2+1+2) and *rachenitsa* or *kichitsa* (2+2+3); and Serbian *kolos* such as *u šest* (*moravac*), *seljančica*, *žikino* and *kukunješ*. Bands performing in the post-World War II 'new style' focussed on the more urban pieces, often composing dance-songs for the Macedonian *lesno* (3+2+2), featuring an amplified solo singer. Bands composed of Canadian- or American-born younger musicians tend to have a pan-Balkan repertory, which is learnt from recordings and published collections.

In general, the style of a band is determined by the leader, often the clarinettist. Repertories are expanded through intermarriage and contacts with Greek, Albanian, Serbian, Croatian, Romanian, Ukrainian, Polish, Jewish and other Balkan and east European communities; some bands include musicans from these ethnic groups. Many musicians learn new tunes from recordings or notated sources. A few bands have made recordings in North America.

An interesting phenomenon at some Macedonian-Bulgarian community events of the 1970s, 80s and 90s was the active participation of American musicians who are not of South Slavic ancestry. These individuals generally became acquainted with South Slavic folk music through the international folkdance movement that was extremely active and widespread on American college campuses during the late 1960s and early 70s. They gained their musical expertise through extended stays in the Balkans, as well as studies with Balkan American musicians in North America. These musicians often focussed on pre-World War II rural instruments and genres that Macedonian and Bulgarian Americans in the late 20th century did not. While ethnic community members generally prefer more modern postwar styles, there has been some revived interest recently in these older genres as well. (See also §(k) below.)

(e) Czech and Slovak. The history of Czech American and Slovak American music is as diversified as the many ethnic groups that have occupied former Czechoslovakia. Inherent in the changing ethno-national identity was ethnic, religious and linguistic diversity, which renders the identification of a national 'Czechoslovak' music almost impossible. Moreover, the nation and sense of nationhood that emerged only in the 20th century was quite unknown to many immigrant Czechs and Slovaks, who left their homelands when they were under the political, and often cultural, domination of foreign powers. As the culture of Czechoslovakia underwent patterns of consolidation during the 20th century, so too did the musical traditions of Czech and Slovak Americans, but to a lesser degree. By the late 20th century, public performances of mixed 'Czechoslovak' traditional music were rarely encountered, whereas individual Slovak and, to a lesser degree, Czech traditional performing arts collectives are still active, particularly in urban areas.

Czech and Slovak immigration to the USA falls into four periods. During the colonial era small religiously motivated groups, largely from German-speaking areas, established settlements in Pennsylvania and the Carolinas. During the second period, from the late 19th century until World War I, the most significant numbers of Czechs and Slovaks came to the USA. Immigration for political reasons occurred during the mid-20th century, and following the Warsaw Pact invasion of Czechoslovakia during the 'Prague Spring' of 1968. Further immigration and travel outside the homeland has occurred since the so-called Velvet Revolution of November 1989 and the subsequent emergence of independent Czech and Slovak republics in January 1993.

During the 19th century both Czech and Slovak immigrants came primarily from agricultural backgrounds. The first Czech settlements were in the agricultural states of the Midwest and in Texas; urban Czech settlements also sprang up in Midwestern cities, although New York, the port of entry, retained many immigrants. The plentiful land of the Midwest offered both economic and linguistic advantages, for it allowed Czechs to settle near the dominant German groups, whose language most of them knew better than English. Slovak immigrants settled predominantly in Pennsylvania and Ohio in industrial cities and rural coal-mining areas. High concentrations of Slovak Americans are found in industrial centres such as Cleveland, Pittsburgh, Chicago and Detroit. Many Carpatho-Rusyns, or 'Rusnaks' from

eastern Slovakia and subcarpathian Rus, which was annexed from Czechoslovakia and incorporated into the former Soviet Union after World War II, immigrated to the USA, mixing with and frequently identifying themselves as Slovaks. Rusyn influence on Slovak culture, song and music in the USA is quite significant.

The community structures of both Czech and Slovak immigrants were extremely strong. Family and religion provided the foundations for this structure, and a variety of social organizations provided the superstructure, which further served to link communities to each other. The traditional music of Czech and Slovak communities reflects this tightly organized structure, for those musical genres that have been retained the longest are the ones deriving from family and community participation: music associated with specific holidays and festivals, songs celebrating life-cycle events, and music related to religious celebrations. Ethnic radio programming, a tradition still supported by Slovak Americans, has played a prominent role in preserving ethnic awareness and disseminating musical culture, particularly to the newer generations born in the USA.

The Moravians were the earliest immigrants from the Czech lands (Bohemia and Moravia). Settling in closely knit communities as early as 1741, the German-speaking Moravians brought a rich musical culture to colonial America. Not only did they maintain rich choral traditions, but they combined these with instrumental traditions, making theirs the first American concert music. The Moravians were also among the first instrument makers in the colonies. The importance of instrumental music to the Moravians is a distinguishing characteristic of Czech and Slovak immigrant musics as well (*See* MORAVIAN'S, MUSIC OF THE.)

Although Czech and Slovak folksongs form different repertories, they share certain characteristics that distinguish them from the songs of other eastern-central European cultures. Transposition (the repetition of an entire phrase or section at a higher or lower pitch) is used extensively in Czech and Slovak folk music. For Slovak songs the predominant interval of transposition is a 5th (the interval also common in Hungarian melodic transposition); Czech songs more frequently transpose by 2nds or 3rds, reflecting their more customary diatonic scales. Related to transposition is the frequent use of sequence, which is also shared by Czech and Slovak songs. Both Czech and Slovak folksong and instrumental genres depend heavily on prosody, another unifying characteristic in the two repertories. Czech and Slovak folksongs are heavily accented, and Slovac melodic phrases, as well as those Czech ones that predate Germanic influence, rarely begin on an anacrusis; most are lyrical.

Folksong texts make both regional and local references, and love songs, soldier and conscription songs, songs of social commentary, life cycle events and religious holiday songs, ballads, agricultural and shepherds' songs, children's songs and songs of immigration are included in the repertory. References to the homeland have in some cases been replaced by references to the USA, rendering the songs more pertinent to immigrants.

Czech and Slovak traditions of instrumental music are tenaciously maintained in the USA. Both rural and urban communities have supported folk ensembles that play favoured dances such as polkas, *čardašes*, *karičkas* and waltzes, and perform at weddings and traditional music festivals such as the Pittsburgh Folk Festival. These bands have become a part of social institutions such as ethnic clubs and churches. Eastern European instruments, such as the bagpipe, have largely been replaced by more common American instruments, but the interrelationship between folksong and instrumental music has caused the fairly conservative retention of traditional repertory. Instrumental ensembles serve as a symbol of Czech and Slovak community solidarity, and with song are a principal means of preserving and possibly reviving their musical culture.

(f) Greek. Before 1890 no more than 3000 Greeks had immigrated to the USA. These few Greek Americans were widely dispersed over the country, and the only Greek community was a small enclave in the area of New Smyrna and St Augustine in Florida. From 1891 to 1910 Greek immigration increased dramatically. In the first decade of the 20th century 167,519 Greeks were recorded as entering the USA. These people quickly formed communities throughout the country; in New England, New York, San Francisco and the urban areas of the upper Mississippi Valley, particularly Chicago. Although most American cities now have sizeable Greek communities, the largest are in Boston, New York, Detroit, Chicago, San Francisco and Los Angeles.

Most Greek American musicians are semi-professional or professional and are supported by several forms of patronage within the community. More than 95% of Greek Americans are raised in the Greek Orthodox faith, and the churches sponsor social functions of which music is an integral part. The most common are the *glendi* (party), the *paniyiri* (festival), dinner dances and picnics. Various Greek American social and political organizations, such as the Order of Ahepa, and regional fraternities, such as the Pan-Macedonian Society and Pontian Society, sponsor similar activities. Musicians are regularly engaged to perform in Greek supper clubs and for Greek nights in restaurants. In addition, family occasions in the Greek American communities (weddings, baptisms and reunions) usually include music by local performers.

Nearly all musical performances in Greek American communities (as in Greece itself) are by ensembles; solo presentations are rare. Some groups perform only the music of specific regions or provinces of Greece, using the instrumentation of those regions (the repertory and instrumentation varies greatly from region to region). The pan-Hellenic folk ensemble, or *kompania*, performs rural music from various regions of Greece and traditionally includes clarinet, violin, *santouri* (trapezoidal hammered dulcimer), and *laouto* (long-necked plucked lute). These may be supplemented or replaced by one or more vocalists, accordion, mandolin, guitar, percussion or any of a number of other instruments.

The *bouzouki* ensemble, which developed in urban Greece, performs both rural and urban Greek music. It has thrived in the USA and has become by far the most popular type of ensemble among Greek Americans. The main instrument is the BOUZOUKI, a long-necked plucked lute. The ensemble often includes the *baylamas* (small lute), guitar, bass guitar, drum set and accordion, organ or piano; in the USA a clarinet may be added. The repertory consists primarily of pan-Hellenic dance-songs, which may be purely instrumental but are usually instrumentally accompanied vocal pieces. These pieces include compositions by village musicians, which may

date from the 19th century or earlier, as well as contemporary pieces by urban composers. In general they are isometric and strophic. Most melodies are based on pentatonic and heptatonic modes (*see* GREECE, §IV). The more prominent heptatonic modes are often non-diatonic and commonly include an augmented 2nd. The older dance-songs were originally monophonic or heterophonic and were often accompanied by a drone; as performed by contemporary Greek American *bouzouki* ensembles, they are often set to Western harmonic progressions.

Dance-songs may be categorized by metric and rhythmic type according to the dances they accompany. The most popular types include the *kalamatianos*, in 7/8 (3 + 2 + 2 or 2 + 2 + 3); the *tsamikos*, in 3/4 or 6/4; the *hasapikos* or *sirtaki*, in 4/4; the *hasaposervikos*, in 2/4; the *sirtos*, in 8/8 (4 + 2 + 2 or 3 + 3 + 2); and the *haniotikos sirtos*, more commonly known in the USA as the 'Never on Sunday' or 'Misirlou' dance, in 4/4. Other important parts of the *bouzouki* repertory are *rebetika* (an urban genre) and popular pieces from Greek cities. These compositions are also classified according to the dances they accompany: the *zeimbekikos*, in 9/4; the *karsilamas*, in 9/8 (2 + 2 + 2 + 3); and the *tsifteteli*, in 2/4 or 4/4. Like their rural counterparts, these urban pieces are strophic and isometric and combine modal and tonal elements in their melodies and textures.

(g) Hungarian. The music of Hungarian Americans has been studied since the early 1960s, and some 1000 songs, choral works and instrumental pieces have been recorded among urban groups in Cleveland and northern Ohio, New Jersey, Indiana and various parts of Canada. Historical, sociological and ethnological studies of Hungarian immigrants living in the Calumet region (Lake County), Indiana and Springfield, Louisiana, offer additional information.

Two great tides of immigration from Europe, in 1890–1920 and 1946–57, brought Hungarian immigrants to the USA. Most people of the first wave were from rural backgrounds: landowners, shopkeepers, artisans, household workers and agricultural labourers. Their culture was formed by the values, customs and traditions of the village. The jobs they found in the USA were in the mines, mills, car and steel industries. The 'newcomers' after World War II were urban people with technical skills and professional training. Except for language and national history, the two groups differed in their culture, including their understanding of Hungarian music.

In the Cleveland and Passaic communities, Hungarian Americans of the World War I era built churches and formed cultural organizations. Singing societies, principally urban glee clubs, were centres of musical activity, some autonomous, others affiliated with dramatic groups, fraternal organizations or church. Hungarian choruses primarily performed adaptations of traditional and popular tunes. The Hungarian American Singing Society (established in Cleveland in 1908) staged an annual operetta, folk play or musical comedy and maintained a repertory of popular art and traditional songs. The aim of the society (as with other organizations of this kind) was to preserve the Hungarian native language, music and culture.

The programmes and practices of singing societies show the influence of the Liedertafel, a choral movement that originated in Germany and spread throughout Europe towards the end of the 19th century. In Hungary the movement took hold at a time when prevailing notions about traditional music were changing; its programmes

included a conglomeration of indigenous as well as foreign genres, such as popular art songs, patriotic songs and tunes of the urban and upper classes, reflecting the Biedermeier aesthetic. The Hungarian American Singing Society performed all these genres. The tunes grouped together in medleys were generally known from oral tradition and sung from memory, in unison and with piano accompaniment.

Individual singing reflected a more traditional layer of national heritage. Hungarian Americans came from

different areas of their homeland, and this regional and social diversity is manifest in their repertories. The three distinctive classes of songs are the 'old style', the 'new style' and a popular 19th-century art music style. Characteristic features of old-style songs are pentatonic melopoeia, descending melodies and the parlando tempo (ex.1). In the repertories of older Hungarians only a handful of tunes revealed such features. These characteristics can also be found in the repertories of the linguistically and ethnically related Finno-Ugric Cheremis and Turco-Bulgar Chuvash people. The lyrics of ex.1 can be translated as

> The wind of Mátra blows and howls
> My shirt and trousers are fluttering with it
> It got my hat also
> Thrown in to the river Tisza by the tartar.

New-style songs (which constitute about 35% of the Hungarian American material recorded in Cleveland) developed under the influence of Western musical trends from the 17th century onwards (ex.2). Their tonalities are heptatonic, with arched melodies and the most common forms being *AA5BA* (where *A5* is transposed a 5th higher), *ABBA* and *ABCA*. Old-style tunes are characterized by ornamentation and free narrative, whereas new-style songs lend themselves to group singing. The lyrics in ex.2 can be translated as

> It is evening, the clock has struck 8,
> Who is singing in the village so late?
> I am singing, for I cannot sleep,
> My heart is tormented by love.

Many 19th-century popular art songs were composed by dilettante musicians, who intended to imitate traditional songs and to create a repertory of tunes in 'Hungarian style' for a new urban population (ex.3). This corpus was popularized by Gypsy musicians and theatrical groups and was widely diffused by oral circulation. The popular art songs reflect an urban middle-class mentality: the lyrics are sentimental and at times gloomy. The lyrics in ex.3 read

> Forest, forest, deep forest, oh, how difficult it is to walk!
> How difficult to wait for the girl's love,
> Her love is hidden like the flower of the forest,
> Leaving the boy in love sighing after her.

Long stanzas with lines of up to 25 syllables are set to melodies in minor keys spiced with augmented 2nds; frequent chromatic notes and large leaps indicate their instrumental origin.

Older Hungarian Americans of the World War I era cultivated forms of music that dominated the Hungarian musical scene at the turn of the 19th century. Unlike the old immigrants in Cleveland, whose society was homogeneous, more recent immigrants in the Passaic and neighbouring communities included several social groups: the 'old timers', the first American-born generation, together with immigrants of the 1930s; 'displaced persons' who left Hungary after World War II and came to the USA after years of detention in Austrian and German camps; refugees after the 1956 uprising; children of displaced persons, raised in camps outside Hungary; and children of immigrants born in America. Members of these groups had different personal histories, experiences of immigration, education and exposure to Hungarian music.

Community musical activities include church and civic choirs; the latter, coached by professional musicians, sing traditional songs in arrangements by Ádám, Kodály, Bartók and others. Community events feature one or more singing groups. Picnics held on holidays such as Independence Day and St Stephen's Day (20 August), banquets honouring community leaders and church fairs provide opportunities for music. Choirs have exchange programmes with other choruses; they also appear at national traditional music festivals, state and county fairs, spring festivals and museum presentations.

The various Hungarian American social groups have different concepts of what constitutes Hungarian music. The oldest generation prefers to sing the so-called 'Magyar songs', a mixed category of pseudo-traditional song, popular art songs and Gypsy tunes; men sing mostly new-style traditional songs and soldiers' songs, and the women sing mostly songs learnt in choir practices. Although the descendants of immigrants have never heard the songs in their native setting, there is a wish to revive their heritage and learn the repertory of their forebears from recordings and published collections.

Children of Hungarian immigrants learn game songs, holiday songs, marching songs and other songs in Sunday school and Boy and Girl Scout groups. During the Christmas season they perform a nativity play that begins with magical incantations, the so-called *regös*-songs, which confer good luck on the house where they are sung.

(h) Polish. While there have been periodic small waves of political immigrants from Poland to the USA since the Revolutionary War, it was the economic conditions in Poland in the late 19th century and early 20th that brought most Poles to the USA. Immigrants came from all regions of Poland, which was at that time partitioned into areas of Prussian, Austro-Hungarian and Russian occupation. Poland gained independence in 1918, and until World War II, cultural exchange between Poland and Polish Americans flourished. After World War II, the communist party in Poland and restrictive USA immigration laws curtailed cultural exchange, but the situation improved in the 1960s, and especially since 1989 when the Solidarity party gained power in Poland.

The imported folksong tradition, which includes songs of love and courtship, rural life, war and military life, and some ballads of the pan-European tradition, survives in the memories of the bilingual first generation of Polish Americans but has not been passed on to the second, American-born generation. The exceptions are wedding songs, especially those connected with the bridal capping ceremony (*oczepiny*), the Christmas and Easter carols (*kolędy*; the texts of both types of song are provided with English translations to wedding guests or church-goers), and folksongs from the Podhale region.

The songs of immigrant folk composers are stylistically indistinguishable from the old-country songs and are firmly entrenched in the folksong repertory. These composed folksongs speak of the separation from loved ones in Poland and the difficult adjustment to urban factory life. The tradition of composing new songs in folksong style has been fostered from the 1920s by music publishers and promoters such as Alvin Sajewski, Louis Vitak, Joseph Elsnic and Walter Dana.

The persistence and development of instrumental folk music owes much to the American recording industry. Between 1915 and 1933 Victor and Columbia Records tapped the burgeoning market for Polish folk music. All the major folkdances of turn-of-the-century Poland are

represented in the catalogues and recordings of this era. From these recordings something of the process of change in the Polish American repertory can be learnt. Some dance genres disappeared as their musical characteristics blended with those of more popular dances; for example, the *kujawiak* and the mazurka eventually vanished as the *walc* (waltz) and the *oberek* gained precedence. The music of the *krakowiak* folkdance became indistinguishable from that of the Bohemian polka, another folkdance in 2/4.

The POLKA is a symbol of Polish American identity, especially among pre-World War II immigrants and their descendants. Originating in what is now the Czech Republic, the polka quickly became a popular ballroom and salon dance throughout Europe and the USA in the mid-19th century. Polish immigrants brought two styles of polka that were popular in Poland at the end of the 19th century: urban polka played by schooled musicians, and rural folk polka played by small string ensembles, often with a clarinet doubling the violin in unison or heterophony. The first urban polkas were recorded in New York in 1915; rural polka styles were recorded about ten years later. Between 1935 and 1965 the urban polka became an acculturated form, incorporating elements of jazz (1930s), American popular song (1940s) and Latin American music (1950s). Urban-style polka bands were often modelled after big bands. Popular in Chicago from the 1920s, the folk style was revitalized in the late 1940s by composer Walter 'Li'l Wally' Jagiello, who combined the asymmetrical phrasing and melodic characteristics of Polish folksong, *krakowiak* syncopation and an improvisational performing style. By the 1960s the 'Chicago style' usurped the popularity of the eastern urban style. In postwar Poland the polka lost much of its popularity, making polka increasingly a distinctive Polish American phenomenon. This development is reflected in the shift from predominantly Polish-language texts in the 1950s recordings to at least half English-language recordings by the 1980s.

The tradition of Polish choral groups was brought to the USA in the late 19th century by immigrants from the Prussian-governed area of western Poland known as Poznania, where choral groups were a response to Bismarck's political suppression of Polish culture. With the goals of preserving and promoting Polish culture, identity and patriotism in the USA, immigrants established the Polish Singers Alliance of America in 1888. A few choirs in the Alliance are associated with Polish American parishes, though most are independent; one, the Lira Singers of Chicago, has achieved professional status. The repertory, including Polish art music, patriotic songs, *kolędy*, sacred music and arrangements of Polish folksongs, is almost entirely from Polish sources and sung in Polish, with the exception of religious works in Latin. There is no large movement towards new Polish American compositions. In addition to choir conventions, the ensembles perform in churches and concert halls, at Polish community events, to commemorate significant dates in Polish history and to represent the Polish community at ethnic festivals.

Polish dance troupes in the USA also strive to promote Polish culture and patriotism, but they differ from Polish choirs in their focus on folk culture instead of classical and religious works. Like the choral groups, many dance troupes are sponsored by Polish American fraternal organizations, parishes and Saturday schools. Dance troupes emerged in cities with large Polish populations between the wars and increased in number after World War II. Most troupes are informal and serve the purpose of teaching Polish heritage and culture, but some imitate amateur and professional troupes promoted in Poland by the postwar communist government, when many original contexts for folkdance were being lost as the country became industrialized. Post-Stalinist reforms in Poland created greater opportunities for cultural exchange with the USA in the 1960s, including the possibility for dance troupes to travel to Poland for festivals. The Polish Folk Dancers Association of America was created in 1983. Most troupes use recorded music for rehearsals and performances, though some manage to maintain small instrumental ensembles.

Regional character is waning in most Polish American music, with the dramatic exception of *góralska* (mountain) music from the rugged Podhale (piedmont) region of the Tatra Mountains in southern Poland (*see also* POLAND, §I, 4). With the aid of a strong social and cultural organization called Związek Podhalan (Podhale Association), established in Poland in 1904 and with branches in the USA from 1929, immigrants from Podhale remain closely linked with their region of origin in Poland. The first commercial recordings of *góralska* music were made in 1927 in Chicago and featured the violin playing of Karol Stoch, a recent immigrant from Podhale and future leader in Związek Podhalan. Music from Podhale features unaccompanied polyphonic free-rhythm singing, and duple-metre singing and dancing accompanied by small ensembles of fiddles (fig.14). The repertory, characterized by predominantly descending melodic shapes frequently emphasizing the augmented fourth scale degree, is distinct from the rest of Poland and is linked melodically with music from south and east in what is now Slovakia, Ukraine and Romania. The dance includes two primary categories: *po góralsku* (in the mountaineer manner) danced by a single male/female couple, and *zbónicki* (robbers) danced in a circle by men. The largest concentration of immigrants from Podhale reside in and around Chicago, where numerous ensembles provide music for weddings, christenings, festivals and other events.

(i) Romanian. Romanians came to the USA in the late 19th century and early 20th, mainly from villages in the Romanian linguistic and cultural regions of the old Austro-Hungarian Empire: Banat, Bukovina and Transylvania (the provinces of present-day Romania north and west of the Carpathian Mountains). There was little immigration from the old Kingdom of Romania (the provinces of Moldavia and Wallachia), so there is limited influence on Romanian American music from these areas, except through Romani (Gypsy) sources. After World War I, immigration was more restricted and included more educated as well as urban Romanians.

Romanian American communities are based increasingly on formal religious and cultural organizations; the ethnic neighbourhood context of performance that preserved Old World regional styles and repertories in the early decades of the 20th century is rapidly vanishing. After 1930 and especially after World War II, the regional distinctions in Romanian American music declined in favour of tunes and styles shared by groups in various

14. Górale musicians serenading a wedding party at the bride's home, 1991, Chicago; photo by Timothy J. Cooley

American cities such as Chicago, Detroit, Cleveland, Gary and East Chicago (Indiana), New York and Philadelphia.

Songs about immigration to the USA were composed by the earliest immigrants (*c*1890–1910). These followed the formulaic traditions of the *doină*, a quintessentially Romanian lyric vocal genre that epitomizes profound feelings of longing and melancholy. Adapted to the experience of immigration, these songs were often bitter commentaries on the bleak and lonely conditions in the USA and the delusive promise of riches; a nostalgia for home was central. The best-known such song was *Doină din America* ('Lament from America'). Still found in folksong repertories in parts of Transylvania, they were not transmitted beyond the first immigrant generation.

A more enduring tradition is the singing of *colinde* (Christmas carols). Starting about six weeks before Christmas the congregations of Romanian Orthodox and Byzantine Rite Catholic churches sing *colinde* at the Sunday service. The churches have groups of *colindători* (carollers), who, from Christmas Eve, visit the houses of parishioners. In Romanian villages *colindători* are always young men and boys, but in the USA the groups are not limited by age or sex. The *colindători* are invited inside to sing and are offered refreshments. The host is expected to make a donation to the carollers, who in turn give the money to the parish; this custom is an American innovation. The songs most commonly sung are *colinde* that are not limited to local village distribution in Romania. *Trei pastori* ('Three Shepherds'), *O ce veste* ('Oh, What News'), and *Florile dalbe* ('White Flowers') are the three most popular songs learnt by the American-born. There are regional variations of these songs, but the carollers usually practise in advance to standardize the texts. Although third-generation Romanian Americans learn the words phonetically and often do not know their meaning, many are proud to carry on an ancient tradition that symbolizes their ethnicity. Increasingly song texts have become fixed through the use of song sheets or homemade song booklets.

The most persistent and characteristic traditional genre maintained by Romanian Americans is dance music. Romanian Americans as well as Serbians, Macedonians and other eastern and Balkan groups play Romanian dance music as part of their mixed repertory for weddings and other festive occasions. Romanian dance music has been adapted to the new environment, and manufactured brass and woodwind instruments (e.g. clarinet, *taragot*) have replaced traditional handmade folk instruments. Other popular instruments include violin, accordion and cimbalom (associated frequently with Romani musicians). Different regional dance styles predominate in different American cities: Romanian folkdancing in Cleveland is identified as Transylvanian; the Banat style is characteristic for Chicago, Detroit, Gary and East Chicago. In the 1920s Romanian and Gypsy orchestras recorded popular dance tunes on the Victor and Columbia labels with titles such as *Memorii din Banat* ('Memories from the Banat') and *Învârtita de la Chicago* ('Învârtita from Chicago') by Joan Hategan's Orchestra, reflecting ethnic sensitivity to Old World tunes. George Radu was one of the most popular Romanian musicians among Romanian Americans

before World War II, recording such favourites as *Doină din America* (with Nicu Hanzi's Orchestra) and *Doină din Selişte* ('Lament from Selişte', with Alex Fodor's Orchestra). Also at this time a number of professional musicians from Romania visited the USA and stayed, carving out significant careers as promoters of Romanian traditional dance and music (e.g. the Ionescu-Ardeal couple) and instrumentalists (e.g. Iancu Cârlig, a cimbalom player who performed at the New York World's Fair in 1939). In the 1950s and 60s, Larisa Lucaci (from Cleveland) also publicized Romanian folkdance and music widely. Some of the current musicians are more recent émigrés, including a number of professional Romani musicians (e.g. in Chicago and New York).

Although some folkdance groups, such as the Şezătoare group (founded in Cleveland in 1959 by Nicolae Smărăndescu to foster and preserve Romanian folksong and dance), try to maintain an authentic Old World style, most Romanian American dances are acculturated. The accommodation of dance styles originally resulted from the efforts of immigrants from different parts of Romania to adapt to each other. Now most original steps have been forgotten and the dances have been greatly simplified. The dances most frequently performed are the simplest ones, such as the *horă* (the basic circle dance of Romania and other parts of eastern Europe) and the *sîrbă*, or snake dance, performed in a long winding line with the arms of each dancer placed on the shoulders of those on either side; both are staples at weddings. The *sirbă* is sometimes still accompanied by *strigături* or traditional shouts. The *învârtită* and *haţegană*, originally from Transylvania, are more complex couple dances; an American variant of the *învârtită* – danced in a circle – is common at weddings. Originally a ritual dance of fertility and healing performed exclusively by men, the *căluş* or *căluşer* (leaping horse) became, among early 20th-century Romanian Americans, a virtuoso dance of performance, often in competitions. In modern times, it is performed by both men and women.

(j) Russian. The first Russian explorers landed in north-western Alaska in 1741. In 1794 Orthodox missionaries began work among the native peoples, and by 1861 about 12,000 Aleuts, Tlingits and Eskimos had converted to Russian Orthodoxy. The church music of these early Russian immigrants was a blend of medieval *znamennïy* chants and 18th-century Western European musical styles. Although the connections between Russian and Amerindian musics have not been studied in depth, some scholars believe that multi-voice religious chants still sung among the Tlingits are the remnants of Russian Orthodox *a cappella* choral singing.

Since the 1880s, when mass immigration began, more than 750,000 people of Russian ancestry have settled in the USA. Each of the many ideological, social, religious, linguistic and ethnic Russian subgroups has contributed to the colourful mosaic of Russian American music. The Russian Orthodox Church of America has been a powerful influence for the expression of a unified Russian ethnicity; it has also provided advanced training for church musicians. The entire liturgy is still sung *a cappella* (no spoken words are allowed), in intricate polyphonic texture and with characteristic parts for low basses. The use of musical instruments, as objects of human artifice, is still forbidden in the Russian American church. The repertory includes multi-part arrangements of chants, old and new, and liturgical compositions by Russian composers of the 19th and 20th centuries.

Members of several religious minorities, most notably Old Believers and Molokans, immigrated to the USA as a result of persecution in Russia. Accustomed to living in opposition to main-stream society in closed small communities in Russia, many of them persistently maintain their religious, ethnic and cultural identities; they have learned to live in two worlds, the old and the new simultaneously, but without allowing their complete merging. The Old Believers, who split from mainstream Russian Orthodoxy in the 1650s, preserved the repertory of monophonic *znamennïy* chants (*see* RUSSIAN AND SLAVONIC CHURCH MUSIC, §2) sung *a cappella*, as well as knowledge of musical notation by Russian neumes called *kryuki*. First arriving in the USA in the 1880s, Old Believers scattered throughout New York, New Jersey, south-western Pennsylvania and Michigan, eventually forming a closely knit community in Erie; they spoke Russian at home and maintained traditional dietary customs. Their secular singing included village wedding songs, laments, lullabies, ballads and urban romances, all sung *a cappella*; only dance-songs and *chastushki* (see below) could be accompanied by instruments. The cultural separateness of these communities began to break down in the 1950s, and in 1978 one group of Old Believers in Erie, Pennsylvania, integrated English into church services by trnaslating texts of prayers and chants; *znamennïy* melodies and *kryuki* notation were preserved intact. Another group of Old Believers who arrived in Oregon in the 1960s also preserved the entire *znamennïy* repertory. Although it is taught by means of *kryuki* notation, the performance tradition is largely transmitted orally. Oregon Old Believers continue to perform lullabies, game- and dance-songs, ballads and other genres of Russian rural folksong. Traditional wedding songs and laments are still part of the wedding ceremony.

Unlike the Old Believers, the Molokans broke completely with the Russian Orthodox Church. Molokanism rejected all visual attributes of Orthodox liturgy; consequently, verbal and non-verbal forms of sound assumed some of the functions and energy that flowed through other channels of the Orthodox service. A prominent feature of Molokan *sobraniye* (communal worship) is psalms and songs sung *a cappella* by the entire congregation and led by specially trained singers. Psalms and songs are also sung at home on social occasions and during ritual celebrations associated with the benediction of children, weddings, funerals, memorials, house-warmings and religious holidays. The repertory of the Molokans in the USA consists of several hundred psalms and spiritual songs. Adult Molokans are not supposed to sing anything else. Before marriage, they can take part in secular singing and dancing together with non-Molokan youth, but they are expected to refrain from these activities after marriage. In reality, however, the secular repertory of adult Molokans ranges from Russian folksong to operatic arias and American popular music.

Religious singing is an essential factor of Molokan self-identification. The names of the creators of songs and psalms are never printed in Molokan songbooks: being both a manifestation and the source of the communal spiritual power, each composition belongs to the entire community. The repertory is maintained by individual training and *spevki* ('singing classes' led by experienced

singers), participation in which is expected from young members of the church. Molokan singing employs a combination of oral and written forms. The melodies are transmitted orally from generation to generation; they are either 'worked out' (composed) by an individual singer, usually male for psalms, or 'given' by the Spirit. Depending on the local school, psalms are sung in unison (in two, three or sometimes four octaves) or in parts; the melody is often in the middle, surrounded by melodic counterpoints in the lower and upper registers or by heterophonic versions of the same melody. Any passage from the Bible can be used in psalms. A short segment is first read aloud and then lined out (*see* LINING OUT) to a melody. Psalm melodies are highly melismatic, use assymetrical phrases and, in general, are similar to *protyazhnaya* songs (*see* RUSSIAN FEDERATION, §I, 1(v)).

Although traditional psalm melodies are constantly undergoing changes, entirely new melodies are no longer composed. However, spiritual songs, set to rhymed poems, are still being created. Unlike psalms, song melodies are syllabic and usually symmetrical in structure. Connections with melodies of old Russian village ballads, dance, love and soldier songs, as well as songs of other sects, are easily traceable. Songs from Soviet films and American popular songs have also left their marks on Molokan music; some are used in their entirety with new texts (e.g. *Korobochka*, *Kogda b imel zlatiye gorï*, *Na zakate khodit paren'*, *Amazing grace*, *The Last Rose of Summer*, *Clementine* and *Red River Valley*). Emigré culture can often be characterized as operating between two poles: memory and adaptation. Among Molokans, traditional melodies of psalms and newly composed songs fill in the continuum. Although Molokan communities in the USA are quite different from those of Old Believers, they too have started to accept the use of English during *sobraniye*.

Outside of religious practices, popular repertories in many urban Russian American communities include late 19th-century romances and ballads, Ukranian, Gypsy and Jewish entertainment music, and poems composed as songs by favourite contemporary poets (Vladimir Vïsotsky, Bulat Okudzhava, Aleksander Galich). This music is commonly performed in Russian restaurants and clubs and has been extensively recorded. A genre of traditional folk music that survived in both urban and rural communities is *chastushka* (from the adjective *chastïy* 'quick'). These songs consist of short, single-stanza rhymed couplets and are usually sung to dance. *Chastushka* texts are often extemporized and reflect current local events and concerns. One of the few genres of Russian folksong that can be performed with instrumental accompaniment, they are sung with balalaika or, when available, *garmoshka* (a type of button accordion), and are easily adaptable to any other instrument at hand. Other genres of traditional village folksong have been preserved only in isolated Russian American communities. In the late 20th century, however, there was a revival of Russian folk music in new forms. Instrumental ensembles and orchestras (comprising different sizes and combinations of balalaika, *domra*, mandolin, accordion and string instruments) have attracted performers from Russian American and other multi-ethnic communities. Arrangements of folksongs also became popular among pop and rock ensembles of younger Russian Americans. After the collapse of the Soviet Union, Russian American communities in larger metropolitan areas such as New York, Chicago, Philadelphia and Los Angeles sponsored tours of popular Russian singers. Village performers from Russia have performed in the USA under the auspices of American government agencies, private companies and educational institutions.

(k) South Slavic.

Introduction. Although South Slavic immigration may have begun as early as the 17th century and continues to the present day, most immigrants from the lands of the former Yugoslavia left to escape economic hardship during the mass migration of 1880–1910. Most were peasants from the Austro-Hungarian territories of Slovenia, Croatia, Bosnia and Hercegovina, and to a lesser extent from Serbia, Montenegro and Macedonia (which were under the control of the Ottoman Empire). By the turn of the 20th century, the principal communities had been formed (mostly in mining and manufacturing areas), and religious and social institutions – churches, fraternal organizations, newspapers and cultural organizations – had been established. It is estimated that between 1·5 and 2 million people of South Slavic descent live in North America.

A number of traditional contexts for music were transplanted to North America, including weddings, dances, informal home gatherings and the *slava* (family religious observance). New contexts include amateur singing societies, certain church services, *bećar* gatherings (see below), commercial recordings and public performances. The last is a particularly conspicuous part of Slavic American culture, as hundreds of groups dressed in traditional costumes perform regional songs and dances to the accompaniment of native instruments. Excellent relations between these groups and the government-sponsored *matice iseljenike* (immigrant societies) of the several former Yugoslav republics ensure continuing contact with the native cultures. In presenting traditional culture, transformed for the concert stage, Slavic American performing groups re-create and identify with an ethnic milieu in which they no longer live; contemporary Slavic American immigrant folklore, however, is generally not represented on stage.

Despite the enormous diversity of regional styles in South Slavic traditional music, the Slavic American immigrant repertories comprise somewhat homogenized musical styles. Vocal music, the largest part of the repertory, generally has rounded strophic forms, diatonic intervals and a manner of performance based to a large extent on evolving popular music styles in the home areas. This style was doubtless influenced by the presence of foreign élites (Austrian, Italian and Hungarian) in southern Slav cities at the time of the mass migration. Instrumental music, principally for dancing, also reflects these influences; the most common dance forms are waltzes and polkas, and Western instruments such as accordion, violin, guitar and wind instruments are more frequently played than traditional instruments. Nonetheless, distinctive regional hybrid styles may be found in Slavic American communities.

Slovenian. Americans of Slovene descent number some 350,000 individuals. As Slovenia is bordered by Austria and Alpine Italy, Slovenian folk music has an Alpine flavour that has been retained in the USA. Strophic forms, triadic harmonies and partsinging characterize the vocal music, whereas instrumental music follows the models of Alpine polkas and waltzes. Slovenian Americans such as

Frank Yankovich have been in the forefront of the pan-ethnic polka movement in the Midwest, which created a hybrid American-style polka and waltz repertory. This style has been adapted to liturgical use in the so-called 'polka mass' shared by Slovenes, Croats, Poles and other eastern European Catholics. Yankovich's ensemble includes accordion, banjo, double bass, drums and voices, with woodwind and brass instruments sometimes added. While the conventional chromatic accordion continues to be the most popular Slovenian instrument, there has been a revival in recent years of 'button-box' orchestras, ensembles of diatonic button accordions.

Macedonian. Americans of Macedonian origin are thought to number some 60,000 individuals; many identify themselves as Bulgarians, and their culture has much in common with that of Bulgaria. They arrived later and in smaller numbers than other South Slavs and have not established cultural institutions to the same extent. Their music is taken largely from commercial sources in the Former Yugoslav Republic of Macedonia, and at Macedonian American gatherings traditional and modern songs, as well as a few Macedonian and Serbian dances, may be heard. Because of additive rhythms and scales with augmented intervals (the latter a legacy of Turkish occupation), Macedonian songs are considered somewhat exotic and oriental by other Slavic Americans and are very popular at their gatherings. As in other Slavic American groups, accordion and clarinet are prominent in dance and vocal accompaniment, and are sometimes augmented by guitar, double bass, *tarabuka* goblet drum or *tapan* double-headed bass drum (see also §(d) above).

Bosnians, Croatians, Serbians. Serbo-Croatian-speaking Americans and their descendants number some 600,000–1,000,000 Croats and 250,000–400,000 Serbs (including Montenegrins). The Bosnian Muslim population has swollen to an estimated 100,000 following the Yugoslav wars of the 1990s, and Bosnians (including Bosnian Croats and Serbs) who might formerly have associated with other South Slavic groups are now forming their own communities. Four distinct musical style areas are included in the Croatian and Serbian regions of the former Yugoslavia, and isolated examples from some of these styles may be found in a few American communities: *ojkanje* (non-tempered diaphonic song form) among highland Croats and Bosnians, *sevdalinke* (Turkish-influenced love songs) among Bosnian Muslims, the playing of chromatic polyphony on *sopila* (oboes) among northern Adriatic Croats, *linđo* dancing to rhymed calls and *lijerica* (three-string fiddle) accompaniment among Dalmatians, and the performance of epic songs accompanied by the *gusle* (one-string fiddle) mostly among Serbs. However, these styles have generally not been transmitted to the second and subsequent generations and hence have not contributed to a Slavic American style. Rather, a hybrid song repertory is shared by many Croats and Serbs and has been passed to second, third and in some cases fourth generations. It consists of rural songs of a more recent style, urban songs composed on rural models and foreign song styles (mostly Austrian, Italian, Hungarian and to some degree Turkish) adapted to Serbo-Croatian texts. Such a homogenization of styles is probably due to several factors: the long association and common experiences of different Serbo-Croatian-speaking nationalities in North America, a pan-Slavic trend already current in the South Slavic region in the late 19th century, and (despite the frequent use of accordions and other instruments) the general preference of American Croats and Serbs for the *tambura* instrumental medium.

Tambura refers to a family of long-necked plucked lutes, of Turkish origin, found throughout the Balkans. By the time of the mass migration, the simple, hand-hewn instruments had been pressed into the service of southern Slav nationalists as a symbol of cultural unity and had been modified to serve in a European-influenced string ensemble. By the 1890s *tambura* instruments had arrived and were being manufactured in North America; this industry continues to flourish. *Tambura* instruments and ensembles rapidly spread throughout the USA and Canada, a movement aided by appearances in vaudeville of *tambura* musicians, recordings in Serbo-Croatian, and teachers and arrangers such as Paul Perman, John Rozgaj, Rudolph Crnkovic and the Crlenica Brothers.

Three trends in American *tambura* music may be discerned, parallel to those in the former Yugoslavia. The first is a cultivated tradition whose adherents seek to legitimize *tambura* as a progressive cultural activity through an emphasis on musical literacy, trained musicianship, concert performances and a semi-classical repertory. Its most prominent representative is Walter Kolar, who as director of the Duquesne University Tamburitzans and Junior Tamburitzans, has established the model for Slavic American folklore groups and *tambura* music education. The second, often known as *bećar* ('young rake') music, derives from rural traditions emphasizing orally acquired repertory and technique, small ensembles and an informal celebratory atmosphere. Dave Zupkovich and Marty Kapugi are important *bećar* figures; some groups, such as the respected Popovich Brothers Orchestra, are equally comfortable in concert and *bećar* environments. *Bećar* ensembles also play for dances, which in addition to waltzes and polkas include many *kolo* (circle) and other southern Slav dances.

The third trend is the result of recent political developments. Since World War II, and particularly since the Yugoslav wars, the hybrid nature of the Croatian-Serbian musical culture has been weakened by political and religious disputes and by the increasing preference of all Slavic Americans for artists and recordings of their own ethnicity. This has led to a keen awareness in both Croatian and Serbian communities of the distinction between American and European Slavic traditions. Although each tradition has its partisans, the American hybrids are increasingly the province of the older generations, while younger generations espouse ethnic musical monocultures. As *tambura* is coming to be accepted in the former Yugoslav republics as an expressly Croatian musical form, and American *tambura* music is dominated by younger Croatian *tambura* musicians such as Jerry Grcevich and the Slanina ('bacon') Orchestra, who are actively engaged with contemporary Croatian *tambura* music and its incorporation of international popular styles. Younger Serbian and other Slavic Americans, to the extent that they honour a musical-cultural heritage, do so within their own ethnic groups and in general eschew *tambura* music. At the end of the 20th century the established Slavic American cultural institutions and expressive forms were undergoing a fundamental transition.

(l) Ukrainian. The large numbers of immigrants from the Ukraine who settled in the industrial northeastern USA during the 19th century brought with them a rich

heritage of village music-making, which was eventually changed and adapted to the New World setting. Much of the traditional folksong corpus subsequently died out, but some songs and instrumental music associated with weddings have lingered on, providing support for the communities' growing sense of ethnic identity. The introduction of sound recordings and ethnic radio programmes in the early decades of the 20th century helped to maintain the group's folk-music legacy, albeit in a greatly reduced form.

Choral singing, secular and religious, has become the most characteristic medium for Ukrainian music in the USA. Church cantors were at first especially important; later, choral masters such as Alexander Antonovych Koshyts (1875–1944) helped to develop the art among Ukrainian American communities from the 1920s onwards. After World War II a new wave of Ukrainian immigrants, including many professional musicians trained in the Ukraine, arrived in the USA as political refugees, and their presence helped to reinforce this trend and enrich Ukrainian American music. Soon after the war the Bandurist Male Choir of Detroit was formed under the direction of Volodymyr Bozhyk and Hryhory Kytasty. By 1959 the Association of Ukrainian Choirs of America was formed in New York.

Ukrainian musical plays and operettas, since the first production in New York in 1907, have been revived from time to time for both stage and screen; these include such popular pieces from the traditional repertory as *Natalka Poltavka*, *Cossack Beyond the Danube* and *Marusia*. Workshops stressing instrumental performance have been held to teach the rudiments of making and playing the *bandura* (psaltery), the national folk instrument of the Ukraine.

Efforts to provide a base for the Ukrainian community's musical activities in the USA include the founding of a short-lived Ukrainian Conservatory of Music in New York in 1924 by one of the pioneer figures of Ukrainian American music, Mykhailo Hayvoronsky (1892–1949). In 1952 the Ukrainian Music Institute was established in New York; founded by Roman Sawycky (1907–60), it soon grew into a network of 14 branches, with 50 teachers and 400 students, from Buffalo, in New York state, to Washington, DC.

2. African American. African American musics consist of individual and group, and oral and written forms of expression. The various genres that comprise this tradition are associated with specific historical periods, social contexts and functions. They also share a common core of aesthetic qualities of African origin that positions black American music within an African cultural continuum. Black Americans resisted cultural imperialism of the larger society by maintaining fundamental ideals from the past. During the era of slavery, they adapted to and survived their oppressive existence by preserving existing and creating new musical forms from African traditions, and they brought relevance to European musical traditions by reshaping them to conform to African aesthetic ideals. After emancipation, they transformed oral forms into written traditions, folk idioms into concert and urban styles, and secular and sacred traditions into hybrid forms of expression.

(i) African cultural traditions and musical aesthetics. When Africans were transplanted to the New World as slaves, they continued to engage in cultural traditions of African origin. Missionaries, slaveholders and other observers from the 17th–19th centuries noted that music was central to these traditions and that instrumental music, song, and dance or some form of bodily movement accompanied a range of ritualized events such as religious ceremonies, festivals and holiday celebrations, as well as work, recreational and social activities.

Descriptions of these African and American activities reveal that shared approaches to music-making and common aesthetic features link black musical events on to the two continents. Even though music is performed by individuals, musical events are generally organized as communal, celebratory and social occasions in which everyone participates freely without distinctions made between performer and audience. The musical event itself and the spontaneous and interactive involvement of the entire community dictate musical content, aesthetic priorities and structural components as evidenced in the text, vocal style and the prominence of repetitive chorus and call-and-response structures. In the case of the latter, the leader improvises the text and melody to which the chorus responds with a short repetitive phrase. Within the chorus section, individuals may make slight changes in the pitch and rhythm. Singers also employ vocal qualities ranging from raspy, guttural, strained and nasal to percussive, and their vocal interpretations weave groans, screams, grunts, cries, moans, whines and other interjections into melodies.

European observers responded negatively to the spontaneous quality and other features of musical performances by slaves. They described the singing as wild, crude, artless, barbaric and a mixture of 'yells and screeches', 'boisterous outbursts' and 'nonsensical chants and catches'. According to Francis Bebey (1975, p.145), 'the objective of African music is not necessarily to produce sounds agreeable to the ear but to translate everyday experiences into living sound. The musician wisely avoids using beauty as his criterion because no criterion could be more arbitrary'. Instead, musicians use a criterion based on the function of music to accompany dance and a variety of activities such as work, religious, ceremonial, social and recreational events.

Dance and movement are intrinsic to African and African-derived musical expressions. European clergy were critical of this practice among slaves, interpreting it as pagan and contrary to European cultural and Christian traditions. The clergy simply were unable to relate to the dance aesthetic, the percussive sound qualities and polyrhythmic structures produced by the instruments that accompany dancing. African-derived dance styles emphasize exaggerated arm, shoulder, hip and leg movement, in contrast to the more sedate nature of European dance styles that centre around a straight and stiff posture. These aesthetic differences led to African dance styles being labelled by the clergy and other European observers as primitive, wild and vulgar.

To discourage and replace these 'sinful' dances and 'secular' musical events in America with sanctioned European activities, missionaries began to organize proselytizing campaigns in the 18th century in northern colonies. Despite the conversion of some slaves and free blacks, the clergy's initial effort was largely unsuccessful. However, the Great Revival Movement mounted a century later in the South resulted in the conversion of large groups of slaves, who were attracted to the emotional

aspect of the camp meetings associated with this movement. As Christians, the majority of slaves and free blacks relinquished neither their African religious beliefs nor cultural traditions. They resisted European cultural conformity by transforming Christian worship services into an African-styled ritual, developing the Protestant repertory into an African American tradition and reinterpreting biblical teaching through both an African world-view and their experiences as slaves.

When slaves and free blacks attended camp meetings and later conducted their own religious services, they changed the character of the ritual by freely interjecting verbal ('Yes, Glory', 'Lord! sweet Lord', 'Hallelujah', 'Oh, Lord' and 'Ha! ha!') and physical responses such as tossing heads, waving and clapping hands and stomping feet throughout the sermon. They also created improvised songs accompanied by bodily movement and a religious dance known as the 'shout'. The white clergy disapproved of these unorthodox practices and expressed concern about the slaves' practice of transforming psalms and hymns into African-styled songs. Henry Russell, a British musician who visited a black church in Vicksburg, MS, in the 1830s observed that

> When the minister gave out his own version of the Psalm, the choir commenced singing so rapidly that the original tune absolutely ceased to exist – in fact, the fine old psalm tune became thoroughly transformed into a kind of negro melody; and so sudden was the transformation, by accelerating the time, for a moment, I fancied that not only the choir but the little congregation intended to get up a dance as part of the service (Russell, 1895, p.85).

Paul Svinin, a Russian visitor to a black church in Philadelphia in 1811 described the tranformation process:

> At the end of every psalm, the entire congregation, men and women alike, sang verses in a loud, shrill monotone. This lasted about an hour. [They later] began chanting psalms in chorus, the men and women alternating, a procedure which lasted some twenty minutes (Svinin, 1930, p.20).

Elizabeth Kilham, a white school teacher in the South after the Civil War, witnessed this process applied to a hymn and concluded that 'Watts and Newton would never recognize their productions through the transformations they have undergone at the hands of their colored admirers' (Kilham, 1870, p.129). The slaves' reinterpreted versions of psalms and hymns resembled their communal compositions. Both are characterized by call-and-response structures, repetitive choruses, repetitive melodic phrases, melodic ornamentation (i.e. slides, slurs, bends, grunts and moans), rhythmic complexity and heterophonic singing. The distinctive body of music later became known as Negro folk spirituals.

When missionaries converted slaves into Christianity they anticipated the end of 'pagan' activities and assumed that psalm and hymn singing would replace the improvised songs associated with both religious and secular events. To this end, several whites reported that 'whenever the negroes become Christian, they give up dancing ... and employ their musical talents merely on psalms and hymns' (Epstein, 1977, p.211). The limited number of secular songs described in contemporary writings and included in collections of slave songs suggests that most slaves did not sing secular songs after becoming Christians. But slaves and free blacks often did not sing secular songs in the presence of whites, since they were expected to sing only religious songs. In other instances, the overseer and masters requested slaves to sing their favourite songs, which often were from the slaves' sacred tradition. Despite the pressure to relinquish an African world-view and 'pagan' way of life, most Christian slaves continued to define their cultural traditions from an African frame of reference. As such, they viewed their sacred and secular worlds as interconnected.

(ii) Secular and sacred textual themes. Churches became central to the lives of slaves as institutions with multiple functions. In addition to religious functions, they became temporary refuges from a cruel world and centres for unrestricted cultural and personal expression. Through song, slaves expressed religious beliefs, vented frustrations and responded to daily experiences. The slaves' secular and sacred worlds became intertwined, as reported by the minister-abolitionist James McKim from Philadelphia, who noticed while travelling by boat to the Sea Islands of South Carolina in 1862 that the slave rowers sang only religious songs. When he asked about the origins of these songs, a rower responded: 'Dey make 'em, sah'. Further inquiry about how they were made led to the following explanation:

> My master call me up and order me a short peck of corn and a hundred lash. My friends see it and is sorry for me. When dey come to de praise meeting dat night dey sing about it. Some's very good singers and know how; and dey work it in, work it in, you know; till dey git it right; and dat's de way.

He then sang the song created from the incident:

> No more driver call for me (3x)
> Many a thousand die!
> No more peck of corn for me (3x)
> Many a thousand die!
> No more hundred lash for me (3x)
> Many a thousand die!
> (McKim, pp.58–9)

Descriptions of slave singing in other secular contexts, including field, industrial and transportation-related labour, domestic chores and leisure activities, reveal that some songs consist exclusively of either secular or religious texts, whereas others interweave the two, as the following example demonstrates:

> It's a long John, it's a long John,
> He's a long gone, he's a long gone,
> Like a turkey through the corn, through the long corn,
> Well, my John said, in the ten chap ten,
> If a man die, he will live again,
> Well, they crucified Jesus and they nailed him to the cross,
> Sister Mary cried, my child is lost. ...
> (Lomax, liner notes)

Secular songs not only facilitated work and the passing of time but also provided a forum for social commentary and criticism, as shown in the lyrics of the following song:

> We raise the wheat, Dey gib us de corn;
> We bake the bread, Dey gib us de crust;
> We sif de meal, Dey gib us de huss;
> We peel de meat, Dey gib us de skin;
> And dat's de way, Dey take us in;
> We skin de pot, Dey gib us de liquor,
> And say dat's good enough for nigger.
> (Levine, 1977, pp.12–13)

Slaves psychologically survived their inhumane treatment by relating their plight to that of Jesus and other scriptural figures who endured hardships and unwarranted situations. Biblical stories from the Old Testament and the Book of Revelations from the New Testament provided thematic material for some secular songs and the majority of folk spirituals. Slave songs recreated

stories about the oppressed Hebrew people, the cruel Egyptians, the Red Sea and the land of Canaan to reflect their oppression, their treatment by whites and their desire for freedom. The stories about Daniel, Jacob, Moses, Gabriel, Jesus, Jonah, Paul, Silas, Mary and Martha provided them with the courage, strength and determination to endure worldly hardship with the promise of a better life in Heaven.

> When Israel was in Egypt's land, let my people go.
> Oppressed so hard they could not stand, let my people go.
> Go down Moses, 'way down in Egypt land,
> Tell ole Pharaoh, let my people go.
> (*Songs of Zion*, 1981, p.112)

Folk spirituals also provided a forum for slaves to protest their bondage and criticize their masters: 'Befo' I'd be a slave, I'll be buried in my grave, An' go home to my Lord an' be free' (Southern, 1997, p.157).

A number of Negro spirituals include language coded with *double entendre*, whose meaning can only be understood if analyzed in the appropriate performance context. Slaves sang these songs to organize clandestine meetings and plan escapes for the thousands of slaves who found freedom in the North and in Canada:

> Steal away, steal away, steal away to Jesus! Steal away, steal away home, I ain't got long to stay here!
> My Lord calls me, He calls me by the thunder;
> The trumpet sounds within a my soul, I ain't got long to stay here.
> (*Songs of Zion*, 1981, p.134)

The first line of the song text given above alerted slaves to the presence of the person who would lead them to freedom. The remaining text warned that the journey would begin immediately upon receiving a signal that the path was clear. These and other texts were incomprehensible to whites who interpreted them as unintelligible and meaningless.

After slavery ended, *double entendre* remained a part of African American musical expression, providing options for black Americans to express their private thoughts freely in public space. During this time, the secular world became increasingly important in the lives of black Americans as, did the need for individual expression. Freedom presented new challenges for blacks, who struggled to establish new lives and cope with limited opportunities for economic independence and social advancement. In response, they created a new musical form called the BLUES, through which they spoke frankly about the realities of everyday life. In blues songs emotional and sexual references were masked through the use of coded and/or metaphorical language. However, when protesting their treatment as workers and commenting on social inequalities, they did so in direct and overt ways. Even though the blues are associated with individual singers, their messages express the feelings and experiences shared by African Americans as a community.

(iii) The fusion of oral and written traditions. Emancipation provided blacks with a degree of freedom and mobility, yet they were expected to conform to the worldview and cultural standards of society at large. As a free people, according to W.E.B. DuBois (1989, p.3), African Americans were faced with the conflicts of their double identity, both American and African, with 'two souls, two thoughts, two unreconciled strivings; two warring ideals in one dark body'. The diverse ways in which African Americans sought to reconcile this dual cultural identity are manifested in the transformation of folk forms for the concert stage in the late 19th century and urban forms in the 20th century.

Following the Civil War, southern whites resisted all attempts to equip black Americans with the tools necessary for economic stability and social advancement. Conversely, northern abolitionists and religious organizations such as the American Missionary Association promoted education as the only viable solution for achieving social and racial equality in society. Committed to this mission, they established schools throughout the South and recruited teachers from the North, and in these schools, the teachers expected African-Americans to conform to Euro-American cultural models and ideals.

The teachers and administrators who established and taught in schools located in the Sea Islands off the coast of South Carolina reported that the children showed progress in learning the basic subjects and that they performed new songs with enthusiasm. However, their views differed about the ways in which these new songs and the general curriculum would affect indigenous cultural expressions. Some teachers expressed disappointment that the children continued to engage in past religious rituals and musical activities. Others predicted that the distinctive features and cultural forms of African American music would gradually disappear with the continued education of the current and subsequent generations. Still others were ambivalent about promoting cultural superiority at the risk of destroying the richness of African American culture.

Education did not destroy black American culture, but it became one of the many factors that would reshape and diversify it as the musical transformations and innovations that occurred on black American college campuses demonstrates. These schools exposed students to Euro-American cultural models and ideals, and many ultimately distanced themselves from folk spirituals, referring to them as undignified and primitive and opposing their inclusion in arranged forms in the repertory of African American college choirs. Nevertheless, through the initial efforts of the white choral instructors at Fisk University, Hampton Institute and other African American colleges, the Negro folk spiritual quickly became known and admired throughout the world as a concert form of black American artistic expression.

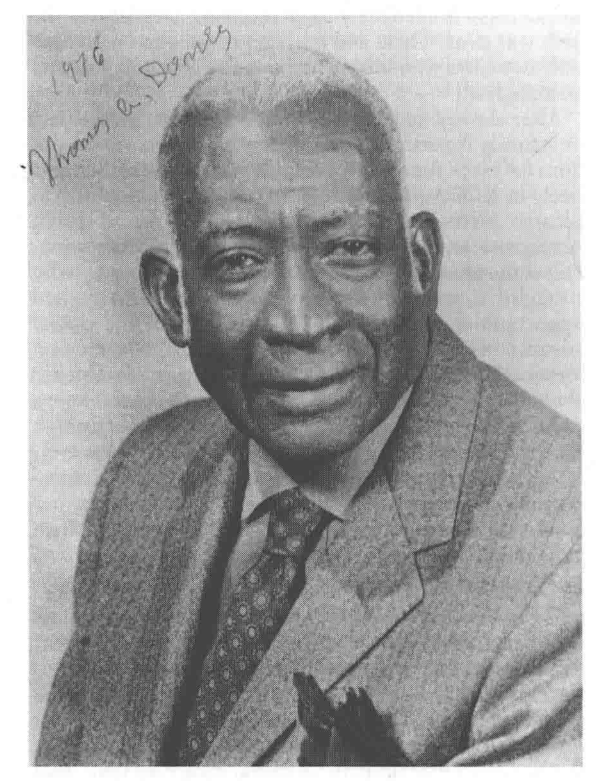
The concert versions of spirituals differed from folk styles in their development, function and performance aesthetic. Folk spirituals developed as a form of communal religious expression, and their performance was governed by the aesthetics of the African American oral tradition. Arranged versions, created by musicians trained in the European concert stage tradition, established African American music as a written tradition. As such, performers executed and interpreted written scores according to European aesthetic principles. Nevertheless, the arrangements preserved aspects of the original form through the use of call-and-response structures, syncopation, polyrhythms, melodic and textual repetition and linguistic dialect.

The transformation of folk spirituals into arranged versions mirrors cultural changes that took place in African American communities during the decades following the Civil War. Arranged versions embody the new

experiences and imperatives of African Americans as well as their adoption of new attitudes, values and world-view. Despite the popularity of arranged spirituals, the core black American folk community did not relate to them, stating that the songs didn't sound 'right', that they were too 'pretty' and that choirs confused them with classical music. Differences in aesthetic ideals and musical expectations shaped this assessment. The emerging African American middle-class began to reshape aspects of and bring diversity to African American musical traditions, yet folk and new forms of cultural expression coexisted amid the two social classes.

The transformation of folk expressions into new written forms continued throughout the 20th century. The arranged spiritual developed when existing versions no longer operated effectively within a given context or when new values changed the significance of old traditions. When the original expressions no longer served their designated functions they became part of the historical legacy and were performed as such.

During the first four decades of the 20th century, millions of black Americans moved from rural to urban areas, where they faced unexpected discriminatory practices and a host of new problems. Many adapted to and endured life in the city by turning to African American churches for support, strength and guidance. Many urban dwellers were attracted to the Holiness Pentecostal church, whose doctrine emphasized sanctification on earth for believers. Its ritual resembled that of slaves and centred around the congregation; the musical repertory consisted of folk spirituals, spontaneously created songs in the style of folk spirituals and a new body of religious music written by an emerging group of Methodist and Baptist songwriters. The singing style preserved all of the aesthetic features associated with the folk spiritual: improvised melodies, call-and-response structures, multi-layered rhythms, hand-clapping and foot-stamping.



Holiness Pentecostal congregations introduced two major innovations to the folk spiritual tradition: new textual themes and instrumental accompaniment. The new texts centred on the difficulties of living a Christian life and Christian-inspired solutions to worldly burdens. The new themes replaced the 'dying and going to Heaven' theme found in spirituals, thus capturing the urban experiences, new values, attitudes and world views of the city dwellers.

Holiness Pentecostal churches also brought an urban spirit and sound to the ritual by incorporating instruments from the secular world into the service. The various scriptures that instructed congregations to praise the Lord with instruments inspired this development. The musicians responded by bringing to church their guitars, drums, trombones, trumpets and saxophones among other secular instruments, which they played in improvised ragtime, jazz and blues styles. The addition of these instruments to accompany the singing and the introduction of new song texts transformed the folk spiritual into a new body of religious music known as folk gospel.

The development of gospel music as a written tradition paralleled the emergence of the folk gospel style (*see* GOSPEL MUSIC, §II). The Methodist minister CHARLES ALBERT TINDLEY, created the prototype for this music during the first decade of the 20th century. Tindley's compositions, known as gospel-hymns, related scriptural themes to daily life experiences, combined the verse-structure from hymns with the verse-refrain structure of folk spirituals and retained the melodic and rhythmic features of the African American folk tradition. Tindley originally wrote these hymns in conjunction with his sermons, and they were performed within this context by him, his congregation and the seven-member all-male Tindley Gospel Singers. Tindley, as well as many gospel music composers that followed, did not read or write music; they used transcribers to translate their songs into a form of notation that performers interpreted by employing the conventions of oral tradition.

Tindley's compositions provided the foundation for an original form of gospel music created in the 1920s by THOMAS A. DORSEY, a trained musician and ragtime, blues and jazz performer. While Dorsey preserved in his songs the textual themes and African American vernacular features found in Tindley's model, he replaced many of the melodic, rhythmic, harmonic and structural features common to hymns with those from ragtime, blues and jazz. Adhering to the process of musical transmission in the African American tradition, Dorsey's scores provide only a skeletal outline of the basic melody, harmony and rhythm. Performers interpreted Dorsey's compositions using the oral method and performance aesthetic associated with black American vernacular traditions. In the process, they freely changed keys, substituted metres and improvised on the notated melody, harmony, rhythm and text. Gospel music is a fluid and changing tradition defined by a body of original compositions and a distinctive performance style.

The transformation of the folk blues into a written tradition followed a similar pattern of development, as did the Negro spiritual. Initially middle-class black

16. *W.C. Handy*

American musicians with formal training distanced themselves from the blues, which they viewed as 'primitive'. This perception began to change with the success of W.C. HANDY, an African American professional musician and bandleader, who was the first person to publish original blues compositions. Handy realized the commercial potential of the blues during a performance of his dance orchestra in a rural black Mississippi community in 1903, when his orchestra's repertory of arranged marches, light classics, polkas, schottisches, waltzes and other American popular forms failed to meet the expectations of the audience. At the request of the audience, a local three-member blues band substituted for Handy's orchestra. According to Handy, this group played songs on a battered guitar, mandolin and worn-out bass that were repetitive, monotonous and with no clear beginning or ending. Yet this blues band made more money in tips than his band made on contract. He concluded that an audience existed for this 'weird' music despite its need for 'polishing' (Handy, 1970, pp.80–81).

Inspired by this experience, Handy began a formal study of folk blues and wrote arrangements of this music and original compositions that employed the form, vocabulary, rhythms and text of the blues idiom. He claimed originality, emphasizing that his compositions were built upon, rather than constructed of the snatches, phrases and cries of specific folk blues songs. Handy's first composition, *Mister Crump* (1909), later published as *The Memphis Blues* (1912; fig.17), followed by *The St. Louis Blues* (1914) and *The Beale Street Blues* (1917), popularized the blues as a formal musical genre that crossed racial and class boundaries. These works quickly entered the repertory of brass, society dance and jazz bands, radio and symphony orchestras, vaudeville, Broadway, concert singers and professional choirs. Through such performances the blues acquired new forms, performance styles, and meanings.

After Handy introduced the blues to mainstream society, professional musicians of all races began writing, publishing and recording in the new blues style. In 1920, African American songwriter Perry Bradford convinced a record executive from Okeh Records to record one of his blues compositions, *That Thing Called Love* sung by Mamie Smith, a black American woman. Smith's vaudeville-influenced vocal style was diluted by the stilted instrumental accompaniment of white session musicians. However, Smith's subsequent recording of Bradford's *Crazy Blues* contained aesthetic qualities of the oral tradition. The accompanying African American jazz ensemble played from a head arrangement, bringing an element of spontaneity to the performance. *Crazy Blues* and subsequent vocal recordings of original blues compositions quickly established this new blues style as a viable commercial commodity. Even though its performance aesthetic differed from that associated with folk blues, it retained elements such as form, melodic and harmonic structures; rhythm from the blues idiom known as vaudeville blues binds this blues style to the larger African American musical tradition.

Black American instrumental forms followed developmental patterns similar to the vocal traditions. They were created as oral forms of expression, often within communal contexts. Later, they were transformed into a written tradition in which the performance aesthetic preserved many conventions of the oral tradition, as illustrated in the development of ragtime and jazz. RAGTIME, characterized by a syncopated melody played over a quarter (crotchet)- or eighth (quaver)-note bass

17. *'Memphis Blues', title-page, 1912*

pattern, evolved from instrumental dance music of slaves. After the Civil War, it was first popularized in black communities as a style performed by African American brass bands and by itinerant pianists who improvised on folk and popular tunes in a highly rhythmic and syncopated manner. By the 1890s, ragtime referred to an original body of notated music written and arranged in this style. Performances of this music by black American composers and amateur musicians often differed from their Euro-American counterparts. The ragtime compositions of Scott Joplin, Jelly Roll Morton, Eubie Blake and Artie Matthews often employed the improvisatory style of the oral tradition, producing great melodic and rhythmic complexity. Conversely, Euro-American musicians played these compositions exactly as notated on the printed score. Thus interpretation of the written score is guided by sets of culturally determined aesthetic principles and musical ideals.

There are also differences in the construction, use and interpretation of the printed score in JAZZ, a tradition that also developed as a form of collective improvisation. Similar to the transformation of gospel and ragtime into written composition, some jazz styles became the music of composers and arrangers. As notated music, jazz arrangements became increasingly intricate and complex. Despite the availability of fully notated and arranged compositions, many African American jazz bands played primarily from head arrangements, skeletal notations of the melody, rhythm and harmonic changes. Even though oral forms of African American musics have been transformed into written traditions, performances of the music transcend the printed page and represent a continuation of aesthetic principles and musical conventions associated with oral tradition.

(iv) Secular-scared musical interactions in the 20th century. The artificial boundaries that historically separated secular and sacred traditions in black American communities became virtually non-existent in the 20th century. The hybrid musical styles that developed from cross-fertilization of the sacred and secular traditions in the Holiness Pentecostal church invaded the secular realm through recordings and radio broadcasts beginning in the 1920s. The ragtime, jazz and blues influences on the gospel compositions of Thomas Dorsey eventually found a home in African American demoninational churches after an initial rejection because of their 'secular' sound. In the 1940s and the decades that followed, the unique rhythms, melodies, harmonies, form and styles intermingled and were recycled. This process, which continues to the present, brought life to new black American popular forms beginning in the 1940s and gospel beginning in the late 1960s.

In the 1940s and 50s, gospel music influenced the popular styles created by youths who patterned their styles after those of gospel performers rather than the blues and jazz musicians who influenced earlier generations. In 1954, the rhythm and blues performer Ray Charles defied the secular-sacred boundaries when he repackaged the well-known gospel version of the spiritual *This Little Light of Mine* as *This Little Girl of Mine.* Ten years later, rhythm and blues singer Mitty Collier recorded a secular version of the gospel song *I had a Talk with God* as *I had a Talk with my Man.* In the 1960s, Ray Charles, James Brown, Curtis Mayfield, Gene Chandler and Aretha Franklin successfully transformed gospel music into a new popular style, 'SOUL', by employing elements of gospel in their vocal and instrumental stylings.

Paralleling this development was the use of gospel music to revitalize and reshape folk spirituals, hymns, gospel-hymns, folk ballads and earlier popular styles such as rhythm and blues into freedom or civil rights songs. The melodies, harmonies, rhythms and sensibilities of gospel combined with the message of equal rights and black pride captured the ethos and philosophy of the 1950s Civil Rights and 1960s Black Power movements.

In the 1970s, the message of gospel music became more universal. While retaining the established theme of salvation, some performers began omitting direct references to God or Jesus. They introduced themes of peace, compassion and universal love inspired by the Civil Rights movement and the teachings of Martin Luther King, Jr. Gospel performers also began recording popular songs in the gospel tradition, substituting 'Jesus' for 'me', 'baby', and 'my man'. Popular songs inspired by religious beliefs, such as *People Get Ready* by Curtis Mayfield, were recorded by gospel singer Shirley Caesar and the Thompson Community Singers without changes to the text.

Since the 1970s, gospel music has been a part of popular music radio programming. Popular music artists freely move between both traditions on a single album, and gospel artists include songs on their albums with popular music arrangements. Both groups use songwriters, producers and artists from 'opposite' traditions on their albums. Such trends further illustrate the fluidity of black American musical traditions and suggest a common core of features, approaches to music making and shared life experiences that bind all African American musical genres into a conceptual whole.

3. HISPANIC AMERICAN. The official classification of social groups in the USA considers Hispanics to be individuals originating or descending from Latin American and Spanish-speaking Caribbean countries, regardless of their ethnic heritage or social classes. Thus conceived, Hispanics represent the second largest minority in the country, with the prediction that they will soon be the most numerically important non-Anglo-Saxon group in the USA. Despite this reductionist classification, Hispanics are as diversified as the cultures from which they originate. Hispanic or Iberian Americans include not only Spanish Americans, Mexican Americans, Cuban Americans, Puerto Rican Americans, Dominican Americans, Portuguese and Brazilian Americans, but also other citizens from Central and South America. Their musical expressions and traditions are therefore as diverse as their various parent cultures. In some specific cases, such as those of Afro-Cuban or certain Mexican or Andean indigenous groups, one confronts a musical tradition that, as a whole, is anything but Hispanic; thus a wide range of different traditions are subsumed under the term Hispanic American music.

(i) Mission and colonial contributions. The vast territory of what is now the American Southwest and California was first explored and claimed by Spain in the 16th century, but the mission life introduced by the Spaniards was not fully organized until the 17th and 18th centuries. Spanish missionaries, particularly Franciscans in the Southwest, gave a prominent place to music in their conversion work among the Amerindians. Religious education included vocal and instrumental training. Following models established in Mexico (New Spain),

Amerindian choirs sang at daily services in the mission churches. Training in making instruments for church use also received special attention, particularly organ building and the production of brass, percussion and, in the 18th century, string instruments.

The earliest well-organized Spanish missions were in what is now New Mexico. Among the Franciscan friars who accompanied the Conquistador Juan de Oñate into the area (1598) was Cristóbal de Quiñones, considered 'the first music teacher who worked within the confines of the present United States' (Spell, 1927). Before 1669 one of these friars had installed an organ in the church of the San Felipe mission. By the time of the Amerindian rebellion of 1680, which drove the Spaniards out of the New Mexico territory for the next 12 years, some 25 missions had been established in the area. Those of San Francisco at Sandia and of San Antonio at Isleta had 'schools for reading and writing, singing and playing of all instruments', as Alonso de Benavides reported in 1630 in his *Memorial*, the chief source of information for New Mexican church music in the first half of the 17th century.

Music teaching revolved around Gregorian chant, polyphonic music (*canto de órgano*) and traditional Spanish religious music. The last included *villancicos* and *aguinaldos* (Christmas songs), and *alabados* and *alabanzas* (songs of praise), all in Spanish. In addition, the monks introduced into the area the music and songs of the traditional Iberian catechetical folk theatre. Particularly important in the New Mexico and Texas areas were the *autos sacramentales*, dramatic religious representations with appropriate songs. The folk play *Los pastores*, still occasionally performed in New Mexico and Texas, is believed to be a retention of the old *auto sacramental*. The performance of *Los pastores* is preceded by the singing of *posadas* recounting the search of Joseph and Mary for shelter in Bethlehem. One of the three recognized genres of *alabado* was introduced into the Texas area by Antonio Margil de Jesús, a Franciscan missionary who worked there from 1716 and founded several missions, including the San José mission in San Antonio.

The discovery of *Once misas mexicanas* from the village of Tomé (founded in 1739) and other villages of northern New Mexico points to the existence of a Latin folk mass tradition, as these masses incorporate secular dance music and folksongs. Although these works were notated between 1875 and 1904 they probably dated from the 1840s or even earlier. Likewise documentary evidence on the secular musical life in Hispanic New Mexico in the 19th century, as reported by Koegel (1997), indicates folk-dance music performed in fandango festivities.

The Franciscans established their missions in the California territory only after 1769, with a total of 21 missions extending from San Diego to Sonoma by 1823. The most notable music teacher and composer in California was Narciso Durán (1776–1846), head of the San José mission. He compiled a very substantial choirbook of Gregorian chant and polyphonic music (1813), and a mass, *La misa de Cataluña*, discovered at the San Juan Capistrano mission, has been attributed to him. As a good pedagogue, Durán developed a simplified method of music teaching to respond to the needs of the Amerindian population of the missions. For example, he used only the F clef for all voices, wrote the melodies in the most suitable range and included all four voice parts on a single staff, the bass in solid black notes, the baritone in red, the tenor in black with white centres and the alto in red with white centres (such coloured notes were used in the California missions and in the Texas missions; see fig.18). The number of tones or melodic formulae used in the service for introits, alleluias and communions was reduced in Durán's method. Another notable musician and dramatist was Florencio Ibáñez, who served at the missions of San Antonio de Padua and Nuestra Señora de Soledad. A *pastorela* (nativity play) of his apparently won great popularity throughout the California missions.

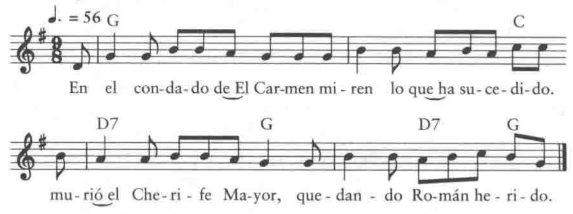
Little is known of the actual development of traditional music in that same area during the colonial period. It stands to reason, however, that traditional music activities, similar to those developed in Mexico during the 17th and 18th centuries, were present (to a certain degree) in the Southwest and California. In addition, Hispanic traditions must have been introduced gradually by the colonizers, though documentary evidence is scant.

(ii) Contemporary traditional music.

(a) Mexican American and Southwest. Hispanic traditional music in the southwestern USA clearly derives from Mexican sources, although northern New Mexico and southern Colorado retain more archaic elements of Renaissance Spain, and numerous New Mexicans claim a direct Spanish rather than Mexican ancestry. Mexican Americans (or Chicanos) are present from Texas to California and Colorado, and as a result of migratory movements, Chicano music has spread to areas of the Midwest and the northern plains. The music stems primarily from the Mexican *norteño* style but also includes several genres of the greater Mexican area. Regional *norteño* styles developed during the latter part of the 19th century in northern Mexico. Central to that music was the regional ensemble (*conjunto*) with the diatonic button accordion as the chief melodic instrument and the *bajo sexto* (12-string bass guitar) and the double bass as harmonic and rhythmic instruments. Out of this ensemble developed, from the mid-1930s, the Texan Mexican *conjunto* tradition that came to be known generically as *musica norteña* by Mexican Americans. This tradition has remained associated with the poor, while the *orquesta* or *orquesta texana* tradition, developed after World War II, has been more closely associated with the urban, middle-class, more Americanized minority of Texan Mexicans.

Conjunto music took over the polka as its main song-and-dance genre, not so much under the direct influence of German and Czech settlers in Texas, as has been too readily assumed, but as part of the general assimilation of European 19th-century salon dances and the creolization process common to the whole Latin American continent since the late 19th century. The same applies to the growing popularity of the button accordion from the 1890s. At first the two-row button accordion was used, with an emphasis on the bass, especially in polkas, as is evident from the recordings of Narciso Martínez and Santiago Jiménez, the first popular *conjunto* musicians in the 1930s and 40s. In the 50s the three-row button accordion, tuned in various keys, became the main instrument of the ensemble; from this time little or no attention was paid to the bass and harmonic possibilities of the accordion, since this function was fulfilled by the *bajo sexto* and the electric bass guitar. The rhythmic accompaniment had also been reinforced with the addition of a drum kit. By 1960 this instrumentation had

become standard for the *conjunto*. The *polca* became predominantly a vocal genre, performed in a typically Hispanic type of folk polyphony – two voices in parallel 3rds and 6ths, in a fast tempo and with a strongly tonal harmonic support. Quite frequently the accordion and *bajo sexto* players are also the singers. Polka tempos tended to slow down from the 1930s to the 50s, perhaps as a result of the addition of drums and the changing styles of dancing. Concurrently a more staccato, choppy style of accordion performance developed, which became the trademark of numerous virtuoso players, such as Tony de la Rosa and Flaco Jiménez.



Another aspect of Hispanic traditional music of the Southwest is associated with social dances, found especially in New Mexico. Dances such as the polka (*polca*), schottische (*chotis*), waltz (*valse*), mazurka (*mazurca*), *redowa* and cotillion (*cutilio*) have been retained in the tradition. Since the beginning of the 20th century dance tunes have been performed traditionally by fiddle and guitar. The fiddle-tune tradition remained vigorous until the end of the 1900s. Ex.4 illustrates a *polca* tune as

Ex.4 *La polca*, transcr. A. Paredes, from a performance by M. Roybal

performed by Melitón Roybal (1898–1971), one of the most accomplished New Mexican folk fiddlers; such a tune very frequently accompanied the performance of the *cuadrilla*, a dance much like the Anglo-American quadrille.

Among the various folksong types not primarily associated with dance are the *décima* (which has a ten-line verse), referred to as *décima cantada* (an older genre) on the Texas-Mexico border, and the *corrido*, the archetypal ballad genre. In its most generalized form, the *corrido* follows the literary structure of the *copla* (octosyllabic quatrains, generally with the rhyme scheme *ABCB*). *Corridos* are sung to simple, symmetrical tunes in 3/4 or 6/8, accompanied by a guitar, *bajo sexto* and often accordion. The melodies frequently have a range of less than an octave: 'The short range allows the *corrido* to be sung at the top of the singer's voice, an essential part of the *corrido* style' (Paredes, 1958). Although the essential narrative character of the *corrido* prevails, there are also non-narrative examples, such as simple love songs or political commentaries. Numerous episodes in the long conflict along the Texas-Mexico border (lasting from *c*1848 to 1930) are recounted in Chicano *corridos*, the epic character of which reflects the long struggle of the Mexican American population for social justice. One of the best examples of the border *corrido* is *Gregorio Cortez*, narrating the killing by Cortez of Sheriff Morris on 12 June 1901 in reprisal for the death of his brother at the sheriff's hand; the *corrido* recounts Cortez's heroic escape and final capture and became an important element in the emerging group consciousness of Mexican Americans (see Paredes, 1958). The melody of the Cortez *corrido* is typical in its anacrusis, isometric and symmetrical structure, and in its simple harmonic implications (I–IV–V–I) (ex.5). This type of border-conflict *corrido* appeared up to about 1930, but the tradition of celebrating

Ex.5 *Gregorio Cortez*, Chicano *corrido*

heroes continued in new *corridos*, for example, those of the 1960s about John F. Kennedy or those of the 70s about César Chávez and the Chicano movement.

In Hispanic New Mexico and southern Colorado, narrative folksongs of the Spanish *romance* tradition are quite common and include not only the *corrido* but the *indita* (with some influence from southwestern Amerindian music) and the *relación* (a type of humorous *romance*). In addition, *alabados* are the main hymns of the religious brotherhood of the Penitentes or Los Hermanos, sung in a free metre and somewhat reminiscent of plainsong. The New Mexico *matachines* dance, a pantomime ritual dance-drama of Spanish and Moorish origin, is generally performed on the most important Catholic feasts, in a so-called 'Spanish' version, with violin, guitar and rattle accompaniment. There is also a 'drum' version performed by Pueblo Indians and a male chorus accompanied by drums and rattles (Romero, 1993). Most significantly, there are also versions with Amerindian dancers accompanied by Hispanic musicians.

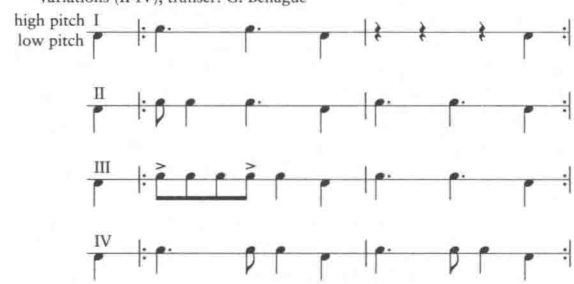
Throughout the Southwest from Austin, TX, to San Diego, CA, the tradition of the Mexican *danza azteca* performed by the famous *concheros* has taken root as an expression of Mexican American identity. This tradition combines re-created elements of supposedly pre-Columbian Mexican Indian ritual dance with strongly mestizo, Spanish-related, popular religious songs, accompanied by *conchas* (guitar-like instruments with armadillo shells and usually five courses of double strings). The dance itself is frequently accompanied by drums of the *teponaztli* and *huehuetl* Aztec types and by rattles, and the dancers wear reconstructed and reinvented Aztec costumes as well as jingles on their ankles. The *conchero* groups (also known as *corporaciones de danza azteca* or *danza de la conquista*) are syncretic religious groups, combining Christian and Amerindian beliefs and practices. They form a sort of religious army whose weapons are their musical instruments and songs. The fact that they carry an essentially Christian-Catholic message does not contradict the mystic search for and identity with their Amerindian ancestry. Therefore, aside from annual pilgrimages of *conchero* groups to such Mexican shrines as Chalma and Los Remedios, the *danza* is frequently performed on 12 October, which for most Hispanic Americans is the 'día de la raza' (feast day of the 'race', or the new mestizo culture), symbolized by the so-called discovery of the New World by Columbus.

(b) Caribbean American. In contrast with the Mexican Americans, who have a long history in the Southwest and California, the various groups of Caribbean Hispanics have immigrated to the USA relatively recently, and the great majority have settled in the urban centres of the East Coast, Chicago and Los Angeles. The largest Puerto Rican

18. Puerto Rican bomba dancers accompanied by conga drums and maracas

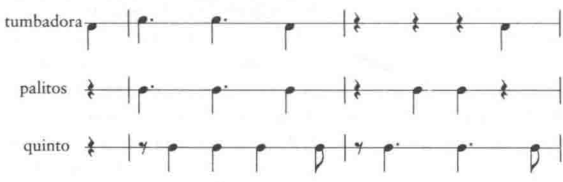
communities are in New York (especially in East Harlem). Their music involves several genres, some inherited from Puerto Rico, others developed locally out of contact with other Latin and black American groups. African-related folkdance music of Puerto Rico's coastal areas, such as the *bomba*, has been retained with a few changes. Typical of the *bomba* is its accompaniment by drums in sets of three, consisting of the *conga*, *tumbadora* and *quinto* (all types of *conga* drum), reinforced by idiophones such as cowbells and claves (fig.18). Responsorial singing prevails. It may involve song texts improvised by the soloist, who is answered by the chorus, or four-line stanzas sung alternately by soloist and chorus. The performance of such music by '*conga* groups' (so called in New York) takes place in informal settings in Puerto Rican neighbourhoods. The interaction of Puerto Ricans with American blacks in New York is reflected in the ritual behaviour and musical practices of Latin Pentecostal churches. Religious music is provided by an instrumental ensemble consisting of drums, maracas, electric guitars and a melodic instrument such as a trumpet or clarinet, and includes the singing of *coritos*, songs of praise in strophic forms. Ritual dancing and spirit possession closely relate to Pentecostal religious practices.

Cubans in the New York area and in southern Florida especially have established Afro-Cuban religious groups known as *santería*. Whether of Yoruba (Lucumí) or Congo (Mayombé) derivation, these groups retain belief systems and practices closely related to West African cultures. Music functions as an essential and necessary element of worship and consists of extensive and complex song repertories and drum (especially *batá*) rhythmic patterns associated with the various deities or *orishá*. Each ritual gesture (sacrifice, offering, purification and initiation) is made meaningful by the performance of appropriate songs. Dances associated with particular *orishá* are an integral part of ritual performances. The majority of religious songs are monophonic and are performed in responsorial fashion, with much overlapping of call and response. The open, relaxed vocal style retains a strongly African character.



The rumba continues to be the principal secular dance and musical genre among Cuban Americans. Although better known in its urbanized, highly sophisticated version, as performed by Celia Cruz and Tito Puente, the rumba also enjoys great popularity as a folkdance, particularly in the form of the *guaguancó* and *columbia*. The *guaguancó* stresses improvised patterns on the *quinto* drum in contrast to the patterns of the *tumbadora* (larger *conga* drum) and the *palitos* (sticks); as revealed in the

Ex.6



(a) Basic rhythmic pattern of the *guaguancó* melodies

(b) *Tumbadora* accompaniment to the *guaguancó*: basic ostinato (I) and variations (II-IV), transcr. G. Béhague

(c) Typical multilayered rhythmic activity

performances of such virtuosos as Mongo Santamaria, this creates the typical multilayered rhythmic activity of Afro-Cuban music (ex.6). The vocal parts of the *guaguancó* consist of a largely improvised solo part, answered by a set, harmonized choral part. This call-and-response practice is built on four- or eight-bar patterns equally divided between the soloist and the chorus. Both vocal and percussion soloists fluctuate in their improvisatory freedom. The other performers' parts provide referential bases for the tension and release of the soloists' improvisations. This effective contrast is one of the most distinctive qualities of the folk rumba.

The other major Caribbean presence in the north-eastern main urban centres is the Haitians, who, beginning in 1905, have brought to the area the black traditions of *vodoun* and *Congo-Guinée* religious music and dance, to name only the prevailing cult groups.

(c) Portuguese American. Portuguese settlers are concentrated in Massachusetts and Rhode Island, on the New England seaboard and in northern California. Since the mid-19th century immigrants have come not only from Portugal itself but also from the Cape Verde Islands and the Azores. Their descendants retain folksongs and dances associated with *bailados* (social gatherings), and dramatic dances, such as the *reisados* and *marujadas*, narrating in popular theatrical forms Portuguese maritime exploits and the festivities of the Christmas cycle. Sea life is also the major topic of several folksong genres, such as the *fade marítimo* from the Azores, still performed in New England. As the main genre of urban vocal music in Portugal, the *fado* has been extended to the Portuguese American communities in New England with the arrival of new immigrants since the 1960s.

Among the various folkdances preserved by Portuguese Americans are the *corridinho*, a polka-like dance from southern Portugal, and the *chamarrita*, a square dance from the Azores, variously accompanied by string ensembles (including the *viola*, a Portuguese folk guitar) and by bands consisting of amplified strings, brass and percussion.

Beginning in the 1980s, Brazilians have settled in fairly large numbers in southern Florida and cities such as Los Angeles and Boston. They have gradually established Brazilian popular music celebrations, such as carnival samba parties, and have sponsored the more frequent appearance of Brazilian professional musicians in the USA.

(iii) Latin urban popular music. Since the beginning of the 20th century, American popular musical trends, including jazz, have assimilated a number of Latin American urban musical styles. Such influences came primarily from Cuba, Mexico, Argentina and Brazil. Starting with the tango, introduced to the USA by Broadway in 1913, a series of Latin American styles, some related to dances, swept American cities: the rumba in the 1930s, the samba in the 40s, the mambo and cha cha cha in the 50s, bossa nova in the 60s and salsa in the 70s. Tin Pan Alley, the American popular song industry, has always kept abreast of these cycles of fashion and has assiduously marketed the Latin popular songs associated with them. Similarly, Hollywood and Broadway have frequently promoted Latin music, as with the Brazilian singer and dancer Carmen Miranda in the 1930s.

Beginning in the 1970s, *mariachi* ensembles and their music have taken on additional significance for Mexican American identity. With the recognition of multiculturalism in the 1980s, *mariachi* groups have been established in many high schools and universities as regular scholastic activities. Official festivals and conferences (e.g. the 'Mariachi Spectacular' in Albuquerque, New Mexico) have been sponsored more frequently by cities of the Southwest. *Mariachi* music functions in many different contexts, from the traditional restaurant setting to social events of all sorts and even in the Catholic church, where *mariachi* masses are celebrated.

SALSA music has become especially emblematic of 'Hispanidad' throughout the country because of its syncretic nature. Cuban musicians who flocked to Miami and New York City during and after the Revolution (1959) cultivated the Cuban *son*, *guaracha* and rumba, among others, but also salsa and other forms. Interacting with other Spanish Caribbeans and Central Americans, they contributed, with Puerto Rican musicians, to the salsa phenomenon in the 1970s and beyond. A 'mixture of mixtures, the results of a long process of syncretization' as Jorge Duany (1984) characterized salsa (literally 'sauce', i.e. with many different ingredients), the trend developed primarily in New York City, created by both Puerto Rican and Cuban musicians and reflecting the life, culture and socio-political aspirations of the 'barrio' or poor urban neighbourhoods of East Harlem, the Bronx and Brooklyn. The musical genre that served as the basic model for salsa (the barrio sound par excellence) was undoubtedly the *son cubano*, with its driving, multi-layered ostinato patterns, followed by the *guaracha* and the *guaguancó*, but it also incorporated aspects of Puerto Rican *plena* and *bomba*, Dominican *merengue*, and sometimes Colombian *cumbia* and *vallenato*.

Concurrently with these Latin influences in American popular music, specific Latin stylistic fusions such as LATIN JAZZ, Latin soul and Latin rock represent the genuine expressions of the bicultural world of Hispanic Americans in the USA and are an integral part of contemporary American popular music. In the 1990s the mixing of various Latin and Anglo American pop styles by some young Latin pop stars, such as Ricky Martin, Jennifer López, Marc Anthony and Shakira, symbolizes the biculturalism of the new generations of Hispanic Americans.

4. AMERINDIAN.

(i) Pan-Indian movement. Several factors led to the development of an intertribal Amerindian culture in the 20th century: hitherto unrelated tribes were combined on single reservations; interaction between tribes became easier, both physically and through mass communication; and Amerindians wanted to present themselves as having a united culture in order to preserve their identity in the face of relocation and urbanization. This new intertribalism and the increased secularization of music have resulted in what is referred to as 'pan-Indian' music because of the degree to which many tribes participate in it and because of the breakdown of tribal distinctions. The principal occasions at which this music is performed are intertribal powwows, accompanied by dancing; these are attended by members of more than one tribe as well as by interested non-Indians who may participate in the dancing and occasionally the singing. As a result, there has developed a class of professional or semi-professional Amerindian singers and composers, whose performances are judged by musical rather than religious or any other criteria.

Individuals are now accepted as composers, whereas formerly they were viewed primarily as carriers of tradition or purveyors of supernatural inspiration (*see* AMERINDIAN MUSIC). A new type of non-participating audience, comparable to a Western concert audience, has arisen, particularly in the Plains, which includes Amerindians and others. Nevertheless, a good deal of music is still restricted to private or tribal use.

The intertribal powwow is the occasion for the performance of most pan-Indian music. The singers and dancers at powwows, whether urban or rural, represent many tribes. All activities at the intertribal powwow revolve around the 'drum', a group of male (and, more recently, sometimes female) singers who perform while seated at a large bass (or home-made) drum turned on its side. Each singer has a drum beater, and all play and sing in unison (although differences in vocal style create heterophony). Female singers also may stand behind the drum and reinforce the melody an octave higher. Each powwow is sponsored by an organization or club that raises money and plans months ahead for such an important event. While the main emphasis is on singing and dancing, the powwow also includes feasting, 'give-aways' (the public distribution of gifts), arts and crafts sales, raffles and often the crowning of a princess. Plains Indian music prevails at these gatherings with some regionally specific music and dance; there are for example, substantial differences between the performing practices of the northern Plains Indians (Blackfoot, Crow, Dakota) and those of the southern Plains (Oklahoma).

The intertribal powwow is a complex social and religious event. The lead singer and lead dancers are chosen not only for their superior knowledge of song and dance repertory but also for their community status and network of family and friends, who perform with them to show their support. The characteristics of a good lead singer are a strong voice, musical talent, a superior memory and an ability to guide the group of singers constituting the 'drum'.

Before many southern Plains and urban powwows, members of a Gourd Clan may dance. These dancers represent warrior societies and are ceremonially dressed with a red and blue blanket over the shoulder; they carry a tin-can rattle in the right hand and a feather fan in the left. In contrast to the general southern Plains powwow with its war dance, fancy dance and grass dance, the gourd dance seems slow and less vigorous, and the song sets are extremely long. The music is similar to other southern Plains music in that it is sung by men and is in duple metre, but it uses a narrower vocal range; the characteristic accompaniment is an alternating loud–soft beat.

While round dances are frequently used prior to the formal opening of a powwow (after the gourd dance, if it is performed), they may also be interspersed among war dances or trick songs (for contests). These social dances, along with the Oklahoma two-step, rabbit dance and owl dance (all usually in triple metre, alternating crotchets and quavers or quavers and crotchets), offer a chance for audience members to participate. At such times, ceremonial dress requirements and etiquette are relaxed, and visitors are encouraged to dance.

War dances are the mainstay of intertribal music and dance. Whether 'slow' or 'fast', 'straight' or 'fancy', all the songs share common musical characteristics: *A* – opening phrase sung by the leader; *A′* – repeat of opening phrase by the 'second' (one or more followers); *B* – second phrase, sung by all men at the drum as well as female back-up singers if they are present; *C* – third phrase sung by all; and *D* – fourth (or more) phrase(s) sung by all. Phrases *B* to *D* are repeated, then the entire piece is repeated from *A*, usually three more times. The melodies have a descending, 'terraced' contour; the range is wide (up to two octaves); although the scales are usually pentatonic, they may differ from song to song even in the same set; the metre is duple, the pulse accented–unaccented; the vocal style is tense with non-rhythmic pulsation on the sustained tones (particularly the high ones).

Regional traditions are carried on through individual genres such as the stomp dance, which originated in the Southeast and is now used by Amerindians from various areas living mainly in Oklahoma and the Northeast. This dance preserves in its generally responsorial use of short phrases one of the indigenous characteristics of the south-eastern tradition, though it may also have been influenced by the music of black Americans.

Special dances performed during interludes might include the Navajo ribbon dance, the swan dance, the hoop dance, the shield dance, and one of the Pueblo buffalo or eagle dances. In a powwow setting these dances are strictly for show, and often the dancers are paid handsomely for demonstrating them. Contests are also held to draw the best dancers and singers to a powwow.

The 'forty-niner' dances are performed mostly by young people after powwows and sometimes last all night. Regalia is not prescribed, and the accompanying drum may even be a cardboard box or car bonnet. Because these affairs are mostly for fun, the words of the songs may be changed to fit the location or tribe involved. Like popular or country music and sometimes in English, they often contain references to love, sweethearts and problems. The metre is triple, having an accented–unaccented pulse, and the music is fast; the melodic contour and form are much like those of the Plains round dance.

The intertribal musical events have given rise to many songs with vocables as well as with English words, several of which have become known throughout reservation culture. The acceptance of English texts can variously be attributed to the decrease in the Amerindians' use of their own languages, the growth of an intertribal Amerindian audience, and the participation of non-Amerindians.

Standardization of forms and the restriction of the repertory to a small number of tune types are also characteristic of the pan-Indian musical culture. Most stomp dances use variants of about two dozen melodies, and in Plains music the rapid composition of new songs by retaining and recombining phrases from existing songs builds a highly homogeneous repertory.

Since the 1960s there has been among Amerindians a resurgence of interest in their own musical, dance and ceremonial traditions, which has been part of the desire to assert their ethnic identities. Amerindians since the middle of the 19th century have changed from being a group of relatively independent and isolated cultural units to being a minority within a large population culturally unrelated to them. The function of music and – to some degree – its style and structure embody this basic change in society.

Traditionally dancers performed both to vocal and instrumental music featuring a variety of instruments. Many of these instruments are still used in intertribal powwows, for instance drums; hand-held rattles; strung rattles worn on the dancers' arms, legs and torsos; flutes, conch-shell trumpets, whistles; hollow logs, rasps and striking sticks. Some important new additions to instruments and dance regalia involve the substitutions of metal rattles and bells for formerly natural materials. Also new are tin-can leg rattles substituted for turtle shells or metal salt shakers for gourd dance hand-held rattles. Sequins, trade beads, plastic bones and other mass-manufactured items adorn contemporary dance outfits. Popular Latin American musicians now use CLAVES, *guiros*, *teponaztles* and other rhythm instruments based on the striking sticks, rasps and hollow logs.

Despite tribal variations in music and dance forms, pan-Indian dance is generally somewhat restrained, with the dancers staying close to the earth, for both religious and practical reasons. Usually following the drum, dancers take small steps – because of space, number of participants or because they must conserve strength in order to dance for long periods of time. Some dancers still mimic animals or birds or the work of hunting, fishing, planting, harvesting, preparing food, or warfare. The music often underscores these movements by using onomatopoeia, shouts, changes in accent, metre or tempo, or even rises and falls in pitch. Dancers may shake rattles, sticks or branches, adding texture to the music.

Tribalism may still be distinguished. For instance, while individual expression is allowed in most North American Plains music and dance, Pueblo dances require unison singing and dancing, broken up from time to time by the relatively free movements of the ritual clowns. The hoop dance, a 'show dance' of many tribes, is one of the most individual: it features a dancer's manipulation of a dozen or more hoops over and around his torso, legs and arms to form a variety of geometric shapes. Customarily, Amerindian dances require communal interaction of musicians, dancers and family members cooperating across generations. Within the context of the powwow, however, tribal distinctions are superseded by a dynamic pan-Indian tradition. Despite differences in terms of groups involved, size and location, there is regularity in the main components – types of dances, costumes, procedures, format and spatial organization.

In the 1990s Amerindian traditional singers and dancers were found at Amerindian and county fairs, public receptions honouring dignitaries, national Amerindian conferences, political rallies, crafts fairs, public programmes of museums and colleges, demonstrations by Amerindian political activists, graduation ceremonies of Amerindian students, tourist attractions, amusement parks and in various Amerindian education programmes.

Ancient songs, dances and ceremonies are performed to maintain certain social, religious and curing ceremonies, but the creation and performance of new songs and dances ensures sustained interest and continuity. For example, some Kiowas and Blackfeet composed new songs and dances for Operation Desert Storm in 1991.

The new dances and genres have new words, melodies, steps and dress. For example, the women's fancy-shawl and jingle-dress competitions feature many innovations, particularly in freedom of movement. Costumes, particularly those worn by men, do not express any specific tribal identity. Many of the individual ornaments are purchased on the powwow circuit, and the costume itself embodies a dynamic notion of pan-Indian identity. The contemporary revival of many Amerindian dances has also fostered healthy controversy about authenticity of versions, proper instrumentation and dress, suitable venues, ownership of songs, dances and ceremonies, and even the issue of dance. The dynamics of change and tradition are complementary, and music and dance are still vital for Amerindians whether in rural areas, cities or on reservations.

(ii) Inuit. Inhabitants of the circumpolar region, about 34,000 Inuit live in Alaska, and this article refers specifically to the music of the Alaskan people. The traditional reliance of the coastal Inuit on sea mammals as a source of food, clothing and other materials, and of the inland Inuit on caribou-hunting, have been the principal determinants of their ceremonialism. Although there are considerable differences in culture and race between the Inuit and other Amerindians, the music of the two groups is stylistically related.

(a) Genres and functions. Most indigenous explanations of songs, dances and drumming distinguish between social, secular and religious functions. St Lawrence Islanders refer to *ilaegaek* as 'night-time singing' or shamanistic song, and to *aetok* as 'daytime singing' or secular song used for entertainment (Hughes, 1960, p.304). A similar distinction is reported for the Northwest; of the four generic categories of song recognized there, three are secular, and the fourth is literally translated as 'songs of group of things done in a trance': *qitkutim atuutaa*, game songs; *unipkaaq atuutilik*, songs in stories; *uamipiaq*, dance songs; *angaiyatikun atuutit*, ceremonial dance songs (Johnston, 'The Eskimo Songs of Northwestern Alaska', 1976, p.8). By the 1970s the last category had been subdivided into six subgenres: *kiapsaq*, whalers' spinning-top dance songs; *tohoyaqhuuqaun*, puppet ceremony dance songs; *nalukataun*, whalers' skin-toss dances; *uingarung*, whalers' masquerade dance songs; *kigugiyataun*, northern lights dance songs; *kalukhaq*, box-drum dance songs. Most of these are modified fragments of such larger ceremonials as the Messenger Feast (*kalukhaq*) or whaling rituals (first four categories), which flourished in the 19th century.

In coastal communities of the Northwest, communal religious festivals were related to whaling and centred around the hunting-group leader (*ümealiq*) and his crew or lodge. In the interior similar lodges were traditionally associated with the annual caribou drive. A large cycle of songs was sung by the *ümealiq*, the *kaakliq* (an older, more experienced whaler who was also often a shaman) and the crew to accompany each stage of the whaling operation (Spencer, 1959). Songs thought to ensure the efficacy of the harpoon, lances, lines and floats, to control the weather and to attract the whale were also sung. The season ended with a spring whaling feast. Special dances performed in recent decades in Point Hope on New Year's Eve and at the June Whaling Feast derive from these practices. Traditional festivals involved social dancing, distribution of whale meat, ceremonial masked dances and, at their culmination, the *nalukatug*, in which an individual was thrown into the air from a walrus skin to the accompaniment of a song.

The second important ceremonial of the Northwest was the social Messenger Feast, last held at Wainwright in 1914–15. This event, which has some features in

common with the Northwest Coast Amerindian potlatch, demanded a long period of preparation to amass food and gifts, prepare songs, dances and costumes, build a *karigi* (dance house) and train participants. Songs of invitation were sent from one village to another by a messenger bearing a symbolically marked staff. The festival included the formal announcing and greeting of guests, pretended insults between the messengers and the chief host, footraces between the guest and host camps, stomping dances accompanied by a box drum, distribution of gifts, dances by hosts and guests either separately or together, a soccer game and social dances. A contemporary box-drum dance cycle at Wainwright has evolved from this feast.

In the Southwest, whaling rituals culminated in the annual Bladder Festival. For approximately one month the spirits of animals taken during the year's hunt were honoured, and through the action of returning the bladders to the sea, the rebirth of the spirits in new creatures was requested. Rival groups practised new songs in darkness until correct performance was assured; wild parsnip was burnt to the accompaniment of a special song as a purification rite. Modified parts of this festival continued into the 1970s in some communities (e.g. the April Walrus Carnival and June Whaling Feast in Savoonga).

An ancient Feast for the Dead shared some characteristics with the Bladder Festival: the careful preparation of ceremonial songs in the darkness of the dance house and the singing of songs to honour the spirits of the dead and encourage their return. Ghost songs unassociated with dance continue to constitute a special repertory in this area, but their relationship to earlier ritual is unclear.

A third ceremonial in the Southwest and on St Lawrence Island is the Inviting-in Feast, which relates to some extent to the northern Messenger Feast. Originally involving elaborate wooden masks that represent animal protectors (Nelson, 1899, p.358), these dances are now intercommunity events at which dance teams display story dancing.

Central to ceremonial and recreational life in the 19th century was the *karigi* (also called *kashgee*, *kashim*, *kudyigi* or *kazigi*), a large house built either temporarily for the winter season or remaining permanently in the community (as at Point Hope). In southern areas the semi-subterranean building was a men's house for hunt-related chores, meetings, socializing, bathing and sleeping, while in the north, women were more freely admitted. Shamanistic performances and ritual and recreational dancing occurred there.

In addition to the role that music played in these festivals, songs could be used for many nonsecular purposes to extend personal power. 'Power' songs were sung to attempt control of the weather, to encourage game, to seek protection in conjunction with amulets or to facilitate shamanistic actions. There were songs designed to prevent conception, to ease the birth of a child, to raise a boat or house, to cure illness, to find objects and to effect love magic. Such songs were personal property, not always the shaman's, and could be sold. The power of such songs was feared; children were told not to learn the songs sung by the shaman lest they themselves become imbued with shamanistic power.

Secular, recreational, nonceremonial songs and dances are either composed or, in the case of some dance types, improvised. In northwestern communities, dances for which the choreography is fixed, taught and rehearsed by dance teams are called *sayuun*. This category includes specific dances such as the women's bench dance, often with paddling motions (*taliq* in Point Hope, *paagurraqtuq* in Wainwright). The permanently assigned motions that accompany the drum rhythms and musical motives of a song are often devised by the composer's male hunting partner or trading associate. The *atuutipiaq* dances, on the other hand, have freely improvised motions, often including jumping or stomping for men and knee-bending or arm-curving for women. Both dance categories frequently imitate hunting or other subsistence activities. The southwest region does not recognize a division between fixed-motion and freely improvised dances, but rather classes dance styles according to the body position of the dancers. The men's *arula* is done in a kneeling position; during an *arula* performance women do a gentler style known as *putuluteng*, standing behind and to the side of the men with eyes downcast. The *pualla* is a men's stomping dance; the *talirluteng* (like the Inupiaq *taliq*) is a seated bench dance with arm motions executed by both men and women.

In the game-song category juggling songs are the most widespread. These are characterized by texts containing sexual allusions and indelicate references, features shared by juggling songs in northern Canada. In a hopping game called *mitquliksraq*, in which opposing lines of boys and girls hop towards each other and try to break through the linked arms of the other team, the hopping is timed to the asymmetrical rhythm of the song's words (Johnston, *Eskimo Music*, 1976, p.57). A song also accompanies *annami-analuuraq*, a chasing game. Short chants accompany string games, in which cat's-cradle figures represent segments from stories. Songs associated with stories range from short, half-spoken dialogues between animals to longer, dramatic performances with masked dance (e.g. The Beautiful Woman and the Three Suitors dance, performed in Point Hope on New Year's Eve).

Thus fragments of traditional festivals continue, usually in conjunction with recreational dances by community dance teams. Ritual items are now often associated with Euro-American holidays (Christmas, New Year's Day, Independence Day) or with special community events (the Point Hope Northern Lights Dance, the Barrow Eskimo games, the Dillingham Beaver Round-up).

(b) Instruments. The Alaskan Inuit use a wider variety of traditional instruments than do the Inuit of Canada and Greenland, where the single-headed frame drum is often the only indigenous instrument. In Alaska this type of drum – called *tchauyuk* (by Koranda) or *cauyuk* (by Johnston) in Yupik, and *keylowtik* (Koranda) or *gilaun* (Johnston) in Inupiaq – has a thin, wooden, circular frame covered with a natural membrane that is wetted and stretched in preparation for playing.

On the northwest coast the Inuit frame drum is cylindrical, about 60 cm in diameter and 4 cm deep, with a membrane usually made from the stomach or liver of a whale, walrus or (inland) caribou. The beater, a thin, slightly curved stick about 75 cm long, is used to strike the instrument from below. The player strikes the rim either in one or two places, or strikes both the rim and membrane. The southwestern frame drum differs in that the diameter of the head may vary from 55 to 65 cm; plastic membranes have sometimes been used since the 1970s. The beater (about 90 cm long) strikes the

instrument from above, on the edge, the membrane or both. On St Lawrence Island a pyriform frame drum is used; its head is about 40 × 45 cm, and the instrument is about 5 cm deep, with a membrane made from walrus tissue. The beater, a sharply curved stick roughly 45 cm long with a paddle carved at each end, strikes the membrane from above.

Another important type of 'drum' is the *kalukhaq* (also spelled *kalluraq*, *kaylukluk* or *kotlookuk*), a box drum associated originally with the Messenger Feast. In the myth that explains the feast's origin the drum is said to represent an eagle's heartbeat. The instrument consists of a wooden, rectangular case of variable size with a decorative, zigzag top edge and eagle feathers. A fur-padded rail along one side is struck with a short stick. The drum is suspended from the roof and played by a seated drummer.

Other instruments include rattles made of bone, bird beaks, animal teeth or cartridge shells, which are attached to the northwest-coast dance mittens worn in deference to whaling spirits. Arm gauntlets with puffin-beak rattles are worn on King Island. Rattles are sometimes attached to other items of apparel; an interesting historical example is the tall, conical cap covered with rows of mountain-sheep teeth (Murdoch, 1892, p.365). Bullroarers are found chiefly as children's toys. Rare instances of chordophones have been observed, one a one-string fiddle (*kelutviaq*) tapped with a small wand or quill (Johnston, *Eskimo Music*, 1976, p.107).

(c) Style. Dance songs vary from one region to another, but most are pentatonic. Certain scale notes (especially the note below the tonal centre) may be microtonally inflected according to context. A tonal centre, defined by its reiteration and position at the end of a phrase, is often the second-lowest scale tone. The range of dance songs is usually around an octave but may be as great as a 12th; intervals differ according to region, but large, ascending leaps are rather common. An exception to this is the style of the riverine communities of the Southwest (such as Pilot Station and St Mary's), where narrow-ranged, tetratonic melodies with many ascending 4ths and descending minor 3rds were analyzed by Johnston (ibid., p.109).

Text settings are generally syllabic; there is some melismatic prolongation of certain vowels in large, downward melodic leaps, but only in specific positions within words. Dance songs are generally single strophes (except in some inland communities of the Southwest, such as Pilot Station), but many are performed twice, first with vocables and light drumming on the rim, then slightly faster with lexical text and heavier drumming involving membrane strokes. More vigorous dancing parallels the appearance of song words in the second part.

The most common metre is 5/8, but heterometrical sections, often parallel to the rhythms of the text, are frequent. Some areas have distinctive metres; for example, 7/8, related to Siberian styles, is characteristic of St Lawrence Island (Johnston, ibid., pp.16, 97ff). Song and drum pulses (as well as dance motions) generally coincide, but the metrical grouping of vocal and drum rhythms often diverges, producing polyrhythms and syncopation.

Game songs such as those for juggling usually have a range exceeding an octave and a modular, motivic structure that might be represented *AA′* ... *BB′* ... *CC′* ... (ellipses denote a variable number of repetitions of the same motif). Some motifs are repeated at a later point in the song. Although pebble-juggling implies a regular, duple rhythm (many transcriptions are written in 2/4 metre), not all musical motifs are consistently duple, and the resulting cross-rhythms add a dimension of complexity to the juggling performance.

Songs-in-stories and string-figure songs are generally narrow-ranged, and they sometimes use speech-song in which relative, rather than exact, pitch levels are important; animal calls are sometimes interspersed. The most wide-ranging melodic motion occurs at the beginning of the song, and tone reiterations increase toward the end.

Acculturation in musical style ranges from the parodying of Euro-American song features to the complete imitation of new styles (e.g. four-part hymns and pop songs accompanied by guitar). The merging of Euro-American and Inuit styles, however, is rather rare. The continuity of traditional music varies widely, depending on such factors as the relative tolerance of religious authorities and the influence of the mass media.

5. Asian American.

(i) Introduction. The almost 9 million people officially designated as 'Asian American' in the USA include those of Chinese, Japanese and Korean extraction; South Asians (primarily from India and Pakistan); Filipinos and recent arrivals from mainland South-east Asia (especially Vietnam, Laos and Cambodia), most of whom have been given asylum as refugees; and those of Polynesian, Micronesian and Melanesian ethnic groups. The numbers of Asian immigrants rose sharply after the passage of the Immigration and Nationality Act in 1965, and again between 1980 and 1990, when there was an increase of almost 100%.

Many immigrants come from the larger Asian cities, which have a strong international flavour. In many of these urban centres traditional music has mostly been replaced by Western art music and new forms greatly influenced by Western popular music. This is particularly evident in Korea, where children in the major cities are more likely to receive instruction in Western instrumental music than in any of their native traditions; the same is becoming increasingly true of children in China and Japan (*see* especially Japan, §IX, 2). In South Asia, however, although Westernized film music dominates the urban scene, traditional forms such as Hindustani and Karnatak music and dance, devotional music and folksong continue to be prominent. In mainland South-east Asia much of the population is rural and, although influenced by the new pan-Asian music, still retains contact with its indigenous musical traditions.

Recent immigrants to the USA are sometimes less deeply steeped in the musical traditions of their birthplace than were earlier ones, and the impetus to maintain their ethnic culture often comes from previous generations of immigrants. However, some second- and third-generation Asians in the USA, particularly the Chinese and Japanese, want to revive and perpetuate their cultural heritage and participate in the musical functions of the community.

In this section the state of music among the larger Asian immigrant populations is examined. Influences and responses vary considerably: some groups appear to have adopted the Western musical world exclusively; others maintain a dual involvement; and others, like the Filipinos, have created neo-traditional forms.

19. Melody of China instrumental ensemble performing 'The Moon is High' at the San Francisco Mid-Autumn Festival, October 1996

(ii) East Asian.

(a) Chinese. The history of Chinese American music began in the 1850s, when the original wave of contract railroad labourers and gold miners came to California from the south-east coast of Guangdong province in China. In 1943 the Chinese exclusion laws were repealed, and in 1965 the annual quota of Chinese immigrants was raised to equal that of other countries; the demographic changes brought changes in the musical scene. This current has intensified since the 1978 normalization of diplomatic relations between China and the USA as more people have emigrated from mainland China.

The 1895 Exclusion Law restricted all Chinese residents to living in Chinatowns. Without families and homes, these labourers formed a bachelor society. Listening to Cantonese opera, the favourite music from their homeland, was their main pastime. The first Cantonese opera was staged in San Francisco in 1852, and from 1870 to 1890 this tradition enjoyed a golden era: San Francisco supported four theatres with nightly performances. Until the 1940s, the touring opera troupes from Canton and Hong Kong were vital links among the scattered Chinese communities in the USA. The opera theatre was a 'community centre', and opera was an educational experience, used to related ancient legends and history. The heroes and heroines served as role models for Chinatown dwellers during the dark years of exclusion.

Besides professional operas there was also amateur music-making: instrumental playing in one's apartment was an after-hours activity, and performers held forth in gambling houses, at restaurants and banquets, and during Chinese festivals, New Year's parades and funerals. The words of songs and chants inscribed on Angel Island cabin walls bear witness to the music culture of immigration detention centres.

There were also integrated music styles. Formed in 1911, the oldest music club in San Francisco's Chinatown – the Cathay Club – had a marching band with a Western repertory but Chinese traditional instruments such as *erhu* bowed fiddles, *di* bamboo flutes and *sanxian* plucked lutes; Chinese percussion was added later, and the repertory expanded to include a few Chinese pieces. In the 1930s Chinese American nightclubs were opened as part of a booming nightlife business in San Francisco. The most famous, Forbidden City, featured Chinese performers, attracted tourists internationally and inspired the establishment of similar clubs on the east coast. This business, however, came to a halt with the postwar recession and the advent of television.

After World War II new waves of immigrants comprised mostly students and intellectuals, whose origin, backgrounds and goals were different from those of their predecessors. The growth of a family society, a new variety of occupations and differing degrees of assimilation all helped to generate a more diverse musical culture within the Chinese community.

Cantonese opera experienced a long decline due to events such as the exclusion laws, the 1906 San Francisco earthquake and, later, competition from new forms of entertainment. Despite the disappearance of regular performances by professional companies in the 1960s, Cantonese opera singing is still alive in amateur clubs, whose headquarters are not only a place for weekly singing but also for social gathering. The nucleus of the club consists of veteran professionals who give lessons to pass on the tradition. Each club has its own collection of instruments, and most singers also play in the ensemble. No regular performances are given, but artists or groups from mainland China or Hong Kong are periodically invited to perform with club members.

Younger Chinese Americans seem to prefer instrumental ensemble music: Chinese traditional classical music, Chinese and Western pop music, Chinese and American dance band music and Western classical music. Traditional and contemporary instrumental ensembles such as San Francisco's Flowing Stream Melody of China (fig.19), and New York's Music from China give concerts in

cultural centres and other venues. Virtuoso performers of PIPA and ZHENG find many students among the young and carry on the refined solo traditions. The study of Western classical music on piano, violin and flute is even more popular among young students, with many starting at five or six and continuing through high school. Chinese Americans are highly visible among winners of local competitions.

Choral singing is also practised. Chinese Protestant church choirs and congregations sing mainly Western hymns with Chinese texts but also include a few Chinese songs. Local choral groups aim to promote Chinese culture and often foster community participation; they perform Chinese art songs and folksongs, composed or arranged by musicians with Western training along with a selected repertory of European classics. In the San Francisco Bay Area alone there are nine choruses, and each holds an annual concert. Beijing opera clubs, organized by generations of northern Chinese, became more common in the 1980s in major cities such as New York, Washington, DC, Seattle, Los Angeles, Chicago and San Francisco. They tend to give annual performances by combining their resources with those of professionals, who perform the leading roles and instruct amateurs. A classical opera style, *kunqu*, is favoured by a small group of people but also has a national organization. One authentic folksong style, *Taishan muyu* song, has won recognition since singer Uncle Ng (*b* 1910) received a 1992 US National Heritage Fellowship.

Two new styles emerged during the 1980s: Chinese American jazz and new contemporary art music. From the late 1960s an indigenous drive to develop a distinct Chinese American identity as part of a broader Asian American movement followed the lead of the civil rights movement. Asian American jazz developed as its cultural wing and included Chinese American musicians Fred Ho (*b* 1957) and Jon Jang (*b* 1954). A new ethnic pride and consciousness inspired their fusion of black American jazz with Chinese musical elements, instruments, history and legends to create a new genre, with many artists joining their path. In the 1990s some first-generation immigrants with backgrounds in European classical and Chinese traditional music ventured into this art form. Contemporary classical composers trained in China and the USA, such as Tau Dun and Chen Yi, have drawn significant attention with new works blending Western techniques and themes based on a Chinese experience.

Other trends include rap music, folksong and popular song contests, and karaoke singing of Chinese popular songs in Chinese nightclubs and restaurants. Except for a few Cantonese opera clubs, most musical activities, especially performances, are open to mainstream society and aim to promote mutual understanding through music. While most Chinese American musical styles preserve and maintain aspects of cultural heritage, interaction between the Chinese community and the society at large will produce more musical change in the years to come.

(b) Japanese. Japanese American music is an expression of ethnic identity, a bi-cultural form drawing on the idiomatic playing styles of traditional Japanese instruments and use of pentatonic melodies, rhythms, forms, stylistic and aesthetic elements from Japanese folk or classical traditions. The incorporation of these traditional elements in Western or American music has resulted in a transculturated music with varying degrees of experimentation and success.

Japanese American music has developed primarily in the hands of *sansei*, third generation immigrants who were born after World War II. A number of *sansei* musician-composers, taking their cues from black American culture and the black power movement, write in a jazz-based idiom as a vehicle for their artistry and in some cases politics. The improvisational nature of jazz offers great freedom of expression, allowing for experimentation in form, rhythm and melody, especially in avant-garde jazz. *Sansei* musicians consider the openness and spirit of jazz to be conducive for incorporating Japanese and Asian musical ideas in their compositions.

The internment of Japanese Americans during World War II and the redress and reparations movement in the 1980s serve as themes for several *sansei* jazz-based compositions: Glenn Horiuchi's *Poston Sonata* for *shamisen* (three-string plucked lute), alto saxophone, tenor saxophone, bass clarinet, bass, percussion and piano, Sumi Tonooka's *Out from the Silence* (inspired by her mother's internment experience) for *koto* (13-string board zither), *shakuhachi* (end-blown bamboo flute), violin, clarinet, trumpet, tenor saxophone, trombone, vibes, rhythm section and voice; and Anthony Brown's *E.O. 9066 (Truth be Told)* for piano, bass, drum set and percussion, *sheng* (Chinese mouth organ), *di* (Chinese transverse bamboo flute), *suona* (shawm), tenor saxophone, clarinet and *taiko* (Japanese barrel drum). The *sansei* Key Kool and his partner Rhettmatic also address internment in their rap song *Reconcentrated* for voice, turntable, DJ mixer and other 'scratch' equipment. The expressive range of these compositions, from anger to reconciliation, address the injustices and humiliation of the internment experience and its aftermath.

The greatest concentration of Japanese American musical activity is in California, particularly in the urban areas of San Francisco and Los Angeles. The Asian American creative music scene in San Francisco is home to a number of *sansei* musician-composers, many of whom study or have studied Japanese court music (*gagaku*; *see* JAPAN, §V). The San Francisco Gagaku Society, directed by the pianist and *koto* player Miya Masaoka, received training under the tutelage of Suenobu Togi, former Imperial Japanese court dancer and musician, who taught these forms for more than 20 years at UCLA. *Gagaku*'s tripartite *jo-ha-kyū* form and aesthetic concept of *ma* (silent beat) are examples of musical elements that broaden the musical landscape for *sanseis* in their own work.

Other forms of traditional music from which *sansei* musician-composers draw include Japanese *taiko* drumming, folksongs and the repertories of the *koto*, *shamisen* and *shakuhachi*. This music is combined with a wide spectrum of contemporary musical styles. Nobuko Miyamoto, with the assistance of Reverend Kodani of the Senshin Buddhist Church in Los Angeles, composed two Japanese folksongs set to English-language lyrics, *Yuiyo Bon Odori* and *Tanpopo*, intended for use at Bon festivals of the dead. Among fusion bands, the well-known Los Angeles-based group Hiroshima was first to incorporate the *koto*, *shakuhachi*, *taiko* and *shamisen* in popular music. The spectrum of Hiroshima's music fuses elements of rock, rhythm and blues, jazz, pop and Latin, with the pentatonic style of the *koto*.

Taiko drumming (*see* KUMI-DAIKO) continues to be the most pervasive and popular Japanese American genre among *sansei* and *yonsei* (fourth generation). It is an adaptation of the Japanese folk genre *suwa daiko*, which combines music and choreographed movement. A *taiko* ensemble consists of five to thirty or more performers, and includes drums of various sizes (most of which are made by the drummers themselves), *atarigane* (small bronze gong), *hōragai* (conch-shell trumpet), and *takebue* (Japanese bamboo transverse flute). There were about 100 *taiko* groups in the USA in the 1990s, and the numbers continue to grow. The annual *taiko* festival sponsored by the Japan America theatre in Los Angeles, featuring around eight or ten groups, is a response to the popularity of this genre among audiences. Other contexts for *taiko* drumming include sacred events, such as the Buddhist Hōraku Festival, as well as secular celebrations – the Cherry Blossom Festivals of San Francisco, New York and Washington, DC; the Asian-Pacific American Heritage Festival in New York and elsewhere, and at summer O-Bon festivals throughout the USA.

(c) Korean. Before the Immigration and Nationality Act of 1965, Koreans in the USA constituted a small population mainly concentrated in Hawaii and California. Since then, the increase in Korean immigrants to the USA has given rise to thriving Korean American communities in urban areas. In Korean American societies, music is the main emblem for high culture, an indispensable vehicle for social and religious functions and the favoured medium for the expression of Korean identity. As such, Korean American music embraces such diverse categories as Korean traditional performing arts, the Western musical canon, Christian evangelical music and recent popular idioms.

Most visibly within the USA, Korean Americans perform and create music of the Western canon. Not only do Korean and Korean American students predominate in the string sections and piano classes of the leading musical conservatories, but Korean Americans sponsor and participate in their own organizations, such as the Korean Philharmonic of Los Angeles, and sponsor musical events at prestigious concert halls throughout the country. These events typically feature Korean and Korean American artists performing virtuosic and lyrical repertories of 19th-century Europe or new works by Korean composers.

Within Korean American society, the Christian church serves as perhaps the most important social institution. 70–80% of Korean Americans and recent Korean immigrants are church members. As a result, old Protestant hymns, sung in Korean often at a slow pace, and other evangelical music, either in a Korean gospel or European Romantic style, comprise musical knowledge common to most Korean Americans. Even in small churches, choirs attempt a challenging repertory, and the musical director and worship accompanist are highly valued. Korean churches also serve as cultural institutions, often sponsoring musical events.

The preservation and performance of Korean traditional music and dance are important to Korean immigrants. This urge to maintain, teach and exhibit their heritage has given rise to several cultural centres in Los Angeles, New York and Chicago, the Halla Pai Huhm Dance Studio in Hawaii, the Korean Classical Music Institute in Los Angeles and the Korean Traditional Music Institute in New York. Increasingly, younger generations of Korean Americans are taking up *p'ungmul* (farmers' dance music popularized by the group Samul Nori) in order to give sound and visibility to their ethnic identity and political entity as Korean Americans. Korean drumming groups have been formed on college campuses (such as Stanford Hwimori, Yale Unity, MIT Hansori) and in Korean American communities such as P'ungmulpae of Oakland. Numerous *p'ungmul* workshops are offered every year by different organizations. As a traditional musical idiom recently adopted by student and labour groups in Korea as a symbol of power against oppression, *p'ungmul* offers American student groups a ready musical form to express Korean identity and to bring attention to the socio-political obstacles facing Korean Americans.

The musical expression of Korean American identity extends to hip hop and rock music. Korean American rappers (e.g. Fists of Fury and rap artist Jamez Chang), like their black American counterparts, focus on social and political issues as they perform on college campuses and at heritage festivals. Many of them point especially to the 1992 Los Angeles riots, which devastated the Korean American community and brought forth a new call for political action. Artists such as Sooyoung Park take part in the larger scene of Asian American 'indie rock'. Park's compilation album, *Ear of the Dragon*, and its subsequent tour seek to show that Korean and Asian Americans can create rock and roll, hence breaking the stereotype of the meek, 'good minority' Asian American.

(iii) South Asian. The American transcendentalists R.W. Emerson and H.D. Thoreau and the Unitarians drew on Indian philosophy, paving the way for the Western missions of Annie Besant and Vivekananda at the beginning of the 20th century. These prepared the ground for the visits of the north Indian *vīṇā* player Inayat Khan, who toured the USA after 1910, taking part in the Indian-influenced dance productions of Ruth St Denis. In the 1930s Uday Shankar and Menaka toured with a group of musicians and dancers.

The music of north India began to flourish in the USA after 1955, when ALI AKBAR KHAN was invited by Yehudi Menuhin to appear on the CBS Omnibus show and made the first LP recording of Hindustani music. Shortly thereafter RAVI SHANKAR began touring in the West, and he and Ali Akbar became powerful ambassadors for the music. Young Americans were particularly taken with the virtuosity of their *tablā* accompanists, Chatur Lal, Alla Rakha, Kanai Dutta, Mahapurush and Shankar Ghosh. This interest elevated the role of the accompanists to nearly that of the soloists, altering the status of these players, even in India. *Tablā* players Zakir Hussain, Swapan Chaudhuri and many others have established residence in the USA, taken on many students and organized cross-cultural percussion ensembles. *Bā̃surī* player HARI PRASAD CHAURASIA and *santūr* player SHIV KUMAR SHARMA, as well as numerous other musicians, have created loyal followings.

In the 1960s Robert Brown of Wesleyan University brought to the USA the south Indian musicians T. Visvanathan (vocal and flute) and T. Ranganathan (*mṛdaṅgam*) and the dancer Thanjavur Balasaraswati; their student Jon Higgins became one of the first Western students to demonstrate that artistic accomplishment in Indian music by non-Indians was viable. Bonnie Wade, Daniel Neuman, Nazir Jairazbhoy, Regula Qureshi, Lewis Rowell and Charles Capwell were among the

students of ethnomusicology who brought Indian music into American academic life.

Ali Akbar Khan began teaching at Berkeley during the summer of 1965. Three years later he had more than a hundred students, partly through the surge of interest created by the Beatle George Harrison becoming a student of Ravi Shankar. The Ali Akbar College of Music was opened in 1968 and has become a major centre for the study of Hindustani vocal and instrumental music and dance. Other teachers have also settled in the USA, and a number of institutions offer instruction in north and south Indian classical traditions. A new generation of American artists now teach and perform in Indian classical styles. The *qawwālī* singer Nusrat Fateh Ali performed with several Western artists, and his concerts drew large audiences.

The first wave of Indian immigration, primarily men with professional and technical vocations, came in the 1960s, and with them came the popular musics of films, *bhajans*, *ghazals* and Tagore songs (*see* INDIA, §§IV AND VIII). This was augmented by brides from South Asia who had learnt classical music and dance, notably *bharata-nāṭyam*. In the 1970s the concentration of South Asian immigrants in the major cities was such that associations of Bengalis, Gujaratis, Tamils and Punjabis were set up, which in turn sponsored temples and schools where classical and semi-classical music is taught and performed. A tour of a major pop performer will attract audiences of thousands. Young people of South Asian ethnicity frequently gather to take part in traditional dances, notably *bhangra* and *daṇḍia rās*, the popularity of which has sparked off new pop song and dance genres.

Ashrams, often with multiple centres, begun by a great variety of primarily Hindu religious teachers, regularly hold sessions of *bhajan* and *kīrtan*. These are distributed in recordings and publications both in the original South Asian languages and in English.

(iv) South-east Asian.

(a) Mainland. Beginning in 1975, many refugees from Laos, Cambodia and Vietnam were given asylum in the USA, and by 1996 over one million immigrants from these countries had ben admitted; over a third of them settled in California, and there are large population clusters in several other states. Representing virtually all segments of mainland South-east Asian society, they continue their traditional musical practices. In addition, they are developing innovative as well as imitative cultural forms that reflect the new elements of their ethnic and social identity created by their radically changed environment. For further information on music genres see under names of individual countries.

Laotian. Laotians in the USA include both Lao-speaking lowland villagers and urban dwellers, and members of non-Lao-speaking tribal groups from mountain villages. Of their several musical traditions the best-known is the court music, which is Khmer and Thai in origin but has been established in Laos for many centuries. The two major Lao classical music traditions are derived from the court, that of the orchestra and dance ensemble of the royal palace in Luang Prabang, and that of the more Thai-influenced and modernized Lao Natassin (National School of Fine Arts) in Vientiane; both have representatives in the USA. Using imported masks, costumes and instruments, the immigrants continue to perform the most important items of the repertory in concerts and community festivals such as the Lao New Year. These presentations include parts of the Rāmāyaṇa story as well as other tales and dances related to religious themes. Many are accompanied by the *pī phāt* orchestra of xylophones (*lanat*), gong-chimes (*khọng wong*), flutes (*khoui*), drums and cymbals.

Lao Buddhist ritual forms, which include chanting and sermons, are practised at religious festivals, other rites and wakes by Lao monks now living in the USA. The musical content of these rituals ranges from near-monotone recitations of Pali texts to highly ornate cantillation of scriptures.

The lowland village traditions featuring the national instrument, the *khene*, a free-reed bamboo mouth organ, also continue in many American Lao communities. The solo repertory for this instrument includes both metred and unmetred polyphonic compositions; the instrument is also used to accompany the memorized or extemporized verses sung by one *mohlam* ('song expert') or several. Singers and instrumentalists alike may incorporate dance movements in these performances. Since Lao is a tonal language, the melodic contours of the songs are generated, in part, by speech tone. The texts of the songs are usually romantic but often contain philosophical, poetic and humorous comments on current events. Social circle-dancing (*lam vong*) may also take place during *mohlam* performances or may be performed to modernized folksong renditions played by Lao rock bands.

Modern urban forms are particularly prominent among the Lao communities in the USA. Lao rock bands, usually deriving their tunes from the large repertory of South-east and East Asian popular songs (Lao, Thai, Filipino, Taiwanese, Hong Kong Chinese and Japanese), commonly perform at the major festivals and provide an occasion for social dancing. Stylistic elements of this music are derived from both Asian and Western popular music.

Laotian tribal groups in the USA include the Hmong (Miao, Meo), Tai Dam, Kmhmu, Mien (Yao) and others. The Hmong are the largest group in the USA and in Laos, and have continued the unique and rich musical traditions of their homeland. These include over 30 genres of sung poetry. Among their instruments, always played individually, are the *gaeng* (*qeej*), a free-reed mouth organ (fig.20), the *ja* (*raj nplaim*), a transverse free-reed bamboo aerophone, and the *nja* (*ncas*), a jew's harp. The melodic contours follow speech tones and may function to some extent as 'speech surrogate' systems. Ritual performances involving music still accompany life-cycle rites, although some forms are also heard at New Year festivals. The mouth organ is characteristic of funerals, at which the tones and rhythms of its music represent sacred texts, and the player's dance movements are ritually meaningful. Some of the traditional Hmong sung poetry has been incorporated into Catholic masses and pageants. As among other South-east Asian communities, pop and rock bands (with lyrics in the native language) are prominent features at Hmong festivals for social dancing.

Cambodian. Cambodian musical traditions have much in common with those of Laos and Thailand. In the USA the court orchestra (*pin peat*) is sometimes augmented by aerophones and chordophones from the folk orchestra (*mohori*). The combined ensemble may include xylophones (*roneat*), tuned gong-chimes (*khọng wong*), flutes (*khloy*), oboes (*sralai*), two-string fiddles (*tror*), struck zithers (*khim*), plucked zithers (*krapeu*), drums (*skor*),

20. Laotian gaeng (mouth organ) dance performed by Chia Chu Kue, Blue Hmong, during the Hmong New Year festival, Providence, Rhode Island, 1981

wooden clappers (*krap*) and finger cymbals (*ching*). A chorus (*chamrieng*) sings poetic texts that narrate the classical dance dramas, such as the *Rāmāyaṇa* story, as well as other dances of religious significance. The wedding orchestra (*phleng kar*), considered to be the most characteristically Khmer ensemble, performs at Cambodian weddings and festival occasions. It may include a hammered dulcimer (*chin*), a two-string spike fiddle (*tror*), plucked lute (*takkei*, *krapeu*), drums and voices.

Many Cambodian American communities also have youth groups devoted to folk traditions, whose dances depict the cultural forms of various Khmer village and tribal groups; they perform chiefly at Cambodian New Year. Like the other South-east Asian groups, Cambodian American youths also enjoy their own version of contemporary urban rock music.

Cambodian Buddhist forms, such as the chanting of Pali scriptures by Khmer monks, are maintained at Cambodian temples in the USA. Congregational singing of contemporary Khmer devotional poetry, following classical rhyme-tune formulae, can also be heard.

Vietnamese. The most popular classical solo instrument for both study and listening among Vietnamese Americans is the 16-string board zither (*đàn tranh*), the metal strings of which are particularly well suited to ornamentation and arpeggiation; other popular solo instruments include the four-string pear-shaped lute (*đàn tỳ bà*), moon-shaped lute (*đàn nguyệt*) and the plucked single-string box zither (*đàn bầu*), which is uniquely Vietnamese; its delicate tone is produced from harmonics and by manual variations in string tension. Many of these instruments are played in the USA at Tết (Vietnamese New Year); also presented are excerpts from classical theatre (*hát bội*), folk theatre (*hát chèo*) and 'modernized' theatre (*hát cải lu'o'ng*), folkdances, nightclub routines and at least one performance of the aria *Vọng cổ*. This aria, sometimes called *Nostalgia for the Past*, is the most widely known item of south Vietnamese music and can be sung to virtually any suitable text. It allows the singer extensive opportunities to express his feelings, either in the song or in the unmetred prelude (*rao*); a few string instruments supply a freely heterophonic accompanniment, the improvised ornaments and melodic contours of which create new polyphonic strata and textures in each performance.

(b) Filipino. Filipinos in the USA are predominantly of lowland (Christian) origin. They have settled chiefly in the western states and in Hawaii and Alaska. During the years of their presence, they have maintained the musical traditions of the homeland while being open to innovations from their new environment. Each Filipino American community responds to its local circumstances rather than to regional or national influences. The responses vary according to language, educational background at the time of immigration, the period of immigration (before World War II, immediately after the war, or the 1970s onwards), and location in the USA, whether urban or rural.

Instrumental music was popular in the pre-war period, especially in the agricultural centres of the west. *Rondalla* (string ensembles) such as the Black and Tan (Kauai, HA) and *banda* (wind bands) such as the Filipino Federation Band (Stockton, CA), were organized early on. Talented musicians quickly found employment in hotel and nightclub dance bands, however, playing popular American rather than traditional Filipino repertory. Few wind bands are currently active, though the Honolulu community established a *banda* in 1980. In recent years communities in California, Texas, and Hawaii have formed *rondalla* ensembles. The University of Hawaii provides instruction in *rondalla* and *kulintang* (gong ensembles), as well as in song and dance, and the University of Washington, Seattle, teaches *kulintang* in Maranao and Magindanao styles. The Kalilang Ensemble (San Francisco) studies and presents authentic performances of repertory from Maranao and Magindanao cultures).

Traditional vocal music, which is generally solo, is performed in both informal and formal settings. It is a part of cultural presentations and nationalistic celebrations, such as Rizal Day, when Filipinos celebrate their national hero. Beginning in 1946, choral groups have gained in popularity among civic organizations, and touring choirs from the Philippines reinforce this interest; performances include choral arrangements of folksongs, as well as *kundiman* (love-songs) and Tagalog film songs; contemporary works by Filipino composers are occasionally presented. The principal motivation for the groups is singing in Filipino languages.

Commercial and pop genres from the Philippines (e.g. Pinoy rock, *see* PHILIPPINES, §IV) have found a market in the USA, chiefly among young, recent immigrants but also to some extent among the American-born. Sound recordings are an important means of dissemination, as are Filipino-language radio and television broadcasts, Tagalog films and concert tours by singers such as Freddie Aguilar and Jun Polistico.

The development of neo-traditional music arises from the concern for a Filipino-American identity among the younger generation and is part of a larger Asian American movement. Gong music of upland and Islamic cultures (those least influenced by the West) forms the basis for such creativity, as exemplified by the Samahan Percussion Ensemble (San Diego, CA) and the Cumbanchero Percussionaires (Seattle, WA). In addition, neo-traditional music of Philippine and American origin provides musical material for folkdance groups inspired by Bayanihan traditions.

The transfer of music from a Philippine to an American setting has caused changes in musical style and in social context. Performances are predominantly presented as entertainment rather than participated in as social or ritual events. An important function for music is to stress ethnic solidarity and identity in contrast to the mainstream of American culture. Many Filipino-Americans, however, choose to concentrate on Western art music and popular music rather than Filipino traditions. This focus and commitment are also a significant part of the Filipino-American experience, and are consistent with patterns of adaptation developed in the Philippines during the Spanish and American colonial periods.

Unit orchestra. The name originally given by ROBERT HOPE-JONES to the type of organ he designed to substitute for instrumental players in theatres. It later became better known as the CINEMA ORGAN (in the USA, the theater organ).

Unit organ. A type of EXTENSION ORGAN. *See also* ORGAN, §VI, 4.

Universal Edition. Austrian firm of publishers.

1. History. 2. Publications.

1. HISTORY. Universal Edition (UE) was founded in Vienna on 1 June 1901 by three Viennese publishers: Josef Weinberger, Adolf Robitschek and Bernhard Herzmansky sr (of Doblinger). The original idea probably came from Weinberger and the banker Josef Simon (Johann Strauss's brother-in-law). UE's initial aims were described in the *Neue Wiener Tagblatt* on 9 August 1901: 'The new music publisher is a joint venture founded by leading publishers of Austria-Hungary. ... As well as publishing the classics and significant instructive works, it will also publish compositions by important modern masters'. The main purpose of UE at the outset was to provide an Austrian edition of the standard repertory which could compete successfully with those of Peters and Breitkopf & Härtel. The firm's financial position was strengthened by the instruction from the Austrian Ministry of Education on 5 July 1901 that all Austrian music schools should buy UE publications in preference to German editions. Further stability was offered by Weinberger who undertook to purchase a substantial quantity of UE's output. Weinberger also provided the firm with its first premises, in his own building at 11 Maximilianstrasse (later Mahlerstrasse). In 1914 it moved to the Musikvereinsgebäude where it remains. In 1904 UE purchased the firm of Aibl, which had published a number of major works by Richard Strauss and Reger. The rapid expansion of the catalogue was made possible not only by such outright purchases, but also by issuing under licence, in UE wrappers, a large number of works from other publishers.

In 1907 Emil Hertzka (*b* Budapest, 3 Aug 1869; *d* Vienna, 9 May 1932) was appointed managing director of UE, with far-reaching consequences. Along with the senior editor Josef V. von Wöss Hertzka changed the firm's publishing policy, concentrating almost exclusively on new music. He presided over the most exciting years in UE's history and after his death Paul Stefan wrote: 'When the history of the music of our time is written, Hertzka's name will stand above all others as the great originator'. Alfred Kalmus joined the firm in 1909; he remained until his death in 1972, apart from the years 1923–5 when he established the Wiener Philharmonischer Verlag. Hans Heinsheimer joined in 1923 as head of the opera department, a post he held until 1938. Alfred Schlee (*b* Dresden, 19 Nov 1901; *d* Vienna, 16 Feb 1999) began working for the company in 1927.

Hertzka's successors were Hugo Winter and Kalmus, but the changing political climate drove Kalmus to leave Vienna in 1936, the year he established UE London, and in 1938 Winter was dismissed by the Nazis; Heinsheimer left Vienna on 11 March 1938, the day before the Anschluss. In 1940 all the shares in UE were acquired by Johannes Petschull (*b* Diez, 8 May 1901), who also worked as managing director of C.F. Peters during the war years. Alfred Schlee remained in Vienna throughout the war, maintaining such contact as was possible with UE composers and, in particular, helping Webern by employing him as arranger and reader. Schlee also made frequent trips to Switzerland during the war, usually to promote Webern's music and to acquire Rolf Liebermann and Frank Martin for UE. The rapid reconstruction of UE after the war owed much to the energetic initiatives of Schlee in Vienna and Kalmus in London. In 1949 the London branch became independent from Boosey & Hawkes under whose aegis it had operated during the war; on 5 June 1951 UE Vienna was re-established, with restoration of all the original shareholders' rights and three directors: Schlee, Kalmus and Ernst Hartmann. From that time UE, both in Vienna and London, once again established itself as the pre-eminent European publisher of modern music, a position which it maintains with authority to the present day. The remarkable achievement of UE was well described by Franz Schreker in 1926: 'It has not only encouraged and sponsored the modern music movement, it has founded it'. WIENER URTEXT EDITION was established by UE in succession to the Wiener Urtext Ausgabe, and European American Music was founded in New Jersey in 1977; both enterprises were jointly funded with Schott. In 1999 EAM changed operation to EAMDC joining forces with Warner in Miami.

2. PUBLICATIONS. UE's publisher's numbers are, in general, reliably chronological. The firm issued 400 titles in its first year of business (1901), passing the stated original target of 1000 titles in 1904 and reaching 3200 in the Spring 1911 supplement to the 1910 complete catalogue. The 1937 *Gesamt-Katalog* lists over 10,000 titles. The catalogue has continued to grow at a considerable rate since the war; by the time UE celebrated its 75th anniversary in 1976 the main numerical series had exceeded 15,000. In 1992 the firm began a new sequence of numbers beginning at 30,000.

In UE's early years, from 1901 to 1907, most of its publications were of the classics. Their editing and arranging was entrusted to some of Vienna's leading musicians, including Hellmesberger, Heuberger, Kienzl, Rosé, Schenker, Schoenberg and Zemlinsky. With the appointment of Hertzka as director in 1907 the policy of publishing new music became apparent almost at once: among the 'recent publications' listed in the 1910 catalogue are new works by Korngold, Mahler, Schoenberg, Schreker and Zemlinsky. Hertzka made contracts with many of the most important composers of the time, excepting Hindemith, Stravinsky, Prokofiev and the French school. The list of composers contracted to UE before 1938 is imposing: Bartók, Berg, Casella, Delius, Gál, Hába, Hauer, Janáček, Kodály, Krása, Krenek, Mahler, Malipiero, Novák, Schmidt, Schoenberg, Schreker, Schulhoff, Szymanowski, Webern, Weill, Weinberger, Wellesz and Zemlinsky, among many others.

With such composers as these it is hardly surprising that UE published many of the most significant works of the time. The firm's pre-war opera catalogue is particularly notable, including Bartók's *Bluebeard's Castle* (1922), Berg's *Wozzeck* (1926) and *Lulu* (1936), Max Brand's *Maschinist Hopkins* (1929), Gál's *Die heilige Ente* (1922), Janáček's *Jenůfa* (1917), *Mr Brouček's Excursions* (1919), *Kát'a Kabanová* (1922), *The Cunning Little Vixen* (1924), *The Makropulos Affair* (1926) and *From the House of the Dead* (1930), Kodály's *Háry János* (1929), Krenek's *Jonny spielt auf* (1926), Schoenberg's *Erwartung* and *Die glückliche Hand* (both 1916), Schreker's *Der ferne Klang* (1911, vocal score by Berg), Weill's *Dreigroschenoper* (1928) and *Aufstieg und Fall der Stadt Mahagonny* (1930), Weinberger's *Schwanda the Bagpiper* (1927) and

Zemlinsky's *Der Zwerg* (1921). In other genres UE's list before 1938 is scarcely less impressive, with Bartók's *The Miraculous Mandarin* (1927) and *Music for Strings, Percussion and Celesta* (1937), Berg's Violin Concerto (1936), Janáček's Sinfonietta (1927) and *Glagolitic Mass* (1928), Kodály's *Psalmus hungaricus* (1924), Mahler's *Das Lied von der Erde* (1911) and Ninth Symphony (1912), Schoenberg's *Gurre-lieder* (1912, vocal score by Berg), First Chamber Symphony (1912) and *Pierrot lunaire* (1914), Webern's Passacaglia op.1 (1922) and Zemlinsky's *Lyric Symphony* (1923).

From the time of the Anschluss on 12 March 1938 until the end of the war, UE's activities were much curtailed; nevertheless, several interesting works were issued by the firm. Only two serve as a grim reminder of the period – Franz Schmidt's posthumous work *Deutsche Auferstehung* (1940) and Josef Reiter's *Festgesang an den Führer des deutschen Volkes* (1938), a cantata in praise of Hitler. Important publications include Webern's *Das Augenlicht* (April 1938), Schmidt's *Das Buch mit sieben Siegeln* (1938), Wagner-Régeny's *Johanna Balk* (1941, vocal score by Webern), Schoeck's *Schloss Dürande* (1942, vocal score by Webern) and Frank Martin's *Le vin herbé* (1943), the first of his many works brought out by the firm. After the war UE published works by Berio, Boulez, Bussotti, Cerha, Dallapiccola, Einem, Cristóbal, Halffter, Haubenstock-Ramati, Kagel, Kurtág, Ligeti, Pärt, Pousseur, Rihm, Schnittke, Skalkottas, Stockhausen and Takemitsu. Among the most notable publications are Boulez's *Le marteau sans maître* (1955), Stockhausen's *Studie II* (1956, the first electronic music to be published), Ligeti's *Atmosphères* (1961), Kagel's Staatstheater (1967), Berio's *Sinfonia* (1972) and Pärt's *Fratres*. The younger generation of composers are represented by Georg Friedrich Haas, Furrer and Sotelo.

The firm has an established tradition of issuing periodicals. Much the most important of these was *Musikblätter des Anbruch* (1919–38; *Anbruch* from 1929), the leading journal of new music, with an inevitable bias towards UE composers. Other journals include *Pult und Taktstock* (1924–30; ed. E. Stein, 1924–7), *Musica divina* (1913–38), *Schrifttanz* (1928–31), the *Haydn Yearbook* (1962–75) and *Die Reihe* (1955–62). Since 1968, UE has been publishing the *Studien zur Wertungsforschung* (ed. O. Kolleritsch).

UE's book catalogue is also substantial, including Schoenberg's *Harmonielehre* (1911), Schenker's series of Beethoven analyses, Hauer's theoretical writings and Hába's *Harmonielehre* (1927). UE has also been active as a publisher of educational music: the *Rote Reihe*, started in the 1960s, is a comprehensive attempt to apply new educational methods to the teaching of avant-garde music.

From the start, most of UE's engraving and printing was done by R.v. Waldheim, Josef Eberle & Co. (later called Waldheim-Eberle). In 1960 however, UE purchased the Wiener Notenstecherei which serves as the firm's production department. UE London was founded by Alfred Kalmus on 1 July 1936 and publishes new music by such British and American composers as David Bedford, Bennett, Birtwistle, Earle Brown, Feldman, Finnissy, Simon Holt, Hoyland, Muldowney, Osborne, Patterson, Rands and Schafer.

UE London's 50th anniversary in 1986 saw the highly successful première of one of its most important publications, Birtwistle's *The Mask of Orpheus*. The three young composers in the UE London catalogue are David Sawer, Julian Yu and Jan Wilson. In 1999, Robert Thompson founded UE Inc. New York establishing relationships with composers such as Osvaldo Golijov and Gabriela Ortíz.

NIGEL SIMEONE

Universal Music Group. Multi-national recording and music publishing organization. Formed in 1996 and owned by the Canadian firm Seagram Company Ltd, Universal Music Group is one of the world's leading music companies, with record operations in 59 countries around the world. Among the company's record labels are A&M, DECCA, DEUTSCHE GRAMMOPHON, Geffen, GRP, MCA, MERCURY, Motown, PHILIPS, Polydor, Universal and VERVE. Universal Music Publishing Group, part of the Universal Music Group, is one of the industry's largest global music publishing operations. Its antecedents may be traced back to 1924 with the formation of the talent agency Music Corporation of America (MCA). In 1964 MCA Music Publishing began to take shape with the purchase of Leeds Music and Duchess Music. Over the next three decades, the division grew to include over 150,000 copyrights; and it represents, wholly or in part, nearly 200 publishers' imprints. Classical, popular and educational music titles are included in its catalogue. MCA was acquired by Matsushita Electric Industrial Company Ltd in 1991 and by Seagram Company Ltd in 1995.

MARK JACOBS/R

Universities. This article examines the history of the study of music at university level.

I. Middle Ages and Renaissance, to 1600

The word *universitas* in later medieval Latin meant any association of individuals and was not restricted to a 'university' in the modern sense. The history of the English term 'university' and its European cognates therefore shows how the organization of higher learning in the 12th and 13th centuries was shaped by the spread of sworn associations and professional corporations that is an outstanding feature of Western civilization in the Middle Ages and Renaissance. In considering these 'universities', the danger of anachronism is severe, hence the cardinal importance of proceeding cautiously in the early period, especially the decades from 1180 to 1230, which saw rise of Notre Dame polyphony; in the Western tradition this is the only musical development of epoch-making significance to have taken place in a university city.

The germinating cells of the universities were the masters (*magistri*). During the 'long' 12th century from 1090 to 1210, the period of the nascent universities, a *magister* was generally a person who had shown such aptitude at a secular school that his best choice of career, at least initially, was to become a schoolmaster himself. Because most of Latin Christendom experienced a phase of urban renewal and demographic increase after about 1050, a process that continued (albeit with less sudden energy) into the 16th century and beyond, the masters invariably based themselves in cities where a relatively abundant supply of money, sustenance and pupils was to be had. The master, in his urban school that was perhaps no more than a rented room, taught his pupils how to read Latin and to compose Latin verse; he also instilled in them some connoisseurship of classical and late antique texts such as the *De consolatione philosophiae* of Boethius. He might also extend his teaching to logic and dialectic. The evidence that some of these *magistri* composed polyphony appears early. The 'Codex Calixtinus' (12th century) contains a number of polyphonic pieces attributed in a slightly later hand to various *magistri*, including two items by 'Master Goslenus bishop of Soissons'. Goslenus became bishop in 1126, when he would have assumed the title *dominus*; if the attribution in the 'Codex Calixtinus' is trustworthy, the term *magister* may carry the date of composition back to the years around 1112 when Goslenus was a noted authority in Paris for his studies of speculative grammar and his opposition to Peter Abelard.

Such evidence is important for establishing the prehistory of the Notre Dame school of polyphonic music, but it reveals little about the formal study of music at Paris. Just as a *magister* of the Middle Ages and Renaissance might have a limited professional interest in the writings of Fathers such as Augustine – the texts that enflamed the monastic love of learning – so too he did not usually teach plainchant. If the master's classes touched upon music it was principally through the medium of revered texts such as the *De nuptiis Philologiae et Mercurii* of Martianus Capella or the *De musica* of Boethius. Numerous treatises on plainchant were composed in the 13th century, and indeed later, but Dyer (1990) has emphasized that they reveal only modest traces of the masters' fundamental technique of comparing the authoritative texts in their inheritance, posing questions (*quaestiones*) to explore the contradictions between them and then devising a *solutio* to resolve the question posed. (One author who did, Elias Salomon, showed by his eccentric manner and shaky Latin that he was far from being a *magister* in the sense described above.) The scholastic colouring is also light in most treatises on polyphony from the period before 1450 or so, and even in the most rigorously taxonomic and objective treatises, such as the *Regule* of Robert de Handlo, it is rarely to be found or does not appear at all. Certainly it is not to be confused with the use of a rigorous structure of argument and the use of Aristotelian conceptions such as 'proper' and 'accident' or 'species' and 'genus'; these were the common property of most men after about 1150 who had been educated to read and write Latin on technical subjects. Revealing evidence on this point is provided by a manual for arts students at Paris, compiled between 1230 and 1240–45 (now in *E-Bac*, Ripoll 109; facs. of section concerning music in Page, 1989, p.140). This mentions the set texts in arts and gives specimen questions and answers to be studied by candidates for examinations. The only set text for music is the *De musica* of Boethius, which remained among the fundamental materials for the university study of music until at least the 16th century. There is no evidence in this syllabus for the existence of 'university music texts' (Yudkin, 1990) other than Boethius, at least at this date.

Where early records still exist, exact musical requirements are often specified: at Prague (1367) 'ordinary (non-holiday) lectures on music were given as well as on arithmetic, geometry and astronomy'; at Vienna (1389) 'some books on music and some on arithmetic' was the requirement for bachelors seeking the licentiate; at Cologne (1398) a one-month study of 'music in two parts', perhaps consisting of theory and practice, was required; at Kraków (1400) aspirants to the *magisterium* heard music lectures for a month; and at Oxford (1431) 'music for the term of a year' was required of magisterial candidates.

The study of music as a liberal discipline was supplemented by other university activities such as academic exercises, masses and investitures, and there was also much informal singing, dancing and instrumental performance. Private music instruction was available to those who wanted it, and instruction was regularly given in choir schools connected with university foundations. The school of Notre Dame was allied to the university in Paris, as were St Stephen's, the Neckarschule and the Thomasschule to univeristies in Vienna, Heidelberg and Leipzig. Collges at Oxford and Cambridge provided for choristers to supply a constant flow of religious services, and some college statutes emphasized music. Thus Queen's College, Oxford, required chapel clerks skilled in plainchant and polyphony to instruct the choristers, and both New College and All Souls demanded musical proficiency of all their applicants.

Paris undoubtedly provided a congenial environment for men interested in music, and throughout the later Middle Ages and Renaissance other universities did the same, notably those at Padua, which provided the milieu for the works of Prosdocimus de Beldemandis, and Oxford, a city that was at least temporarily a home to Walter Odington. Well into the 15th century, however, the question of whether the composition and study of polyphonic music existed as an established university subject remains open in many cases. Palisca (1985) maintains that 'music early earned a place alongside the disciplines of the humanist curriculum in the main Italian

centres of learning' while judiciously admitting that the facts on which to base such a judgment are 'meagre' (p.8). The issue perhaps rests, in part, on what is meant by 'music' and 'musical studies'. For Johannes Gallicus of Namur (*d* 1473), who studied at the school founded by Vittorino da Feltre at the court of Gianfrancesco Gonzaga in Mantua in 1424, musical studies were conducted with the same textbook used by students in Paris two centuries earlier, namely 'the *Musica* of Boethius'. The retention of Boethius – even if he was read somewhat differently, as is surely the case – points to the essential issue. The fundamental requirement for a university subject in the Middle Ages and Renaissance was that its material should be sensed as a universal. The emergence of the university at Bologna, one of the earliest in Europe, is intimately connected with the rediscovery of Roman law and its gradual dissemination throughout western Europe. Theology and medicine, the two other subjects studied in the Higher Faculties, may be spoken of in similar terms, especially in relation to Paris, Salerno and Montpellier. Until the mid-15th century at the earliest, polyphonic music could not readily be regarded in this light because there was no central musical language for polyphonic composition. The rise of 'music' to become a 'university subject', in something like the sense in which these terms are now understood, is linked to the process, chronicled by Strohm (1993), whereby a common language of polyphony emerged in Europe during the period 1380–1500. Music degrees were instituted at Cambridge, and probably at Oxford, in the mid-15th century; it has been claimed that a 'chair of music' existed at Salamanca much earlier and a chair was endowed at Bologna in 1450. Such evidence may easily be multiplied, and it has often been assembled, notably by Carpenter (1958). As Strohm has emphasized, it reveals that the generation of 1450–90 provided the men who 'began creatively to engage in the development of the art' as university teachers (p.293).

During the early Renaissance, university music instruction continued to follow a medieval pattern. *Musica speculativa* was still an essential part of the Quadrivium, and practical musical skills were cultivated in collegiate foundations. Universities established during this period, such as Leuven, Basle and Wittenberg, insisted on musical requirements similar to those of older institutions. Although music taught as a science was gradually allied with physics, it continued to be emphasized as a separate art. The linking of music to humanistic studies, partaicularly Greek and Latin literature, was characteristic of the Renaissance period. At Paris, which was strongly conservative, music remained a mathematical science until the end of the 16th century when it became part of physics, and treatises by mathematicians such as Oronce Finé, the first professor of mathematics in the Collège de France, emphasize this connection. At Prague, knowledge of Johannes de Muris's *Musica*, a traditional requirement, was not insisted on after 1528, and in Germany it was not demanded after the mid-century, when *musica speculativa* became part of physics. In German universities a number of eminent theorists and composers (including Cochlaeus, Listenius, Glarean and Ornithoparchus) with an interest in contemporary music taught either publicly on a university stipend or privately.

The association of musical studies with classical poetry was strong during the Renaissance. The Collegium Poetarum et Mathematicorum, established in Vienna

Students attending a lecture on the theory of music: woodcut from F. Gaffurius, 'De harmonia musicorum' (1518)

early in the 16th century under Conradus Celtes, became important for the cultivation of choral ode settings. At the Collège de Coqueret in Paris, Jean Dorat, professor of Greek and the teacher of Pierre de Ronsard, sang Greek poetry to a lute accompaniment and investigated Greek theories of the emotional powers of music; similar examinations were the main concert of the Pléiade and Baïf's Académie de Poésie et de Musique. Several poets held the chair of music at Salamanca in the 16th century, among them Juan del Encina. Wimpheling's *Stylpho*, the earliest of all humanistic *Schuldramen* to incorporate ode settings, was performed at Heidelberg; and at Uppsala the musician appointed to teach singing was even called *professor poeteos et musices*.

English universities were unique in awarding degrees in music, although they did not maintain staff, and candidates learnt music privately. At Cambridge in 1464 Henry Abyndon, the earliest recorded recipient of an English music degree, became MusB and later that year received the MusD. The earliest recorded BMus at Oxford was Henry Parker, eminent 'for his Compositions in Vocal and Instrumental Musick', who received the degree in 1502, though in the same year Robert Wydow of Oxford was incorporated MusB at Cambridge, and must therefore have taken the degree earlier. The earliest known recipient of the Oxford DMus is Fayrfax, who was incorporated from Cambridge in 1511. During the century, many important English musicians obtained degrees from one or both of these universities. Degree requirements were perhaps stricter at Cambridge, where proof of theoretical and practical experience was required. Even Tye had to prove, before 'incepting', that he had spent many years studying and practising music beyond the MusB and to compose a mass to be sung at commencement. Oxford awarded honorary degrees in music: Heyther, for example, received both BMus and DMus at the same time; Orlando Gibbons, who composed Heyther's commencement anthem, was created DMus 'to accompany Dr Heather'. Late 16th-century statutes of both Oxford and Cambridge list numerous fees imposed on music candidates who ranked with candidates in the higher faulties of law, medicine and theology.

Unlike their counterparts in Germany, France and England the Italian universities played only a modest part

in music teaching during the Renaissance. The only certain example of a chair of music at an Italian university during the early part of the period is that held by Gaffurius at Pavia in the 1490s, which Kristeller believed to have been granted to him as a special favour by Lodovico Sforza. Of course there was a good deal of private instruction given in university institutions, such as that of Ramos de Pareia in Bologna, but the main centres of music education in Italy throughout the 15th and 16th centuries remained the cathedrals and courts.

II. 1600–1945

This period falls into two segments: 1600–1750, when the learned study of music shifted away from *musica speculativa* towards artistic or practical concerns; and 1750–1945, which brought the rise of studies in music history, professorial appointments and a growing role for universities within public musical life. One might see a dichotomy between a practical interest in music in Britain and a more scholarly one in Germany, but the two leading countries in this history differed less than might appear.

1. 1600–1750. 2. Towards the modern university.

1. 1600–1750. Five areas need to be considered: curriculum, professional posts, ceremonies, musical life and intellectual life. Music played a small role in university curricula at least until the early 19th century. That was also true of other comparable subjects (art and literature, for example); the universities served basically law, medicine and the church, and to some extent mathematics, and attending it was not expected of a young man of means. Music was taught instead in the church, in the home and in the musician's studio; it had its own university, one might say, in the great cathedrals and courtly establishments.

Yet music played an important part in the ceremonies of many universities, either their religious rites or the acts where degrees were bestowed. The anniversary of a university's founding was usually honoured with an imposing musical performance. The heads of university choirs tended to be high-level musicians who linked academic and civic, religious and musical institutions. Performers came and went from other areas of a university; a choirboy would go on to a professional school but came back to sing in the collegium musicum. Law or jurisprudence seems to have a particularly close relationship to music: Handel and Forkel are two of many musicians who spent their early years in that discipline, and the directing board of the Leipzig Gewandhaus concerts always had at least one faculty member from it.

A rich world of private and public activities played a central part in the social life of most university communities. As Thomas Mace put it (*Musick's Monument*, 1676), 'our University of Cambridge . . . [is] the home of eminent Performances upon the lute by divers very worthy Persons', and the subscription list for his book included 150 names from the university. In most places there existed a private music society; Franz Uffenbach said of his visit to Cambridge in 1710, at the one meeting weekly in Christ's College, 'there are no professional musicians there but simply bachelors, masters and doctors of music who perform . . . till 11 at night'. Social and intellectual tendencies flowed together: Milton, the son of a musician who studied at Cambridge, 1625–32, wrote his first essay on the music of the spheres.

Differences between the two major confessions brought about major differences in the roles that music played in universities. In Catholic areas those responsible for teaching music could not presume to determine what sort of music was appropriate for the church. University chapels therefore remained limited to a devotional function; in France and Italy particularly the universities played limited roles in musical life after the middle of the 17th century. In Protestant areas, however, the study of practical music entered the university out of the need to understand how *cantus ecclesiasticus*, the music of the

divine service, should properly be accomplished. The Lutheran and Anglican churches allowed the greatest latitude to the highly learned musicians found in university institutions, giving them special opportunities for leadership and innovation. A.H. Francke (*d* 1727), for example, Rektor of the influential Friedrichs-Universität in Halle, became the spokesman for the new pietistic role of sacred music that harnessed expressive power to serve an ascetic, pious religious life.

The most important early establishment of a university post for a practising musician occurred through the gift of William Heyther to Oxford University shortly before he died in 1627. A lay vicar of Westminster Abbey and a Gentleman of the Chapel Royal, he brought the position about through the agency of William Camden, headmaster of Westminster School, who himself endowed what came to be the Camden Chair of Ancient History. Initially, Heyther dictated that there be a master and a lecturer of music. Whereas the former became a permanent post in Oxford musical life called the Music Professor, the latter became a single annual presentation by a succession of speakers. The outcome indicates how practical rather than theoretical music became recognized the more firmly.

Oxford served as the principal centre from which interest in earlier (or 'ancient') music developed. While this activity was not considered in very theoretical terms until the late 18th century, the musical life surrounding the university can be credited for helping establish the first set of notions and practices definably 'canonic'. Henry Aldrich (1648–1710), dean of Christ Church and a major figure in religious disputes, held regular meetings of musicians and interested people in his rooms to perform such music. Similarly, Thomas Tudway wrote an early example of music history – prefaces to a collection of sacred works he made for Robert Harley – while resident in Cambridge. Moreover, the professors of music tended to be men of some learning who took a close interest in the development of a music library and, it would seem, informally educated students in the historical progress of music as they saw it. The most prominent such professor in the 18th century, the elder William Hayes, demonstrated an unusually wide historical knowledge in his *Remarks on Mr. Avison's Essay on Musical Expression* (1753). William Crotch gave formal lectures, both in Oxford and London, and published his *Substance of Several Courses of Lectures on Music* in 1831.

On the Continent, musical posts did not rank as high as they did in England; the designation of a *professor musices* in Basle, Samuel Mareschall, in the 1570s, was unusual. But many universities, especially those in Protestant areas, appointed a director of musical activities who became an important figure in the university and also the town. Such a person was appointed as *director musices* in Uppsala in 1687, and *ordinaris musicant* in Leiden in 1693, to supervise what were called the collegia musica. In Leipzig a special arrangement developed by which the Kantor of the Thomaskirche also took charge of university music, which formed a regular part of J.S. Bach's duties.

As was the case in the Middle Ages, universities were not discrete institutions but in reality a collection of different and separate academic units, some of an entrepreneurial nature. Thus music schools and humanistic academies developed where singing and playing might be studied and compositions performed. A notable academy of this sort, the Accademia de' Dissonanti, was established at Modena by Duke Francesco II d'Este about 1683, in close conjunction with the founding of the University of Modena. Among the compositions written for it were several cantatas by G.B. Vitali. Such musical activities generally flourished only in proximity to a university. By the same token, from the 16th century onwards, at many universities dancing-masters were appointed who in effect started small schools of their own. This was particularly common in Germany; the dancing-master would instruct students in the *ars saltatoria* in order to develop them as what was called 'qualificierte Menschen'. Around 1700 there were six such masters at the University of Leipzig, who also gave instruction in French and Italian, acrobatics and manners.

Just as musical activities interpenetrated the universities' social life, so the intellectual dimensions of musical culture were interwoven within the learned disciplines discussed though not necessarily taught there. What is important is less what was supposedly taught – always a difficult matter to determine – but how members of a university and the many people who passed through these cosmopolitan towns mingled musical topics within other kinds of study in informal discussion and writing.

Between the early 16th century and the early 19th there was a fundamental transformation in the role that music played within Western musical life, and the result was to bring it much more closely into university teaching and writing. What limited the role of music within the universities' intellectual life before the mid-18th century was that few amateurs mastered the rigours of learned composition, the sacred and academic polyphony taught in the cathedrals. Music was further limited by the absence of a corpus of great works from antiquity, such as was regarded as the starting-point for a learned discipline and a pantheon of great works.

Indeed, the tradition of scientific and philosophical study of music in theoretical terms lasted in some respects to the end of the 18th century. While the writings of Boethius were no longer closely involved in musical thinking or pedagogy by the middle of the 16th century, they remained at least to be mentioned as pertinent to courses of study in many places. Scientific thinkers in 17th-century Cambridge (Isaac Newton among them) continued to apply astrological notions to musical tuning even though that subject was no longer closely linked to ideas about the harmony of the spheres. Rameau clung to some such ideas. But at the same time, by 1600 music took a prominent place within the newer areas of discourse in the universities. Even though Mersenne was not based in a university, his thinking on *musica poetica* was read and discussed there; by the end of the 18th century such ideas evolved into musical aesthetics. In such a fashion, musical learning became reorientated from metaphysical science to the humanistic arts.

In a concrete sense, the history of music in the university is the study of the history of music theory found in musical treatises. If the medieval *musica speculativa*, the glossing of texts by Boethius or Ptolemy, had only a slight connection to the study of psalmody or secular song, by the end of the Renaissance *musica pratica* meant theoretical discussion of harmony and counterpoint and their application to composition. Other treatises explained all areas of practical music, from music for dinner or dancing in the halls to the more refined sorts of song. The vast

majority of treatises can be directly or indirectly linked to a university environment, where they were copied or read by succeeding generations of students and other transients. The challenge to the historian is to determine to what extent treatises actually constituted part of the learning process of the university: did they merely grow out of the university environment, or were they actual texts of lectures given in the Faculty of Arts? Since learning the Quadrivium had never taken deep root in the universities of eastern Europe, practical music was much more important within musical pedagogy there than further west. While treatises written in France or Italy rarely included examples of known, composed pieces, those east of the Elbe usually included many, in some cases works not found in western collections.

2. Towards the modern university. The rapid growth of public musical life during the 18th century gave a strong stimulus to university musical activities and eventually its curriculum. After about 1750, concerts and ceremonies at many universities came to form part of the larger musical world. In Cambridge the Installation of the Vice-Chancellor had always been a major musical event, but by 1749 the one for the Duke of Newcastle was described as 'a great musical crash . . . which was greatly admired'. By 1811 the one for the Duke of Gloucester involved diverse concerts and audiences of 2000 people.

Oxford had participated centrally in the rise of public concerts, since events of that nature were held in public houses during the Commonwealth. But after the erection, under Hayes's direction, of the Holywell Music Room, which opened in 1748, the city became second only to London in concert life, partly because the new toll roads made it easy for major performers to go there from London. All authority over public events was vested in the Vice-Chancellor of the University, and the Musical Society was ultimately a creature of university life, its directing committee consisting of representatives from each college, usually a 'Fellow, Scholar, Exhibitioner, or Chaplain' (the Articles of 1757). The society provided music and associated concerts for Commemoration, the Acts and the openings of new buildings.

The awarding of the MusB and the MusD changed fundamentally in meaning in the middle of the 19th century. This formed part of the formalization of teaching and expansion of research activities within universities throughout the Western world. During the 17th and 18th centuries the music degrees at the two long-established English universities had served as honorary degrees for musicians thought of particular distinction, with the requirement only that they compose a work for the occasion. In Oxford, Frederick Ouseley, professor from 1855 to 1889, began a long process of designing taught degrees in music, instituting residence requirements and examinations not only in music but also in mathematics, Latin and Greek. Examining boards led to a more formal structure of a music department. Students from other institutions, including conservatories, received degrees under the aegis of the university. At Cambridge, William Sterndale Bennett played a similar role in reforming degree requirements while serving as professor of music between 1856 and 1875. The number of awards of the MusB there grew from 12 in 1800–40 to 44 in 1875–1900. It is also clear that the undergraduate often had much to do with musical life. The letters of John Addington Symonds during his years in Oxford (1857–64) show an intense fascination with works by Beethoven, Mozart and Rossini that was to play an important part in his later writings within the Decadent movement.

The universities contributed significantly to new movements in musical life. The Musical Antiquarian Society was set up in Cambridge in 1840, bringing concerts and the reconstruction of old instruments. The Folk Music Society was founded there in 1898. Charles Villiers Stanford brought Cambridge into close touch with new tendencies in both foreign music and British music as conductor of the Cambridge University Music Society and professor from 1887 to 1924. The dawning of the special role that universities played in new music during the 20th century can be seen in the fact that the distinguished pianist Harold Bauer offered an unusual number of recent works, chiefly by Debussy and Ravel, when he visited Cambridge or Oxford.

The entrance of music into university curricula formed part of a much wider integration of musical thinking into intellectual life as a whole. The neo-classicism of the 18th century permitted a new variety of principles, by which music of the 16th century was now termed 'ancient' music, such as would have seemed foolish a century before. Public musical events and periodicals for general readership stimulated each other: columns of news on concerts and the opera became standard by 1800. In Britain and German-speaking countries members of universities were closely involved in the new musical press, from William Hayes in Oxford to J.N. Forkel in Leipzig.

Almost all the newer British universities made appointments in music by the early 20th century. One had been made in 1764 at Trinity College, Dublin (the Earl of Mornington); there followed Edinburgh in 1839, Aberystwyth in 1872, Durham in 1890, London in 1902, Birmingham a few years later and Glasgow in 1930.

That the same was not true in France indicates how deeply and how long it remained divided over religious matters, and how much that limited the role of music in the universities. The Sorbonne had a relationship each with Notre Dame Cathedral and the Sainte-Chapelle for ceremonies, and during the 18th century there existed a music director for such events. But music did not play an important role in its rituals, nor within its intellectual life. Only at the end of the 19th century did musical writings begin to come out of that university. During the 1890s and early 1900s the doctorat ès lettres was awarded for theses on musical topics to Romain Rolland, Louis Laloy and Jules Comparieu, through the Ecole des Hautes Etudes, a professional school closely linked to the university. In 1896 Lionel Dauriac began lecturing on musical aesthetics, and some 15 years later André Pirro became *chargé de cours* for the history of music, offering two different certificates. But the scholarly study of music history remained almost entirely in the Conservatoire, in the Schola Cantorum and among private individuals until after World War II.

German universities led the world in the modernization of programmes: since most had maintained neutrality in confessional identity since the Reformation, they were unusually open to innovation and leadership. Music directors took on specially high status in the academic hierarchy, both conducting ensembles and lecturing on music theory and history. The two most important early figures were Forkel in Göttingen and D.G. Türk in Halle;

after both were appointed in 1779, Forkel was honoured as *Magister ohne Examen und umsonst* in 1787 and Türk was named professor in 1808. A series of other German universities followed suit: F.J. Fröhlich in Würzburg (1811), F.S. Gassner in Giessen (1818), H.C. Breidenstein in Bonn (1826) and A.B. Marx in Berlin (1830). Many were active in musical life as writers and critics as well as performers; Forkel, for example, published a series of almanacs on musical events. Their salaries were nonetheless usually less than half that of a professor, requiring them to continue activity outside the university.

Careers devoted to music history emerged out of those followed by music directors, a process that took over 100 years. Forkel, regarded as the founder of music history as a scholarly discipline, mixed theoretical, practical and historical topics in his lectures; specialized historical study was not established until the end of the 19th century. Among the most important milestones were the bestowal of the first doctorate of philosophy for a musical topic (*Über das Schöne in der Musik*) to Briedenthal in Giessen in 1821, and the award of the Ordinariat to Eduard Hanslick in Vienna in 1870, Gustav Jacobsthal in Strasbourg in 1897 and Hermann Kretzschmar in Berlin in 1904. The grounds for legitimization of the profession changed from period to period, from a humanistic idea of the whole person made by Marx (who had to remain Professor Extraordinarius) to a scientific one by the end of the century. In the process, lines were drawn between preparation of scholars, performers and teachers: the purer kind of scholar emerged in the careers of Oesterley, Nohl, A.W. Ambros and Spitta. During the first half of the 20th century, music history dominated most schools of music in universities, and the study of performance increasingly shifted into the conservatories (now called 'Hochschulen').

The training of musicians and teachers entered the Scandinavian universities more centrally than was the case in Germany. The first professors were appointed in 1918 in Helsinki, in 1926 in Turku and Copenhagen and in 1947 in Uppsala. In the Netherlands and Belgium practices followed the German example more closely, with appointments in Brussels in 1931, Utrecht in 1934 and Amsterdam in 1953.

In the USA, the first university musical activities were performing societies of a convivial nature, usually not officially recognized by the institutions. At Harvard the Pierian Sodality (1808) and the Glee Club (1858) performed both vocal and instrumental music and gradually shifted to giving public concerts. The Glee Club grew out of the appointment of a choir director for the university chapel and obtained its own head, Archibald T. Davison, in 1912. John Knowles Paine built up the music department as the first professor of music between 1875 and 1906, and the first doctorate was granted in 1905.

Music grew up within Yale University largely under the beneficence of graduates, chiefly from the Battell family, who gave funds for instruction and performing groups. In 1854 Gustave Stoeckel, an émigré from Kaiserlauten, was engaged to teach students without offering credit. The Bachelor of Music degree was introduced in 1893, 'for the study of the Science by students already proficient in the elements of it'. The first faculty members were the prominent organist and composer Horatio Parker and Samuel Simons Sanford, an accomplished pianist from a wealthy Bridgeport family, who served without pay as Professor of Applied Music from 1894 to 1910. As was the case at the University of Michigan, American universities developed active music programmes but did not attempt to train performers in this period. Other early programmes included the University of Michigan in Ann Arbor and Northwestern University in Evanston, Illinois; the first chair of musicology in the USA came with the appointment of Otto Kinkeldey at Cornell University in Ithaca, New York, in 1930.

III. After 1945

1. France. 2. Germany. 3. Italy. 4. The USA. 5. Britain.

1. FRANCE. Between 1945 and 1968 music was entirely absent from the curricula of French universities. Musicology was taught in only three: Strasbourg (from 1872), Paris (from 1903) and Poitiers (from 1961). It was a subsidiary subject, to be studied as an adjunct to education in another discipline such as history or literature. The one major innovation during this period was the creation of a first postgraduate doctorate, the *doctorat de 3e cycle*, in 1958. This new diploma, requiring a shorter thesis than those submitted for the full doctoral degree (the *doctorat d'Etat* or *doctorat ès lettres* still essential for candidates applying for positions as university teachers), prompted a sharp rise in the numbers of submitted theses on musicological subjects, from about five a year in the 1960s to about 15 a year in the 70s.

Reforms instituted in 1969 progressively introduced music into university studies on a par (at least in principle) with other disciplines in the humanities. The primary motive was to bring the training of secondary-school teachers of music and the plastic arts into line with that of teachers in other subjects. (Until 1968 music and art teachers qualified at teachers' training centres outside the universities.) As a result, musicology became a possible choice of special subject in a complete university course in music, and for the first time universities would offer posts to musicologists. The reforms took place in the context of a wider series of changes manifested in the founding of more universities, and particularly in the splitting of the University of Paris into smaller units. Since 1969 Paris *intra muros* (within the city) has had seven universities, four of which (Paris I, Paris III, Paris IV and Paris V) have part of their premises at the Sorbonne, the prestigious site of the old Faculty of Letters. Six more universities in the suburbs, Paris VIII to Paris XIII, were added to these seven. In 1969 Paris IV and Paris VIII were authorized to provide music teaching; a year later Aix-en-Provence in association with Marseilles I, Tours in association with Poitiers, and Strasbourg II also introduced the new subject.

In 1984, the French system of doctoral studies was simplified in order to facilitate mobility among researchers and make it more like the system in other countries (notably Germany, the UK and the USA). A single doctoral degree was introduced, and training in research, previously almost non-existent, is now conducted within a doctoral training group. The first year of doctoral studies leads to a *diplôme d'études approfondies* (diploma in further studies; DEA), which recognizes both theoretical and methodological training, and introduces basic research techniques. The recommended period spent writing the post-DEA thesis is two to four years. The old 'main' thesis for the degree of *doctorat d'Etat* has been replaced by an *habilitation à diriger des recherches* (authorization to supervise research work; HDR), which is required of anyone applying for a position as a university professor.

In 1999 music was being taught in 20 of the 85 French universities. While there is considerable variation in curricula, all universities are obliged to prepare students for national diplomas, and the content of these studies is set by the government. (The advantage of this system is that students can begin their studies at one university and continue them at another.) The teaching covers aural training, composition, practical music (singing as well as instrumental performance), criticism and analysis, music history and acoustics; part of the course is usually set aside for non-musical subjects (such as literature, the other arts or languages), and part remains free for options chosen by the university or the student. The first two years of study lead to a *diplôme universitaire d'études générales* (DEUG), and the third year leads to the first degree, after which the student has two options: either to take the high-level competitive examination to recruit secondary-school teachers, or to spend a year working for a master's degree, which usually involves more intensive work and sometimes original research (candidates applying to study for the doctoral DEA must hold a master's degree). Of the 20 universities teaching music, only 13 prepare students for the master's degree, and there are only eight centres for doctoral training in music and/or musicology.

The French system is unusual in attempting to combine music and musicology on the basis of a three-year common-core curriculum. This approach has its advantages but is not without drawbacks, the most serious being the growing predominance of technical studies (solfeggio, harmony, analysis and theory) over intellectual studies (notably in music history). Increasingly, the main objective seems to be to train secondary-school teachers, and research (a field in which there are admittedly fewer openings) is rarely given priority.

See also MUSICOLOGY, §III, 1.

2. GERMANY. After World War II, institutes of musicology with the right to award the PhD (in some cases called 'seminaries') were built up again in German universities, in their traditional place within the philosophy faculty. Some new universities, mostly created in the 1960s (Bochum, Kassel, Oldenburg etc.), also acquired musicological institutes, and others were attached to Staatliche Musikhochschulen – colleges of music responsible for training in musical performance and for the teaching profession (Berlin, Hanover, Frankfurt, Cologne, Düsseldorf etc.; *see* CONSERVATORIES, §IV). Ideals deriving from Wilhelm Humboldt's views on university education provided guiding principles: the education of a cultured personality rather than vocational training; freedom to change one's place of study (*academische Freiheit*); and the interdependence of research and teaching. The only condition of entrance to university was, and still is, the attainment of the higher school-leaving certificate, or 'Abitur'. For over two decades after 1945 the doctorate was still the only degree awarded. As numbers of students grew, especially during the 1970s, the MA degree was established, both to determine whether the student was suited for the PhD and to provide a new finishing qualification. For many years there was no BA degree; a continuing rise in student numbers at the end of the 20th century, however, brought the realization that not all can or wish to profit from the lengthy MA course. The economic burden of long years of study also forced a consideration of the BA, and, in a few cases, its actual introduction.

German students study two or three subjects for the MA, of which musicology may be the principal or a subsidiary subject. (In the German Democratic Republic, 1949–89, it was also possible to take a diploma in musicology without subsidiary subjects.) The general pattern of study is now that of about four semesters (two years) up to an intermediate examination (the Zwischenprüfung, a relatively recent development), and about six

more semesters until the MA examination. If musicology is the principal subject, a short thesis is submitted. Students are free to choose both the time when they will be examined and their examiners (another aspect of *academische Freiheit*), although guidelines about the length of time of study are becoming more rigidly enforced. Courses are therefore divided generally into those suitable for study either before or after the intermediate examination, but there is no division into first-year or second-year courses. After the MA, students may proceed to the PhD (Promotion). An extra qualification, however, the Habilitation (sometimes thought of as a second doctorate), is required before a professorship may be taken up.

German musicological institutes are strongly hierarchical, usually with two professorships (three or four in a few large universities) and one assistant on a limited-term contract, who will typically be completing the Habilitation or seeking a professorship. Almost all other courses will be given by part-time teachers. The competition for professorships, even after the long and arduous road to the Habilitation and beyond, is correspondingly intense. It has resulted in a relatively narrow, élite stratum of scholars, of considerable social prestige (and civil-servant status), many of whom will be directing research and editorial projects. Below this level, however, posts are neither plentiful nor secure nor well paid. Posts equivalent to, say, that of the British lecturer do not exist.

There is great variation in the size of music departments. Some have only a handful of graduates in a year, others several dozen. The actual number of students enrolled ranges from 50 or fewer to several hundred (the extra teaching load in bigger departments is taken up by part-time teachers, while professors remain in charge of examining).

Professorships have traditionally been held by music historians covering complementary periods of music history. In the 1970s pressure gradually mounted for more attention to be paid to the different branches of systematic musicology (such as acoustics, music psychology and sociology). Despite the obstacles inherent in the system to changing the orientation of a professorship, or creating a new one, posts in systematic musicology were established in some larger universities (e.g. Cologne, Hamburg). A few professorships in ethnomusicology also exist.

With some variation depending on the make-up of the teaching staff, German students will study mainly music history, with little or no systematic musicology. Such areas as jazz and popular musics are also rarely represented. Harmony, counterpoint, score reading and so on are commonly taught in the early stages of study. Musical analysis as a more highly developed discipline has been slow to establish itself. To some extent this reflects the distinction still maintained between 'education' and 'training'. (In those universities with teacher-training departments, the teaching of some musical skills may be shared between the musicology and music education departments.) Musical performance as an element in degree courses is practically unknown, although universities usually support an orchestra, choir and other ensembles open to members of all faculties.

Lists of the main lectures and seminars held at musicological institutes in Germany, Austria and Switzerland are published twice annually in *Die Musikforschung* (in many respects the organization and curricula of Austrian and Swiss universities resemble the German pattern). Whereas in the 1950s there were musicological institutes at 17 universities in West Germany and West Berlin, this number had doubled by the end of the 1970s. In East Germany, with initially five university institutes, the twin pillars of research and teaching were sundered, many musicology departments being closed or reduced to servicing teacher-training, while research was concentrated in special institutes outside the university system. The Gesellschaft für Musikforschung, founded in 1948, remained common to the two Germanies until 1968, when East German members were obliged to resign and join the Kommission für Musikwissenschaft des Komponistenverbandes. After the reunification of Germany in 1989, university institutes in the former German Democratic Republic were integrated into a unified system. In the late 1990s there were over 40, with seven comparable institutes in Austria and four in Switzerland.

The challenge of rebuilding the edifice of German musicology after 1945 was met by outstandingly gifted scholars, who were able to launch such landmarks in the history of the discipline as the encyclopedia *Die Musik in Geschichte und Gegenwart* (ed. Friedrich Blume), new complete editions of several composers' works and other monumental series. In retrospect, the institutional environment for these achievements appears to have been propitious. In the last quarter of the 20th century, however, several factors made it difficult to pursue the traditional goals as single-mindedly as in the first two decades after the war. The intellectual upheaval at the end of the 1960s questioned the concentration of musicology on historical and philological research. Alongside the great expansion in the potential scope of the discipline itself, student numbers increased inexorably, making traditional patterns of study and teaching impracticable. The need to coordinate courses at a European level also became important. All these factors will presumably lead to changes in the way musicological institutes function in Germany in the future.

See also MUSICOLOGY, §III, 4.

3. ITALY. Apart from a few private universities, none of which offers courses in music, the Italian university system is public and was formerly organized nationally, initially under the control of the Ministry of Public Education and then (from 1989) under the Ministry of the University and Scientific and Technological Research.) Entrance to university before World War II was restricted to graduates of an accredited classical lyceum who passed a national exam; after the war this requirement was gradually relaxed and entrance is now open to all who complete any accredited secondary school curriculum. By the late 1990s the number of universities had risen to 69, with a teaching staff of 49,000, an administrative staff of 58,000 and 1,700,000 students.

The University of Turin offered a course in music history as early as 1925. The first chair of music was established at the University of Florence in 1941 (it was eliminated in 1953), the second at the University of Rome in 1957; among those who campaigned for music courses were Raffaello Monterosso and Giuseppe Vecchi, as well as Diego Carpitella. Until the 1970s most universities recruited untenured teachers on a yearly basis. An important university reform law of 1978 established the tenured categories of full professor (*professore ordinario*),

associate professor (*professore associato*) and researcher (*ricercatore*). At the same time music history, which previously had generally been taught within an institute of art history or Italian literature, was grouped with related disciplines in departments of the arts or performing arts.

By 1998 music history was being taught at some 30 Italian universities. Other courses (musical dramaturgy, musical philology, paleography, ethnomusicology, history of theory etc.) may also be offered, but only a few universities regularly teach several music subjects. Those granting degrees in musicology are the universities of Pavia at Cremona (since 1952), Bologna (1970), Macerata at Fermo (1989) and Cosenza (1990). Universities do not offer practical training in music – this is left to CONSERVATORIES – and even university choirs are rare.

The student of music at a university usually pursues a liberal arts degree; the 21 exams (which may have a written part but, by law, must also contain an oral part) cover the music subjects available at the particular university, as well as a selection of other liberal arts subjects. A degree related to preserving Italy's artistic heritage was instituted in the 1990s, but it only occasionally includes courses concerned with music. All university students must write a final thesis: given the availability in Italy of primary sources, this is most often based on original research and may be on the level of a PhD dissertation. In 1999 a government proposal was passed which would reduce university courses to three years (without thesis), followed by an optional two-year course (with thesis); specialization, for instance in education, would entail a two-year course.

An advanced degree called Dottorato di Ricerca was instituted in 1978 and is available only at universities which specifically request it from the government. Until 1998 students could take part in the advanced degree only if they passed an entrance examination and obtained one of the few government grants. In the future, however, it is expected that each university will award its own grants. In music, in order to provide more courses and facilities, groups of two or more universities have offered Dottorato di Ricerca programmes jointly, with administrative seats established at Bologna in 1983, Pavia at Cremona in 1987 and Rome in 1991.

Faculty openings are filled by public competition, held at the government's discretion. Because such competitions have been infrequent, university music careers in Italy have been largely stagnant. A new system of competition, however, was implemented in 1999, resulting in a marked increase in the number of full and associate professors. In 1993 the Associazione fra Docenti Universitari Italiani di Musica was founded to promote discussions with the government; in 2000 it had 103 members, with F. Della Seta as president.

See also MUSICOLOGY, §III, 2.

4. THE USA. Most colleges and universities in the USA, unlike their European counterparts, offer both academic and applied studies in music. Since 1945 many universities have established schools of music combining both types of study; among the larger schools are those of Indiana University and the universities of Michigan, Illinois and Texas. Such schools typically have much larger faculties and student bodies than academic departments of music. The department usually forms part of a school of arts and sciences, and its chair reports to the dean or director of the school. A school of music has more autonomy than a department, and its administrator reports to a higher level, usually the provost of the university. Most departments of music in colleges and most schools of music in universities offer both academic and applied instruction in music. Some departments, such as those at Harvard, Princeton and Columbia universities, maintain the European approach of excluding applied music but include instruction in composition (*see also* CONSERVATORIES, §IV).

Undergraduates typically choose a 'music major' leading to the Bachelor of Arts (BA), Bachelor of Music (BM) or Bachelor of Music Education (BME) degree (the labels for these degrees vary: some institutions, for example, award the Bachelor of Fine Arts or Bachelor of Science in Music). In general the BA places more emphasis on the liberal arts and less on musical performance and composition than the BM; the BME prepares students to teach music in secondary schools. All three programmes include courses in the history and theory of music. Colleges and universities also offer numerous courses in music appreciation, music history, music literature and music theory for undergraduates not specializing in music.

At the graduate level students may work towards the Master of Arts (MA, an academic degree) or master's degrees in music performance or education. Master's degrees usually take one to two years to complete. Qualified students may then proceed to the Doctor of Philosophy (PhD) in musicology, ethnomusicology or music theory. Schools of music usually offer the Doctor of Musical Arts (DMA) in performance. The doctorate in music education (DME) is most often administered by schools of education rather than departments or schools of music. Schools of music typically offer advanced degrees not only in applied music but also in academic studies, culminating in the PhD. Yale University is unusual in its inclusion of both a department of music for academic studies and a school of music for applied studies.

The range of academic courses offered in music for both undergraduate and graduate students has expanded greatly since 1945. An important impetus was the arrival in the USA during the late 1930s and 40s of numerous European musicologists, mostly German and Austrian, who fled the Nazi regime; among them were Alfred Einstein, Karl Geiringer, Otto Gombosi, Hugo Leichtentritt, Edward Lowinsky, Paul Nettl, Curt Sachs, Leo Schrade, Eric Werner and Emanuel Winternitz. Two disciples of Heinrich Schenker, Oswald Jonas and Felix Salzer, exerted a significant influence on music analysis.

In the years immediately following World War II undergraduate music-major courses consisted mainly of surveys of music history, courses in the music of specific composers and historical periods, and various theory courses. Musicological study at the graduate level was mostly historical, with special emphasis on medieval and Renaissance studies. In the mid-1960s, graduate schools began to pay more attention to later historical periods, although traditional musicological methods continued to be applied. The traditional approach to historical musicology has been maintained in many fields, especially in music of the Middle Ages and Renaissance, but new approaches have become increasingly important at both the graduate and undergraduate levels (see below). Graduate schools have also placed greater emphasis on

the theory of music, in particular Schenkerian analysis, set theory and computer technology.

In the 1960s scholars such as Charles Seeger, Alan P. Merriam and Ki Mantle Hood brought the discipline of ethnomusicology to prominence. Merriam, active as an anthropologist at Northwestern University in the 1950s and at Indiana University beginning in 1962, emphasized the study of music within culture, as reflected in his book *The Anthropology of Music* (1964). From 1954 Hood taught at the University of California at Los Angeles, where he established the Institute of Ethnomusicology in 1961. In *The Ethnomusicologist* (1971) he argued that music must be understood both on its own terms, by participation in performance, and within the context of its society. His was the first programme in North America to offer instruction in playing the Javanese gamelan, and his institute also provided opportunities for students to perform a wide variety of other non-Western musics. Seeger's approach was universal: instead of separate historical and ethnomusicological studies, he advocated one musicology, although his work was of primary importance to ethnomusicologists. During the 1960s Seeger was research musicologist at the UCLA Institute of Ethnomusicology (until 1970). Graduate courses in ethnomusicology are offered in universities throughout the USA; among the most active programmes, in addition to those mentioned above, are those at Wesleyan University and the universities of Michigan and Illinois. Courses in non-Western musics have also been added to the curricula for undergraduates at many institutions.

Before 1945 colleges and universities paid little attention to art music in the USA, and virtually none to American psalmody, folktunes, African American music, jazz and popular entertainment music. From the 1960s, however, these genres became increasingly important to scholars teaching at both the graduate and undergraduate levels. In 1961 Gilbert Chase founded the Inter-American Institute for Musical Research at Tulane University, and a decade later H. Wiley Hitchcock established the Institute for Studies in American Music at Brooklyn College. Richard Crawford, at the University of Michigan, has been an important influence on research and teaching in the field. Most institutions now offer courses in American music, and universities with ethnomusicological programmes have taken the lead in research in a variety of American musics.

Jazz entered the curricula of North American colleges and universities as an area of applied study. In 1947 North Texas State Teacher's college (now the University of North Texas) at Denton became the first institution in the USA to offer a programme in jazz performance; Indiana University followed shortly thereafter. Virtually every college and university that teaches applied music now has at least one jazz band, and courses in jazz improvisation are offered at many institutions. This trend, coupled with the increased interest in ethnomusicology and American studies, led to the introduction of undergraduate and graduate courses in jazz history, and to the writing of dissertations on jazz (viewed today as a 'classical' music). The Institute of Jazz Studies at Rutgers University is among several important centres fostering the study of jazz.

Since the 1970s the study of the music of African Americans has become increasingly prominent. A major impetus for research in this field was the Black Music Center at Indiana University, founded in 1970 by Dominique-René de Lerma. This centre, which continued into the 1980s, served as a clearing-house, depository and research-reference site for the documentation of African American music history. Also in 1970 Indiana University established a Department of Afro-American Studies, in which students may concentrate on music while also taking courses in the School of Music. The department is one of the two most important locations for teaching and research in this field, the other being the Center for Black Music Research at Columbia College in Chicago, founded in 1983 by Samuel A. Floyd jr.

Among the more recent developments in the academic study of music in North American colleges and universities are those associated with 'the new musicology' (*See* MUSICOLOGY, §III, 8). These include a variety of approaches modelled on trends in literary criticism, studies of women in music, gay and lesbian issues in music, the criticism of music in terms of gender, and music in relation to politics and various ideologies. Of these approaches, the subject of women in music appears to have had the greatest influence on curricula. The advent of the computer has also had a wide-ranging impact on music teaching and research (*see* COMPUTERS AND MUSIC, §VII). Since the 1980s computers have been used to assist in teaching undergraduate theory and music appreciation courses. In the 1990s interactive music programs on CD-ROM began to be used in teaching undergraduate music history and appreciation. At the graduate level, the teaching of bibliography and the practice of research have been transformed by the availability of on-line bibliographic databases. The computer has become an indispensable tool for music students at every level.

5. BRITAIN. Although British universities have granted music degrees as a professional qualification since the 15th century (and were, indeed, the first in Europe to do so), it was not until after World War II that music was accepted as a subject suitable for full-time study. Undergraduate music degrees were instituted at Cambridge in 1945 and at Oxford in 1950. In both these institutions the link with the cathedral tradition has been an essential ingredient, since individual colleges have maintained their own choral establishments, which have attained the highest standards over several centuries. In the postwar years, chairs in music and full-scale music departments were also established at many of the new 'red-brick' universities. Although there have always been opportunities for performance, the main purpose of these programmes was to provide a general education in music with an emphasis on scholarship and research; these remain the primary basis of most higher degrees. University curricula in this period included imitative composition, usually in styles from the 16th century to the early 19th; music history and literature; and skills such as fugal composition, critical commentary, ear training and keyboard tests. Free composition or performance was an option for a student's final year, and individual dissertations were admitted later.

This traditional curriculum has been maintained in the oldest British universities. Musical scholarship since World War II, largely through these institutions, has opened up a wider historical repertory through the work of figures such as Gerald Abraham, Denis Arnold, Frank Ll. Harrison and J.A. Westrup. The series Musica Britannica was founded in 1952 with Anthony Lewis as general

editor and Thurston Dart as secretary. Dart started the department at King's College, London, in 1964, and his legacy of scholarship applied to the performance and recording of early music was carried forward in the careers of such practitioners as David Munrow, John Eliot Gardiner and Christopher Hogwood. The presence in universities of immigrant scholars such as Hans Redlich, Egon Wellesz and, in the 1990s, Reinhard Strohm, has expanded British horizons. In 1964 Wilfrid Mellers started the Music Department at York with a staff of composers and a teaching programme reflecting all aspects of contemporary music as well as connections with the study of literature and music education. This use of composers, although completely independent, had parallels with the 'Literature and Materials' programme at the Juilliard School of Music, New York, established a decade earlier.

In 1962 Peter Maxwell Davies felt he had to go to Princeton to study composition seriously; however, the study of 20th-century music steadily gained ground in the newer music departments. Electronic studios proliferated in the 1960s and 70s, and computers were soon being used for composition, analysis and eventually the delivery of teaching materials. Courses in jazz and popular music were developed with notable contributions to the field from Richard Middleton and the journal *Popular Music* (1981) as well as such specialists as Stephen Banfield. Musicology itself gradually expanded to include ethnomusicology, pioneered by John Blacking, psychology, acoustics, gender studies and applied aspects such as music education, music therapy and arts administration, which all found a place in university curricula.

This unprecedented diversification within a generation has produced a stimulating crisis of identity for music in tertiary education. Boundaries have been crossed or blurred, and selective specialization based on what George Rochberg called 'supermarket curricula' has taken the place of the inherited general culture based on the full range of Western music, usually Austro-German. Degrees are now offered in what used to be regarded at best as fringe areas, such as electro-acoustic composition or commercial music. The balance between performance and academic studies has shifted as well, with universities taking performance more seriously and music colleges embracing contextual and analytical study (*see* CONSERVATORIES, §IV). This interaction has gone a long way towards healing what Mellers in 1973 (*MT*, cxiv, 245–9) called 'the breach between making and doing and knowing . . . epitomised in the division between music colleges (places that do) and universities (places that know)'. Theory and analysis, formerly represented by little more than a kind of critical commentary in the tradition of Tovey, in the postwar period acquired a significant stake in university courses based largely on the ideas of Schoenberg and Schenker. Periodicals such as the American *Journal of Music Theory* (founded in 1957) and *Perspectives of New Music* (1962) and the British *Music Analysis* (1982) provided new forums for analytical discussion, where the work of Arnold Whittall has been seminal. Composition was recognized as a discipline leading to higher degrees, and some influential British composers held positions in university music departments. By the 1950s these included Hadley, Orr, Rubbra, Wellesz, Hoddinott, Mathias and Leighton; a generation later, Goehr at Cambridge, Harvey at Sussex; and – in the 1990s – Casken at Manchester, Birtwistle at King's College, London, and Lefanu at York.

From the 1960s many British universities became patrons of the arts with an influence in their regions comparable to that of European courts in earlier centuries. Music departments became centres of musical culture inside and outside the institution. Some universities developed their own arts centres, not always linked to music departments, and schemes employing performers and composers in residence evolved on American patterns. These developments have reflected the changing nature of the subject, notions of its public accountability and opportunities for employment in the field. Increased numbers of music students beyond those needed in performance or teaching have been justified by new outlets in the media and administration; these include radio and television, organizations such as the Arts Council and its regional Arts Associations, arts management and the recording industry. Music graduates also take up careers in jazz, pop and music theatre, with more crossovers between categories than in earlier generations.

In this increasingly fragmented musical culture it has become impossible even for relatively large music departments to offer the breadth of expertise normally expected from a full-time teaching staff; small departments have been forced to specialize. This situation has been exacerbated by government assessment of both teaching quality and research output. As a result of the quadrennial Research Assessment Exercises, on which critical state funding for universities largely depends, there has been some growth in the number of university music departments with staff actively engaged in research. (This increase partly reflects government policy in raising the numbers of students participating in higher education in general, and the granting of university status to polytechnic institutions in 1995.) Music colleges became eligible to enter the exercises in 1996 and are assessed on the same basis as universities, with composition and performance regarded as the equivalent of research. The trend towards specialization has profoundly affected undergraduate teaching, which no longer reflects music education as previously understood. Together with funding constraints, it may limit the contribution of university musicians to public life, although in the short term it has undeniably demonstrated the quality and quantity of British music scholarship.

Unterholtzer [Underholtzer, Niederholtzer], **Rupert** [Ruprecht] (*b* Salzburg, *c*1505–10; *d* ?Venice, ?after 1542). Austrian composer. His father was Thomas Unterholtzer, a tailor who had business links with Venice. He is described (in *CH-Bu* F.X.1–4, Nr.90) as 'discipulus illius Finckii Salisburgensis'. Heinrich Finck went to Salzburg with Cardinal Matthäus Lang in 1519 after the latter's enthronement as archbishop and remained as composer to the cathedral chapter probably until 1527. If Unterholtzer was born about 1510, he could have been a choirboy in Finck's Kapelle and later could have learned composition from him. He was ordained and in 1528 studied at Ingolstadt University, but he then became a merchant like his father. He went to Venice on business and married an Italian. In 1556 his son Thomas was made a citizen of Salzburg.

Unterholtzer studied music seriously only in his youth, but nonetheless he left his mark. Together with Gregor Peschin, Johannes Stomius and Wilhelm Waldner he belonged to that group of composers in Salzburg in the early 16th century who took part in the humanistic movement and who were certainly influenced by Paul Hofhaimer, also working in Salzburg. Unterholtzer's motets and secular songs appeared in several collections of the time, but were also circulated in manuscripts as far afield as Regensburg, Basle and Hamburg. The extent of his output is not known, and a study of his work and its dependence on that of Finck has not been made.

Unverdorben [Unferdorfer], **Marx** [Marc, Max] (*fl* ?mid-16th century). German lute maker, active mainly in Italy. He was a cousin of Luca and Sigismondo (i) MALER and married Angela, the daughter of Giovanni Gisoli (also known as Batilori), with whom Luca Maler made a contract in 1527. In 1530 Maler's son Sigismondo (ii) was apprenticed to Unverdorben for a year, and Unverdorben is mentioned as a beneficiary in Luca Maler's first will, also dated 1530. Shortly afterwards he appears to have moved to Venice, although legacies to the daughters of 'Marco Oserdoni, lute maker of Venice' in Maler's second and last will of 1552 suggest that the family connection was maintained.

The Fugger inventory of 1566 (see Stockbauer, and Smith) includes 'Eine grosse alte Lauten von Max Unverdorben'. A few of his instruments survive, though none are in original condition. These include a fine multi-rib yew instrument (in Fenton House, London), labelled 'Marx Unverdorben in Venetia 158. . .', which was rebuilt as a 13-course baroque lute by Buchstetter of Regensburg in 1747. The Victoria and Albert Museum, London, has a very striking lute back composed of a complex and unsupported marquetry of different woods (no.193-1882). The Museo Municipal della Musica, Barcelona, has a seven-course lute with a 13-rib back of quilted maple (no.408). The Lobkowitz collection in the Czech Republic has one instrument converted in the 18th century (this was formerly in the Národní Muzeum, Prague). Another instrument, remade as a theorbo, is in the Museo di Strumenti Musicali, Rome (no.37).

The stylistic disparity and the date of the Fenton House lute suggest that at least two generations of Unverdorbens are represented in the surviving instruments.

LYNDA SAYCE

Unverricht, Hubert (*b* Liegnitz, Silesia [now Legnica, Poland], 4 July 1927). German musicologist. From 1947 he studied musicology at the Humboldt University in Berlin under Vetter, Meyer and Dräger with German philology and philosophy as secondary subjects, and from 1952 under Gerstenberg at the Free University, Berlin, where he took the doctorate in 1953 with a dissertation on programme elements in instrumental music to 1750. After acting as research assistant at the Joseph Haydn-Institut in Cologne (1956–62), he became assistant lecturer at the musicology institute of Mainz University (1962–7). He completed the *Habilitation* in musicology at Mainz in 1967 with a study of the history of the string trio. In 1971 he was appointed research fellow and professor at Mainz and from 1980 he was professor at the Catholic University of Eichstätt. He retired in 1991. His chief work has been the study of source materials and the music of Viennese Classicism, particularly Haydn and Beethoven, as well as research on chamber music and the music history of Silesia and the Rhineland.

HANS HEINRICH EGGEBRECHT/WOLFGANG RUF

Unverzagte [Unvuortzaghete], **Der** (*fl* late 13th century). German poet and composer of *Sangsprüche*. He was probably of noble birth, and was among the most prominent SPRUCH poets of his time. His name may derive from his bold expressions of open criticism, directed not so much at political or socio-political situations (as with Walther von der Vogelweide) as at the personal characteristics of kings and royal lords, their generosity or meanness, justice or injustice, artistic sensitivity or philistinism, and so on. In addition, he cultivated the traditional themes of pleading for his lord's favour, praising and upbraiding his patron, or instructing young people. *Ez ist ein lobelîchiu kunst* is informative with regard to contemporary artistic practice in stating that singing should be more highly regarded than mere instrumental music. There are no religious poems. The Jenaer Liederhandschrift (*D-Ju* E1.f.101) contains Der Unverzagte's 22 *Spruch* stanzas: they are formulated in three different *Töne* (*see* TON (i)), the three melodies of which also appear in this manuscript. Although his work is not outstanding in either form or content he seems to have been well regarded by his contemporaries, since he is mentioned together with Konrad von Würzburg and Der Meissner in a polemical work by the Rumslant.

Unvollkommene Kadenz (Ger.). *See* PLAGAL CADENCE.

Uolrich von Liehtenstein. *See* ULRICH VON LIECHTENSTEIN.

Upbeat (Ger. *Auftakt*, *Vortakt*). In a measured RHYTHM, that impulse that immediately precedes, and hence anticipates, the DOWNBEAT, which is the strongest of such impulses (see ex.1); an anticipatory note or succession of notes, sometimes referred to as an 'upbeat figure', occurring before the first barline of a piece, section or phrase. An alternative expression for 'upbeat figure' is 'anacrusis' (from Gk. *ana*: 'up towards' and *krousis*: 'to strike'; Fr. *anacrouse*), a term borrowed from poetry where it refers to one or more unstressed extrametrical syllables at the beginning of a line.

The occurrence of upbeats at more than one level in a rhythmic scheme is illustrated in ex.2: the upbeat, in the metric sense of the term, occurs at *b*, though at a local level the semiquaver at *c* is an upbeat to the note at the downbeat of the following bar (*d*); at a lower level, the semiquaver at *a* is an upbeat to the note at *b*. Anacruses

Ex.1 Upbeat (u) and downbeat (d) in common metres

are often found embedded at several levels in musical works. In ex.3, the first rhythmic group at the smallest level is initiated by the two-note (B–C) anacrusis leading to the downbeat of b.1. The first two bars, in turn, function as an anacrusis to the downbeat of b.3.

Ex.2

In the early 19th century Momigny formulated the thesis that a well-formed rhythmic unit always proceeds from upbeat to downbeat. Riemann later universalized this idea as the principle of *Auftaktigkeit*, that is, the notion that the prototypical beginning for rhythmic groups of any size is anacrustic. The expressive potentials of anacrustic rhythms in terms of performance timing and nuancing were extensively explored by Lussy, who identified as many as 20 different kinds of anacruses, such as 'ornamental', 'accelerating', 'suspensive' etc.

Ex.3 Beethoven, Piano Sonata op.14 no.2, 3rd movt

An anacrusis is in essence an initiation on a non-accent, and as such it is rhythmically unstable: its most fundamental characteristic is the forward rhythmic impulse it generates towards the accent. Certain writers have therefore extended the term still further and applied it to whole spans of tonal instability, arguing that a whole

phrase, for instance, can be heard as an anacrusis to its own cadence.

Uppman, Theodor (*b* San Jose, CA, 12 Jan 1920). American baritone. He received his vocal training at the Curtis Institute, Stanford University and the University of Southern California. He won praise as Pelléas in a concert performance of the opera by the San Francisco SO under Monteux in 1947, with Maggie Teyte as Mélisande. Uppman's light, high baritone and boyish appearance made him a particularly suitable choice, and he repeated the role in his débuts with the New York City Opera (1948) and the Metropolitan (1953); he also made a speciality of Papageno. In London he sang the title role in the première of Britten's *Billy Budd* (1951, Covent Garden), a performance subsequently issued on CD and revealing how apt vocally Uppman was for the role. He repeated the part in Paris and, on television, in the USA. He also created roles in Carlisle Floyd's *The Passion of Jonathan Wade* (1962, New York City Opera), Villa-Lobos's *Yerma* (1971, Santa Fe), Pasatieri's *Black Widow* (1972, Seattle) and Bernstein's *A Quiet Place* (1983, Houston). Uppman's Metropolitan repertory included Guglielmo, Piquillo (*La Périchole*), Eisenstein (*Die Fledermaus*), Taddeo (*L'italiana in Algeri*), Harlequin (*Ariadne auf Naxos*) and Marcello.

MARTIN BERNHEIMER/R

Uppsala. City in Sweden. Its musical life has been largely determined by the city's having been the seat of the Archbishop of Sweden since 1273 (which Gamla Uppsala had been since 1164) and the site of the oldest university in Scandinavia, founded in 1477. The cathedral houses the relics of St Eric (*d* 1160), for whom a rhymed Office was composed. A chief promoter of the Eric cult was Nils Alleson, who studied in Paris during the 1270s and as archbishop from 1292 laid down regulations for the cathedral choir, which on occasion sang polyphony (organum). After the Reformation, Gregorian chant was slowly supplanted by Lutheran chorale melodies which were codified in the chorale book compiled by Harald Vallerius in 1697. It was used in all Swedish churches until replaced in 1820–21 by the chorale book of J.C.F. Haeffner. After Haeffner's time oratorios were performed in the cathedral by the Filharmoniska Sällskap (Philharmonic Society, 1849–*c*1920) and the Akademiska Kapell and later by the cathedral's own musical forces. In 1867 a regular cathedral choir was founded by J.A. Josephson and in 1920 a boys' choir (Uppsala Domkyrkas Gosskör) was instigated by Archbishop Nathan Söderblom. In 1927 H. Weman inaugurated a series of evening services with concert performances.

The university's significance for musical life in Uppsala began after its reorganization in 1593. King Gustavus II Adolphus's preliminary statutes of 1621 included provision for an 'Archimedes' professor who was to lecture on music and the other liberal arts, according to the system of Johann Thomas Freig. Practical and particularly instrumental music assumed a prominent place with the appointment of Jonas Columbus to the chair of poetry and music in 1628. Since the time of Olof Rudbeck's first appointment as *rector magnificus* (1661–2) the university has had an instrumental ensemble, later called the Akademiska Kapell, second in age among orchestras in Sweden only to that of the royal chapel (the present opera orchestra). Although its main function today is to contribute to academic ceremonies, it also gives regular concerts as part of the concert association.

Rudbeck also took over the direction of a collegium musicum. Under his best-known pupil Harald Vallerius (lecturer in mathematics from 1680 and professor from 1690) several dissertations on questions of music theory were published. His work was carried on by J.A. Bellman (*d* 1709) and from 1724 by Eric Burman. The university's excellence in the theory and practice of music at this time won the praise of Johann Mattheson (1740).

Musical life in Uppsala revived around E.G. Geijer, the professor of history and musician, and J.C.F. Haeffner, *director musices* (leader of the orchestra) at the university from 1808. Under Haeffner a male choir tradition on the German model became established. His compositions for male choir provided a focus for unity for the students, who were influenced by the nationalist ideas of the Romantic movement. As a result the Uppsala Studentkårs Allmänna Sångförening (Uppsala Students' Choral Union) was founded in 1830 and received its statutes in 1842. Its period of greatest activity was under Oscar Arpi during the 1850s and 1860s; it is now a mixed choir. In 1853 the Sångsällskap Orphei Drängar, an élite male student choir, was founded, and particularly under I.E. Hedenblad, Hugo Alfvén and Eric Ericson it has made concert tours in Europe and the USA and gained an international reputation. The Academic Chamber Choir (1957), a mixed choir, grew out of the musical activities of the Norrlands Nation (Norrland Student Club).

Regular concert organizations were not established until the 20th century. A Konsertförening (Concert Association), founded in 1916 and reconstituted in 1942, gave a subscription series of orchestral concerts. In 1977 the Upplands Musikstiftelse took over, in its turn succeeded by Musik i Uppland. This incorporated the Municipal Chamber Orchestra, a string ensemble of professional musicians founded in 1968, and the State Regional Music organization, which had its origin in the Uppsala military music corps. The planning for a professional orchestra was the work of the then *director musices*, Carl Rune Larsson. In 1902 the Sällskap för Kammarmusik was established and conducted by W. Lundgren; from 1930 to 1936 chamber music was encouraged by the Mellersta Sveriges Kammarmusikförening (Mid-Swedish Chamber Music Society) and thereafter by the Kammarmusikförening. The Värmlands Nations Musikcirkel (music circle of the Värmland students' club) was particularly active in promoting contemporary music in the 1940s and the Sällskap Samtida Musik (Contemporary Music Society) was founded in 1949. The Joculatores Upsalienses was founded in 1965 by a group of young musicologists specializing in the performance of early music on period instruments.

University lectures in music history were instituted in 1864 by the *director musices* J.A. Josephson; in 1927 C.-A. Moberg gave the first series of lectures in musicology and from 1947 to 1961 occupied what was the first chair of musicology in Sweden. His successors were Ingmar Bengtsson (to 1985) and Erik Kjellberg. Education in music for school-age children is given mainly in the Municipal Music School (1950).

The university library, the largest in Sweden, has extensive music holdings including medieval liturgical manuscripts and printed and manuscript music from the 16th century to today (*see* LIBRARIES).

CARL-ALLAN MOBERG/JAN OLOF RUDÉN

Upright bass. A colloquial term for the DOUBLE BASS.

Upright [vertical] **pianoforte** (Fr. *piano droit*; Ger. *Piano*; It. *pianoforte*). A piano with strings stretched vertically, rather than horizontally as in grand and square pianos. Upright pianos began to be made soon after Cristofori's invention. The earliest surviving instrument, signed Domenico del Mela (1683–*c*1760) and dated 1739, is in the Museo del Conservatorio di L. Cherubini, Florence. An unsigned, undated one ascribed to him is in Milan. Del Mela may have been associated with Cristofori; one of the latter's wills mentions bequests to a del Mela family.

Doubtless based on the vertical harpsichord (clavicytherium), the upright piano was further developed in the mid-18th century. C.E. Friderici of Gera invented a *Pyramidenflügel* (Ger.: 'pyramid piano') which was effectively a grand piano set on its head with the strings running diagonally in a symmetrical case. Three instruments ascribed to Friderici are known, two dated 1745. A few others were made later in the 18th century. In 1795 William Stodart of London patented an upright grand with a rectangular case. Behind silked doors, the space in the upper right-hand side had shelves on which books and other objects could be kept. These instruments, placed on legs, stood about 2·5 metres high. The keys passed under the wrest plank and soundboard, the hammers striking the strings from behind. German and Austrian makers such as Joseph Wachtel and Jakob Bleyer (1778–1812) began making 'giraffe' pianos in about 1804. These instruments were so-called on account of their shape, which followed in graceful curves the contour of the strings and ended at the upper left with a kind of scroll (*see* PIANOFORTE fig.15). Many makers, notably Franz Martin Seuffert (1773–1847) and Matthäus Andreas (André) Stein (1776–1842) of Vienna, made this form of upright grand, and a drop-action version of the Viennese action was devised for it. Many giraffes had multiple pedals, including janissary and bassoon stops.

Vertical instruments occupied wall space rather than floor space, but the pyramids, giraffes, and upright grands required high ceilings. In the early 19th century, experiments with small uprights began. In 1800 Mathias Müller of Vienna made his 'Ditanaclasis', standing about 154 cm high, and in the same year John Isaac Hawkins of Philadelphia patented his 'portable grand pianoforte' standing only about 140 cm. These were the earliest instruments in which the strings reached to the floor. Later forms were Robert Wornum's 'cottage piano' (the first model of which was created in 1811) and 'piccolo piano' (1826), the latter only 98 cm high, and the 'piano droit' of Johannes Roller and Nicolas Blanchet (Paris, 1827). In 1828 Jean Henri Pape (Paris) invented his 'pianino' or 'piano-console', which was the vehicle for the earliest cross-stringing. Earlier, Thomas Loud (i) had proposed oblique stringing, like that in Friderici's pyramids, for small uprights (he was granted a British patent in 1802). French makers excelled in 'pianinos' of the sort that Pape pioneered. All of these forms were aimed at families living in modest homes, and, as European cities grew, apartments. Some larger types were the symmetrical *Lyraflügel* (Ger.: 'lyre piano') of Johann Christian Schleip (*d c*1877), Berlin, which had a lyre-shaped upper case, and the 'harp piano' (especially by Kuhn & Ridgeway, Baltimore) which exposed the strings above the keyboard.

As compasses were extended, uprights required longer strings and taller cases. In Britain, 'cabinet pianos', standing perhaps 1·5 metres high with cases extending to the floor and tuning pins at the top, supplanted upright grands, and on the continent, uprights began to take on the shapes more familiar today. Steinway & Sons pioneered uprights shorter than the cabinet pianos incorporating all of the firm's innovations: cross-stringing on a single-piece iron frame, metal action frame (which helped to avoid warping of the action parts), sostenuto pedal, duplex scale, and single bridge. That form dominated the piano market until the Great Depression of the 1930s. Modifications have consisted mainly of a standardization of sizes. 'Full' uprights are about 120 to 130 cm. 'Studios' stand about 115 cm high, the 'console' piano about 105 cm, and the 'spinet' a tiny 90 cm (now almost entirely abandoned). Even the larger cases can accommodate only short, stiff strings. The solutions to the problems of the upright have by no means been solved, though Darrell Fandrich of Seattle, Washington, has completely redesigned the action, which has never been satisfactory. David Klavins of Bonn designed an enormous upright, over 3·5 metres tall, straight-strung, whose bottom string is 3 metres long. The keyboard is at the top of the instrument, and the pianist sits on a platform over 2 metres above the floor. Its sound is said to be astounding, as is its price.

EDWIN M. GOOD

Upshaw, Dawn (*b* Nashville, TN, 17 July 1960). American soprano. While studying at the Manhattan School of

Music, she took the title role in Hindemith's *Sancta Susanna* (1983), then Echo in *Ariadne auf Naxos* at the Spoleto Festival (1984). She was engaged by the Metropolitan under the Development of Young Artists Program, progressing from small parts to Sophie (*Werther*), Sister Constance of St Denis and Blanche (*Dialogues des Carmélites*), Ilia, Zerlina, Pamina, Susanna, Despina and Gretel. At the Salzburg Festival (from 1987) her roles have included Susanna and the Angel (Messiaen's *Saint François d'Assise*). She has appeared at the Aix-en-Provence Festival as Despina and Anne Trulove, one of her most vivid parts which, like several of her Mozart roles, she has recorded. Upshaw took the title role in Handel's *Theodora* at Glyndebourne in 1996, an interpretation recorded on video. Like all her portrayals, this was notable for its intense sincerity and conviction. With her pure, slender tone, frank manner and ease of communication she has had notable success on the recital platform, and has made delightful recordings of lieder, works by American composers and songs from musicals.

ALAN BLYTH

Upton, George Putnam (*b* Roxbury, MA, 25 Oct 1834; *d* Chicago, 19 May 1919). American journalist and writer on music. After taking the AM from Brown University in 1854, he began a long journalistic career in Chicago, where he wrote the city's first music criticism. He served on the *Chicago Tribune* as music critic (1863–1881) and as senior editor until 1905. After the great fire of 1871, he helped restore the city's concert life by founding a choral society known as the Apollo Club. He was music consultant to the Newberry Library when it assembled its collection (1885–7).

Upton, like so many other New Englanders who dedicated themselves to the cultural development of America's frontier cities, wrote numerous popular books for the education of American audiences. Some of these appeared in Spanish and Braille editions; he also translated several books from German, including Nohl's biographies of composers. A staunch supporter of Theodore Thomas, he was instrumental in the foundation of the Chicago Orchestra. His *Musical Memories* (1908) chronicles Chicago's early music history.

MARY ANN FELDMAN

Upton, William Treat (*b* Tallmadge, OH, 17 Dec 1870; *d* Adelphi, MD, 19 Jan 1961). American organist, pianist, teacher and musicologist. He studied music at Oberlin College and Conservatory (BA 1896, MusB 1904, MA 1924) and the piano with Leschetizky in Vienna (1896–8) and Josef Lhévinne in Berlin (1913–14). He taught the piano at Oberlin Conservatory (1894–1936) and served as organist at the Calvary Presbyterian Church, Oberlin (1903–18). His interest in contemporary American art song led to his major and probably most enduring work, the revision and expansion of O.G.T. Sonneck's *Bibliography of Early Secular American Music*, first published in 1905 and still central to American scholarship. His biographies of A.P. Heinrich and W.H. Fry have not been superseded. In 1945 Oberlin College awarded him an honorary doctorate in music.

Urban VIII. Pope and music patron, member of the BARBERINI family.

Urbana-Champaign. Twin cities in Illinois, USA, site of the UNIVERSITY OF ILLINOIS SCHOOL OF MUSIC.

Urbánek, František Augustin (*b* Moravské Budějovice, 24 Nov 1842; *d* Prague, 4 Dec 1919). Czech music publisher, father of MOJMÍR URBÁNEK. After his Gymnasium studies in Znojmo and Brno he was employed from 1862 by the bookseller and publisher J.L. Kober in Prague, for whom he became general manager (1866–70). In 1872 he established his own bookselling and publishing firm in Prague, where he first produced pedagogical publications and school textbooks. During the 1870s he gradually began to publish music, bringing out new works by Smetana, almost all of Fibich's compositions, and the early works of Foerster, Novák, Suk, Janáček, Křička, Axman and others. His series Dalibor, Lumír, Zora, Vesna, Lyra and Vlasta were important in the development of choral song; he also published tutors for the piano, violin, flute and harmonium as well as books on music

(including Janáček's *O skladbě souzvukův a jejich spojův* in 1897) and the journals *Dalibor* (1879–99) and *Kalendář českých hudebníků* (1881–1908), serving as editor of both for some years. Besides reviewing Czech books and scores for the journal *Oestrreich-ung. Buchhändler-Correspondenz* (from 1864), he published *Knihopisný slovník* ('Book dictionary', 1865) and published and edited the *Věstník bibliografický* ('Bibliographical bulletin', 1869–84). In 1913 his sons František Augustin and Vladimír became partners in the firm and its name was changed to F.A. Urbánek a synové. The firm was nationalized in 1949.

Urbánek, Mojmír (*b* Prague, 6 May 1873; *d* Prague, 29 Sept 1919). Czech music publisher, son of František Augustin Urbánek. After an apprenticeship with his father and experience in Germany, France, England and the USA, he founded his own publishing house in Prague in 1900. The firm published music by Foerster, Novák, Suk, Říhovský and Janáček. Besides books on music Urbánek published the journal *Dalibor* (from 1900). He owned a keyboard instrument shop and in 1908 set up the Mozarteum concert hall; he also ran a successful concert agency, and after World War I acquired a music printing works. After his death, his widow Iška Urbánková ran the firm, followed from 1925 by his son Mojmír Urbánek. The firm was nationalized in 1949.

ZDENĚK CULKA

Urbani, Peter (*b* Milan, 1749; *d* Dublin, 1816). Italian singer, composer and impresario. He is said to have obtained a MusD from the University of Milan; he then went to London with his countryman Rontzini in search of work, spent unspecified years there and in Dublin, appeared singing Scottish songs at concerts in Glasgow between 1781 and 1784, and settled in Edinburgh in 1784.

In Edinburgh he sang at the Musical Society concerts in St Cecilia's Hall and published six volumes of Scottish songs, including original songs of his own; he ran a music shop and publishing house with Edward Liston at 10 Princes Street from 1795, wrote a singing instruction manual, and lost a lot of money mounting Handel's oratorios. Around 1808 he returned to Dublin, destitute, and died there in 1816. Two operas by him were performed in Dublin during the 1784–5 season, but many of his compositions seem to be lost.

Robert Burns met Urbani in 1793 and described him as 'a narrow, contracted creature'. Burns, always easy-going, put up with Urbani's vanity and commercial self-interest for the sake of his fine singing and the promotion he was giving to Scottish songs, but refused to give him lyrics already promised to George Thomson. Urbani is sometimes credited with inspiring Burns to write *Scots wha hae*, but this is based on a misreading of Burns's letter to Thomson of August 1793.

DAVID JOHNSON

Urbani, Valentino. *See* VALENTINI.

Urbanner, Erich (*b* Innsbruck, 26 March 1936). Austrian composer and conductor. He studied at the Vienna Music Academy, where his teachers included Karl Schiske and Hanns Jelinek (composition), Grete Hinterhofer (piano) and Hans Swarowsky (conducting). He also attended the Darmstadt summer courses and composition masterclasses run by Fortner, Stockhausen and Maderna. In 1961 he was appointed to a post at the Vienna Music Academy, where he became professor in 1969. From 1986 to 1989 he served as director of the Institut für Elektroakustik und Experimentelle Musik. In his compositions he has attempted to draw on experience subjectively and with musical imagination. With this goal in mind, he has developed forms that are clearly structured with respect to sound and gesture so that they can be recognized by the listener. Always open to current musical developments and trends, he nevertheless adopts only what is relevant to him, not committing himself in any particular direction. He has remarked:

> In a time of the most diverse trends, but also in a time of uncertainty as to what is still avant garde and what is conservative, it is important to realize very clearly that innovations are to be located less than ever in the area of material and rather more in the way the composer copes formally.

SIGRID WIESMANN

Urbino (Lat. Urbinum Metaurense). Italian city in the Marche. It reached the summit of its cultural achievement during the late 15th and early 16th centuries, first during the reigns of Federigo da Montefeltro (1444–82; named duke in 1474) and his son Guidubaldo (1482–1508) and then, on the extinction of the Montefeltro line, during the early years of the reign of Francesco Maria I della Rovere (1508–38), who inherited succession. The Rovere rule lasted until 1631, when Francesco Maria II della Rovere abdicated and Urbino, along with such subject towns as Gubbio, Pesaro, Fano and Cagli, was incorporated into the domain of the papal states.

There is little record of musical activity before Federigo's rule. Four chant books used at the cathedral survive from the 14th century, and a document of 1439 mentions that the cathedral then employed 12 singers. During the period of Federigo's rule Urbino became a leading Italian cultural centre. Although court records have not been found, Federigo's support of music is well attested. The Florentine bookseller Vespasiano da Bisticci stated that Federigo employed excellent singers and instrumentalists, including six 'trombetti', two 'tamburini' and two organists, as well as two dancing-masters. The numerous intarsias decorating Federigo's Gubbio and Urbino studies (for illustration *see* CLAVICHORD, fig.3) give further evidence of his particular fondness for instruments; according to Vespasiano, he especially liked organs and 'istrumenti sottili'. Among the intarsias at the Urbino *studiolo* there is also a representation of the well-known chanson *J'ay pris amours*, which was the basis of a *lauda* in the allegorical performance *Amore al tribunale della pudicizia* produced in honour of Federico d'Aragona's visit to Urbino in 1474. Federigo's fondness for the courtly chanson also prompted him to acquire an important chansonnier (*I-Rvat* Urb.lat.1411) for his vast personal library. The manuscript, with its many chansons by Du Fay and Binchois, was given to Federigo's court chancellor by Piero di Cosimo de' Medici. Another testament to Federigo's interest in music is the painting *La musica* (London, National Gallery) by Justus of Ghent, a Flemish painter in Federigo's employ; its allegorical depiction of music, art and science accurately represents Federigo's wide-ranging humanistic interests. Notwithstanding the brilliance of Federigo's court (it was also host to Bramante, Piero della Francesca and Raphael, who was born at Urbino), Urbino was not one of the leading musical centres in Italy; it attained that position only during the reign of Guidubaldo.

Guidubaldo succeeded his father in 1482 and married Elisabetta Gonzaga of Mantua in 1489. Elisabetta, a singer and lutenist, shaped the city's cultural life and helped to make it – along with Mantua and Ferrara – one of the birthplaces of the Italian national style. Among the musical and literary notables who graced the court during this period were the poet-extemporizer Bernardo Accolti ('l'unico Aretino'), the musician-dancer Barletta (said to be Elisabetta's favourite musician), Cardinal Pietro Bembo, the poet Vincenzo Collo (Calmeta), Bernardo Dovizi (Cardinal Bibbiena, adviser to the future Leo X), whose comedy *La calandria* had its first performance at Urbino, the sculptor-musician Giovan Cristoforo Romano, the poet-courtier Giuliano de' Medici (youngest son of Lorenzo the Magnificent), the dancer Roberto da Bari, the singers Gasparo Siciliano and Terpandro (the latter famous for his improvising), and Baldassare Castiglione, whose *Il libro del cortegiano* was inspired by and in part depicts the cultural life at the court. Castiglione wrote that the polyphony of the Franco-Flemish composers was performed at the court (he mentioned a performance of a Josquin motet which, however, no-one liked until it was identified), but it was clearly the lighter Italian frottola style that was preferred, especially when performed by a solo singer with instrumental accompaniment. The court also favoured theatrical productions with music, for example Castiglione's *Tirsi*, for which the music may have been supplied at least in part by Bartolomeo Tromboncino. The musical chapel of the cathedral, the Cappella del SS Sacramento, received its official charter during Guidubaldo's reign (7 August 1507).

Francesco Maria I della Rovere, adopted nephew of Guidubaldo, succeeded him in 1508. He continued the patronage of music, and his court was host to both the Medici lutenist Giovanni Maria Hebreo and the organist Marco Antonio Cavazzoni ('da Bologna, detto d'Urbino'), who probably began his association with Cardinal Bembo there. It may have been Francesco Maria I who initially supported the publication of Petrucci's *Motetti de la corona* (1514–19); Petrucci, born at Fossombrone, was a native of the Duchy of Urbino and returned there temporarily in 1514. By the end of Francesco Maria's reign in 1538, if not before, Urbino, which had been plagued by political troubles from 1516 to 1522, had lost its circle of intellectuals and its standing as a national cultural centre.

During the reigns of the next Rovere dukes, Guidubaldo II (1538–74) and Francesco Maria II (1574–1631), Urbino was only a provincial musical centre. Among the more prominent musicians at the court were Girolamo Parabosco, who visited Urbino in 1548, the Spaniard Sebastiano Ravál, an associate of Victoria, who also had contacts with Francesco Maria II, and Paolo Animuccia, brother of Giovanni and *maestro di cappella* to the dukes in the 1560s and 1570s. Other items of musical interest are Andrea Gabrieli's madrigal *Goda hor beato il Pò* (1574), which pays homage to Francesco Maria II and his duchess, Lucrezia d'Este, Marenzio's third book of six-part madrigals, which is dedicated to Lucrezia, and the performance in 1621 of the festival *intermedio L'Ilarocosmo, overo Il mondo lieto* by Pietro Pace, who spent many years in the service of the della Rovere family. A description of the musical activities at Urbino during the late 16th century appears in the dedication of the *Novellette a sei voci* (1594) of Simone Balsamino, the Venetian choirmaster who was born at Urbino. The most noteworthy musicians there after the 16th century were Pietro Scarlatti, brother of Domenico, who served as *maestro di cappella* at the

cathedral from 1705 to 1708, P.B. Bellinzani, *maestro di cappella* 1730–34 and Francesco Morlacchi, an opera composer at the Saxon court from 1811, who was at the cathedral 1807–8.

Urfey, Thomas d'. *See* D'URFEY, THOMAS.

Urhan [Auerhahn], **Chrétien** (*b* Montjoie, nr Aix-la-Chapelle [now Aachen, Germany], 16 Feb 1790; *d* Paris, 2 Nov 1845). French viola player, violinist and composer of German descent. He received his first violin lessons from his father and taught himself to play many other instruments. After hearing him play in Aix-la-Chapelle in 1804, the Empress Josephine encouraged him to go to Paris, where he became a pupil and member of the household of J.-F. Le Sueur. Between 1807 and 1815 he played with the orchestra of the Chapelle Royale, and in 1814 he joined the Opéra orchestra, becoming first violin in 1823 and violin soloist in 1836, and playing the viola as well. In 1827 he became organist at St Vincent-de-Paul and in 1828 leader of the Société des Concerts du Conservatoire. He was well known for his improvising and sight-reading on many instruments (including the *violon-alto*, a violin with a C string added to give it a viola range) and, above all, for his viola playing. Urhan was a member of the Baillot Quartet (1824–37) and played the viola in Anton Bohrer's quartet (1830–31), which introduced Beethoven's late quartets to the Paris public. Berlioz asked him to perform the viola solo in the première of *Harold en Italie*, and Meyerbeer wrote the viola d'amore solo in the first act of *Les Huguenots* for him. He was a devout Catholic, and sought special dispensation from the Archbishop of Paris to play in the Opéra orchestra, reading prayers in the entr'actes and keeping his back turned to the stage during the performance to avoid the worldly temptations on show.

Urhan's promotion of the music of Bach and Handel and his support of the yearly Beethoven and St Cecilia festivals were important influences in Paris musical life. Furthermore, his arrangements of Schubert's music introduced several works to a French audience for the first time. His spiritual and mystical mind, coupled with his musical integrity, made a profound impression on the young Liszt, who became his close friend and who asked him to play the violin in his performances of Beethoven's chamber music at the Salle Erard in early 1837. He was the godfather and teacher of Julius Stockhausen. In his later years he suffered from depression, withdrawing more and more into himself and performing only the required duties of his church and Opéra positions. His compositions were well-received by Berlioz and others as examples of a new musical sensibility, marked by exceptional sparseness; the song *Celui que j'aime tant* is constructed using only two notes, while his second *Quintette romantique* (for string quintet and four bassoons) depicts the victory of austere heavenly melodies (played by the viola) over the empty virtuosity of earthly music (represented by the first violin). In all his mature compositions, the use of third-related harmonic shifts, alternation of major and minor modes and the appearance of dance melodies bear clear witness to the influence of Schubert. A predilection for long note values, extreme dynamics, non-functional repetitive harmonies, odd instrumental combinations, omission of bar lines and interpolation of poetic texts between staves transforms this influence into a frequently bizarre mixture of pious simplicity and subjective extravagance.

Uriarte, Eustaquio de (*b* Durango, Vizcaya, 2 Nov 1863; *d* Motrico, Guipúzcoa, 17 Sept 1900). Spanish musicologist and music journalist. In 1878 he entered the Augustinian order at Valladolid, where he received his early musical training, and in 1888 he went to the monastery of Silos, near Burgos, devoting himself to the study of Gregorian chant reform as advocated by the Benedictine monks of Solesmes in France. In 1889 he participated in the music section of the first Congresso Católico of Madrid. Uriarte's major work, the *Tratado teórico-práctico de canto gregoriano*, is not only a treatise on the elements of

Gregorian chant, but a panegyric on the need for modern restoration based on the methods of Joseph Pothier of the Solesmes school and the resolutions calling for reform adopted at the Madrid Congress of 1890. Essentially, these reforms included the gradual abolition of the 19th-century Medicean liturgical books then used in Spain, the use of Pothier's newly revised chant books which were based upon the original medieval sources, and the performance of these corrected melodies in a free, non-mensural rhythmic style. Uriarte was a prolific music journalist and contributed many articles on chant reform, music aesthetics and criticism, and opera, particularly to the *Ciudad de Dios*. In 1895, under the patronage of the Archbishop of Madrid, a group including Uriarte and Felipe Pedrell formed the Asociación Isidoriana de la Reforma de la Música Religiosa. Uriarte taught at the new Augustinian college in Guernica from 1896, and in 1899 he was transferred to Palma, Mallorca.

JOHN A. EMERSON

Uribe Holguín, Guillermo (*b* Bogotá, 17 March 1880; *d* Bogotá, 26 June 1971). Colombian composer. He studied the violin with Ricardo Figueroa at the Bogotá Academy of Music (later renamed the National Conservatory) and from 1895 with Narciso Garay. In 1903–4 he visited New York and Mexico City and in 1905 he was appointed to teach the violin and solfège at the Bogotá Academy, where he also founded an orchestra. In 1907 he won a government grant to study with d'Indy at the Schola Cantorum, Paris. After further studies in Brussels he returned in 1910 to Bogotá, where he was appointed director of the National Conservatory (1910–35). In 1919 he made a return visit to Paris.

Uribe Holguín was the most influential Colombian composer of his generation, and his output extends to 120 opus numbers. He favoured orchestral, chamber and piano composition and employed an enriched harmonic language, the result of his late-Romantic training, personal contact with Falla and Joaquín Turina, and his admiration for Debussy. The *Trozos en el sentimiento popular* for piano, which includes music in the style of the *pasillo*, *bambuco* and *joropo*, is an example of his music based on Colombian folk idioms.

ROBERT STEVENSON/ELLIE ANNE DUQUE

Urio, Francesco Antonio (*b* Milan, ?1631/2; *d* Milan, 1719 or later). Italian composer and Franciscan friar. A Francesco Urio, aged 40, is listed as a member of the Venetian instrumentalists' guild in 1672, but it is not known whether he is identifiable with Francesco Antonio. The latter was *maestro di cappella* at Spoleto Cathedral in 1679, then at Urbino (1681–3), Assisi and Genoa (dates unknown). In April 1682 he was nominated for the post of *maestro di cappella* of the collegiate church of S Maria Maggiore in Spello, but there is no evidence that he ever held it. According to the title-page of his *Motetti* op.1, he was *maestro di cappella* of the basilica of SS Apostoli, Rome, in 1690; the motets were composed for and dedicated to Cardinal Pietro Ottoboni, in whose concerts Urio may have been involved. From 1693 to 1695 he was *maestro di cappella* at Pistoia; Pougin said he wrote a cantata (1696) and two oratorios (1701 and 1706) 'pour le service' of Prince Ferdinando de' Medici, but there appears to be no evidence of any permanent appointment at Florence. The title-page of his *Salmi concertati* reveals that he was *maestro di cappella* of the Frari, Venice, in 1697, and he held the same post at S Francesco, Milan, during the period 1715–19.

Urio is now known mainly for his *Te Deum*, of which Handel owned a copy and from which he borrowed. Robinson (1908) suggested that the work was composed by Handel at the village of Urio on Lake Como, but that theory is now discredited. Three copies are known to survive: the first (*GB-Lcm* 1033) belonged to John Stafford Smith in 1780; the second (*Lbl* Add. MS 31478) was transcribed in 1781 from an 'Italian Copy' that 'formerly belonged to Mr Handel' and was then 'in the Collection of Dr Samuel Howard'; and the third, now in the Paris Conservatoire collection, was once the property of Edmund Thomas Warren. The work is ascribed to Urio in all three. In the first two sources he is described as a 'Jesuit of Bologna' and 'Bolognese', a mistake suggested perhaps by the prominence of the trumpet parts. In the first and third sources the *Te Deum* is dated 'Apud 1682'

and '1660' respectively; it is not certain whether either date is correct, but to judge from the style of the work the former seems nearer the mark. The *Te Deum* provided the basis for passages in Handel's Dettingen *Te Deum*, *Saul*, *Israel in Egypt* and *L'Allegro il Penseroso ed il Moderato*. How it came into his hands is not known, but in view of Urio's apparent relations with Ferdinando de' Medici and Cardinal Ottoboni, it seems possible that Handel first saw it in Florence or Rome. Though sometimes prone to squareness, it is an impressive piece, encompassing a wide range of moods. Apart from the trumpet, there are obbligatos for cello ('Patrem immensae majestatis') and violin with graces in Corelli's manner ('Fiat misericordia tua'), a vigorous duet in 12/8 for soprano and bass ('Tu Rex gloriae') and a gentle trio in 3/4 for soprano, alto and bass ('Tu ad dexteram') – all bound together by spirited choruses in homophonic and fugal styles. In view of the quality of this work, it seems a pity that only one of Urio's oratorios appears to survive.

COLIN TIMMS

Urlinie (Ger.: 'fundamental line'). In Schenkerian analysis (*see* ANALYSIS, §II, 4), the conceptual upper voice of a piece in its simplest terms, represented by the diatonic conjunct descent to the tonic from the 3rd, 5th or octave. The interval encompassed by the *Urlinie* and the register in which it appears are determined by the piece itself, together with the criteria the analyst uses to fix its starting point. Because *Urlinie* was the first term Schenker coined in connection with his new analytical method, it became the word most closely identified with his method, as well as the one whose meaning changed most radically in the course of his later theoretical writings.

Schenker used *Urlinie* for the first time in the foreword to his critical edition with commentary (the *Erläuterungsausgabe*) of Beethoven's Piano Sonata in A op.101, published in 1920 (*see* ANALYSIS, §II, 4 fig.18). Yet it is clear from his analysis of op.101, and in the essays in his next series of publications (*Der Tonwille*, 1921–4), that the term was at first understood not as an archetypal melodic line, but rather as a reduction of the surface of a piece that left its phrase structure and broad harmonic-contrapuntal outline intact. The *Urlinie* of these earlier analyses is not only polyphonic in texture, but often preserves the bar-lines of the piece in question. Thus the original meaning of *Urlinie* corresponds rather more closely to what Schenker was eventually to call the musical 'foreground' of a piece (*see* LAYER), and explains why he continued to use the expression *Urlinie-Tafel* for the musical representation of the foreground layer in his analyses. The term is often rendered into English as 'fundamental line', but some writers believe that it is so specialized, so quintessentially Schenkerian, that it is better left untranslated.

WILLIAM DRABKIN

Urlus, Jacques [Jacobus] (*b* Hergenrath, 9 Jan 1867; *d* Noordwijk aan Zee, 6 June 1935). Dutch tenor. He studied in Amsterdam with Cornelie van Zanten and others and made his operatic début in Utrecht in 1894 as Beppe (*Pagliacci*). He sang with the Netherlands National Opera, 1894–9, then in Leipzig, 1900–14. One by one he mastered the leading Wagnerian parts, for which his robust yet sensitive singing and declamatory gifts well fitted him. He made his London début at Covent Garden in spring 1910 as Tristan during the Beecham opera season. In 1911 he was called to Bayreuth, where his first part was Siegmund. He sang regularly at the Metropolitan Opera, 1913–17, becoming its foremost Wagnerian tenor. From 1917 onwards he accepted no fixed engagements, but settled in the Netherlands and toured extensively in Europe and the USA. He was also an excellent concert singer. His many recordings, 1903–24, chronicle every facet of his career and confirm his fine-grained voice and innate sense of style. He published an autobiography, *Mijn loopbaan* ('My career'; Amsterdam, 1930).

CARL L. BRUUN/ALAN BLYTH

Urmawī, al-. *See* ṢAFĪ AL-DĪN.

Urner, Catherine Murphy (*b* Mitchell, IN, 23 March 1891; *d* San Diego, 30 April 1942). American composer and singer. At the University of California, Berkeley, she won the first George Ladd Prix de Paris, enabling her in 1920 to go to Paris to study composition with Koechlin, who considered her remarkably gifted. From 1921 to 1924 she was director of vocal music at Mills College, Oakland, California. She was active as a composer and singer in the USA, France and Italy, and first performances of her music were given in Paris by the Société Musicale Indépendante and at the Salle Pleyel. A talented singer, she specialized in Amerindian melodies, which she used in many of her compositions to create a stark, poetic effect. Through her teaching Urner transmitted the classical French heritage of Koechlin; she translated several of his treatises and arranged for him to give lectures in California. Koechlin regarded her as influential upon his own modal–contrapuntal style. She collaborated

with him on various works and he orchestrated her *Esquisses normandes* (1929), the first performance of which was given by the Bay Area Women's Philharmonic in Berkeley in 1990. In 1937 Urner married the Californian composer and organist Charles Shatto.

ELISE KIRK

U Roy [Beckford, Ewart] (*b* Kingston, Jamaica, 1942). Jamaican DJ and rapper. He was a pioneer of Kingston's sound systems and rose to fame in 1968 through his partnership with the creator of dub, King Tubby. By eliminating the vocal tracks on the master tape of a recording U Roy created instrumental beds on which he would (*see* RAP §1) at dances, often commenting on the events of the day. His first recording, *Earth's Rightful Ruler*, was made for Lee Perry and is arguably the first DJ record. By the time of the album *Version Galore* (Trojan, 1971) U Roy had established his style by using rock steady tracks from 'Duke' Reid's Treasure Isle Records, especially those of the Paragons, retaining key phrases of the vocals and answering them with unique, syncopated, extemporized poetry. With the producer Prince Tony Robinson, he created a number of albums including the most eccentric collection *Dread Inna Babylon* (Virgin, 1975) and *Natty Rebel* (Virgin, 1976).

U Roy's success inspired others such as Dennis Alcapone, Scotty and Big Youth to begin recording DJ discs and helped to create the standard format of Jamaican seven-inch records; the vocal version on the A-side and the instrumental, which can be used by DJs in dance halls, on the other. He is considered by many to be the father of American rap music which was popularized by Jamaican immigrants living in New York's outer boroughs.

ROGER STEFFENS

Urquhart, Thomas (*fl* London, *c*1650–80). English or Scottish violin maker. He was probably a pupil of Jacob Rayman, and was more or less a contemporary of Edward Pamphilon. Urquhart was the most accomplished craftsman of the three. An early, small-sized violin bearing a label with the date 166– (last digit illegible) is of extraordinary delicacy, with a golden varnish of the highest quality. Later instruments are slightly more robust, but excellently finished, and often have a fine red varnish of almost Italian character. These instruments are capable of very fine tone, and can often be distinguished from provincial Italian work of the period only by the intriguingly worked scroll, which is incised at the chin and marked with small prickings around the volute. Unfortunately many of the scrolls and labels were removed by unscrupulous dealers and replaced with more Italianate substitutes. It is likely that some of his work was relabelled and sold in his own lifetime by John Shaw, an eminent instrument dealer and music publisher of the period, who was appointed 'instrument maker to his Majesty' in 1687.

Apart from the record of a Thomas Urquhart buried at St Giles-in-the-Fields, London, in 1698, no information about Urquhart's life has yet been unearthed. The family name of Urquhart certainly derives from Inverness, and has led some writers to conclude that he was Scottish.

CHARLES BEARE, JOHN DILWORTH

Urrede [Urreda, Urede, Vreda, Vrede, Wreede], **Juan de** [Johannes] (*fl* 1451–*c*1482). South Netherlandish composer, active in Spain. He was born in Bruges, the son of Rolandus de Wreede, who was organist at St Donatian until 1482. In 1451 Johannes was refused a clerkship at St Donatian on the grounds that father and son could not work in the same institution, but in 1457 he secured a similar position at the church of Our Lady. His name disappears from the records in 1460, and it is assumed that he left Bruges for Spain at this time, although he does not reappear until 1476, when he was paid as a member of the household of the first Duke of Alba, García Alvarez de Toledo, cousin to King Ferdinand. Urrede (the Castilian form of his name) may have served the duke for some years previously, but on 17 June 1477 he was appointed singer and *maestro de capilla* of the Aragonese royal chapel, his salary being backdated to 1 April of that year. The account books of the royal household reveal that he was employed until at least 1482, but in the meantime it would appear that he also applied to the professorship of Salamanca University, a position that, despite his request for changes to the system of electing new professors, he did not secure. After 1482 there is no further record of Urrede, although the royal household registers are missing for the period immediately following this and he may have served a few years longer. Possibly he died in the period between 1482 and 1484, although there is some evidence to suggest he may have lived substantially longer.

Urrede was not the only Netherlandish composer to work in Spain during this period, but he was certainly the most internationally renowned. Ramis de Pareia, the Spanish musical theorist and professor of music at Bologna University, described him as 'carissimus noster regis Hispaniae capellae magister', and he was also praised by the Italian theorist Giovanni Spataro (one of Ramis's pupils), who, in his *Tractato di musica* (Venice, 1531), commended Urrede's use of proportion in the Benedictus of a Mass (which would appear to have been lost). Unlike his Spanish-born colleagues, Urrede also enjoyed the prestige of having his works widely circulated: his compositions are preserved in French and Italian as well as Iberian sources. Two compositions especially were widely known and were repeatedly borrowed as the basis for new polyphonic compositions or instrumental settings.

One of these is the famous canción *Nunca fue pena mayor*, the poem being attributed to the Duke of Alba and written about 1470. According to Anglès, Urrede's three-part setting is based on a popular Spanish tune. Belmonte borrowed Urrede's superius as the tenor of his canción *Pues mi dicha non consiente*. Both Pierre de La Rue and Francisco de Peñalosa wrote a *Missa 'Nunca fue pena mayor'*. Bartolomeo Tromboncino parodied the beginning in his setting of *Nunqua fu pena magiore*. The tenor was borrowed in an anonymous piece without text in Petrucci's *Canti C* (RISM 1504[3]), f.21*v*, and in another in *I-Bc* Q18, f.46*v*. The piece was sung in two plays written by the Portuguese poet Gil Vicente, and instrumental arrangements appeared in the Capirola Lutebook, written about 1517, and in Petrucci's *Intabolatura de lauto, libro primo* (1507[5]).

Also widely known and much quoted by later composers was the hymn *Pange lingua*, based on the Toledan chant melody. Two settings of this hymn are ascribed to Urrede: one, included in the hymn cycle in *E-TZ* 2–3, is also found, slightly modified, in *E-Bbc* 454, and in at least ten other sources (almost all of Iberian or Latin-American provenance); the second is a unicum in *E-SE*, where it is attributed to 'Johanes Urede'. Especially notable are the keyboard arrangements of the first version: the earliest extant is by Antonio de Cabezón, printed in the *Cifra nueva* (1557) of Luis Venegas de Henestrosa, but there are many later settings by Juan Cabanilles, among others. A number of masses based on Urrede's hymn survive, some as late as the 17th century. Other liturgical works include a setting of the *Magnificat* (part of which was also arranged for keyboard by Gonzalo de Baena before 1540), the *Nunc dimittis* and the Kyrie and Gloria 'Spiritus et alme' of a *Missa de Beata Virgine*, copied into one of the manuscripts for the Sistine Chapel in about 1481. The *Magnificat* and *Nunc dimittis* are preserved in a section of a manuscript in Paris (*F-Pn* n.a.fr.4379) that has been shown to belong to the manuscript *E-Sc* 7-I-28 (see Fallows, 1992), one of the two sources to contain all three of Urrede's extant songs. All three songs, originally for three voices (although versions for four voices survive of *Nunca fue pena mayor* and *Muy triste será mi vida*), were likewise copied into the Cancionero Musical de Palacio (*E-Mp* 1335), before 1500; indeed, *Nunca fue pena mayor* is the first song in the collection, which has led scholars to consider whether the manuscript was begun for the Duke of Alba or possibly for Prince Juan, only son of the Catholic Monarchs, who resided briefly in Salamanca until his untimely death in 1497.

Urrede's compositions reflect the blend of Flemish and Spanish elements that is characteristic of the other arts in the Iberian peninsula during this period. He adopted the song form (canción) and chant tradition of his new homeland, but continued to write in a musical idiom that clearly showed the influence of the Franco-Burgundian school in which he would have been trained in Bruges. He, together with other composers of his generation such as Enrique (de Paris) and Johannes Cornago, who were also educated in the North, were key figures in the transmission and development of this idiom in the Spanish kingdoms in the mid-15th century.

WORKS

SACRED

Kyrie 'Spiritus et alme', Gloria 'Spiritus et alme', 4vv, from Missa de Beata Virgine, *I-Rvat* C.S.14, f.6*v*

Magnificat (6th tone), 4vv, *F-Pn* n.a.fr.4379, *P-Cug*; 'Quia fecit', 'Esurientes', *P-Ln* Ivo Cruz 60, G. de Baena: *Arte nouamente inuentada pera aprender a tanger* (Lisbon, 1540)

Nunc dimittis, 3vv, *F-Pn* n.a.fr.4379, f.84*v*

Pange lingua, 4vv, 2 versions: one in *E-Bbc* 454, *E-TZ* 2–3, and many other MSS, ed. in Gerber; another in *E-SE*, ed. in Anglès

TESS KNIGHTON

Urreta [Urrueta] (**Arroyo**), **Alicia** (*b* Veracruz, 12 Oct 1933; *d* Mexico City, 20 Dec 1987). Mexican composer and pianist. She began six years of piano study with Joaquín Amparán in Mexico City in 1948. In 1952 she entered the Conservatorio Nacional de Música, studying harmony with Rodolfo Halffter, and other subjects with Hernández Moncada, León Mariscal and Sandor Roth. After graduation she continued studying the piano privately with Alfred Brendel and Alicia de Larrocha, and she studied acoustics and electronic music at the Schola Cantorum in Paris. From 1957, while titular pianist of the Orquesta Sinfónica Nacional and instructor in acoustics at the Instituto Politécnico Nacional, she was the chosen performer in the Mexico City premières of all works including piano by Stockhausen, Cage, Gilbert Amy, Manuel Enríquez and Halffter. Meanwhile she composed many works showing her mastery of the avant-garde techniques emanating from Darmstadt. These works favour aleatory procedures with a Boulez-like notion of control: specific markings indicate the exact durations of particular passages and precise dynamic contours; pedalling too is indicated. In the 1970s she co-founded the Festival Hispano-Mexicano de Música Contemporánea, founded the Camerata de México and made recordings (for Voz Viva de México and Creaciones Cisne). Her many awards include prizes for the music for the film *El ídolo de los orígenes* (1967) and for incidental dramatic music, and a citation for her own mixed-media creation, *Pequeña historia de la música* (1980). Her incidental music for plays kept her name constantly before

the Mexico City public. In 1981 the Orquesta Sinfónica Nacional gave the first performance of her concerto for amplified piano and orchestra, *Arcana*, in which she herself was the soloist; the première of her *Esferas poéticas* was given in 1983 by the same orchestra. Manuel Enriquez, Halffter, Mario Lavista and Héctor Quintanar are among those who dedicated works to her.

WORKS
(*selective list*)

Stage: Romance de Doña Balada (chbr op, Urreta), 1972; Canto (Homage to Falla), 1v, actor, dancers; Tributo (ballet); Verán a conocernos [for marionettes]

ROBERT STEVENSON

Urroz, José [Urros, Joseph] (*d* early 18th century). Spanish organist and composer. He was first organist of Avila Cathedral and apparently a musician of some distinction; his name also appears in the records of the church of Santiago de Compostela for 24 January 1710. He was cited as an authority approving the *Escuela música* of Pablo Nassarre (Zaragoza, 1724). His only known works are a *Te Deum* for eight voices with continuo, a *Magnificat*, a mass with organ accompaniment and three *canciónes* and nine versos for organ; the organ music is transcribed in B. Hudson: *A Portuguese Source of Seventeenth-Century Iberian Organ Music: MS 1577, Loc.B, 5, Municipal Library, Oporto, Portugal* (diss., Indiana U., 1961).

BARTON HUDSON

Urrutia Blondel, Jorge (*b* La Serena, 17 Sept 1905; *d* Santiago, 5 July 1981). Chilean composer and musicologist. He studied at the Instituto Nacional de Santiago and at the Law School of the University of Chile, while studying music privately under Pedro Humberto Allende and Domingo Santa Cruz. As an active participant in the music organization movement associated with the Sociedad Bach, under the leadership of Santa Cruz, he joined the society's board of directors. After being nominated secretary of the National Conservatory of Music, he was awarded a scholarship for further studies in Europe: he studied in Paris under Koechlin, Dukas and Boulanger, and in Berlin under Hindemith and Mersmann (1928–31). On his return he was appointed professor of theory and composition at the National Conservatory; his various subsequent positions during the 1940s and 50s included those of secretary and acting dean of the Facultad de Ciencias y Artes Musicales of the University of Chile, and research member of the Instituto de Investigaciones Musicales. As a composer Urrutia Blondel initially cultivated a nationalist style but later adopted elements of post-impressionism (e.g. in *Pastoral de Alhué*, 1937) and neo-classicism. His work as a musicologist consisted chiefly of analytic studies of 20th-century music in Chile and of folk music research, particularly in the northern provinces of Chile.

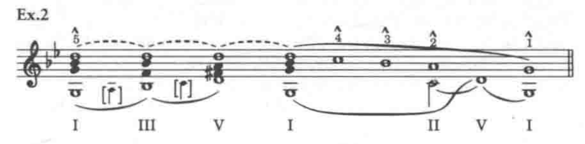
GERARD BÉHAGUE

Ursatz (Ger.). In Schenkerian analysis (*see* ANALYSIS, §II, 4), the basic contrapuntal design that underlies the structure of a piece or movement; the final result of successive harmonic-contrapuntal 'reductions' in a LAYER analysis, and thus the representation of its musical BACKGROUND. The term is often rendered in English as 'fundamental structure'.



The upper voice of the *Ursatz*, called the URLINIE ('fundamental line'), consists of a diatonic stepwise descent to the tonic from the 3rd, 5th or octave; the interval it encompasses and the register in which it appears depend on the analysis, i.e. the content of the previous

layers and, ultimately, the piece itself. The lower voice, which encapsulates the harmonic motion of the piece, consists of a tonic, followed by a dominant and a return to the tonic; this is called the ARPEGGIATION (ii) of the bass (Ger. *Bassbrechung*) since it involves movement between two notes belonging to the tonic triad. Thus the upper and lower parts of the *Ursatz* both exhibit a 'horizontal' unfolding of the tonic triad. Two common *Ursatz* forms in C major are given in ex.1.

While the *Ursatz*, seen from an analytical point of view, is the reduction of a piece to its simplest harmonic and contrapuntal terms, it may also be understood compositionally as the initial elaboration of the tonic triad, and thus the starting-point for the explanation of a piece in terms of growth and development. It is for this reason that *Ursatz* is the first concept developed in the definitive formulation of Schenker's theories, *Der freie Satz* (1935), and also the starting-point – both graphically and verbally – of all his later analyses.

Like its companion term *Urlinie*, the meaning of *Ursatz* changed in the course of Schenker's development as a theorist. In the early to mid-1920s it denoted something a little more elaborate: ex.2 shows the *Ursatz* of the first

movement of Mozart's G minor Symphony in *Das Meisterwerk in der Musik*, ii (1926). By the time of the 'Eroica' analysis (1930), this level of elaboration would have been called the 'erste Schicht' or 'first [middleground] layer'.

WILLIAM DRABKIN

Ursillo, Fabio (*b* Rome, late 17th century; *d* Tournai, 1759). Italian composer and lutenist active in the south Netherlands. He was in Rome in 1720, and some time after that, probably at Rome or Naples, met Count François-Ernest of Salm-Reifferscheid, the future Bishop of Tournai, and in 1725 followed him to Tournai. He is said to have been a man of difficult character; he changed his employment several times, working for the Chevalier d'Orléans, grand prior of France (1730), then returning to the bishop's service in 1733, moving to the Württemberg court in 1744, and finally settling in 1746 with the bishop; he also had opportunities to perform in Brussels, notably at the court. The bishop guaranteed him an annual income of 1200 livres as well as food, lodging, fuel, light and ten Spanish pistoles for clothing. In 1759 his widow, disregarding her husband's periods of work elsewhere, claimed food and lodging for herself on the strength of the 34 years during which he had been in the bishop's service. Fétis confused Ursillo with the Neapolitan composer Fabio.

PHILIPPE MERCIER

Ursino, Gennaro (*b* Roio del Sangro, nr Chieti, 1650; *d* Naples, in or after 1715). Italian composer. At the age of 12 he entered the Conservatorio della Pietà dei Turchini, Naples, where he was taught by Giovanni Salvatore. From 1675 he was chief assistant to Francesco Provenzale, director of this conservatory, whom he succeeded after his retirement in April 1701; he remained in this position until 1705. He was also assistant to Salvatore, then director of the Conservatorio dei Poveri di Gesù Cristo, from September 1686; he was appointed his successor in 1688 and held this position until 1695. He served too as *maestro di cappella* of SS Annunziata (1701–15), S Maria in Portico and the Jesuit college. He composed music (now lost) for three dramatic works given at religious institutions in Naples: the comedy *Pandora* (1690), *Il trionfo della croce nella vittoria di Costantino* (a 'scherzo drammatico' to a text by Giacomo Badiale, 1690, revived 1701) and *Iratus in coelos impetus* (an 'armonica fabula', 1697). A few motets by him survive (in *I-Nf*); most are for small forces, sometimes with concertato violin parts, but three are for four choirs.

KEITH A. LARSON

Ursinus [Ursus], **Johann.** *See* BEER, JOHANN.

Urso, Camilla (*b* Nantes, France, 13 June 1842; *d* New York, 20 Jan 1902). French violinist, active in the USA. She was a child prodigy and at the age of seven became the first girl admitted to the Paris Conservatoire, where she took the first prizes in all her subjects. She came to the USA in 1852, and made her début in New York on 29 October. She appeared in three concerts with the singer Marietta Alboni, then in a series of concerts in New England with the Germania Musical Society. In 1853 she toured with the Germanians and Henriette Sontag. In 1855 she withdrew from public life to Nashville, resuming her career in 1863 with extensive tours of Europe and the USA, as well as Australia (1879, 1894) and South Africa (1895). She appeared in chamber groups and as a soloist with leading orchestras, and was noted for her performances of the Beethoven and Mendelssohn concertos. She retired from concert life in 1895 and settled in New York, where she taught violin and helped to further the activities of the newly formed Women's String Orchestra. She was an outspoken advocate of professional and economic equality for women as orchestral musicians.

SUSAN KAGAN

Urspruch, Anton (*b* Frankfurt, 17 Feb 1850; *d* Frankfurt, 7 Jan 1907). German composer, pianist and teacher. He studied composition with Ignaz Lachner and Joachim Raff, and in 1871 went to Weimar to complete his piano studies with Liszt, where his contact with the Weimar circle had a decisive effect on his subsequent development. He then devoted himself to composition, and became in 1878 teacher and, from 1883, professor of counterpoint and composition at the Hoch Conservatory in Frankfurt. Urspruch's compositions were only moderately influenced by the developments taking place at the end of the 19th century and little, if at all, by Wagner. He wrote three operas, *Der Sturm* (libretto by Pirazzi, after Shakespeare), and *Das Unmöglichste von allem* and *Heilige Cäcilie*, both to his own librettos (the orchestration of the last is complete only for Act 1, and sketched for Acts 2 and 3; a complete piano score survives); his other works comprise a large number of songs, both for chorus and for solo voice, a symphony, a piano concerto, a piano quintet and other chamber music, and piano works. His compositions (all in *D-F*) were popular in their day and are characterized by harmonic originality (including both unusual chromatic progressions and reminders of 16th-century vocal polyphony), ingenious contrapuntal treatment and progressive orchestral style (e.g. *Die Frühlingsfrier*, a setting of Klopstock's Ode for tenor, chorus and orchestra). He also worked for a revival of Gregorian chant, his extensive research resulting in his publication of *Der gregorianische Choral und die Choralfrage* (Stuttgart and Munich, 1901).

THEODORA KIRCHER-URSPRUCH

Ursprung, Otto (*b* Gunzlhofen, Upper Bavaria, 16 Jan 1879; *d* Schondorf, nr Munich, 14 Sept 1960). German musicologist. He studied philosophy and theology at the Freising Hochschule and Munich University from 1899 to 1904, when he was ordained priest; after four years of pastoral work he began to study music, first privately with Gottfried Rüdinger and then with Sandberger and Kroyer at Munich University, where he took the doctorate in 1911 with a dissertation on Jacobus de Kerle. He was attached to St Cajetan's, Munich (1912–26), serving as an army chaplain during World War I, and then as honorary canon to the court church, All Saints, until its closure by the Nazis in 1940; he was honorary professor of music history at Munich University (1932–49).

Ursprung's dissertation on Kerle's part in the reforms of the Council of Trent led to his major work, a comprehensive and fundamental survey of Catholic church music, in which he combined his knowledge as a theologian and music historian. His other writings, developing from this primary concern, dealt with the aesthetic bases of church music, the relationship between Gregorian and ancient music, the growth of liturgical music drama, and early Spanish music. He wrote an important book on Munich's musical history and produced editions of works by Kerle and Senfl.

WRITINGS

Jacobus de Kerle (1531/2–1591): sein Leben und seine Werke (diss., U. of Munich, 1911; Munich, 1913)
'Spanisch-katalanische Liedkunst des 14. Jahrhunderts', *ZMw*, iv (1921–2), 136–60

KARL GEIRINGER

Ursuleac, Viorica (*b* Czernowitz [Cernăuţi, now Chernovtsy], 26 March 1894; *d* Ehrwald, Tyrol, 23 Oct 1985). Romanian soprano. She studied in Vienna and made her début at Agram in 1922 as Charlotte. She sang at Cernăuţi, the Vienna Volksoper and the Frankfurt Opera, whose conductor, Clemens Krauss, she later married. In 1930 she moved to Vienna, in 1935 to the Berlin

Viorica Ursuleac as Countess Madeleine in Richard Strauss's 'Capriccio'

Staatsoper and finally with Krauss to the Staatsoper in Munich (1937–44). She created the leading soprano roles in Strauss's *Arabella* (1933, Dresden), *Friedenstag* (1938, Munich) and *Capriccio* (1942, Munich) and sang the title role in the public dress rehearsal of *Die Liebe der Danae* (1944, Salzburg). She also appeared in *Elektra*, *Der Rosenkavalier*, *Die Frau ohne Schatten*, *Ariadne auf Naxos* and *Die ägyptische Helena*. Strauss dedicated *Friedenstag* jointly to Krauss and Ursuleac, and some of his songs to Ursuleac; in all she sang 506 performances of 12 Strauss roles during her career.

Ursuleac also created the leading soprano roles in Sekles's *Die zehn Küsse* (1926, Frankfurt), Krenek's *Der Diktator* (1928, Wiesbaden) and d'Albert's *Mister Wu* (1932, Dresden). She appeared regularly at Salzburg, 1930–34 and 1942–3. She made her only Covent Garden appearance in 1934, when she sang in the English premières of *Arabella* and *Švanda the Bagpiper* and as Desdemona. Her repertory of 83 roles also included Senta, Sieglinde, Tosca, Turandot and Elisabeth de Valois. Her recordings of the Marschallin, Ariadne, Arabella and, above all, Maria (from a live performance of *Friedenstag* by the original cast) confirm her lasting reputation as a Strauss interpreter.

HAROLD ROSENTHAL/ALAN BLYTH

Urteaga, Irma (Graciela) (*b* San Nicolás, Argentina, 7 March 1929). Argentine composer and pianist. She studied in Buenos Aires at the National Conservatory and at the Instituto del Teatro Colón, where she studied choral and orchestral conducting. She later taught at both institutions. Between 1974 and 1978 she was director of the opera studio and house répétiteur at the Teatro Colón, where she later directed an opera workshop (1984–93); she did similar work for Ecuador Opera during the 1986–8 seasons. Urteaga's compositions, mainly vocal works, have won several prizes. She acknowledges the influence of Prokofiev and Bartók and then of Berg and Penderecki in her early works, and later developed her own style, which is essentially neo-romantic, with occasional use of avant-garde techniques. This combination is particularly apparent in *La maldolida* (1987), a humorous and affectionate operatic parody.

WORKS

Stage: La maldolida (chbr op, A. Dimant), 1987; Buenos Aires, 20 June 1991

Orch and vocal-orch: Ambitos, orch, 1970; Paolo e Francesca (Dante), S, T, chbr orch, 1971; El mundo del ser (E. Frías), Mez, orch, 1989–90; Mar Conc., 1994

Choral: L'Inferno (Dante), chorus, orch, 1971; Expectación (C. Costa Lima), S, chorus, 1977; Motivos de pecera (A.L. Frega, C.A. Merlino), children's female chorus, fl, pf, 1989; Luz de mundos (I. Gruss), chorus, 1990; Los alumbramientos (N. Candegabe), children's chorus, chbr orch, 1992

Other vocal (for 1v, pf unless otherwise stated): 2 canciones (J.F. Giacobbe, C. Nalé Roxlo), 1967; Existenciales (A. Storni), 1974; Sueños de Yerma (F. García Lorca), Mez, fl, cl, vn, vc, pf, 1986; Celebérrimas andanzas del ingenioso fidalgo Don Eduardo Cogorno (Dimant), Mez, Bar, S S S, pf, 1989; Himno a San Rafael (E. Frías), 1992; Cánticos para soñar (Frías, O. Sussel-Marie), 1993; Enigma de la palabra (A. Requeni), 1993

Chbr and pf: 2 Preludes, pf, 1967; Variations and Toccata, pf, 1968; Pf Sonata, 1969; Str Qt, 1969; Designios, fl, cl, va, pf, 1976; Turbulencias, vn, pf, 1979; Escalénicas, pf, 1992; A través, db, pf, 1993; Engarces en 3 cuadros, vn, sax, pf, 1994; Tiempo de memorias, cl, vn, pf, 1996; Variaciones sobre un tema de Beatriz Sosnik, pf, 1997

Principal publishers: Cosentino IRCA, EAC-Moeck

RAQUEL C. DE ARIAS

Urtext (Ger.: 'original text'). A term used in studying and editing musical sources to signify the earliest version of the text of any composition, musical or otherwise, a version that is usually no longer extant; it is also used to signify a modern edition of earlier music which purports to present the original text, without editorial addition or emendation. (*See* EDITING.)

The concept was developed in the study of biblical and medieval texts, where no autograph or (in most cases) other contemporary source survives. Since the act of copying always introduces changes in the text, deliberately or otherwise, the absence of a HOLOGRAPH means that many details are subject to question. The value of the search for a musical Urtext is debatable. On one hand, it would of course be interesting to know exactly what a composer wrote. But, on the other, there is no evidence

that any composer before, at the earliest, the late 18th century was concerned that the holograph should be followed exactly. If a composer saw the notated version as one among a number of equally possible alternatives, then any other versions in the extant sources may have equal validity. Nevertheless, the processes of stemmatics remain of great value, for they help to validate the surviving versions, to indicate what they represent – as regional versions, as evidence for performing practices, or as records of special occasions – and occasionally to reveal actual decisions on the composer's part.

This touches on a second difficult area in the search for any 'original' version: that of changes made by the composer during and (particularly) after the act of composition. The doctrine of the 'Fassung letzter Hand' – that the last version, carrying the composer's final thoughts, is deemed to be the only one worth recovering – raises serious questions about when a composer believed a work was complete and finished. Some composers (Liszt, Bruckner and Boulez are obvious examples) clearly go through continuing rethinkings of works: there are then apparently several Urtexts, representing different versions. Other composers make smaller changes, sometimes affecting little more than the mode of notation, so that it cannot be said which version is the only possible and its source the single provider of an Urtext.

This claim that a modern edition is an 'Urtext' is difficult to support. As the foregoing makes clear, any original text rarely exists for music composed before the 18th century, and any attempt at its reconstruction is not only impossible but also of questionable value. Even for music from 1700 on, few sources can be transcribed into a modern edition without editorial intervention. With manuscripts as difficult to read as those of Beethoven, many of the scratches and splotches require interpretation, and many of these even involve pitches. For other composers, there are similar problems with the placing of dynamic marks, the duration of slurs, a confusion between accents and crescendo signs or between staccato and marcato marks, and so on. Finally, again, many composers revise both details and large-scale elements, and it is not always possible to establish which version was the later. Any of these requires editorial intervention and renders suspect the claims of any modern Urtext edition.

Because of these elements, an Urtext edition is no less a reflection of its times than one with an avowed editorial intervention, as has been recognized for the various editions of Bach's music.

Uruguay, Eastern Republic of (Sp. República Oriental del Uruguay). Republic in South America. It is on the east coast of the continent, bounded to the south and east by the estuary of the river Plate and the south Atlantic, to the west by the River Uruguay and Argentina and to the north by Brazil.

I. Art music. II. Traditional and popular music.

I. Art music

The colonization of Uruguay began in the 16th century and developed fully from the late 17th, when Spaniards occupied the territory to contain Portuguese expansion towards the river Plate. Few mission settlements had been established, and the capital city, Montevideo, was founded only in 1726; colonial music did not flourish until the late 18th century. The music archives of S Francisco in Montevideo contain about 215 works (some incomplete) by composers active in Uruguay from the colonial period to the late 19th century, including the earliest known Uruguayan polyphony, the four-part *Misa para Día de*

Difuntos (1802) by José Manuel Ubeda (1760–1823). Other composers of religious works include Juan José de Sostoa (*c*1750–1813); the Italian José Giuffra, who arrived in 1850; and Carmelo Calvo (1842–1922). Juan Cayetano Barros (probably Portuguese) wrote a Constitutional Anthem in 1821; his son Antonio (*b* 1800) was a skilful composer whose Grand Symphonie (*c*1830) introduced the Italian style, which predominated from that time, to the Uruguayan public. Antonio Sáenz (*b* Spain), who settled in Montevideo in 1829, wrote a *Misa solemne* for the third anniversary of the Uruguayan constitution in 1833. The Hungarian-born Francisco José Debali, who arrived around 1837, headed a new generation of Uruguayan musicians, many of them amateurs, who composed mostly piano pieces and songs; some were women, including Carmen Luna, who published a Minué in 1837, and Jacinta Furriol (*b* 1806), whose *Contradanza de los militares y empelados* was performed in 1833.

Dalmiro Costa led a generation of pianist-composers including Pablo Faget (1825–1910), Miguel Hines (1820–63) and Oscar Pfeiffer (1824–1906). Costa's works use Latin American rhythmic and melodic patterns. The first Uruguayan opera, *La Parisina* by Tomás Giribaldi, had its première in 1878; León Ribeiro wrote the first extant Uruguayan symphony (1877), the first extant Uruguayan string quartet (1879), and the opera *Colón* (1892) for the 400th anniversary of Columbus's voyage to America. Luis Sambucetti, a dominant figure of this generation, trained in Paris and introduced the French tradition to Uruguayan music with his Suite d'Orchestre (1898). In the early 20th century, nationalist feeling appeared in compositions by Carlos Pedrell and Alfonso Broqua, strikingly in Broqua's *Tabaré* (1910) and his Quintet in G minor (*c*1914). Eduardo Fabini was the giant of Uruguayan musical nationalism; notable are his choral work *Las flores del campo* (1900) and the tone poem *Campo* (1913). Luis Cluzeau-Mortet developed a fresh nationalist style, handling rural musical idioms with an impressionistic flair. Jaurés Lamarque-Pons quoted Afro-Uruguayan rhythms and the urban music of the river Plate – the *milonga* and the tango – in his Suite de Ballet (1957) and his opera *Marta Gruni* (1967). Nationalist composers who cultivated a Romantic idiom included Vicente Ascone and Ramón Rodríguez Socas (1886–1957), whose opera *Urunday* (1940) calls on the lyricism of the Italian tradition. César Cortinas eschewed nationalism, cultivating eclectic sources of melody and universalist musical forms. Carmen Barradas, in her *Fabricación* for piano (1922), introduced notation symbols and sound effects that prefigured *musique concrète*. Guido Santórsola employed atonal expressionism in some of his compositions.

The works of Carlos Estrada, controlled in formal design and harmonically rich, followed neo-classical aesthetics. Héctor Tosar, another neo-classicist, used elements of Uruguayan traditional music in such compositions as *Oda a Artigas* (1951) and *Danza criolla* (1940). With *Aves errantes* (1961–3) he began experimenting with 12 basic groups of three sounds (*trifonos*); he presented the sound-group concept in the 1992 monograph *Los grupos de sonidos*, the first Uruguayan venture in composition theory. Composers whose careers developed during the 1960s include Pedro Ipuche Riva (*b* 1924), Diego Le Grand (*b* 1928), León Briotti (*b* 1929), Ricardo Storm (1930–96), Antonio Mastrogiovanni (*b* 1936), José Serebrier (*b* 1938), Sergio Cervetti (*b* 1940) and Alvaro Carlevaro (*b* 1957), whose *La Vía Láctea* (1985) and *Intramuros* (1987) display subtle tone colours and eclectic rhythms.

The Uruguayan broadcasting service, SODRE (Servicio Oficial de Difusión Radioeléctrica), has disseminated the works of many Latin American composers through its radio and television broadcasts, through its orchestra, choir and ballet, and through many festivals of Latin American music. In 1994 the Uruguayan congress created the Fondo Nacional de la Música to sponsor research and projects related to Uruguayan music.

II. Traditional and popular music

The traditional musics of Uruguay should not be studied in isolation as they share features with those of the bordering regions of the neighbouring countries of southern Brazil and central-eastern Argentina; on a broader level with those of the larger continent of Latin America, and on a general level with the entire Americas. Uruguayan music draws on three cultural sources: the indigenous, the western European and the black African. Each has produced complex rather than homogeneous musical forms, this diversity defining the Uruguayan musical profile. At the time of the arrival of the Spanish conquerors a multiplicity of ethnic traditions already existed dispersed over a wide area with diverse levels of interaction. The varying nature of gradual contact with the colonizers determined contrasting indigenous components in the music of neighbouring mestizo communities. The European contribution was not as simple as is commonly understood: the majority of immigrants, mostly low class, came from different parts of western Europe and the Iberian peninsula, the latter only recently emerged from a war against Muslim invaders involving religious, economic and political conflict. As a result, a variety of acculturated musical situations already existed within the European population. The cultures of slaves brought forcibly from all around the sub-Saharan regions of Africa also carried with them musical material from a diverse number of cultural areas.

Apart from a number of minor historical studies, the first important contribution to research was made by Isabel Aretz in 1943. Between 1945 and 1966, the Uruguayan musicologist Lauro Ayestarán (1913–66) carried out formative work in collaboration with his senior Argentine colleague Carlos Vega (1898–1966), archived in the musicology section of the Museo Historico Nacional.

1. Amerindian heritage. 2. African heritage. 3. Mestizo music and instruments.

1. AMERINDIAN HERITAGE. The Amerindian people were nomadic, moving over a very large territory, including parts of Uruguay, Brazil, Argentina and, possibly, Paraguay. While their ethnic roots are unclear, it is known that Guaraní was one of their spoken languages. According to historians, most others were mainly from Charrúa and Chaná, both ethnic groups possibly belonging to the Arawak linguistic family. The Chaná-Charrúas rejected acculturation and were as a consequence practically annihilated by the conquerors. Those who survived were wiped out later, after the independence wars by some of the *criollo* leaders. However, it is now accepted that resistance to integration did not mean that there was no cultural contact. So, although the Amerindian population was destroyed as an entity during the 19th century (notably until 1831; in subsequent decades less openly), it is not possible to affirm that mestizo culture had not absorbed elements from the Chaná-Charrúa musics. What is accepted is the strong presence of Guaraní musical elements in the resulting popular culture which has meant that in recent decades new Guaraní small communities, belonging to the Mbyá ethnic group, have been able to return from the north. As a result of the return of these groups it is now known that, for the Mbyá, music is a private, 'secret' practice, which sheds light on earlier historical chronicles which provided practically no information about indigenous musics. In the mid-20th century when Lauro Ayestarán studied some of these early written documents, an imprecise picture was given of indigenous people playing only trumpets, horns and drums. Presence of instruments other than those known in European organology were not noted. Nor was it understood or recorded that for example, in Chaná-Charrúa culture, music did not constitute a category which could be segregated from the totality of everyday human activity. Other Uruguayan Amerindian groups include a probable small quantity of acculturated Chaná-Charrúas, who succumbed to missionary pressure at the beginning of the 17th century; a massive dispersion of acculturated Guaranís ejected from Jesuit missions by the Spanish crown in 1767; and several Guaicurú groups of unconfirmed number who came from the Chaco to settle as tenant farmers following the land reform of 1815–16 begun by the revolutionary leader José Artigas. Each would have introduced varying musical contributions of diverse ethnic origin, complicated by varying degrees of acculturation ranging from the probably low level of the Guaicurús, to the high levels of Guaranís from the missions.

2. AFRICAN HERITAGE. The contribution of people from the sub-Saharan (Aguisimbian) regions of Africa has been of great influence. However, colonial Montevideo population records show equal numbers of people coming from Mozambique (East Africa), Angola (West Africa) and other territories.

Expressions of black culture conserved in the capital Montevideo are detectable in the music of the *llamada*, in choreographic-musical elements of *candombe* and other specific aspects of dance choreography. Despite the diversity of origin of African immigrants, by the beginning of the 20th century evidence suggests unified use of membranophones, with the adoption of the *tamboril*, a variant common to other Latin American territories. A

Gramillero accompanied by tamboril (single-headed drum) in candombe

single-headed drum whose membrane is nailed to a barrel-shaped wooden shell, the *tamboril* is carried over the shoulder and played with two hands, one holding a stick (see illustration). There are three sizes of *tamboril* called *chico*, *repique* and *piano* (in ascending order of size), the latter appearing sometimes as a bass *piano* called *bajo* or *bombo*. Traditionally tuned by stretching the membrane over heat, in recent decades new methods of construction have introduced mechanical tuning mechanisms. Tuning relationships between sizes is more a function and consequence of 'good tension' relationships between the instruments than a question of absolute pitch. The wooden body, traditionally made out of barrel laths without nails, and since the 1970s constructed from treated wood, is carved so that each lath wedges into the next, encircled and held together by three iron rings.

A minimum of two different drums (either the *repique* or *piano*, with the *chico* in continuous reference to the other two) is necessary to produce the *llamada*, the music of this set of drums. They create a rich weave of patterns with none of the different sizes of *tamboril* acting independently of the others. In the case of the *chico* rhythmic patterns are fixed; for the *piano* (*bajo* or *bombo*) they are partially unchanged (ex.1); while for the *repique*

Ex.1 Basic patterns of *chico* and *piano* in a *llamada de tamboriles*

they are varied, with improvisational practices. The *llamada* is produced by several drums of each size, each

determining a layer of rhythms which interact with other layers while at the same time engaging in 'dialogue' within their layer (particularly the improvising *repiques*). The continuity of this tradition is directly linked to the black population of Montevideo, within *conventillo* (tenement house) and *barrio* (neighbourhood) culture. At the end of the 20th century this has been gradually changing as young white people, whose own life experience contrasts with that of the poor blacks of these marginal neighbourhoods, have become interested in and have adopted this music.

While still associated with particular calendar dates, the *llamada* maintains a non-explicit ritual spirit. The 'spontaneous' meeting of a group of walking drummers is usually accompanied by people of the neighbourhood. The drummers are usually preceded by processing dancers, some of whom may perform choreographic characterizations: while their original meaning is lost, some bear the mark of behaviours related to the acculturation of black African traditions observed elsewhere on the American continent. In the 1950s the continuity of the tradition was transformed through the integration of the *llamada* into the official Carnival festivities; the whole phenomenon was thus institutionalized by the municipality of Montevideo, with the introduction of written rules and prize-winning mechanisms. Despite this many traditional features persist.

Drummers, who can number from 15 to 100 or more form a line, usually with six to each row, mixing different sizes of *tamboril*, their music a challenging mix of the polyphonic and polyrhythmic. Traditional costumes are worn (fig.1). They are accompanied by ritual characters including the *gramillero*, the *mama vieja* and the *escobero* or *escobillero* and the standard bearers. Other participants include dancers (mostly young women) and 'exotic' characters drawn from the world of show business (inspired by the Río de Janeiro carnival and transvestite culture among other things), all formally accepted by the official rules and judging panels. The *gramillero* (fig.1), a young person disguised as an old man, wears a false white beard, a pair of spectacle frames, a top hat, dress coat, gaiters with rope-soled sandals instead of shoes, two white gloves (one held), while holding a small case in the left hand and using a walking cane to support a tensely held 'old' body. This character relates to roles conserved in syncretic religions of the black Americas. The *mama vieja* evokes an old lady dressed in bulky skirts holding a parasol, walking graciously. The *escobero* or *escobillero* wears a colourful shirt, an animal-skin loincloth studded with brilliant objects over tight-fitting trousers, and sandals with long ribbons attached and tied cross-wise up the legs. The *escobero* carries a thin-sticked broom, making rotating patterns with it in the air, a syncretic practice thought to relate to the exorcism of bad spirits. The trophy or standard bearers often carry war emblems: a star, a half moon, flags and banners; these trophies are probably survivals of historical 'holy wars' between Islamic and Christian blacks in both Africa and the New World. In recent decades certain Afro-Brazilian syncretic religions, particularly Umbanda, have increased their presence and influence with practically unchanging practices of observing the Brazilian liturgy and singing in Portuguese.

3. Mestizo music and instruments. The European contribution to music culture has posed problems arising from the complex issues surrounding colonialism. The particular history of the river Plate region has led to the perception of the Uruguayan intelligentsia of Uruguay as a country inhabited by 'white' people, posing a challenge to creative musicians who wish to assume a mestizo identity.

With indigenous resistance to the European practice of genocide (particularly of the Chaná-Charrúa), postponing the colonization of the eastern coast of both the Uruguay and Plate rivers, and with no stable European settlements until the 18th century, the process of European acculturation was inhibited. At the same time there were constant cultural influences from the north (from Asunción and later the Jesuit missions), the west (Buenos Aires and other settlements) and the north-east, where Portugal tried to force a permanent demarcation line with Spain in order to dominate navigation in the river Plate area.

By the time Montevideo was finally taken by Spain around 1726, the territory had already been influenced by rural mestizo inhabitants, urban migrants and acculturated Guaranís dispersed from the Jesuit missions, thereby creating a well-defined musical mestizo identity which survives in children's songs and games and other traditional forms. Ayestarán found that these were linked to similar traditions elsewhere on the continent, with more than 100 different examples of monodic, unaccompanied melodies used as lullabies, rounds, *romances* (ballads), *villancicos* and children's songs and games.

The guitar is the main instrument of both rural and urban mestizo society. While standard western tuning is the most common (*E–A–d–g–b′–e′*) there is evidence of at least another five older tunings, including the *temple del Diablo* tuning, which has a tritone between the second and the third string and is still found in some rural or semi-rural areas.

The second most popular instrument is the accordion, usually the diatonic form with one or two rows of keys, which first appeared in the mid-19th century, when many social dances were adapted into its repertory. Accordions with ten melodic keys and four bass buttons which produce tonic, dominant and sub-dominant harmonies are generally tuned in D although some use C. A type of accordion preferred for social dances has 21 buttons and eight bass keys.

The *bandoneon*, pre-eminent in tango culture in Argentina, has relatively few virtuoso players in Uruguay. A number of areas bordering with Brazil use the *cavaquinho* (retaining the Portuguese name), a small guitar with four strings. *Cavaquinhos* are played in some places in an ensemble with guitars and ebony side-blown flutes which survive from military and town bands. Drums and cymbals play a large part in Carnival while the *tamboril* has its own aforementioned traditions, principally in Montevideo. Since the 1960s composer-performers have incorporated a bass guitar called the *guitarron*, occasionally substituted in groups by a plucked double bass. Drum kit, electric bass, electric guitar, assorted percussion and many wind or string instruments, mainly borrowed from the European orchestra, are found in various popular ensembles.

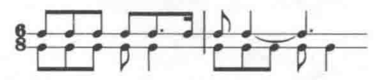
The preferred vocal aesthetic for men in mainstream popular music in the second half of the 20th century involved a low register, avoiding high and middle registers favoured by women. A former male tradition, which gradually diminished in popularity in live performance

during the 1930s, involved a smooth singing style moving to falsetto. This was particularly evident in the 'high' art version of a form called *estilo*, a genre influential in the art of tango singing, as heard in the voice of Argentine tango singer CARLOS GARDEL. Traditions such as the *payada* which demand strong vocal projection for open-air performance developed a 'crying' vocal style. In the 1980s a style of male falsetto reappeared following the reappraisal of 1960s metropolitan rock music.

The musical craft of the *payador* survives with surprising historic continuity on the American continent in former Spanish and Portuguese colonies (including Chile, Cuba and Brazil). The *payador* sings improvised poetry to his own guitar accompaniment according to strict stanzaic rules of versification, based on the octosyllabic, ten-line verse *décima* form. The *décima criolla* is the most familiar but other *copla* (couplet) and *verso* (verse) forms, with stanzas of four, six and eight lines, are also frequent, on the basis of a repeated musical structure accompanied by the guitar. The present Uruguayan tradition is related to that of neighbouring areas of Argentina and part of the state of Rio Grande do Sul, Brazil. The principal musical genres used in contemporary *payadas* (song sessions) are the *cifra* and the *milonga*. For the singer, solo improvisation on a subject usually given by the audience may be of secondary importance to actual participation in a *payada de contrapunto*, a challenge between two singers, in which they can fully show their virtuosity. Stanzas are alternated, while both guitars maintain repeated rhythm, with a final flourish in the final stanzas when alternating couplets are exchanged, often resulting in an atmosphere of breathtaking public contest.

The most common song type in Uruguay is the *milonga* (also found in southern Brazil, central-eastern Argentina and southern Chile). Ayestarán's unsuccessful attempts to establish its origin arose from a history of 18th- and 19th-century racism and social taboo concerning the music of African immigrants, resulting in a lack of written documentation about the *milonga* and related genres. A fast, danceable version, usually without words, had disappeared by the turn of the 19th century, with surviving elements captured in some early tango and the *tango-milonga*, a more rapid form than common tango and full of striking rhythmic patterns (ex.2). The slower *milonga*,

Ex.2 Some patterns of the danceable *milonga*



often used as accompaniment for the improvised verse traditions of the *payadas* of *payadores*, as well as for songs, has different characteristics. The most common rhythmic pattern is 3 + 3 + 2 in duple time (ex.3). Despite

Ex.3 Basic rhythmic structure of the sung *milonga*

the accompaniment with tonic and dominant chords, 19th-century *milonga* singing style used non-equal tuning (of unknown origin) outside the tonal system. At the end of the 20th century two main tendencies could be recognized on opposite sides of the river Plate: a Uruguayan *milonga*, called *oriental* or *orientala*, in a heavy style which contrasts with the softer and delicate style of the Argentine *pampeana*.

The *cielito* form, which emerged as the most prestigious musical and choreographic genre some time between 1800 and 1820 when it was popular with revolutionary patriots, is still found. In a lively tempo, its metrical pattern was binary with ternary subdivision (6/8 or equivalent), with a general *ABABAB* structure. The formula for the refrain '*Cielito, cielo, que si, / cielito*' or '*Cielo, cielito, que si, / cielo*' or variants, appears as the first phrase of *B* and at the beginning of the second phrase *B* (ex.4). The *cielito* became popular throughout the

Ex.4 Rhythmic pattern of melody and accompaniment in the *cielito*

whole river Plate area as did the popular dances, the *media caña* and *pericón*. Both use a similar metrical pattern with texts often expressing political struggle (the *media caña* by 1830, the *pericón* later), and are still performed.

The *estilo* (occasionally called *triste*), which became popular in the late 18th century, was recognized by the end of the 19th century as a 'folkloric survival' and 'revitalized', remaining commercially popular until the beginning of the 1930s. Usually sung by men, with the singer accompanying himself on guitar, the subjects of its lyrics were most often 'transcendental', lyrical or dramatic; it is regarded as one of the most 'refined' popular genres. With an *ABA′* structure (in Vega's terminology: *tema*, *kimba*, *final*), it begins with a *punteo*, an introductory instrumental prelude, whose structure contrasts with those of the *A* and *B* melodies while relating to the tempo of the *B* section. The metre for both *A* and *A′* is in either duple or triple time or a combination of both. The *B* section is called *cielito*, recalling the aforementioned *cielito* dance. According to unpublished work by Ayestarán, the structure of the *cielito* falls into three formal groups: the principal one has two sections of four phrases, a slow section *A*, followed by a quicker, danceable section *B*, concluding with a slow *A′* section of two phrases. Its verse pattern is that of the *décima criolla* or *décima espinela*, a widespread Latin American popular poetic tradition, a Spanish-derived octosyllabic ten-line rhyming stanza form (usually patterned *ABBAACCDDC*), in which one the challenges is shifting the verse punctuation to coincide with the rhythms of the music.

The *cifra*, a non-danceable song genre which had probably originated by 1830, is also based on the *décima* form, sharing non-tonal melodic behaviour with the sung *milonga*. It survives in the repertory of music used in the contemporary *payada*. A solo voice alternates with guitar sections, with sung phrases in a declamative *recitative* style, 'commented on' by brief instrumental interludes, except for the final passage between the last sung phrases, when the musician may conclude with a surprise improvisation on the original musical theme. The range of subjects covered in verse includes *sucedidos* (dramatic stories), memorable deeds and (more recently) humorous themes.

The *vidalita*, noted in documents by 1880, is apparently the last south-eastern genre derived from musical and poetic material which came originally from Peru, the centre of the Spanish colonial empire. Generally reserved for expressing the pain of love or love sickness, it is structured in quatrains, with alternate lines followed by a refrain on the word *vidalita*. The *chimarrita* (also *chamarrita*, *cimarrita* or *shimarrita*), linked to the Portuguese-Brazilian colonial period, is still found in the

northern half of the country and neighbouring territories. Emerging in the 1820s and widespread by 1850, its popularity peaked around 1880. With an octosyllabic *ABAB* structure, and lyrics in Portuguese or a particular frontier dialect of Portuguese and Spanish, it was danced with *polca* steps. The *tirana* and *carangueyo* (*carangueija* in Portuguese), dance-songs related to the southern territories of present-day Brazil (mainly the state of Rio Grande do Sul), survive only as songs, with lyrics in Spanish, Portuguese or the frontier dialect.

As a reaction to the arrival of enormous numbers of European immigrants at the end of the 19th century in the river Plate area, a movement led by progressive intellectuals emerged in Montevideo and Buenos Aires, which attempted to affirm a *criollo* cultural profile. This involved the revival of certain musical genres including the *pericón* and *estilo*. During the same period, dances brought originally from Europe evolved new creole forms. They included the *polca* (polka), known in its new southern version as the *polca canaria*; the *vals* or *valse* (waltz); the *chotis*, *shotis*, *siotis* or *chote* (schottische); the *danza* or *habanera* (from the French and English country dance); and the *mazurca* (mazurka) or *ranchera*. Adaptation to a *criollo* aesthetic often meant these dances lost characteristic European features, such as choreographic jumps, due to a preference for keeping feet close to the ground, which resulted in corresponding musical changes.

By 1880 the beginnings of TANGO, one of the most influential musics and dances of the 20th century, emerged in both Montevideo and Buenos Aires (*see* ARGENTINA). The etymology of 'tango' is thought to be of African origin, as the term was used historically in various countries of the Americas to describe the practices of black communities. Its choreography emerged independently of any previous traditions. Its success in Europe just before World War I enhanced its reputation at home, where local society had initially regarded it as 'indecent'. Although Uruguay played a significant role in the development of tango in the first 50 years of its life, Montevideo gradually relinquished the role of 'tango-capital' to Buenos Aires.

During the final decades of the 20th century *candombe* became fashionable, mostly as a song. As a term it has had various contrasting but related meanings over time. During the colonial period it described the practices of the black communities, while in modern times it has designated a song whose rhythm is compatible with the drummed *llamada*, so that it can be superimposed over it. In the 1940s it had two meanings: the first as a form conserved in the *conjuntos lubolos*, the societies of black people in the official Carnival festivities in Montevideo (together with other genres such as the *milongón*); the second, introduced by tango orchestras (*orquestas típicas*), related to the danceable *milonga*, a form which had already been used by tango composers. At the end of the 1950s, when the popularity of tango was in decline, a third *candombe* emerged in the repertory of dance bands strongly influenced by Afro-Cuban dance music. From the mid-1960s to the early 1970s *candombe* further evolved: one group of creators and performers attempted to 'fuse' the *candombe* of the *conjuntos lubolos* and of orchestras of 'tropical' Latin music with elements of first jazz and then rock. Another group created a new way of playing *candombe* with guitar (with or without plectrum and percussive tapping on the guitar body). These groups were part of a new Uruguayan 'folksong' movement searching for their musical roots which briefly became a mass phenomenon in 1967–8. From the mid-1970s this *candombe* became part of a young song movement, which blended together previous musical developments.

The *murga* is a dramatic form used traditionally during the long Carnival festivities. Although its origins are unclear (in Spanish the word was originally used to describe groups of non-professional musicians asking for money), by 1920 the name was given to societies practising this style, formed in the main by poor people. During its 'golden age' in the 1940s certain characteristics emerged and were consolidated. These included free use of fashionable tunes, with satirical lyrics composed annually on a wide range of subjects from critiques of daily life to obscene jokes; delivery with a strong nasal voice; use of rhythms regarded as mestizo, supported by a bass, snare drum set and cymbals; and a repertory of gestures and choreographic movements performed by musicians with painted faces wearing colourful clothes. Until the 1970s *murgas* were found only as part of Carnival. However, during the 1960s, the *murga* developed as a number of popular musicians began to build songs based on the *marcha camión*, one of its rhythmic patterns (ex.5).

Ex.5 Rhythmic pattern of the *murga*

During the 1970s *murga*, particularly the *marcha camión* and other variations, gradually became accepted by new social groups (ex.6), and by the 1990s *murga* was a

Ex.6 Variation in the pattern of the *murga*

successful part of the repertory of popular singer-composers. The northern area of Uruguay, related historically to the culture of Rio Grande do Sul, Brazil, has preserved a number of religious polyphonic forms, including the recital of the *Rosario de cinco misterios* (the Rosary of the Five Mysteries) or *Tercio*. The *folías del Divino* are prayers sung during processions at times of crisis.

GERARD BÉHAGUE/LEONARDO MANZINO (I), CORIÚN AHARONIÁN (II)

Usandizaga [Soraluce], **José Maria** (*b* San Sebastián, 31 March 1887; *d* San Sebastián, 5 Oct 1915). Basque composer. He began studies at an early age in San Sebastián with German Cendoya (piano) and Beltran Pagola (harmony). Later he played the piano at a private audition for Planté, who recommended him to d'Indy, and accordingly he went to the Schola Cantorum in Paris at the age of 14 to study with Grovlez (piano), Tricon (counterpoint) and Séré. His family wanted him to concentrate on the piano, but an arterial disease in the hand obliged him to give his attention instead to composition. He returned to San Sebastián in 1906, and shortly thereafter his first works based on Basque folk music – *Irurak bat* for orchestra, *Bidasoa* for band and *Euskal festara* for band – were performed. Usandizaga now became a prolific composer in all genres, but it was in the theatre that he had his greatest popular successes. The triumphal reception accorded his first work for the stage, *Mendi mendiyan* ('High in the Mountains'), at San Sebastián in 1911 encouraged him to search for another opera subject. He found it in Martinez Sierra's play *Teatro del ensueño*. In September 1913 the dramatist sent him an adaptation entitled *Las golondrinas* and two months later the work was complete. After the Madrid première in 1914 Usandizaga was established as a national figure. He asked Martinez Sierra for another libretto and spent his last months in Yanci, Navarre, composing *La llama*. On his death the work was finished by his brother, Ramón. Usandizaga's orchestration was Puccinian and there was a French influence in his music, but despite these links he was a Basque musician *par excellence* and, together with Guridi, he laid the foundations of Basque art music.

WORKS
(*selective list*)

Stage: Mendi mendiyan [High in the Mountains] (pastoral lírica vasca, 3, epilogue, J. Power), 1909–10, Bilbao, Campos Elíseos, 21 May 1910; Costa brava, 1912; Las golondrinas (drama lírico, 3, G. Martinez Sierra after his *Teatro del ensueño*), 1913, Madrid, Price, 5 Feb 1914, rev. as op by R. Usandizaga, Barcelona, 1929; La llama (drama lírico, 3, Martinez Sierra), 1915, inc., completed by R. Usandizaga, San Sebastián, 1918

Orch: Suite, A, *c*1904; Dans la mer, sym. poem, 1904; Ouverture symphonique sur un thème de plain-chant, 1904–5; Irurak bat, rapsodia popular vasca, *c*1906; several other pieces for orch and band

Vocal: Mass, 4vv; Euskal herri maitiari, rapsodia vasco-francesca, 4vv; several other choral pieces, songs, folksong arrs.

Inst: Cuarteto sobre temas populares vascos, str qt; Str Qt, A; pieces for vn/vc, pf; many pf and org works

Principal publisher: Unión Musical Española

ANTONIO RUIZ-PIPÓ

Usiglio, Emilio (*b* Parma, 8 Jan 1841; *d* Milan, 8 July 1910). Italian composer and conductor. He began piano lessons at the age of five and later moved to Borgo S Donnino (now Fidenza) to study harmony with Giovanni Rossi (ii). He completed his piano studies with Gustavo Romani in Pisa, where his family had settled, and studied harmony and counterpoint in Florence with Teodulo Mabellini. At the age of 19, Usiglio composed his first opera, *La locandiera* (from Goldoni's comedy), which was favourably reviewed by F. D'Arcais on its début in Turin in 1861. After a second comic opera, *L'eredità in Corsica* (1864), there followed Usiglio's most successful work, *Le educande di Sorrento* (1868), expressly written for the Teatro Alfieri in Florence. The opera had a wide circulation in Italy and was also performed in Malta, as *La figlia del generale* (Manoel, 1875), and in Berlin (Volksoper, 18 February 1911, sung in German). After *La scommessa* (1870), he again borrowed from Goldoni for *Le donne curiose* (1879). The libretto was by A. Zanardini, who later adapted Labiche's *La mariée du mardis gras* for Usiglio's last opera, *Le nozze in prigione* (1881).

Usiglio also composed ballets, chamber music and songs, but his prestige came mostly from his intense activity as a conductor, even though excessive drinking was eventually to mar his career. Usiglio took *Aida* on tour in Italy after its La Scala première was conducted by Franco Faccio in 1872. He was responsible for the first Italian performances of Thomas's *Hamlet* (1876, Venice) and *Carmen* (1879, Naples), and won the critics' favour to Boito's revised *Mefistofele*, conducting it at Bologna's Teatro Communale on 4 October 1875. In 1882 he conducted a successful revival of *Lohengrin* at La Fenice. He was widely appreciated for his intelligence, sense of balance and secure conducting style. In later years he grew deaf and retired to Milan with his wife, the singer Clementina Brusa; she died three months after him, on 2 October 1910, leaving a legacy to the Parma Conservatory to found a competition for Italian composers of comic opera.

Among minor composers of late 19th-century Italian opera, Usiglio had a particular inclination for *opera buffa*, which he cultivated through the unabashed revival of Rossinian and Donizettian formulas. Like his older colleagues Lauro Rossi or Nicola De Giosa, he was the epigone of a tradition that had long lost its vitality; but in

his best operas, *Le educande di Sorrento* and *Le donne curiose*, Usiglio could strike a personal note in some brilliant ensemble writing. *Le educande* also shows, along with typical devices of the old style – for example the *buffo* mannerism of Don Democrito rector of a girls' college – parodies of contemporary Verdian highlights, including a rataplan (Act 1), a brindisi (Act 2) and a sentimental *romanza* (Act 3).

MATTEO SANSONE

Usmanbaş, İlhan (*b* Istanbul, 28 Sept 1921). Turkish composer. He studied the cello as a child. In 1941 he enrolled at the Istanbul Municipal Conservatory where he was a pupil of Cemal Reşit Rey; in the following year he entered the Ankara State Conservatory, studying composition with Hasan Ferit Alnar and piano with Ulvi Cemal Erkin. He left the advanced composition department in 1948, and was appointed a teacher at the same conservatory. In 1952 he went to the USA on a UNESCO grant and continued his studies with Dallapiccola at Tanglewood and at Bennington. Usmanbaş went to the USA again in 1958 and on this occasion some of his works were performed. His String Quartet, which had won the Fromm Prize in 1955, was recorded. In 1963 he was appointed director of the Ankara State Conservatory for a short time; he has continued to teach there.

Usmanbaş is the main Turkish advocate of new musical procedures. The influences of Bartók, Stravinsky and Hindemith, seen in his earlier neo-classical works, have given way to an individual style which embraces 12-note and especially aleatory techniques, for instance in the Symphony no.3 (1979), in which performers can choose the order of movements. He has drawn attention abroad, winning prizes in international contests and receiving several commissions. Japanese radio commissioned his *Japanese Music* (1956), and *Music with a Poem* (1958) won a prize in the student Koussevitzky Competition at Tanglewood. Further information is given in O. Manav: '*Venedik oyunlari* ve sonrasi' [*Jeux vénitiens* and beyond], *Müzikoloji dergisi*, i/1 (1995), 1–6.

FARUK YENER/MÜNİR NURETTIN BEKEN

Uspensky, Nikolay Dmitriyevich (*b* Polya, Novgorod province, 3/16 Jan 1900; *d* Leningrad (St Petersburg), 23 July 1987). Russian musicologist and church historian. After attending the Novgorod Seminary he studied theology at the Petrograd Theological Institute (1921–8), taking the *Kandidat* degree in 1925 with a dissertation on the Russian Orthodox Vespers, and then preparing for a professorial post under the distinguished liturgiologist A. Dmitriyevsky. When the institute closed in 1928, he entered the Leningrad State Academic Chapel School, qualifying in choral conducting and training (1931); he then studied conducting with Mikhail Klimov and theory and polyphony with Khristofor Kushnaryov at the Leningrad Conservatory, graduating in 1937. He became assistant director, and then director of the Leningrad Music Academy, and taught fugue and counterpoint at the conservatory (1937–54). In 1946 he was appointed senior lecturer in the liturgical department of the new Leningrad Divinity Academy, and defended his *Kandidat* dissertation on north Russian modes at the conservatory; in 1949 he was awarded a magister of divinity degree by the Divinity Academy for his book on the Vespers of the Greek and Russian Churches. He was awarded a doctorate of church history for his work on ancient church chant (1957), and honorary degrees from the Aristotelian University of Salonica (1967) and the Orthodox Theological Academy and Seminary of St Vladimir, New York (1968). Uspensky's most important works on music deal with the evolution of Russian chant in the 16th and 17th centuries. He wrote a valuable study of ancient Russian chant, *Drevnerusskoye pevcheskoye iskusstvo*, and edited extensive anthologies of traditional Russian melodies used in liturgical services.

MILOŠ VELIMIROVIĆ

Uspensky, Viktor Aleksandrovich (*b* Kaluga, 19/31 Aug 1879; *d* Tashkent, 9 Oct 1949). Russian composer and ethnomusicologist. He studied composition with Lyadov, and also the harp at the St Petersburg Conservatory (1908–13), and in 1918 he was a co-founder of the Tashkent Conservatory, where he served as director and harmony lecturer. In 1925 he took part in an ethnographical expedition to the Turkmen SSR, continuing this work with three further expeditions, on which he was joined by Belyayev and later Mosolov, to the Fergana Basin and the Turkmen SSR (1927–8), another to the Fergana Basin (1931) and research in the Uzbek SSR. He held posts at the Uzbek Music Technical School as director of the national music department (1928–34), theory lecturer (from 1936) and director of the department of theory and composition (from 1936). In addition, he worked at the academic research institute for the arts in the folklore department and in the laboratory for the reconstruction of Uzbek folk instruments, holding appointments as academic assistant (1932–48) and subsequently director. Among his honours were the titles People's Artist of the Turkmen SSR (1927) and People's Artist of the Uzbek SSR (1937).

DETLEF GOJOWY

Uspensky, Vladislav Aleksandrovich (*b* Omsk, 7 Sept 1937). Russian composer. He studied at the Music College attached to the Moscow Conservatory under Frid, whilst benefiting from consultations with Kabalevsky (1955–7). He then attended the Leningrad Conservatory, studying under Arapov (1957–62), and later, as a postgraduate, under Shostakovich (1962–5). He runs the composition class at the St Petersburg Conservatory, and was appointed professor in 1982. He is the secretary of the Russian Union of Composers, and is a People's Artist of Russia (1988).

Uspensky has composed in almost all of the major musical genres and in a wide variety of styles. Thus, alongside *Interventsiya* ('Intervention'), an opera with a traditional dramatic structure, one also finds the opera-pamphlet *Voyna s salamandrami* ('War Against the Salamanders'), which gained especial popularity in its television version. The latter incorporates elements of the political theatre piece in the spirit of Brecht and Weill. Besides instrumental concertos, in which he preserves many of the traditional attributes of the genre, he has also written works such as *Muzïka dlya skripki i orkestra* ('Music for Violin and Orchestra') and *Muzïka dlya strunnïkh i udarnïkh* ('Music for strings and percussion') which are based on free, rhapsodic structures. In his oratorio *S toboy i bez tebya* ('With You and Without You') Uspensky introduces snatches of popular songs. Concerts devoted to the composer's works and the performance of individual compositions have taken place in all the major cities of Russia, and also in England, France, Germany, Israel, Japan and other countries. Uspensky's songs have entered the repertory of variety artists, and have gained widespread popularity throughout Russia.

WORKS

MIKHAIL GRIGOR'YEVICH BYALIK

Usper [Sponga, Spongia, Sponza], **Francesco** (*b* Parenzo [now Poreč], Istria, *c*1560/61; *d* Venice, 24 Feb 1641). Italian composer, organist and priest. The family name was originally Sponga. He studied with Andrea Gabrieli and must therefore have settled in Venice before 1586. He had previously served as a priest in Capodistria. In the late 1580s he was the tutor of Cesare Usper (*d* 1589), son of Lodovico Usper (*d* 1601), a lawyer and minor official of the confraternity of S Giovanni Evangelista, Venice, to whom Francesco dedicated his *Ricercari*. Adopting the surname of this patron, Francesco Usper devoted much of his life to the confraternity, which he served as organist (1596–1607), chaplain (1607–24), choirmaster (1624–6), manager (*capo*) of the adjoining church (1626–41) and administrative officer (*mansionario*) (1631–41). He was also sporadically active elsewhere in Venice. He was organist at the church of S Salvatore by 1614 and it was in this capacity that he was cited in 1615 for having provided one of the imitative subjects worked out in two canons for four voices in Romano Micheli's collection *Musica vaga et artificiosa*. He collaborated with G.B. Grillo and Monteverdi in the composition of a requiem mass (now lost) for the Medici Grand Duke Cosimo II performed at the church of SS Giovanni e Paolo in May 1621; he wrote the gradual and tract. He served at S Marco as a substitute organist for Grillo in 1622 and early in 1623. However, he was disappointed in 1623 and again the following year in his attempts to attain a permanent position as organist there. In 1617 and 1623 he was engaged for the feast of S Roche (16 August) at the confraternity dedicated to the saint. He lived near S Maria Gloriosa dei Frari in the parish of S Stin.

Usper was unusually sensitive to words in his vocal works and to form in his instrumental works. He continued certain popular local customs of the later 16th century by including a battle madrigal in his 1619 collection and some polychoral psalm settings in that of 1627. He saw himself as an exponent of conservative styles of composition, which he contrasted in the preface of his 1614 collection with the 'strepitoso' (raucous) music then coming into fashion. Such conservatism did not, however, prevent his composing skilfully and effectively in the newer accompanied and concerted styles. His instrumental works, although few in number, are significant for various reasons. The four *arie francesi* in his first publication are among the earliest Venetian ensemble canzonas. His two sinfonias, two canzonas, two capriccios and single sonata in the 1619 collection show notable advances in the differentiation of instrumental genres. One sinfonia, proclaimed by Einstein as a forerunner of the concerto grosso, features concertino passages for recorder and chitarrone alternating with a homophonic ritornello for string orchestra; but string instruments and trombones still form the nucleus of his orchestra, as they did for Giovanni Gabrieli. The recent recovery of all the parts from the 1619 collection (removed from Berlin in World War I) in the library of the Jagiellonian University, Kraków, has facilitated more extensive study of Usper's mature compositions. Five undated sacred vocal works have also been recovered (in *D-Pl*). Secular vocal works by Usper were published in collections that appeared in Nuremberg (1604) and Copenhagen (1606) but may have been assembled in Venice by pupils and associates of Giovanni Gabrieli; the Danish composer Borchgrevinck, who edited the 1606 anthology, was such a pupil.

WORKS

Ricercari et arie francesi, 4 insts (Venice, 1595); ed. in IIM, xi (1990)
Il primo libro de madrigali, 5vv (Venice, 1604); 1 madrigal repr. in 1606[5]
Messa, e salmi da concertarsi ... et insieme sinfonie, et motetti, 1–6vv, org, 6 insts (Venice, 1614[2]); also includes 4 works by Gabriel Usper
Compositioni armoniche nelle quali si contengono motetti, sinfonie, sonate, canzoni & capricci ... et in fine la battaglia, 1–8vv, bc, 6–8 insts, op.3 [sic] (Venice, 1619); also includes 3 works by Gabriel Usper
Salmi vespertini per tutto l'anno, 4, 5, 8vv, op.5 (Venice, 1627)
2 madrigals, 5vv, 1604[12]; 2 madrigals, 5vv, 1606[5]; 2 motets, 1624[2]; 2 motets, 1v, bc, 1625[2]
5 Ger. and Lat. motets, 1–2vv, bc, *D-Pl*; 2 motets, *Bsb* 13 and Z.75

ELEANOR SELFRIDGE-FIELD

Usper [Sponga, Sponza], **Gabriele** (*b* ?Parenzo [now Poreč], Istria; *fl* 1609–32). Italian composer and organist, nephew and apparently pupil of FRANCESCO USPER. He lived with his uncle in Venice. In 1609 he unsuccessfully sought appointment as organist at the confraternity of S Giovanni Evangelista. He composed 13 *Madrigali concertati* for two to four voices (Venice, 2/1623), and had earlier contributed two sinfonias, a psalm setting (*Laudate dominum*), an *Ave regina* for alto solo, a Credo for five voices and two other sacred vocal works to Francesco's *Messa, e salmi* (1614) and two sonatas, a sinfonia and two polychoral motets to his *Compositioni armoniche* (1619). He also composed one vocal work in manuscript in the Stadtarchiv, Pirna (*see* USPER, FRANCESCO).

Gabriele Usper's works are much more modern than his uncle's. The bassoon is emphasized in the pieces published in 1619 (one of which includes imitations of the bagpipe and *lira da braccio*), and Monteverdi's influence is apparent in his madrigals.

ELEANOR SELFRIDGE-FIELD

Ussachevsky, Vladimir (Alexis) (*b* Hailar, 3 Nov/21 Oct 1911; *d* New York, 4 Jan 1990). American composer of Manchurian birth. He emigrated to the USA in 1930 and received the BA from Pomona College in 1935; he later studied under Bernard Rogers and Howard Hanson at the Eastman School of Music (MA 1936, PhD 1939). After wartime service in the Office of Strategic Services and State Department, he undertook postdoctoral work at Columbia University with Luening and joined the faculty, eventually becoming professor of music. In 1951 he began the earliest American experiments in the electronic medium (excluding attempts at synthetic music before the advent of magnetic tape recording), shortly thereafter collaborating with Luening in a series of electronic works, not joint compositions but rather amalgamations of independently created sections, both live and electronic, by each composer. Only later did he become aware of the slightly earlier activities of the Parisian *musique concrète* group. In 1959 Ussachevsky, with Luening, Babbitt and Sessions, founded the Columbia-Princeton Electronic Music Center (New York) and became chairman of its committee of direction. For regular periods from 1970 he served as composer-in-residence at the University of Utah (he taught there from 1980 to 1985), and in 1973 was elected to membership in the National Institute of Arts and Letters. He retired from Columbia University in 1980 as professor emeritus. He wrote and lectured widely, in the Americas and Europe, on electronic music.

Ussachevsky's works divide into two principal genres: the electronic and the choral. Brought up in the Russian Orthodox Church (as a youth he served as reader and altar boy), he acknowledged a profound influence from Russian liturgical music. His choral works stem directly from the 19th-century tradition of Russian choral liturgy (the tradition of Grechaninov, Tchaikovsky and Musorgsky) and in many ways offer a sharp contrast to his electronic music. The 'stylistic' distinction between the two genres persisted even after 20 years' work in the electronic medium, as can be seen from the *Missa brevis* for chorus and brass (1972). In his electronic works Ussachevsky consistently maintained a flexible attitude towards sound sources: recordings of live sounds ('musical' and otherwise), analogue studio and computer-generated material all feature in his works. (This catholicity distinguished American electronic music from the originally more restrictive French and German types, and gave rise to the designation 'tape music'.) But Ussachevsky is noted particularly for the transformation of pre-existing material rather than for electronic synthesis, and his greatest skill lay perhaps in the mutating of sound from instrumental sources, as in *Piece for Tape Recorder* (1956) and *Of Wood and Brass* (1964–5). Not surprisingly, therefore, he also tended to take over material from one work to the next – a practice that is particularly significant in 'tape music', for here the processes of composition and electronic realization are simultaneous: the work is created directly on tape, frequently by manual operations on the constituent recorded sound materials. This mode of electronic composition, which became known as 'classical studio' technique, recognizes Ussachevsky as one of its most distinguished exponents. In the late 1970s he began writing music for instruments accompanied by tapes of those same instruments (or same class of instruments) transformed through sophisticated 'classical studio', techniques. During his final decades he wrote several compositions for EVI (Electronic Valve Instrument), which allowed live performance in real-time within an electronic medium. He also returned to conventional media, particularly works for chorus, brass and piano.

WORKS

TRADITIONAL MEDIA

Film score: Circle of Fire, 1940

Orch: Theme and Variations, 1936; Solemn Prelude, 1937; Piece, fl, chbr orch, 1947; Miniatures for a Curious Child, 1950; Intermezzo, pf, orch, 1952; Dances and Fanfares for a Festive Occasion, 1980

Vocal: If I Had a Spoon, chorus, ?1932; Praise Ye O Lord (cant.), S, A, T, B, chorus, org, 1936; Jubilee Cantata, reader, Bar, chorus, orch, 1937–8; Lord's Prayer, male vv, 1938; Songs (E. Dickinson), 1946; Ps xxiv, chorus, org/(5 brass, org)/7 brass, 1948; 2 Autumn Songs (R.M. Rilke), S, pf, 1952; Missa brevis, S, chorus, brass, 1972; To the Young, chorus, orch, 1988

Chbr: Legend, vn, pf, 1932; Rondo, vn, pf, 1934; 2 Dances, fl, pf, 1948 (arr. for EVI, pf, 1983); Suite of Moods and Dances, fl, pf, 1949; Inauguration Fanfares, brass, timp, 1973 [based on Byrd: The Earl of Oxford's March]; Suite, trbn ens, 1980; Triskelion, ob, pf, 1982; Anniversary Variations, brass qnt, 1985

Pf: Ghost Dance, 1932; The Question, 1932; Classical Suite, 1935; 2 Minuets, ?1935; Pieces, 1939–47; Miniatures for a Curious Child, 1950; 11 Short Pieces, 1984–5; Sonata, 1984, unfinished; Episodes, 4 hands, 1985, unfinished

ELECTRO-ACOUSTIC

EVI - electronic valve instrument

Dramatic: To Catch a Thief (sound effects for film), 1954; Crucible (sound effects for opera by R. Ward), 1956; Glittering Gate (sound effects for opera by P. Glanville-Hicks), 1956; Macbeth (incid music, J. Duffy), 1956; Mathematics (TV score), tape, 1957; The Boy who Saw Through (film score), 1959; No Exit (film score), 1962; Line of Apogee (film score), 1967; Mourning Becomes Electra (sound effects for the opera by M. Levy), 1967; The Cannibals (incid music), 1969; 2 Images for the Cptr Piece (film score), 1969; Duck, Duck (film score), 1970; We (incid music for radio play), 1970; Flibbertygibbet (sound effects for musical by W. Wright), 1971

Tape: Transposition, Reverberation, Experiment, Composition, 1951–2; Sonic Contours, 1952; Underwater Valse, 1952; Tape Rec Piece, 1956; Metamorphoses, 1957; Improvisation on 4711, 1958; Linear Contrasts, 1958; Studies in Sound, 1958; Studies in Sound, Plus, 1959; Wireless Fantasy (De Forrest Murmurs), 1960; Of Wood and Brass, 1964–5; Suite from Music for Films, 1967; Cptr Piece, 1968; 4 Miniatures, *c*1968; 2 Sketches for Cptr Piece no.2, 1971; Conflict (An Elec Scene from Creation), 1973–5

Tape and vv or insts: Creation Prologue, 4 choruses, tape, 1960–61; 3 Scenes from Creation, 1960–71, rev. 1973: Prologue 'Enuma elish', 2 choruses, tape; Interlude, S, Mez, tape; Epilogue 'Spell of Creation', S, chorus; Colloquy, orch, tape rec, various chairs, 1976; 2 Experiments, EVI, tape, 1979, collab. N. Steiner; Celebration 1980, EVI, 6 wind, str, tape, 1981, rev. as Divertimento 1980–81, EVI, 3 wind, 3 brass, str, perc, tape; Mimicry, a sax, tape, 1982; Dialogues and Contrasts, brass qnt, tape, 1984

Other: Omnia computatas est, cptr + org, 1967; 4 Studies, cl, EVI, 1979; Pentagram, ob, EVI, 1980; Novelette pour Bourges, EVI, pf, 1983

Works with Luening: Incantation, tape, 1953; Rhapsodic Variations, orch, tape, 1953–4; A Of Identity (ballet), tape, 1954; Poem in Cycles and Bells, orch, tape, 1954; Carlsbad Caverns (TV score), tape, 1955; King Lear (incid music), 1956 [3 versions]; Back to Methuselah (incid music), tape, 1958; Ulysses in Nighttown (incid music), tape, 1958; Concerted Piece, orch, tape, 1960; Incredible Voyage (TV score), tape, 1968, collab. Shields, Smiley

Ustād. Honorific title (derived from Arabic *ustādh*: 'master') for a Muslim master musician in India, Pakistan, Afghanistan, Iran and neighbouring regions. The term is applied only to males, and is also used for a highly regarded teacher, writer, poet or visual artist. To be called an *ustād* implies that one has studied over a long period of time and that one has a circle of students. The title Ustād, preceding the musician's name (e.g. Ustād Salāmat Ali Khān), is used within classical music genres. It may be awarded by an official committee or may come into gradual use, applied generally and informally through social consensus. In eastern Afghanistan and northern Pakistan *ustāz* is an alternative form. In western Afghanistan the title Ustā (preceding the name, e.g. Ustā Karīm) is applied to low status players of the shawm (*sornā*) and drum (*dohol*) duo.

JOHN BAILY

Ústí nad Labem (Ger. Aussig). City in north Bohemia with a Czech-German cultural history. The neo-Baroque Stadttheater was built in 1907–8 by the architect Alexander Graf, with decoration by Eduard Veit; it was repaired in 1947 and reconstructed in 1987–93 with 524 seats. Primarily German, it was first run by the actress Maria Pospischil (Pospíšilová, 1909–13). A later prosperous managing director, Alfred Huttig (1920–29), engaged the conductor Adolf Kienzl (1921–2), a pupil of Zemlinsky, and organized the Maifestspiele with celebrated guest singers, giving such works as Mahler's *Das Lied von der Erde*. Subsequent conductors during Huttig's regime included Josef Kribs (1924–5), Bruno Zilzer (1925–7), who presented Zemlinsky's *Es war einmal*, and Viktor Ullman (1927–8), whose repertory included *Tristan* (in its Ústí première), *Ariadne auf Naxos*, *The Kiss* and *Jonny spielt auf*. There was also, from the time of Czech independence in 1918, a two-month Czech season alongside the eight-month German one, with visiting opera troupes from Olomouc and České Budějovice.

In 1945 the Divadlo Severu (Northern Theatre) brought Czech opera from Teplice. Then came the Ústecko-Karlovarská Zpěvohra (Musical Theatre of Ústí and Karlovy Vary), which played in those two cities, followed in 1952 by the Divadlo Zdeňka Nejedlého (Zdeněk Nejedlý Theatre) in Ústí. It toured regularly to Most, Teplice and elsewhere, and formed links with the opera in nearby Dresden. In 1990 it came under the jurisdiction of the municipality and was renamed the Městské Divadlo Ústí nad Labem (Ústí Town Theatre). Its repertory ranges from Baroque to contemporary works, and has included works on the grand scale, such as *Boris Godunov* (1952 and 1967), *Der fliegende Holländer* (1954) and *Tristan* (1972, the first Czech performance since 1945). The theatre orchestra also gives regular concerts, and played Verdi's Requiem at the neighbouring site of the Theresienstadt concentration camp. Conductors who worked in Ústí included Josef Bartl (1946–52) and František Vajnar (1974–80), and among singers in the company were Vladimír Bauer (1952–6), Naděžda Kniplová (1957–9), Vilém Přibyl (1960–61) and Václav Zítek (1960–69).

Musical education takes place in three music schools, two piano schools and two zither schools. There is also a great tradition of choral singing, led by the Ústecký Pěvecký Sbor (Ústí Singing Choir, founded 1956), the Chorea Academica of the Pedagogical Faculty (1959) and the Ústecký Dětský Sbor (Ústí Children's Choir). The State Scientific Library includes a music department, and there is a regional station of Czech Radio.

EVA HERRMANNOVÁ

Ustinoff, Nicolai. *See* GEDDA, NICOLAI.

Ustvol'skaya, Galina Ivanovna (*b* Petrograd, 17 June 1919). Russian composer. She studied at the music college attached to the Leningrad Conservatory (1937–9) and then with Shostakovich and Steinberg at the Conservatory itself (1939–47) and later undertook postgraduate studies there (1947–50). Her education was interrupted by a period of service at a military hospital during World War II. She taught composition at the music college attached to the Leningrad Conservatory (1947–75); throughout her time there, her class was the centre of attraction for the most gifted students, among whom were the composers Banevich, Tishchenko and Veselov. Shostakovich so admired Ustvol'skaya's music that he incorporated some of her ideas into his own works; for example, the second subject of the finale of her *Trio* for clarinet, violin and piano (1949) appears in his Fifth String Quartet, op.92 and in the Suite op.145 (No.9, 'Immortality').

In Ustvol'skaya's earliest works of her student years teachers noted the strength, clarity and originality of her talent. In her works of the 1940s and 50s, some of which were programmatic, she was attracted by sunny images of childhood (the orchestral suites *Detskaya* ('The Children's Room') and *Pionyorskaya*) and by the energy of youth (the suite *Sportivnaya*). She then wrote works in genres and fields from which she later turned away – a number of vocal works such as the ballad *Son Stepana Razina* ('Stepan Razin's Dream') and the cantata *Chelovek s gorï vïsokoy* ('The Man from the Mountain High') and film scores; although some of the latter were later arranged in suite form, she did not return to these fields after the mid-1950s. Soon after this she also ceased to use folksong themes either in direct quotation or in stylized form; she had, for example, used material from a *bïlina* (heroic folktale) in *Son Stepana Razina* and the Sinfonietta. The orchestral piece *Podvig geroya* ('A Hero's Exploit') won an All-Union prize and was written for the 40th anniversary of the October Revolution, while the symphonic poem *Ogni v stepi* ('Fires in the Steppe') was composed for the 40th anniversary of the Komsomol. At the same time, Ustvol'skaya worked on the First Symphony and instrumental pieces such as the Octet; this led to a turning-point in her work and the abandonment of previous ideas, themes and forms.

Ustvol'skaya's First Piano Sonata may be regarded as the starting point in her compositional evolution. Although her early pieces reflect the influence of Shostakovich (which she decisively repudiated in an interview in the 1990s), this influence and the neo-classicism of the Piano Concerto were quickly left behind, and she developed a pathetic, declamatory quality comparable with Musorgsky and Mahler, although the tragic dimension of her music soon developed hitherto unprecedented heights and depths. The strong, ascetic style of her mature works stands apart from mainstream contemporary techniques. The profound, emotional world of her music is polarized between the opposing forces of silence and tense protest. Abrupt changes in mood are effected through extreme shifts in texture and dynamics: meditative moments, with broad textures and dynamics as low as *ppppp*, are contrasted with raging sections of dense textures and *fffff* dynamic markings. At times, bar-lines are dispensed with and lines move independently of each other, invoking, in appearance at least, different types of psalmodic chant – Gregorian plainsong, Russian Orthodox chant (*znamennïy rospev*) or the mourning ritual of the folk tradition. At other times, Ustvol'skaya introduces bars with single beats, the presence of a strong beat without its antithesis giving the music hypnotic power. Another characteristic technique involves chains of single notes, or clusters, of equal duration moving along the diatonic scale. The means of musical expression used by Ustvol'skaya are maximally hyperbolized and taken to their extreme limits. This finds expression in her dynamic, articulation and agogic markings.

In her mature works, Ustvol'skaya has concentrated on composing for instruments. Although several other symphonies include voice, vocal parts are usually very brief and non-traditional. They are either conceived as an instrumental line, albeit the principal one, or used to recite a proclamation or prayer (e.g. the speaker's role in symphonies no.2–4). Avoiding the traditional orchestra, she composes for unique ensembles, for very unusual combinations of soloists. Nevertheless, the composer maintains that the works are not chamber music and are unconnected with the early music renaissance. Although Ustvol'skaya uses sacred texts, her music is not religious in an Orthodox sense, nor, in the composer's opinion, does it have any specifically religious meaning. Her music is linked to the St Petersburg tradition of Dostoyevsky and Andrey Bely. She has spent her entire life in the city, where, unconnected with any groups or associations, she leads an enclosed and externally isolated life (she has made only one trip abroad, to Amsterdam in 1995).

Utendal [Utenthal, Ausm Thal], **Alexander** (*b* Netherlands, *c*1530–40; *d* Innsbruck, 7 May 1581). Netherlandish composer. According to his own account he was in the service of the house of Habsburg from an early age. He was presumably a member of the court chapel of the widowed Queen Maria of Hungary, sister of the Emperor Ferdinand I. In 1564 he went as an alto into the court choir of the emperor's son, Archduke Ferdinand, at Prague. On becoming governor of the Tyrol the archduke took up residence at Innsbruck, and Utendal accompanied him there in 1566. In the Innsbruck court chapel he also gave the choristers music lessons, becoming deputy Kapellmeister probably not later than 1572. He held this post until his death, rejecting an offer in 1580 to succeed Scandello as Kapellmeister of the Dresden court chapel.

Utendal's work embraces a wide range of sacred and secular forms: much of his music is polyphonic in texture, richly scored and containing both chromatic and polychoral elements, in the manner of the more progressive Netherlandish composers of the time, such as Lassus, Christian Hollander and Ivo de Vento. His songs are in general characterized by the predominance of the upper voice, the text being dramatically treated in madrigalian fashion; he derived most of his German songs from traditional and popular sources. Although he certainly did not have the same importance as Jacob Regnart, who succeeded him at Innsbruck, he was greatly esteemed by his contemporaries: his compositions were included in many printed collections and manuscripts of the time and his name was frequently mentioned in literary sources of the late 16th century. Joachim Burmeister, in his *Musica poetica* (Rostock, 1606), named him with Leonhard Lechner and Johann Knöfel as a representative of the *stylus sublimis*. A feature of his works is the careful notation of accidentals involving the early use of the natural instead of the sharp sign to cancel a flat.

HELLMUT FEDERHOFER

Uthman, Muhammed. *See* OSMAN, MUHAMMED.

Utrecht. City in the Netherlands. The earliest musical records concern church music. Before the Reformation, which was completed in 1580, there were five minsters or collegiate churches (the cathedral of St Maarten or Domkerk, St Salvator or the Oud Munster, St Pieter, St Jan and the Mariakerk), four parish churches (the Buurkerk, Jacobikerk, Nicolaikerk and Geertekerk) and several monastic churches and chapels. In the 11th and 12th centuries each of the minsters had a cantor, who led the choristers in singing plainchant. In 1342 the cathedral founded a house for its choristers, the 'koraalhuis'; to assist the rector scolarum in the performance of polyphonic music, the first succentor was appointed there in 1415. The religious life of the citizens was focussed on the parish churches. Little is known about music in the monasteries and convents: only one manuscript of songs (*c*1500), probably from the St Agnes convent, has survived (MMN, vii). During the 15th and 16th centuries the prince-bishop of Utrecht had a court ensemble; in the second half of the 15th century David of Burgundy employed eight instrumentalists and about 20 singers.

The presence of minsters and parish churches stimulated bell casting and organ building. By the 14th century all the churches had organs. In addition to native builders such as the Talp family, builders from elsewhere worked in the city. Anthonie van Elen from Maastricht built a new organ for the Domkerk in 1434, and Peter Gerritsz of Hoorn arrived in about 1455; his son and grandson built many organs in and around Utrecht. From the mid-18th century to the early 20th the main organ builders were the Bätz and Witte families (1740–1902), Abraham Meere (1785–1840) and the Maarschalkerweerd family (1850–1920). Among the surviving historic organs are those of the Domkerk (1831, Bätz), Jacobikerk and Geertekerk, and the auditorium of the university.

Bell casting, important in the city since the 14th century, was stimulated by the appointment of Jacob van Eyck as carillonneur in 1625; three years later he became director of the Utrecht bell works. It was he who discovered a connection between a bell's shape and its overtone structure, and consequently found how to tune a bell. This he brought into practice in cooperation with the

great bellfounders François and Pieter Hemony. As a recorder player he gave public performances on the Janskerkhof during summer evenings, for which his salary was raised in 1649.

Music in the open air was further performed by the city musicians. The earliest Utrecht city records (1380) refer to four of them, and from 1597 until about 1650 there were six. In 1631 the instrumental Collegium Musicum Ultrajectinum was founded as an organization of musical amateurs from the upper circles using the city musicians as a professional core. In the 17th century the collegium's repertory included English and German consort music as well as canzonas and sonatas by Italian composers such as Uccellini, Merula, Buonamente and Legrenzi.

From 1738 onwards the collegium had the use of a music room on the Vredenburg square. Among the last musicians known to have performed there were Leopold, Wolfgang and Nannerl Mozart, who gave a concert on 21 April 1766. Later in the same year the collegium moved to the choir of the Mariakerk, which was fitted up as a concert hall. In 1844 it was replaced by the Gebouw voor Kunsten en Wetenschappen. This symphonic hall, the oldest in the Netherlands, was taken over by the conservatory in 1974, burnt down in 1988 and was rebuilt with a modern interior, leaving the size of the original main hall intact. A second orchestra formed of university students, the Utrechtsch Studenten Concert, was founded in 1823 and remains in existence. Among the 19th-century musicians who performed in Utrecht under the auspices of either the collegium or the Studenten Concert were the Schumanns, Vieuxtemps, Wieniawski, Joachim, von Bülow and Brahms. The Utrecht SO was formed at the end of the 19th century through the amalgamation of the collegium with the band of the civic militia, and was first directed by J.H. Kufferath and Richard Hol, Kufferath being also director of the Utrecht section of the Maatschappij tot Bevordering der Toonkunst. Wouter Hutschenruyter, Jan van Gilse, Carl Schuricht, Willem van Otterloo, Paul Hupperts, Corneliu Dumbraveanu and Hubert Soudant were among the later chief conductors. The orchestra's history came to an end in 1985, when it merged into the newly established Netherlands PO, which has Amsterdam as its home.

Utrecht takes second place in Dutch musical life after Amsterdam. Concert life was invigorated in 1979 by the building of the Muziekcentrum Vredenburg, designed by Herman Hertzberger. The complex, comprising a large concert hall and a small recital room, is visited by the leading Dutch orchestras. The radio orchestras from Hilversum have it as a second home, for live concerts. In 1982 the Holland Festival of Early Music was instituted in Utrecht, taking place at the Muziekcentrum Vredenburg and several historical locations. It is one of the world's leading festivals that focusses on historically informed performance practice.

THIEMO WIND

Utrecht, Heinrich (*b* Minden; *d* Celle, Jan 1633). German composer, instrumentalist and organist. From 1611 until his death he was an instrumentalist in the Hofkapelle of Duke Christian of Brunswick-Lüneburg at Celle and also carried out the duties of castle organist there: in the preface to his publication of 1624 he stated that he had earned his living at the court for over 13 years. He was also associated with composers at the court of Bückeburg (William Brade, Thomas Simpson, Nicolaus Bleyer). In 1620 or 1622 he met Michael Praetorius. His two collections of suites contain a total of 60 stylized dances – both single and paired – for small varying ensembles.

WORKS

Parnassi musici Terpsichore, e hoc est paduana, galliarda, alemanda, intrada, mascharada, aria, couranta, volta (41 pieces), 5vv, bc (Wolfenbüttel, 1624); 6 ed. H. Müller (Celle, 1994); 1 ed. in Engelke; 1 ed. in Mw, xxvii (1965)

HORST WALTER/HARALD MÜLLER

Uttini, Francesco Antonio Baldassare (*b* Bologna, 1723; *d* Stockholm, 25 Oct 1795). Italian composer and conductor, active in Sweden. He received his musical education from Padre Martini and, according to Fétis, from Perti and Sandoni in Bologna. In 1743 he was elected to membership in the Accademia Filarmonica and produced his first opera, *Alessandro nelle Indie*, in Genoa. During the next ten years he achieved some fame as a composer of both operas (mostly *opere serie*) and oratorios throughout Italy, joining the Mingotti theatre troupe in 1752 as resident composer. It was in that troupe that he met his first wife, the singer Rosa Scarlatti (1727–75). His first tour to northern Europe (1752) resulted in the opera *Siroe*, performed in Hamburg, and in the following years he directed *L'olimpiade* and *Zenobia* in Copenhagen; he also presented numerous pasticcios in Rostock and

elsewhere, of which only one, *Armide*, survives (1754; *D-ROu*).

In 1755 members of the Mingotti troupe including Uttini were invited by Queen Lovisa Ulrika to visit Stockholm and perform operas for the court. For the newly built theatre at Drottningholm he composed the opera *Il re pastore*, which was later printed in score. About this time he also composed a flute concerto and a set of harpischord sonatas. After the troupe disbanded, Uttini remained in Stockholm as the queen's private court *kapellmästare*, writing mostly Italian *opere serie* but also instrumental chamber works, symphonies and cantatas. He also began his long career as a conductor. In 1762 he turned his attention to settings of French *opéra comique* texts, such as Favart's *Soliman II* and Quinault's *Psyché*. He was appointed *Hovkapellmästare* to replace Per Brandt in 1767, and the following year his trio sonatas op.1 were published in London by the Swedish printer Fougt. In 1772 he was commissioned by Gustavus III to provide the music for the first Swedish grand opera, *Thetis och Pelée*, which was successfully performed the following year. During the next ten years he turned towards larger works such as *Birger Jarl och Mechtilde* (1774, with H.P. Johnsen) and *Aline, drottning uti Golconda* ('Aline, Queen of Golconda', 1776); he added choruses to Swedish versions of Racine's *Athalie* (1776) and *Iphigénie* (1777), and wrote ballet music and prologues to Gluck's operas. After 1778 his role as principal conductor of the *hovkapell* was mainly taken over by other musicians and he gradually retired from concert life. From 1781 onwards he was a board member of the Catholic congregation in Stockholm. By 1788, when he retired, he had largely ceased to compose; he married his second wife, the singer Sophia Liljegren (1765–95), in the same year.

Uttini's early musical style conforms to the *opera seria* style of the period; his operas of 1766 onwards, however, tend to show a greater reliance on the orchestral accompaniment, often resulting in colourful scores. In his Swedish operas, the use of folk melodies is occasionally noticeable. His orchestral writing favours sharp keys and brilliant instrumental combinations. His five symphonies, with their occasional layered crescendos, demonstrate the influences of Mannheim, while his chamber works reflect an older *galant* style.

BERTIL H. VAN BOER, MARTIN TEGEN

U2. Irish rock band. It was formed in Dublin in 1977 by Bono (Paul Hewson; *b* 10 May 1960; vocals), the Edge (David Evans; *b* 8 Aug 1961; guitar), Adam Clayton (*b* 13 Mar 1960; bass guitar) and Larry Mullen Jr. (Lawrence Mullen; *b* 31 Oct 1960; drums). Having signed to Island Records, their first song to become widely known was *Gloria* (1981; from the album *October*), after which their studio albums *War* (1983; including the hit *Sunday Bloody Sunday*), *The Unforgettable Fire* (1984), *The Joshua Tree* (1987), *Rattle and Hum* (1988; which also contained live recordings), *Achtung Baby* (1991) and *Zooropa* (1993) reached number one in the UK or US charts, and in some cases both. As a result they, together with REM, had become the world's best-known stadium-rock attractions by the early 1990s. This position was already assured when U2 were one of the highlights of the Live Aid concert in 1985.

U2's style gradually grew from their new-wave roots and rested on simple harmonic patterns with no extended verse-refrain forms, a driving bass technique developed little from early punk, characteristic busy guitar patterns

in a high register which made use of delay effects, and a recitative-like vocal approach. The combination of these elements seemed to reinforce the band's sincerity. The epic, ideologically sound nature of many songs, their evident devotion to their audience and three of the members' reasoned Christian commitment confirm the connotations of their style, which has led to favourable comparisons with such luminaries as Bruce Springsteen. The Zoo TV tour, which followed *Achtung Baby*, played with their sense of authenticity and involvement, such that the subsequent *Zooropa* was a more convincing postmodern album than many that are more usually cited, such as those by Bowie or Talking Heads. *Pop!* (1997) was poorly received.

ALLAN F. MOORE

Uzbekistan. Country in Central Asia. The musics of Uzbekistan, an independent nation since 1991, draw on several ancient traditions within its own rich heritage. The Soviet republic of Uzbekistan, created in 1924 from the remains of Russian Turkestan, the Bukharan Emirate and the Khivan Khanate, bequeathed geo-political borders reflecting the political exigencies of the early Soviet era rather than deeply rooted ethnic or linguistic boundaries. Therefore, Uzbekistan's traditional musics are best understood in the context of broader regional patterns and affiliations, particularly those of the Tajiks (*see* TAJIKISTAN, §II, TURKMENISTAN, §II, KYRGYZSTAN, KAZAKHSTAN, AFGHANISTAN).

Prior to 19th-century Russian colonization, Uzbek traditions included court music played in cities by professional musicians, and the musics of nomadic steppe and rural peoples, performed by both professional and non-professional musicians. During the Soviet era (1924–91), European-style venues for traditional music, such as concerts, festivals, competitions, radio and television, became widespread and western European art music was developed. In addition, traditional musics were cultivated by Soviet cultural strategists as a means of reinforcing national identity and socialist political consciousness. During the 1950s, however, the classical music tradition, formerly associated with the patronage of the feudal nobility of Bukhara, Khiva and Kokand, was discouraged in favour of music glossed as 'folk music'.

In both urban and rural areas of late 20th-century or post-Soviet Uzbekistan, the primary social occasion for traditional musical performance is the *toy*, a festive occasion marking life-cycle events such as marriage, circumcision or the first haircut of a male child, as well as special events such as the receipt of an award or prize or the return of a young man from the army. Other social occasions in which music is commonly performed include *osh* (literally 'food') – an early-morning quasi-religious male gathering held separately by the fathers of both bride and groom before every Uzbek marriage – and *gap*, *ziyofat* or *gurung*, intimate evening gatherings of friends for conversation, food and music respectively.

1. URBAN TRADITIONS. During the Soviet era, Uzbekistan's largest cities became multi-ethnic. In the capital, Tashkent, Russian-speaking Slavs and other peoples of European origin comprise about 40% of the population, and urban cultural life tends to divide along lines of language and ethnicity. The urban traditions described in this section are those that predominate among speakers of Uzbek, a Turkic language, and Tajik, an eastern dialect of Persian.

(i) Composed songs. Within living cultural memory, the repertory of professional urban musicians has consisted largely of lyrical songs in which successive verse couplets or quatrains are set to a through-composed melody that follows a paradigmatic scheme of development. The initial melodic section, *daromat*, is sung softly, in a low range. This is followed by the section *miyonparda* (also called *miyonkhono*), set a 4th or 5th above the pitch level of *daromat*. After *miyonparda* comes *dunasr*, which initially replicates the pitch level of *daromat* at the octave. *Dunasr* may contain several sub-sections set at higher pitch levels, the highest of which is called *awj* or 'culmination', which is also the astronomical term for 'zenith'. Following the *awj*, the melody descends quickly and concludes in the initial low range.

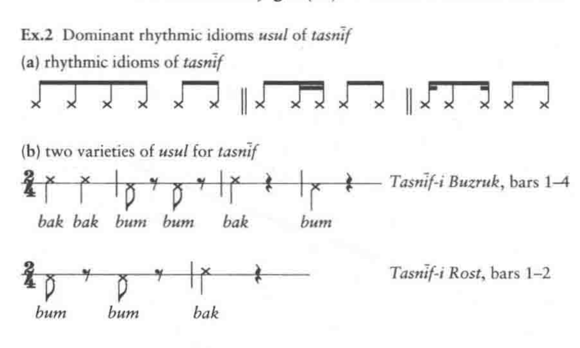
Lyrical songs are known by a variety of names in different regions of Uzbekistan – *ashula* (Ferghana-Tashkent), *suwora* (Khorezm) and *sowt* (Bukhara) – but all share similar principles of composition and performance: terraced melodic development as described above, a densely ornamented, nasalized but lyrical vocal style, domination of voice over instrumental accompaniment, and conformity to a small inventory of melodic types and metro-rhythmic patterns (*usul*). An *usul* may provide either a steady beat pattern comparable in length to a single measure that serves primarily as a time-keeping device, or a constant metrical shape for melodic form. Part of the skill of song composition and performance is the ability to match quantitative verse patterns (*aruz*) of poetic texts with an appropriate *usul*.

The tradition of lyrical song-writing has remained very much a living tradition in Uzbekistan. The Uzbek term *bastakor* designates composers in the oral tradition who create their own melodies and texts as well as set newly-composed melodies to the quantitative verse of classical Central Asian poets (e.g. Nawo'i, Mashrab, Fuzuli and Mukimi). The same poetic text may be sung to many different melodies, just as a single melody may be sung to different poetic texts. Performers tend to vary poetic texts as a function of the language (Turki or Farsi) and mood of their audience.

(ii) Suite forms. A quintessential characteristic of musical performance is the sequencing of individual songs and instrumental pieces to create cycles or suites. Suites may either be constructed spontaneously in the context of performance or formalized independently of performance, and may comprise a few or many items. Whatever their

size, suites tend to reflect two basic structural principles: progression from slower to faster tempo, and juxtaposition of contrasting *usul*. For example, at the simplest, a lively dance-like *ufar* in 6/8 is often attached to the end of a more lyrical *nasr* in 2/4, or to a *talqin'* in the limping (Persian: *lang*) compound metre 3/8 + 3/4.

Suites that have assumed a canonical form and that carry the social prestige of a cultivated music performed by specialized performers are typically called *makom*. In these suites, the term *makom* may also refer, as it does in Ottoman and Arabic music, to a melodic mode or melody type (*see* MODE, §V, 2). Linked to the classical *maqām* of other Islamic lands by a common heritage of musical theory, these suites display features of melodic style and formal structure that set them apart from other present-day repertories that have evolved from this heritage. Each of the three most extensive *makom* repertories is associated with one of the feudal courts that existed during the 18th and 19th centuries in present-day Uzbekistan: *shash makom* ('six *maqām*') is linked with Bukhara, *olti yarim makom* (six and a half *maqām*) with Khorezm, *chor makom* (four *maqām*) with Kokand and, by extension, with the greater Ferghana-Tashkent region. In each case, the numerical modifier refers to the number of separate suites that comprise the canonical repertory. The Khorezm *makom* is said to contain six and a half suites because one suite, *Pandjgokh* (*pandjgāh*), includes instrumental pieces but no songs.



Scholars in Uzbekistan have taken the Bukharan and Khorezm *makom* to be older than the *chor makom*; however the provenance and *terminus a quo* of all three repertories remain unclear. The earliest evidence of suites resembling the forms of *shash makom* and *olti yarim makom* is in chrestomathies of poetic texts (*bayaz*) used by singers as an aide-mémoire to performance that date from the last quarter of the 18th century. With the exception of an experimental and little-used late-19th-century tablature notation for the *ṭanbūr*, the long-necked lute typically used to accompany vocalists, none of the *makom* repertories was notated until the 20th century.

The Russian musicologist V.A. Uspensky (1879–1949) completed a partial transcription of the *shash makom* that was published in Moscow in 1924 under the editorship of Abdurauf Fitrat, but without vocal texts. In the 1950s, a full transcription of the *shash makom* was undertaken by the Uzbek musician and self-styled musicologist Yunus Rajabi (1897–1976), whose redaction was a synthesis of different musicians' versions of the repertory. Rajabi's version entitled *Bukhoro Makomlari* (Bukharan *makom*) became known as the 'Uzbek *shash makom*' and featured poetic texts in Uzbek and Chagatay, the proto-Uzbek literary language. Essentially the same repertory, but with poetic texts in literary Persian, was published between 1950 and 1967 by Tajik musicologists. The cloning of the once unified repertory into two distinct 'national' versions, one Uzbek and one Tajik, was evidently an artefact of Soviet cultural politics. In post-Soviet Uzbekistan, the two versions have been officially reunited in what is called in Uzbekistan the 'Uzbek-Tajik' *shash makom*, and in Tajikistan, the 'Tajik-Uzbek' *shash makom*. The Khorezm *olti yarim makom* has also been published in several different versions. The first to appear, in 1939, was transcribed by the Russian musicologist E.E. Romanovskaya. Subsequent redactions by Uzbek musicologists were published in the 1950s and the 1980s. The Ferghana-Tashkent *chor makom*, which is considerably shorter and simpler than its two sister repertories – possibly because the Kokandian court was destroyed almost 80 years before the earliest transcriptions – was included as a series of appendices in a six-volume edition of Rajabi's *Shash Makom* edited by F.M. Karomatov and I. Rajabov and published in Tashkent from 1966. This published edition has assumed a canonical role in *shash makom* teaching and performance in Uzbekistan's state-run cultural institutions: the Tashkent State Conservatory, a network of specialized music secondary schools, and the *makom* ensemble of the Tashkent radio station.

Ex.1 *Bazgui of 6 tasnīf*

Ex.2 Dominant rhythmic idioms *usul* of *tasnīf*

The *shash makom* is the most complex of the three indigenous *makom* repertories. Each of its six *makoms* (in their conventional order, *buzruk*, *rost*, *nawo*, *dugāh*, *segāh*, *iroq*) is divided into an instrumental section (*mushkilot*) and a vocal section (*nasr*). A core sequence of metro-rhythmic genres is replicated in each of the six *makom* suites: *tasnif*, *gardun*, *tarje*, *mukhammas*, *sakil* in the instrumental section, and *sarakhbor*, *talqin'*, *nasr*, *ufar* in the vocal section. An additional group of metro-rhythmic genres (*sowt*, *mugulcha*, *talqinche*, *chapondoz*, *kashkarcha*, *soqinoma*, *ufar*) is joined to the core sequence in all *makom* except *iroq*. These genres are melodically transformed in each suite to conform to the modal profile of that suite's constituent melodic types. Melodic transformations of the ritornello-type refrain (*bazgui*) in *tasnif*, the first item in the instrumental section, are illustrated in ex.1. In each case, the melody preserves the dominant rhythmic idiom and *usul* of *tasnif* shown in ex.2. The *usul* is notated in the drum mnemonics used by performers on the *doira*, the Central Asian frame drum. *Bak* represents a sharp rim stroke while *bum* represents a lower-pitched stroke to the centre of the drumhead.

Just as a single metro-rhythmic genre is melodically transformed to conform to the modal profile of different melodic types, so a single tune is metro-rhythmically transformed to conform to the dominant rhythmic idiom and *usul* of different genres. Ex.3 shows three metro-rhythmic transformations of a tune that reflects the modal profile of melodic type *ushshoq*, from the *rost* suite. *Usul* is indicated on the staff line beneath the melody.

In the *shash makom*, the two axes of metro-rhythmic genre and melodic type are woven together like warp and weft, making possible an infinite number of unique intersections, which are individual pieces. The process of weaving two musical qualities through one another, while itself mechanical, can yield diverse results, not only on the level of individual pieces, but in the aesthetic dimension of the suite taken as a holistic musical structure. For example, the *shash makom* suites are described by some performers as symbolizing the entire realm of humankind's inner life, from the sombre, prayer-like *sarakhbor* to the spirited dance rhythms of *ufar*.

During the Soviet era, the *shash makom* assumed the mantle of an official 'national' music in Uzbekistan, and performance style came to reflect the ideologically mandated adoption of European cultural models. Large ensembles and mixed choirs replaced the small groups of instrumentalists and male vocalists who had performed the *shash makom* in earlier times. This tendency continues in post-Soviet Uzbekistan.

Performers of the *shash makom* have traditionally included both Muslims and Bukharan Jews. The latter, members of an old community centred in Bukhara and Samarkand, were well represented among the professional musicians who performed for the later emirs of Bukhara. Since at least the mid-19th century, Jews and converted Jews, called *chala*, held a key position in the transmission of the Bukharan *shash makom* repertory.

In addition to the three *makom* repertories discussed above, several smaller and simpler suite forms consisting solely of instrumental melodies have achieved a canonical status in Uzbekistan and are designated as *makom*. These include the Khorezm *dutār makomlari* performed on the *dutār*, a two-string long-necked lute (fig.1) and the *surnāy makomlari*, performed on the *surnāy*, a loud shawm which is similar to the North Indian *śahnāī*. The

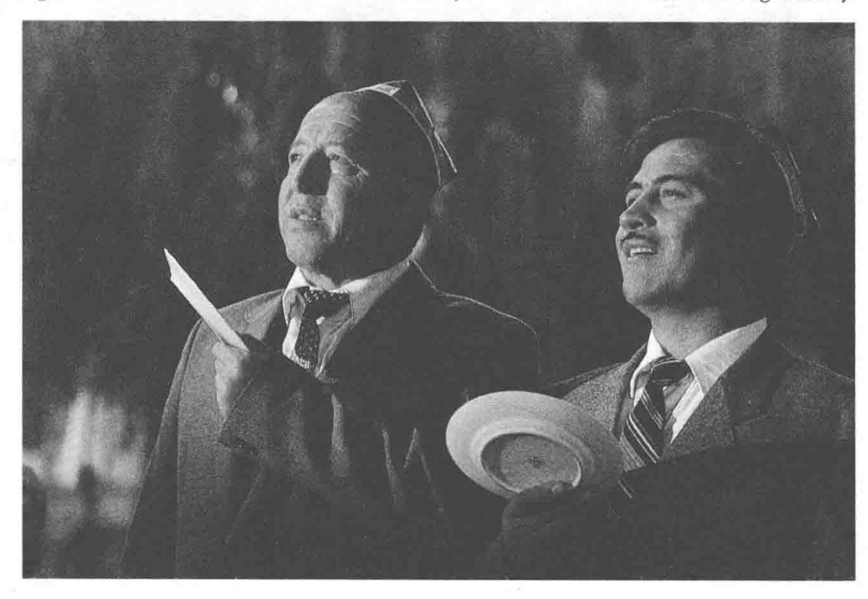
(b) *Nasriy Ushok*

(c) *Ufar-i Ushok*

1. Turgun Alimatov and his son, Alisher, playing ṭanbūr and dutār



description of these suites as *makom* seems indicative of a desire to endow them with the sense of musical prestige and historical canonicity suggested by the term.

(iii) Katta ashula. *Katta ashula*, literally 'great song', is an urban musical form identified with the Ferghana-Tashkent region. *Katta ashula* has several distinctive features. Firstly, it was sung traditionally *a cappella* by male singers (contemporary vocalists sometimes accompany their singing with a simple instrumental drone), either as a solo or as a duet or trio in which singers created a veiled competition, trading off verses and challenging one another to sing louder and higher. Secondly, in contrast to the lyrical songs of the *makom*, *katta ashula* begins in a high range and stays there, typically rising by only a 5th at the *awj* or culmination. Thirdly, *katta ashula* is unmetred and performed without the accompanying *doira* that is *de rigueur* in the *makom*. The origins of *katta ashula* are evidently in the Sufi ritual of *zikr* which, in the Ferghana-Tashkent region, included both instrumental and vocal music. Music for *zikr* was called *zikr makom* or *katta makom* ('great *makom*'). During the Soviet era, the practice of *zikr* was prohibited and *katta ashula* was transformed into a secular genre among contemporary performers of traditional music. A form analogous to *katta ashula* is also performed by both Muslims and Jews in the region of Bukhara and Samarkand, where it is called *Haqqoni* (Jews chant *Haqqoni* not at *zikr* but typically as part of funerary rites).

(iv) Mavrigiy. *Mavrigiy*, a form of vocal suite associated with the city of Bukhara performed by a specialized male performer called *mavrigikhon*. *Mavrigiy* means literally 'from Merv', the oasis city (now called Mari) in contemporary Turkmenistan that was once a principle cultural centre of Khorasan. Merv was also one of Central Asia's principal slave markets. The typical *mavrigikhon* was a descendant of the Bukharan Irani or Farsi, who trace their ancestry to slaves captured in Iran by Turkmen tribesmen and taken via Merv to Bukhara. The Bukharan Irani have preserved their Shi'a heritage and, relative to the city's Sunni majority, are a marginalized social group. As such, they have performed work traditionally considered unsuitable for Sunni Bukharans, including serving as entertainers.

Unlike the canonical *makom* suites, the sequence of the *mavrigiy* is by no means fixed. The first item in the cycle is always the unmetred *shahd* (Tajik: 'honey'). *Shahd* is followed by metred genres which may include *shahd-i gardon*, *sarkhon* or *chor zarb*, the latter containing five or six parts. Later comes *makayilik* and finally *gharaili*. The typical performance venue for the *mavrigiy* is a *bazm* or feast organized for men during a *toy* (festive celebration), where the *mavrigikhon* not only sings but dances and provides humorous interludes. There are few *mavrigikhon* left in contemporary Bukhara, and the *mavrigiy* seems destined to be replaced by more contemporary forms of wedding entertainment.

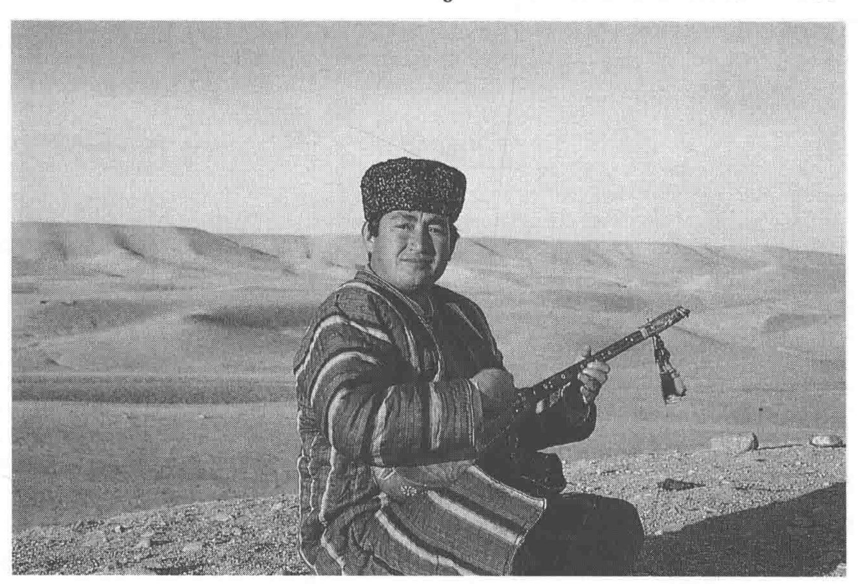
(v) Women's music. Traditionally, the social life of women has been separate from that of men among settled populations in Uzbekistan. (Among herders, this separation tends to be less strict.) During a *toy*, men and women usually celebrate separately, with female entertainers serving the women. In Bukhara, such wedding entertainers are called *sozanda*. Just as the Bukharan *mavrigikhon* has typically been of Shi'a Iranian descent, so the *sozanda* has typically been a Bukharan Jew. (As Bukharan Jews emigrated from Uzbekistan in large numbers, beginning in the late 1970s, the function of the *sozanda* has gradually

2. Performers of Katta Ashula, native to the Ferghana Valley use plates to resonate the voice

been taken over by Uzbeks and Tajiks.) *Sozanda* perform at weddings in groups of three or four. Their performance consists of strophic songs, *bukhorcha*, sequenced together according to much the same principle as the *makom*: progression from serious to light and juxtaposition of contrasting *usuls*. A *sozanda* traditionally accompanies her singing with a *doira* (*see* DĀIRA) and *kairak* (stone clackers). The artistry of the performance is in linking pieces together in such a way that the progression of changing metres, rhythms and tempos keeps listeners constantly engaged, energized and, from time to time, surprised.

The *khalfa* is the Khorezmian analogue of the *sozanda*. The term *khalfa* derives from Arabic *khalifa*, rendered in English as 'caliph', and literally means 'deputy', 'viceregent' or 'assistant'. In Khorezm, a *khalfa* is always a woman. *Khalfa* may be divided into two classes: one who has primarily a religious function, the other who has primarily a musical function. The religiously oriented *khalfa* fills the role of a mullah among women, while the musically oriented *khalfa* (*khalfa sozi*) provides music at the *toy*. The distinction between the two kinds of *khalfa* is not based on a distinction between sacred and secular functions. The same woman is often a musical *khalfa* in her younger years and gravitates towards reading or reciting religious texts as she grows older. This synthesis of entertainment and religion distinguishes the *khalfa* from the Bukharan *sozanda*, a wholly secular figure in Bukharan life. As with the Bukharan *sozanda*, the *khalfa* has often been drawn from the ranks of socially marginalized groups. In overwhelmingly mono-ethnic Khorezm, marginalization has not been based on religious or 'national' identity as in Bukhara, but on family background, lineage and physical appearance. Many *khalfa* are blind or crippled. Others come from poor families or an undistinguished lineage. The *khalfa*'s performance programme, like that of the *sozanda*, is normally divided into blocks of songs (*dawr*) that gradually progress from slow to fast tempo through the course of a *toy*, although with less rhythmic intricacy than in the performance of the *sozanda*. The *khalfa* also sings lyrical songs from Khorezm epics (*daston*).

In towns and rural settlements of the Ferghana Valley, groups of women commonly perform strophic dance-songs known as *yalla* or *lapar* for their own entertainment, accompanying themselves on the *doira*. The lead singer-drummer, known as *yallachi*, might be considered a non-professional analogue of the Bukharan *sozanda* and the Khorezmian *khalfa*. Women in the Ferghana region also play a form of *dutār* that has a shorter neck and softer tone than that typically played by men.



(vi) Other performance genres. Several types of urban male performers who were common in pre-Soviet Bukhara all but disappeared during the Soviet era. These included the *qalandar*, who performed didactic spiritual songs before street crowds for alms, the *maddoh*, who sang Sufi-inspired verse, recited moralistic stories and chanted *hadith* and extracts from the Qur'an, and the *mekhtar*, who played the *surnāy* or shawm at weddings and civic events. The term *mekhtar* also denoted the military orchestra consisting of a number of *surnays*, *karnays* and various sorts of drum played from a portico attached to the exterior wall of the emir's palace.

2. RURAL TRADITIONS. The interaction of city-dwellers and steppe-dwellers is an abiding and defining characteristic of cultures in Central Asia, yet distinct urban and rural traditions of music-making have largely been preserved. In the steppelands of Surkhandarya and Kashkadarya, in rural Khorezm, and in the sparsely inhabited 'Autonomous Republic of Karakalpakstan within Uzbekistan', as the region is officially known, the central entertainment at a *toy* is the performance of oral poetry. Various forms of solo instrumental music are also widely performed.

(i) Oral Poetry. The pre-eminent form of oral poetry in Central Asia is the *daston* or epic tale. Shorter orally composed poems, often improvised in the course of performance, are known as *terma*. Both *daston* and *terma*

3. Tohfaxan with her troupe of sozandas, 1957

4. *Qahhar bakhshi plays his dömbra*

are composed in the common genre of Turkic folk poetry known as *barmok*, which in its canonical form is organized into quatrains, the lines of which contain an identical number of syllables, most commonly 7, 11 or 15. Both *daston* and *terma* are performed by male bards called *bakhshi* or, among the Karakalpaks, *zhirau*. (Bards have also been known in various parts of contemporary Uzbekistan as *akhun*, *sannochi*, *yuz bahshi* and *zhirau* – the term now used by Karakalpaks.) The term *bakhshi* also refers to traditional healers who use music as an aid in contacting the spirit world. At some point in the past, the two activities seem to have been linked both socially and psychologically in the work of the same individual; the recitation of musically heightened poetry was understood to have a magical and potentially therapeutic effect on listeners.

The vocal styles of the Surkhandarya and Kashkadarya *bakhshi*, and the Karakalpak *zhirau* feature a guttural, raspy timbre which presents an immediate contrast to the normal speaking and singing voice, thus creating an artistic and magical distance between everyday experience and the heroic world in which the *bakhshi* stories take place. This special, laryngeally tensed voice is called *ichki avoz* or 'inner voice', in contrast to *tashkari avoz*, 'outer voice'. The *bakhshi* of Surkhandarya and Kashkadarya accompanies himself by strumming on the fretless, two-string DÖMBRA. Among the Karakalpaks, the *dömbra* has largely replaced an older style of accompaniment performed on the *kobuz*, a two-string fiddle with horsehair strings that links the Karakalpaks to the old nomadic Turko-Mongol cultural realm. In Khorezm, musicians distinguish two styles of epic performance. In the Irani style, which shows many affinities to the Khurasani and Turkmen styles of *daston* performance, the *bakhshi* accompanies himself on a *dutār* in much the same way as the *bakhshi* of Kashkadarya and Surkhandarya accompanies himself on the *dömbra*. In the Shirvani style, the *bakhshi* plays the TĀR and is accompanied by a violin and *doira*. The Shirvani instrumental trio is analogous to the classic *mugam* trio of Azerbaijan (which includes a *kemancha* instead of a violin and a *daf* instead of a *doira*) and exemplifies the consanguinity of the Khorezm *bakhshi* to the bards of the Western Oghuz Turks (Azerbaijani, Turkmen, Turkish), called *ashuk* or *ashik*. A number of heroes of the Khorezm *daston* are called *ashik*, which suggests that in earlier times this title was also used in Khorezm to designate the performer of *daston*. In the Shirvani style, the narrative alternates between sections of prose recitation in emotionally-heightened speech and melodies drawn from an inventory of 72 *noma* ('melodic form'). The sung portion of the epic comprises a musical form in the pattern of a typical Khorezmian art song in which the tessitura of the melodic line ascends in successive strophes to the *awj*, then descends to a well-prepared cadence.

(ii) Instrumental music. The same inclination towards narrativity that shapes the musical style of the Uzbek and Karakalpak bards is also present in instrumental music that has roots in the musical aesthetics and metaphysics of a larger Central and Inner Asian Turko-Mongol cultural realm. For example, *dutār* and *dömbra* players often use their instruments to narrate a story, the meaning of which listeners are assumed to understand. These pieces, generically known as *kui* (a term also used by Kazakhs), often involve virtuoso strumming and fingering techniques, shifting rhythmic patterns and the flexible use of two-part polyphony. Other instruments, such as the *sybyzyk*, a short single-reed pipe made from cane, and the *chang kobuz*, a metal jew's harp, are used to help the performer to 'imagine' an image or brief narrative programme. Such music is more personal and intimate than communicative, and individual styles linked to the idiosyncratic techniques of one or another performer exist alongside canonical repertories.

3. MUSICAL INSTRUMENTS. The earliest historical evidence of musical instruments in the area now known as Uzbekistan is found in sculptures and wall paintings. Excavations in the Khorezm area (north-west Uzbekistan) have uncovered representations of two forms of angular harp (similar to Middle Eastern models) from the 4th and 3rd centuries BCE. In nearby sites, representations of spade-shaped long-necked lutes have been found from the period CE 1–200. In later periods, instruments have also featured in manuscripts and paintings. For instance, the

spike fiddle *ghidjak* (*see* GHICHAK) is mentioned in 10th-century manuscripts and depicted in 15th-century miniature paintings.

At the close of the 20th century, the most popular instruments in Uzbekistan were the long-necked plucked lutes ṬANBŪR and DUTĀR, the long-necked, three-string fiddle *sato* and short-necked, four-string fiddle *ghidjak* and the single-headed frame drum *doira* (*see* DĀIRA). The music they play draws upon the court traditions of urban life, the religious traditions of Sufism and the folk traditions of rural and nomadic peoples.

(i) Court traditions. Until the second half of the 19th century, *Hon* (or *Sarai*) *sozandalary* (musicians patronized by urban ruling élites including the local emir or khan) performed predominantly *makom* at ceremonial and social events in the courts of Samarkand, Bukhara, Khiva and Kokand. The main instruments played in this context were *ṭanbūr* and *sato*, the latter being sometimes replaced by a bowed *ṭanbūr*. A court musician, however, had also to be able to play other instruments, such as *dutār*, *ghidjak*, *kanun* (*see* QĀNŪN) and *doira*.

Ensemble sizes and instrumentaria varied. In 19th-century Khiva, court musical ensembles comprised seven or eight musicians. In Bukhara, each *makom* was performed by two *ṭanbūr*s, a *sato* or *ghidjak*, an Afghan five-string lute or *rubāb*, and three *doiras*. *Makom* suites might be performed as instrumental music or include vocal sections. The smallest ensemble consisted of a singer accompanied by a *ṭanbūr* and *doira*. *Doira* players also often sang. When the khan was present at the court of Khorezm, a special melody 'Khan Chikar' was played, imitating the rhythm of his horse. Poetry competitions in which poems were performed to the accompaniment of the *doira* were also common.

Instruments played outside, during official state ceremonies and military occasions, had to be capable of producing loud sounds and therefore included the *karnay* (long trumpet), *sumay* (shawm; *see* SURNĀY), *bulaman* (cylindrical clarinet), *naghora* (kettle drum) and *doira*; those played inside the palaces for aesthetic enjoyment and entertainment were soft-sounding string or wind instruments, such as the *ghidjak*, harp (ancestor of the *chang*) and *doira*.

Instruments played at the urban *toy*, at which the repertory was predominantly professional art or classical music, vary traditionally and in contemporary Uzbekistan. In the Ferghana Valley, the *karnay* was used to signal the imminent event, while in Khorezm, Samarkand and Bukhara, *surnay* fulfilled the same function. In the Ferghana Valley, the *ghidjak* was sometimes replaced by the violin, played in traditional folk style. In the Khorezm area, the *rubāb* was replaced by the plucked lutes, TĀR or SAZ.

(ii) Sufi tradition. In his poem *Husn va dil* ('The Beauty and the Soul'), the 18th-century Uzbek Sufi poet Muhammad Niaz Nishôti from Khorezm, gave the myths of origin and characteristics of the three main instruments of Sufi tradition: *nay* (*see* NEY), *chang* (box zither) and *daf* (*doira*). In the poem, each instrument introduced itself to the khan. The long, slim *ney* from Efrat used to be alive, free and proud. When the people cut it down, it was devastated by what it saw in the world of humans declaring: 'Now just the touch of a finger makes me weep'. The *chang* came from China where it was a tree, but it was expelled, tied with straps and silken threads and taught to sing songs of alien places. The *daf* pretended to be mute so the khan ordered that it be beaten and heated over the fire. The *daf* then said: 'I was swimming in the deep sea when I was caught, cut up and bound. A master polished me and fitted me with rings. I used to be like a moonfish but was turned into a sphere like the sun. I have always aspired to reach the deep water, but people put me over the fire!' This alludes to the practice of heating the skin of the drum before beating it to improve its timbre.

(iii) Rural traditions. In rural areas music is performed during everyday life and during the *toy*. In everyday life non-professional musicians play instruments that make delicate sounds, such as the *nay* (small reed flute) or *chang kobus* (metal jew's harp). If the *nay* is played in the morning, however, it signals a death. In Surkhandarya and Kashkadarya, where there are strong nomadic influences, a *toy* may include hereditary bards, who perform epics (such as 'Alpamysh' and 'Ker-Ogly') and short improvised songs or *terma*. These may be simply vocal renditions. Alternatively, the male *bakshi* accompanies himself on the plucked lute *dömbra*, the female *otin-oy* on the *doira*. The *bakshi* ritually introduces the bride to the audience by lifting her white veil from the head or peg-box of the *dömbra*. The *dömbra*, a simple variant of the *dutār*, and the *kiak*, a simple variant of the *ghidjak*, reflect the nomadic aspect of Uzbek culture. During the main part of the *toy*, a small group of musicians play traditional folk music on the *ghidjak*, *nay* and *doira*. In the Khorezm area, the *bakhshi* perform the epic genre *daston* with an ensemble of *dutār*, *bulaman*, *ghidjak* and *doira* to accompany the introductory section 'Nogma Bakhshi'. The *doira* was also sometimes used in shamanic healing rituals.

4. SOVIET AND POST-SOVIET POPULAR MUSIC. During the Soviet era, Uzbekistan's Ministry of Culture, like the ministries of other Soviet republics, organized professional music and dance ensembles of 'national' music. These ensembles toured widely within the former USSR as well as abroad, where they served the former Soviet Unions' initiative in cultural diplomacy. Such ensembles, motivated 'from above' by official cultural policy, contrast with musical groups motivated 'from below' by musicians themselves, presumably responding to the tastes of the cultural marketplace. Whatever their motivation, however, musicians who performed in public venues such as concert halls, restaurants or the auditorium of the House of Culture (a cultural centre administered by local and municipal governments, factories, labour unions and other organizations) were required to have an affiliation either with a house of culture or with the state-sponsored Philharmonia, which acted as manager, booking agent, patron and censor. Vocalists were typically required to submit song lyrics for approval before being performed, and Western-style contemporary pop music, officially vilified as the degenerate product of capitalist culture, was discouraged or prohibited in public venues. Nevertheless, electric guitars, synthesizers, drum sets and heavily amplified acoustic instruments, both indigenous and imported, became the norm of an entire popular music industry. This provided entertainment in cavernous state-run restaurants and banquet halls, and at the increasingly popular evening wedding feasts at which men and women celebrated together rather than, as was traditional, separately. Such ensembles, known as 'vocal-instrumental

5. Uzbek folkloric ensemble typical of those formed under the sponsorship of Soviet 'House of Culture'

ensembles', performed a genre known as *estrada* (from French *estrade*: 'platform', 'stage') or 'ethnographic vaudeville' that persists in myriad 'national' varieties (for instance, Uzbek, Ukrainian, Yakut) all over the former Soviet Union. In *estrada* music, folksongs or popular songs are arranged in modernized performance versions that typically set modally inflected melodies within a square metrical template held by bass and drums.

Sine the 1970s Uzbek composers have paid more attention to the expression of their national identity. Instead of pro-Soviet music, works have been composed recalling national history, ancient epics and mythology (for example M. Tajiev's *Serdze drevnego Samarkanda* ('Heart of the Ancient Samarkand') of 1973). Different music schools within Uzbek music have begun to be promoted, including *Uighurs* (Sh. Shahimardanova, Ab. Hashimov and Al. Hashimov), *Tatars* (Ya. Sherfeddinov), *Karakalpaks* (A. Halimov and N. Muhamedzinov) and *Korean* (V. Pak and Pak Endin). For the first time in Uzbek history, international festivals and symposiums have begun to be held within Uzbekistan (Samarkand 1978, 1983 and 1987), and these have provided a platform for many interesting musical innovations.

The independence of 1991 has had both positive and negative effects on Uzbekistan's musical culture. Lack of money, a breakdown in connections between professional communities and the emmigration of musicians are all results of the decay of Soviet culture. However, Uzbek musical culture has benefited from the more open contacts with other countries, and Uzbek music and song has entered the WORLD MUSIC arena, with musicians such as TURGEN ALIMATOV (*sato*, *ṭanbūr* and *dutār* player) and singer MUNADJAT YULCHIYEVA gaining prominence.

5. OPERA, BALLET, ORCHESTRAL AND CHAMBER MUSIC. From the time of the conquest of Central Asia and its union with Russia in 1868 Russian culture began to penetrate the area. In 1884 a musical society was formed in Tashkent, comprising a symphony orchestra, a choir, vocal soloists and instrumentalists. The study of the region's musical heritage began at the close of the 19th century, laying the foundations for Uzbek musical folklorism, and after the October Revolution 'national' culture was inaugurated by cultural strategists. From 1917 to 1932, the first music teaching institutes were opened and there was a broad development in recording and reworking of the Uzbek musical heritage. In June 1918, on the initiative of the musicians M. Mironov, V. Karelin and V. Uspensky, the Turkestani People's Conservatory was established in Tashkent, which from 1936 became the Tashkent State Conservatory. Similar conservatories were founded in Bukhara, Samarkand and Fergana.

An important role in the development of musical education in Uzbekistan was played by the Shazq Musiqa Maqtabi ('School of Oriental Music') in Bukhara. Leading singers, instrumentalists and experts on musical heritage, such as Ota Dzhalol Nasïrov, Domulla Khalim Ibadov and Ota Giyas Abdugani, acquired the skill of performing *Shashmakom* there. Also many future famous musicians of Uzbekistan and Tajikistan studied there, including Mukhtar Ashrafi, F. Shakhobov and Sh. Sakhibov.

A significant contribution to the development of Western art music in Uzbekistan was provided by Russian composers such as Uspensky, B. Nadezhdin, R. Glière, N. Roslavets, S. Vasilenko, A. Kozlovsky and G. Mushel'.

The foundation of the Composers' Union of Uzbekistan in 1938 was highly significant for the training of future specialists. Its members included professionals with long experience as composers or musicologists (Uspensky, Kozlovsky and Ye. Romanovskaya), musicians who were then young (I. Akbarov, M. Ashrafi and T. Sadïkov) and representatives of traditional folk music (T. Dzhalilov and Yu. Radzhabi) called *Bastaqor*.

The development of music drama in the republic in the 1930s led at the end of the decade to the writing of the first Uzbek operas. These were *Buran* ('The Snowstorm') by Ashrafi and Vasilenko (1938) and *Leyli i Mejnun* by Glière and Sadïkov (1940). In 1941, Ashrafi and Vasilenko wrote the opera *Velikiy kanal* ('The Grand Canal') on a contemporary theme: the building of the Ferghana Canal.

The most significant of the operas written in the republic during World War II are *Ulugbek* (1942) by Kozlovsky and *Makhmud Tarabi* (1944) by O. Chishko. The war years marked an enormous development in

Uzbek musical life in the fields of musical education, performance and composition.

In 1943 and 1944 Mukhtar Ashrafi composed the first two symphonies written by an Uzbek composer: *Geroicheskaya* ('Heroic') and *Slava pobedi-telyam* ('To the Glory of Winners').

These first Uzbek symphonies were programmatic. In the postwar years symphonic music became one of the leading areas of composition. Along with symphonic suites there emerged poems, cantatas, symphonies, piano concertos and so forth. Brilliant young Uzbek composers of the 1960s and 70s included Khamrayev, Kurbanov, Jalil, Makhmudov, Tajiyev and Abdullayev. The most mature works are the symphonies of Tajiyev, Makhmudov and Abdullayev.

The establishment of the Uzbek symphonies began in the postwar period, particularly in the 1960s and 70s, when the national style was combined with 'new traditions' in all genres of Uzbek music. Given the need for adoption of polyphony by a previously monodic culture, the significance of symphonic music and the symphony orchestra acquired a symbolic status. It was deemed to be important that the 'new traditions' were born on the basis of the old, since this allowed continuity of the work itself and, to a great extent, the psychology of its acceptance. The most significant have been *Symphonicheskye zasskasy* ('The Symphonies Stories') by I. Akbarov (1972), and the third and fourth symphonies of Tajiev (1927, 1975).

Vocal symphonic music, oratorios and cantatas have undergone great development in Uzbekistan. The most significant have been Ashrafi's *Pesn' o schast'ye* ('Song of Happiness', 1951); R. Vil'danov's *Voydite v mir* ('Enter the World', 1961); S. Yudakov's *Pamyati Lenina* ('In Memory of Lenin', 1961); F. Yanov-Yanovsky's oratorio *Golos* ('The Voice'); N. Zakirov's *Oktyabr'* ('October'); and *Chorus a cappella* (1954) by M. Buzhanov.

Much vocal symphonic music was written in the following years by such composers as R. Vil'danov, A. Malakhov, Yanov-Yanovsky, Kh. Rakhimov, I. Khamrayev, F. Nazarov, Sh. Shaymardanov, M.M. Burkhanov, Akbarov and N. Zakirov. In 1974 M. Ashrafi's last piece was performed: an oratorio entitled *Skazaniye o Rustame* ('The Lay of Rustam'), based on A. Firdousi's poem *Shakh-namė*.

In 1947 the Uzbek State Academic Grand Theatre of Opera and Ballet was based in Tashkent, giving a platform to many leading performers, including the singers M. Kari-Yakubov, K. Zakirov, Kh. Nasïrova, S. Yarashev, N. Khashimov and S. Kabulova; and the conductors Ashrafi, B. Inoyatov, A. Abdukayumov, F. Shamsutdinov, D. Abdurakhmanova.

Many operas and ballets by Uzbek composers have been performed in this theatre. The most famous are the operas *Dilorom* (1958) and *Serdtse poėta* ('The Heart of the Poet', 1962) by Ashrafi, *Maisaraningishi* ('Maysara's Pranks', 1959) by S. Yudakov, *Kasïda 'Alisheru Navoi'* by M. Burkhanov and *Leopard iz Sogdianï* ('The Leopard from Sogdiana', 1977) by Akbarov, and the ballets *Amulet lyubvi* ('The Amulet of Love', 1970), *Lyubov' i mech* ('Love and the Sword', 1974), *V doline legend* ('In the Valley of Legends', 1977) and *Tomaris* by U. Musayev.

The centre of the republic's concert-going life is the Uzbek State Philharmonia (1936) and Uzbek State Symphony Orchestra, developed under conductors such as P. Shpital'ny, Kozlovsky, Ashrafi, N. Alimov and K. Usmanov. Since the mid-1960s the orchestra has been headed by Z. Khaknazarov.

Uzbek composers have mastered all genres of modern music and since the 1970s a new generation of composers has begun to flower: N. Giyasov, R. Abdullayev, Kh. Rakhimov, A. Mansurov, A. Malakhov, R. Vil'danov and Yanov-Yanovsky, strengthening the music development by form and dramatic evolutions.

THEODORE LEVIN (1–2, 4), RAZIA SULTANOVA (3), F.M. ASHRAFI/RAZIA SULTANOVA (5)

Uzoigwe, Joshua (*b* Ogidi, 1 Jan 1946). Nigerian composer. After studying music at the University of Ibadan, Nsukka (diploma, 1973), he pursued graduate studies at Trinity College of Music (diploma, 1977). His completion of an MA in ethnomusicology at Queen's University, Belfast, studying with John Blacking, marked an important shift in Uzoigwe's theoretical background. In his works completed at Ibadan, notably the *Igbo Songs* (1972–3), he established as an important compositional trait the conscious application of Igbo instruments and performing practices, further reinforced through his systematic study of Igbo musical traditions in his doctoral dissertation. Such influences include the tonal properties of Igbo flutes, xylophones and drums, elements of improvisation within an aleatory framework and time-line patterns. Uzoigwe writes solely for African instruments in such works as *Ritual Process* (1980), solely for Western ones, as in *Watermaid* (1983), and for a combination of African and Western, as in *Masquerade* (1980). As well as the influence of Akin Euba on Uzoigwe's theoretical and creative works, elements of the 'African pianism' espoused by Euba appear in Uzoigwe's piano writing. Uzoigwe has held senior lecturing positions at Nigerian universities.

DANIEL AVORGBEDOR

V

Vaccai, Nicola (*b* Tolentino, 15 March 1790; *d* Pesaro, 5/6 Aug 1848). Italian composer and singing teacher. Though he was born into a family of doctors, his first inclination was towards poetry; by the age of 17 he had written four verse tragedies in the style of Alfieri, one of which was performed by a professional company in Pesaro. Not until he left for Rome in 1807 to read law did he become aware of his true vocation: he began to take regular music lessons from Giuseppe Janacconi, later *maestro di cappella* of S Pietro, and by 1811 had been awarded the *diploma di maestro* of the Accademia di S Cecilia. He then went to Naples, where he studied dramatic composition with Paisiello, gaining his first practical experience by writing church music and insert arias for opera revivals in Neapolitan theatres. Encouraged by his début at the Teatro Nuovo with *I solitari di Scozia* (1815), Vaccai left for Venice in search of opera commissions. But there success eluded him; *Malvina* (1816) was removed after one night, while *Il lupo di Ostenda* (1818) was criticized as imitation Rossini. Four ballets, written for La Fenice between 1817 and 1821, fared better. Meanwhile, his literary training bore fruit in an Italian translation of the libretto of Méhul's *Joseph*.

During this period Vaccai was much in demand in Venetian high society as a singing teacher. In this capacity he went to Trieste in 1821, spending three months in 1822 at Frohsdorf, near Wiener Neustadt, in the establishment of Murat's widow. Still hoping for operatic fame in Italy, he turned down an offer to be Kapellmeister at Stuttgart. After leaving Trieste for good in 1823 he secured a commission for the Teatro Ducale, Parma, resulting in *Pietro il grande* (1824), in which Vaccai himself substituted for one of the singers; this inaugurated a brief period of theatrical glory for him, to which belong *Zadig e Astartea* (1825, Naples) and his masterpiece *Giulietta e Romeo* (1825, Milan), the only one of his operas to achieve frequent performance outside Italy.

With the advent of Bellini, Vaccai's fortunes declined rapidly. *Saladino e Clotilda* (1828, Milan) was received so badly that his commission to compose an opera for the opening of the Teatro Carlo Felice in Genoa was revoked in Bellini's favour. A quarrel with Felice Romani – Vaccai had failed to ensure full payment to him for the libretto of *Saul* – undoubtedly played its part in the decision by Romani and Bellini to recoup their losses over *Zaira* with the hastily written *I Capuleti e i Montecchi*, which inevitably eclipsed Vaccai's slighter opera on the Romeo and Juliet story. But the older composer was avenged at a Paris performance in 1832 when Malibran, at Rossini's suggestion, interpolated the penultimate scene of Vaccai's opera into Bellini's. From then on this became a regular option for contraltos such as Marietta Alboni who essayed the role of Bellini's Romeo, originally written for the soprano Giuditta Grisi; hence its inclusion as an appendix in all later printed editions of *I Capuleti e i Montecchi*.

In 1830 Vaccai renounced the stage for the second time and went to Paris as a teacher. A visit to England in that year was unexpectedly prolonged until 1833, while he enjoyed a highly successful career as a teacher and composer of salon pieces. During that time he published his *Metodo pratico di canto italiano per camera* (London, 1832), still a standard work. On the death of his father in 1833 he returned to Italy to settle down, marry and raise a family. Once again the lure of the theatre proved strong. But in spite of the presence of Malibran in the title role, his *Giovanna Gray* (1836, Milan) was a failure.

Compensation came in the offer of a post at the Milan Conservatory. After succeeding Basili as *censore* in 1838, he reorganized the study of singing, inaugurated opera performances among his students on the Neapolitan model and set up a new choir school. He also enlarged the repertory to include the German classics. However, the reversal in 1843 of his decision to include Handel's *Messiah* in the conservatory's celebration of Holy Week determined him to resign the following year and he returned to manage his family estates at Pesaro. In 1845 his operatic activity came to an end with *Virginia*, performed at Rome. Even in retirement he continued teaching and composing with an industry that is thought to have hastened his death.

In a famous letter of 1851 Rossini paid tribute to Vaccai as a teacher and a composer 'in whom sentiment was allied to philosophy'. Yet as a theatre composer he was an honourable failure. Very few of his operas were ever printed in their entirety. *Zadig e Astartea* and *Giulietta e Romeo* owed their success to a delicate, personal inflection of the current Rossinian style, but they were not proof against the much higher emotional charge of Bellini's music. Two of the later works achieved a certain *succès d'estime: Marco Visconti* (1838, Turin) shows an attempt to come to terms with the dramatic style of Donizetti, but the best of it is to be found in isolated, often purely episodic pieces of a refined charm and workmanship; *Virginia* is a full-blown Risorgimento opera with plentiful choruses and two stage bands, whose intermittent grandeur recalls Spontini rather than Vaccai's contemporaries. Both operas show a regard for academic values unusual at the time. More successful are the many songs and *ariette per camera*, in which Vaccai exploited his slight but genuine melodic gift and his keen feeling for words. The religious compositions are distinguished by the skill of their part-writing and sure sense of effect. It is,

however, as a singing teacher that Vaccai left his chief mark. His *Metodo pratico* is not only an excellent primer for the amateur but also a valuable document for the study of 19th-century performing practice.

WORKS

OPERAS

I solitari di Scozia (melodramma, 2, A.L. Tottola, after G. De Gamerra), Naples, Nuovo, 18 Feb 1815, *I-TOL**

Malvina (op sentimento, 2, G. Rossi), Venice, S Benedetto, 8 June 1816, *TOL** (inc.)

Il lupo di Ostenda, ossia L'innocenza salvata dalla colpa (op semiseria, 2, B. Merelli), Venice, S Benedetto, 17 June 1818, *TOL**

Pietro il grande, ossia Un geloso alla tortura (dramma buffo, 2, Merelli), Parma, Ducale, 17 Jan 1824, excerpts (Milan, 1824)

La pastorella feudataria (op semiseria, 2, Merelli), Turin, Carignano, 18 Sept 1824, *US-Wc*, excerpts (Milan, 1826; London, n.d.)

Zadig ed Astartea (dramma per musica, 2, Tottola, after Voltaire), Naples, S Carlo, 21 Feb 1825; rev. version, Trieste, 1826; as L'esiliato di Babilonia, Venice, 1832; *I-TOL* (with autograph annotations), *US-Wc*, excerpts (Milan, 1826 or 1827/*R*; IOG, xlv; Paris ?1825)

Giulietta e Romeo (tragedia, 2, F. Romani), Milan, Cannobiana, 31 Oct 1825, *I-Mr**, copy *Mc*, vs (Milan, 1826/*R*); IOG; xlv); rev. version (3), Milan, 1835, *Mc*

Bianca di Messina (os, 2, L. Piossasco), Turin, Regio, 20 Jan 1826; *TOL*, excerpts (Milan, 1826)

Il precipizio, o Le fucine di Norvegia (melodramma semiserio, 2, Merelli), Milan, Scala, 16 Aug 1826, *Mr**, copy *TOL* (with autograph annotations), excerpts (Milan, 1826 or 1827)

Saul (azione sacra, 2, Romani), 1826, unperf.; rev. version (tragedia lirica, Tottola), Naples, S Carlo, 11 March 1829; rev. version, Milan, 1829; *Mr**, *TOL**, copy *TOL*, excerpts (Milan, n.d.)

Giovanna d'Arco (melodramma romantico, 4, Rossi, after F. von Schiller), Venice, Fenice, 17 Feb 1827; rev. version, Naples, 1828; *Mr**, copy *TOL*, excerpts (Milan, 1827)

Saladino e Clotilda (melodramma tragico, 2, L. Romanelli), Milan, Scala, 4 Feb 1828; *TOL**, excerpts (Milan, 1828)

Alexi (azione tragica, 2, Tottola), Naples, S Carlo, 6 July 1828, begun by C. Conti

Giovanna Gray (tragedia lirica, 3, C. Pepoli), Milan, Scala, 23 Feb 1836; *TOL**, copy *TOL*, excerpts (Milan, 1836)

Marco Visconti (dramma lirico, 2 acts [4 giornate], L. Toccagni), Turin, Regio, 27 Jan 1838; *TOL**, vs (Milan, 1839)

La sposa di Messina (melodramma, 3, J. Cabianca, after Schiller), Venice, Fenice, 2 March 1839; *TOL*

Virginia (tragedia lirica, 3, C. Giuliani), Rome, Apollo, 14 Jan 1845; rev. version, Pesaro, 1846; *Mr**, copy *TOL*, vs (Milan, 1846)

OTHER WORKS

Cants.: Dafni ed Eurillo, ?1813; Andromeda, 1814; L'omaggio della gratitudine, 1814, *I-TOL**; Ildegonda, 1827; Il monumento di Milano, last pt. of In morte di M.F. Malibran de Bériot (A. Piazzi), Milan, Scala, 17 March 1837, collab. Donizetti, Pacini, Mercadante, Coppola; vs (Milan, 1837)

Ballets, all perf. Venice, Fenice: Camina, regina di Galizia, 1817; Timurkan, 1820; Il trionfo di Alessandro in Babilonia, 1820, ov., *TOL**; Ifigenia in Aulide, 1821

Sacred: Mass, 4vv; Ky-Gl; Ky; 3 Gl; Laudamus; 3 Gratias; Domine Deus; 3 Quoniam; Cum Sancto Spirito; 3 Cr; Domine Deus-Ag; 2 Qui tollis; Dies irae, inc.; 3 Mag, Mag-Gl, 6 ps; Gloria Patri nel dixit, 6 Tantum ergo; Iste confessor; Salve regina; Holy Week service, inc.; several motets etc, all *TOL* (mostly autograph); others, *MAC, NOVd, Vnm*

Other vocal: more than 100 chbr pieces, incl. ariette, notturni, arias, romanze, duets, etc., many in *TOL**, most pubd (Milan, Paris, London); Italia redenta, hymn, 1848, *TOL**

Inst: Variations on 'God Save the King', vn, pf (London, ?1820); Fuga tonale di un Credo, org, *TOL**; Concertone da camera, *TOL**; Str Qnt, after 1837; Fanfara ed introduzione all'Inno nazionale, orch, *Mr*

Pedagogical: Studi di contrappunto, *TOL*; 12 ariette per camera in chiave di violino per l'insegnamento del bel canto italiano (Milan, 1840); Metodo pratico di canto italiano per camera diviso in 15 lezioni, ossiano Solfeggi progressivi ed elementari sopra parole di Metastasio (London, 1832)

JULIAN BUDDEN

Vaccaro, Jean-Michel (*b* Le Petit-Quevilly, Seine-Maritime, 31 May 1938; *d* Tours, 21 Oct 1998). French musicologist. He studied at the Institut de Musicologie at the Sorbonne under the supervision of Chailley (1965–70), and trained at the Centre d'Etudes Supérieures de la Renaissance in Tours with André Souris (1964–9) and at the CNRS in Paris with Jean Jacquot (1966–83). From 1970 until his retirement in 1997 he taught at Tours University, where he founded the department of musicology and became professor in 1979. In 1984 he founded the Groupe de Formation Doctorale 'Musique et Musicologie', a liaison committee that links Tours University with the Ecole Normale Supérieure, Paris Conservatoire and the Ecole Pratique des Hautes Etudes. He was the director of this committee until 1995. From 1991 to 1996 he was also director of the Centre d'Etudes Supérieures de la Renaissance in Tours. He was awarded the silver medal of the CNRS in 1981 and received the honorary doctorate in 1994 from the Université Libre de Bruxelles.

Vaccaro undertook research on 16th-century vocal music, instrumental music from the 16th–18th centuries, particularly lute music, and the music of Stravinsky. He examined the second of these subjects in his doctoral dissertation *La musique de luth en France au XVIe siècle*. He also published many volumes of the collected edition entitled Corpus des luthistes français. In addition to his research work, Vaccaro was an active musician. He directed the Ensemble Vocal Universitaire de Tours, a choir that he founded, which specialized in the oratorio repertory from Schütz in the 17th century to Stravinsky in the 20th.

JEAN GRIBENSKI

Vacchelli, Giovanni Battista (*b* Rubiera, nr Reggio nell'Emilia, *c*1625; *d* in or after 1667). Italian composer and organist. He was a Franciscan friar. According to the title-page of *Il primo libro de motetti concertati*, for two to four voices and organ, op.1 (Venice, 1646), his first appointment was as organist at Rubiera. In 1657 he became *maestro di cappella* of S Francesco, Bologna. The title-page of his *Motetti a voce sola, libro primo*, op.2 (Venice, 1664) recorded that he had been appointed *magister musices* of the Franciscan order in the previous year. From at least 1664 until 1667 he was a member, under the name of Accademico Naufragante, of the Accademia della Morte at Finale di Modena. At the time of the printing of his *Sacri concerti a 1–4 voci con violini e senza, libro secondo*, op.3 (Bologna, 1667) he was *maestro di cappella* at Pesaro. His surviving music, which probably constitutes his entire output, consists of sacred vocal works for small forces and was probably written for performance in the churches to which he was attached.

□

Vacchi, Fabio (*b* Bologna, 19 Feb 1949). Italian composer. At Bologna Conservatory, he studied choral music and choral conducting with Tito Gotti (diploma 1971) and composition with Manzoni (diploma 1974). He also studied at the Accademia Musicale Chigiana in Siena, with Donatoni, and at Tanglewood, where he won the Koussevitzky Prize for composition (1974). In 1976 he won first prize in the Gaudeamus Competition in the Netherlands for his first acknowledged work, *Les soupirs de Geneviève* (1974–5). Vacchi lived in Venice from 1975 to 1992, when he settled in Milan; he began to teach composition at the conservatory there in 1993.

Vacchi's music is characterized in particular by its quality of sound, fluid, refined and shimmering, subtly nuanced and suggestive of echoes and reverberations. The rigour of his compositional procedures (with their roots in his apprenticeship with Manzoni and Donatoni) is tied to a concern to create a communicative idiom which takes account of the listener's perceptive ability and which is not afraid to use consonance, a personal melodic manner and to forge links with history and tradition. Of his earlier works, notable are *Ballade* (1978), *Scherzo* (1979), *Continuo* (1979), many passages from the opera *Girotondo* (1982), *Il cerchio e gli inganni* (1982) and the Piano Concerto (1983). In the *Ballade*, a gentle, fluid and richly ornamented melodic line defines a particular relationship with harmonies and timbres. In *Girotondo*, the apparent frivolity of Schnitzler's *Reigen* meets a compositional response of profound melancholy, like a mechanism turning to no purpose. The emphasis on vocal virtuosity in some of the arias or ariettas almost seems to suggest the senseless movement of a caged bird as it vainly tries to fly.

During the years which separate *Girotondo* from Vacchi's next opera, *Il viaggio* (1987–9), the composer moved towards greater transparency of sound and less density of material; examples are the expressive poetic evocation of *L'usgnol in vatta a un fil* for ensemble (1985) and the chamber pieces which make up the cycle of *Luoghi immaginari* (1987–92). This cycle brings together works which are among Vacchi's most representative; its Trio (1987), Quintet (1987) and *Quartetto a Bruno Maderna* (1989) are also preparatory sketches for *Il viaggio*. This second opera recounts the journey of an elderly husband and wife from Romagna who leave the village where they have always lived to visit the sea for one time; they arrive on a foggy day when they can see nothing. A journey between reality, memory and dream, Vacchi requires the singers to produce a sound which is as natural as possible (a very different approach to that in *Girotondo*), and the sung words of the brief text are absorbed within the kaleidoscopic richness of the orchestral writing.

To a text by Myriam Tanant and freely inspired by a little-known Goldoni libretto, *I bagni d'Abano*, the verbal inflection of the text is the starting point for fluid, natural melodic patterns. These are echoed in the instrumental counterpoint, the restraint and delicacy of which ensures that the text always stands out. From the point-of-view of pitch material, all aspects of the score can be traced to five-note harmonic fields, producing a transparent diatonic quality to match the atmospheric timbres. Various events rapidly intersect in a lively kaleidoscope of situations and moods, until everything is left hanging upon the final aria of the singer who, having until that point only used Sprechgesang, finds her voice again. Among other recent works, the ballet *Dioniso germogliatore* (1996–8) reveals a new complexity and a symphonic breadth of scale.

PAOLO PETAZZI

Vacek, Miloš (*b* Horní Roveň, nr Pardubice, 20 June 1928). Czech composer. He studied the organ at the Prague Conservatory (1943–7) and composition with Pícha and Řídký at the Prague Academy of Musical Arts (1947–51). While serving as a conscript in the army he was active as a composer in the Military Art Ensemble. Since 1954 he has made his living as a composer. His first opera, *Jan Želivský*, written at the age of 22, revealed an instinct for dramatic form which he developed further in his ballets, musical comedies and incidental music. Integral to his output are functional pieces, some of which are popular in style.

WORKS

JAN LEDEČ

Vachon [Vasson, Waschon], **Pierre** (*b* Avignon, 3 June 1738; *d* Berlin, 7 Oct 1803). French violinist and composer. The son of Ignace Joseph Vachon and Marie-Anne Villelme. According to Fétis, he came to Paris and studied the violin with Carlo Chiabrano who was living there in 1751. His public début was at the Concert Spirituel on 24 December 1756, at which he played one of his own concertos, and he had further success in twelve concerts in 1758. He was first violinist in the Prince of Conti's orchestra from at least November 1761, and performed in concerts at the royal court in Fontainebleau. With Jean-Claude Trial, another musician employed by the court, he composed two operas: *Renaud d'Ast* and *Esope à Cythère* during these years. As Bachaumont and Grimm have noted, however, he had little success with these and other dramatic compositions.

Vachon made journeys to London in 1772, 1774 and again in 1777, returning to Paris for short periods in between. He played at benefit concerts and oratorio performances on roughly 13 occasions between 27 April 1772 and 5 June 1777 (McVeigh), and conducted and performed as a soloist at concerts and recitals. On 27 April 1772 at a benefit concert at the Haymarket Theatre, for example, he played a duet with Duport, and a concerto. During 1774 he played five times at the Drury Lane Theatre in concertos during performances of oratorios by Handel, Smith and Stanley; in 1777 he probably played the viola in a chamber recital at the Tottenham Street Rooms, and the violin in a quartet with Cramer, Giardini and Crosdill at a benefit concert. According to the *Almanach musical*, he seems to have remained in England until 1778.

About 1784 he went to Germany as a musician in the Palatine court, and two years later he had become leader of the royal orchestra in Berlin, alongside Benda. He was praised by the composer for his playing in Dittersdorf's Singspiel *Der Apotheker und Doktor* in Charlottenburg in 1789. Vachon left his post there in 1798, with a pension which he continued to receive until his death.

As evidenced by Carmontelle's portrait and by a verse printed in the *Mercure de France* in 1758, Vachon was much admired by his contemporaries as a soloist and performer of chamber music. In 1780 La Borde described him as 'one of the most charming violinists we have heard, above all in the trio and the quartet' (iii, 488). As a composer he also distinguished himself in chamber music, publishing sonatas, trios and about 30 quartets in Paris and London. According to La Laurencie his virtuoso violin writing was inspired by Gaviniés, and his variety of bowing techniques by Tartini. While his divertimentos and duets op.5 were aimed at amateurs, his quartets opp.5, 6, 7 and 11 display a variety of tempos, numbers of movements and tonality, and give relative independence to each performer. Although Vachon's stage works tended to lack dramatic coherence and were not popular, he was one of the most original and productive composers of

string quartets in 18th-century France, and his symphonies combine the style of the French school with Italian and Mannheim influences.

MICHELLE GARNIER-BUTEL

Vačkář, Dalibor C(yril) (*b* Korčula, Croatia, 19 Sept 1906; *d* Prague, 21 Oct 1984). Czech composer and writer. His father Václav Vačkář (*b* Dobřejovice, 12 Aug 1881; *d* Prague, 4 Feb 1954) was a Czech conductor who had worked in Poland, Russia and Croatia before settling in Prague, where he played the violin and the trumpet in the Czech PO (1913–19), the Vinohrady Opera (1919–20), the Šak PO (1920–21) and in cinema bands (1923–30). He composed over 300 works, mostly popular and light pieces, and served as president of the Union Association of Musicians in Prague (1928, 1937) and in the Author's Protection Society.

Dalibor Vačkář studied with Rudolf Reissig (violin) and Otakar Šín (composition) at the Prague Conservatory (1923–9), remaining there until 1931 in the master classes of Karel Hoffmann (violin) and Suk (composition). Subsequently he played the violin in the Prague RO (1934–45) and worked as a film scenario writer (1945–7). From 1948 he concentrated on composition while working as a journalist for Czech daily papers and music journals. He also wrote poetry, including many texts for his own songs, and had several plays produced at the National Theatre in Prague, among them *Veronika*, which served as the basis for Rafael Kubelík's opera, and *Chodská nevěsta* ('The Bride of Chodsko'), which he himself set. As a composer he worked in all genres. His inventive music developed from the tendencies of the interwar period (as in the urban song cycle *Pouťové boudy*, 'Fairground booths', the *Smoking Sonata* for piano and the neo-classical *Trio giocoso*) to the simplified melody and craftsmanship of the 1950s (as in the *Symfonie míru*, 'Symphony of Peace'). In his orchestral works and film scores he showed a sophisticated understanding of instrumentation. For his light music he used the pseudonyms Pip Faltys, Peter Filip, Tomáš Martin and Karel Raymond; for his literary and dramatic work he used the pseudonym Dalibor C. Faltis.

His son Tomáš Vačkář (*b* Prague, 31 July 1945; *d* Prague, 2 May 1963) was a promising composer, mostly of orchestral music. His orchestral works include a *Concertato recitativo* for flute and strings, *Melancholické scherzo* as well as *Metamorfózy*.

OLDŘICH PUKL/R

Vacqueras, Bertrandus. *See* VAQUERAS, BERTRANDUS.

Vadé, Jean-Joseph (*b* Ham, Picardy, 17 Jan 1719; *d* Paris, 4 July 1757). French poet, dramatist and composer. He was the son of a merchant and moved to Paris with his parents at the age of five. Despite a deficient education, he became *contrôleur du vingtième* (a tax-collecting appointment) at Soissons in 1739, and moved to similar posts at Laon and Rouen before returning to Paris in 1743 as secretary to the Duke of Agenois. In 1745 he was employed in the *bureau du vingtième* in Paris. His lively output of verse and prose brought him into literary circles, and he became friendly with Collé and Fréron; the latter friendship earned him the enmity of Voltaire, who nevertheless admired his work. After an unsuccessful début at the Comédie-Française in 1749 (his play *Les visites du jour de l'an* had only one performance), Vadé turned to the Opéra-Comique at the invitation of the new director, Jean Monnet. The huge success of *La fileuse* (1752), his first *opéra comique*, helped to put the newly reopened theatre on a sound financial basis, and most of his subsequent works staged there were equally well received. In 1751 he was granted a pension of 400 livres by Louis XV, whom he had earlier dubbed 'le Bien-Aimé'. But his dissipated way of life affected his health, and he died aged 38 after a painful operation. His illegitimate daughter, known as Mlle Vadé, enjoyed brief fame in the late 1770s as an actress at the Comédie-Française.

Although Vadé's prolific output includes serious fables and epistles and a quantity of epigrams, bouquets and other light poetry, he is best remembered for the creation of the *genre poissard*, or 'fish-market style', which he used in many of his chansons and *opéras comiques*. This style developed from a close study of the behaviour and language of Parisian market folk, giving his writing a new realism and earthy humour which made it immensely popular at all levels of society until long after his death. The burlesque poem *La pipe cassée* was particularly admired. It was the spontaneity and liveliness of his early work for the Théâtre de la Foire that caused him to be chosen as librettist for *Les troqueurs* (1753), produced at the height of the Querelle des Bouffons and modelled on *opera buffa*. The combination of Vadé's simple plot and lifelike peasant characters with Dauvergne's italianate music was particularly successful, and did much to establish the style of *opéra comique* in which newly composed music replaced the traditional vaudevilles.

Vadé's remaining *opéras comiques*, prominent among which were the still-popular parodies of contemporary Opéra productions, are all of the earlier type which enjoyed a final flowering in the 1750s. Although most of the music for these consists of standard vaudeville melodies, Vadé composed some of the airs himself (exactly how many is difficult to establish, for many of the 'airs de M. Vadé' included in editions of the plays are in fact well-known tunes). They are written in a simple but attractive style, strongly influenced by the Italian music of the Bouffons. Only the melodic lines survive. As well as those included in editions of the librettos, others were printed in the *Recueil noté de chansons de M. Vadé* (Paris, 1758) and in the various editions of *Oeuvres de M. Vadé* (Paris, 1755, enlarged 2/1758; The Hague, 1759).

GRAHAM SADLER

Vado [Bado] **y Gómez, Juan del** (*b* Madrid, after 1625; *d* Madrid, 22 Feb 1691). Spanish composer, keyboard player and violinist. He came from a family of musicians (including his maternal uncle, the composer Diego Gómez de la Cruz) in the service of the Spanish royal household, and trained as a violinist in one of Madrid's several dancing schools. He occasionally took part in palace festivities until, on 19 August 1650, he took up the post of violinist in the royal household, which had been held by his father. He studied the harpischord and organ, probably with his uncle Alvaro Gómez de la Cruz and Francisco Clavijo, organist of the royal chapel, and took up a provisional post as keyboard player in the royal chapel on 1 January 1651 which was made permanent on 25 September 1654. There is evidence that as part of his

duties he played the organ, string instruments and, at least in 1662, the harp. By 1666 he had composed several masses for the royal chapel, and in November 1667 the widowed Queen Mariana of Austria appointed him chamber musician, without a salary. Shortly before July 1674 he was appointed keyboard teacher to the young Carlos II, but after three years he had to give up all his duties because of a stroke, and thereafter he devoted his time to composing. According to L. Ruiz de Ribayaz (*Luz y norte musical*, Madrid, 1677) he intended to print a collection of works for harp, some of which are in the Biblioteca Nacional, Madrid (M.2478). Between 1677 and 1679 he presented Juan José of Austria, first minister of Carlos II, with a book of six masses and eight enigmatic canons (*E-Mn* M.1323). By 1685 he had composed another 15 masses, and in that year, after the death of Juan Hidalgo, he began composing *tonos humanos* for the court theatre on a regular basis, at least until 1688. His will mentioned 20 masses, two Lamentations and 96 sacred works in Spanish, as well as music for six plays performed at the Buen Retiro palace in Madrid.

Vado's works, both sacred and secular, show great skill in the treatment of imitative counterpoint, and also take certain liberties with the rules. For this he was highly spoken of in the following century by writers such as I. Serrada (*Parecer*, Barcelona, 1716), Francisco Valls (*Mapa harmónico*, MS, 1742), and J.F. de Sayas (*Música canónica, motética y sagrada*, Pamplona, 1761). José de Torres (*Reglas generales de acompañar*, Madrid, 1702) stated that Vado wrote a treatise on figured bass, but this does not survive.

LUIS ROBLEDO

Vaduva, Leontina (*b* Roşiile, 1 Dec 1960). Romanian soprano. She studied at the Bucharest Conservatory and with Ileana Cotrubas, making her début as Manon in Massenet's opera at Toulouse in 1987. For her performances in the same opera at Covent Garden the following year she won the Laurence Olivier Opera Award, and was re-engaged to sing Gilda, Micaëla, Antonia, Gounod's Juliet and Mimì. She has appeared in Buenos Aires, Barcelona, Cologne, Vienna and most leading French houses. Vaduva's voice was found light for the Opéra Bastille in Paris, although the delicacy of her style and the natural charm of her stage presence did much to compensate. At Covent Garden her Mimì was deeply touching and her Juliet matched the Romeo of Roberto Alagna in highly praised performances of Gounod's opera in 1994. These are roles she has also recorded, a less pure tone obtruding in some of the louder passages, but with much beauty elsewhere and an appealing warmth of expression throughout.

J.B. STEANE

Vaet, Jacobus (*b* Kortrijk or Harelbeke, *c*1529; *d* Vienna, 8 Jan 1567). Flemish composer. The year of his birth is deduced from a document dated 1543 which gives his age as 13 and records his acceptance as a choirboy at Onze Lieve Vrouwkerk in Kortrijk. Although the church records state that he came from Kortrijk, in the matriculation registers of the University of Leuven his name appears as 'Jacobus Vat de Arelbecke'. When his voice changed in 1546 the church gave him a scholarship, and he entered the university on 29 August 1547. His name appears in a roll of benefices given to members of the chapel of Emperor Charles V in 1550; according to it he was a tenor, and already married. By 1 January 1554 he had become Kapellmeister to Charles's nephew, Archduke Maximilian of Austria (later Emperor Maximilian II), a position that he held until he died. His relationship with Maximilian was evidently a close one, and his broadside motet *Qui operatus est Petro*, presented to Maximilian in 1560, contains a clandestine message of understanding for his patron's suppressed Protestant inclinations. The Habsburg court records show that Maximilian was generous to Vaet, whose death he noted in his diary. Vaet was mourned in numerous elegies, one of which, *Defunctum charites Vaetem*, was set by his pupil Jacob Regnart, and other composers including Jacob Handl, Antonius Galli and Johannes de Cleve expressed their esteem by writing parody works based on his motets. He was praised by the theorists Finck, Zacconi and Cerone.

Of Vaet's extant works the motets, of which 17 are settings of secular texts, were most widely known in his lifetime. Vaet made much use of previously composed material, both his own and that of others. Parody or quoted polyphony is found in all his masses (even the *Missa pro defunctis*) and in numerous motets. A striking example of multiple parody involves three of his own compositions, the motet *Vitam quae faciunt beatiorum* and the masses on *Vitam quae faciunt beatiorum* and *Tityre, tu patulae*; the motet parodies Lassus's motet *Tityre, tu patulae*, and each of the masses parodies both motets. He also borrowed material, both melodic lines and polyphony, from Josquin, Mouton, Barbion, Jacquet of Mantua, Christian Hollander, Clemens non Papa and Rore, and Zacconi drew particular attention to his practice, found in the hymns and *Magnificat* settings, of repeating in triple metre a section previously stated in

duple metre. Vaet seems to have been the first to write a *Missa quodlibetica* and his example was followed by Regnart, Losio and Luython among others.

Although Vaet generally used the style of pervading imitation deriving from Gombert, he also used chordal and polychoral textures. He placed much emphasis on dominant–tonic relationships and was fond of vertical progressions based on the circle of 5ths. He treated dissonance boldly, even on occasion using the augmented 6th and octave, though always in a context of smooth part-writing. He was fond of false relations and various forms of *nota cambiata*, including the archaic three-note figure followed by a rest. Vaet's style represents the intermediate stage between Josquin and Lassus. His debt to the former is apparent in his borrowing, not only musical material, but also techniques such as *soggetto cavato*, ostinato, cantus firmus and incipient parody. From Gombert he inherited a penchant for flowing polyphony unimpeded by expressive detail. His admiration and friendship for Clemens non Papa was expressed by the elegy he wrote on his death (*Continuo lachrimas*) and by extensive borrowings from his work. His music is less modal than Clemens's, thicker in texture and more concise in presenting the words. Vaet was well acquainted with Lassus, and the works they wrote at the same period are in many ways similar. Lassus's *Missa 'Si me tenez'* is variously ascribed to both composers in 16th-century sources.

MILTON STEINHARDT

Vagans (Lat.: 'wanderer', 'vagrant [part]'). In 15th- and 16th-century polyphony, the fifth part, which might be of treble, alto, tenor or bass range, but usually the tenor. In the conventional four-range hierarchy it necessarily duplicated the range of one of the other voices either partly or wholly. The fifth partbook of a set (the quintus, rarely vagans, book) might contain pieces requiring a voice in any of the four conventional ranges, so that from one piece to the next the book might 'wander' from one singer to another.

□

Vagantes. *See* GOLIARDS.

Vaggione, Horacio (*b* Córdoba, 21 Jan 1943). Argentine composer. From 1958 to 1963 he studied composition at the National University of Córdoba with Carlos Gasparini, Olger Bistevins, Juan Carlos Fernández, Ornella Devoto and César Franchisena. In 1961 he began composing his first instrumental works (*Interpolations*, for ensemble, and a piano sonata) and his first electro-acoustic works (*Ceremonia* and *Hierro y espacio*, 1962). From 1965 to 1968 he ran the electro-acoustic music studio of Córdoba University, and in 1966 took part in Lejaren Hiller's course on computer-aided composition at the University of Illinois. During this time he concentrated his research on the interaction between instrumental

and electronic music, in works such as *Untitled*, a multimedia composition involving four instrumental groups, electronic transformations, movement and lights (1965), *Sonata 2*, *Sonata 3* and *Sonata 4* for piano and tape, and *Tierra-Tierra*, an electro-acoustic work (1966–7). He was guest composer and researcher at Madrid University (1969–73), where he was one of the founders of the Spanish live electronic music group Alea Música Electrónica Libre, and created several live electronic and computer compositions, including *Interfase* (1969), *Modelos de universo II* (1970) and *La máquina de Cantar* (1971–2). He taught at Mills College, California (1975–6), where *Triage* for 20 tapes and live electronics was realized. From 1982 to 1985 he was a guest of IRCAM in Paris: *Fractal A* (1982) and *Fractal C* (1984), both for 16-track tape, and *Thema* for bass saxophone and tape (1985) were the most notable products of that residency. He was also invited to the Technisches Universität, Berlin (1986–8), where he wrote *Tar* for bass clarinet and tape (1987) and *Sçir* for bass flute and tape (1988).

His main home has been in France since 1978; he gained a doctorate in musicology from the University of Paris VIII in 1983. He has taught at the same university since 1985, and since 1996 has run its Centre de Recherche Informatique at Création Musicale. His later electro-acoustic works, *Rechant* (1995), *Myr-S* for cello and electronics (1996) and *Nodal* (1997), mostly use digital techniques of sound manipulation, and pay particular attention to the morphology of sounds and their articulation in space. He has won many international prizes, including the Euphonie d'Or prize at Bourges (1992).

WORKS

BRUNO GINER

Vahner [Wagner], **Henrïkh Matusavich** (*b* Zyrardów, Warsaw province, 2 July 1922). Belarusian composer. He first studied at the Warsaw Conservatory (1936–9), then attended the National Conservatory in Minsk where he graduated from the piano class of Shershevsky (1948) and the composition class of Bahatïrow (1954). He taught at the Gor'ky Pedagogical Institute in Minsk (latterly the Belarusian Pedagogical University) from 1962 to 1995 and was for a time the board secretary of the Belarusian Composers' Union (1963–73). He has been awarded the Badge of Honour (1971) and the titles Honoured Representative of the Arts of the BSSR (1971) and People's Artist of Belarus' (1988). Although his first compositions to achieve recognition were the *Belaruskaya syuita* ('Belarusian Suite') and the comic ballet *Padstawnaya nyavesta* ('The False Bride'), the vocal and symphonic poem *Vechna zïvïya* ('Those Who Live for Ever'), dedicated to the memory of the victims of fascism, proved to be a milestone. World War II became a theme which ran through his work and it acquired a potent embodiment in the opera *Stsezhkay zhïtstsya* ('On the Path of Life') and in the Third Symphony *Pamyatsi matul'* ('To the Memory of Mothers'). Dramatic structure is frequently defined by strong contrasts; his works are characterized by a richness of scoring, driving ostinatos and rhythmic variety and although neo-classical elements are to be found in some works of the early 1970s, his style is close to that of Bartók and Prokofiev. The nationalist features of his music manifest themselves in a traditional reliance on the song and dance genres. He devotes considerable attention to the musical upbringing of children; his compositions for children form the foundations of the Belarusian schools' repertory.

WORKS

Stage: Padstavnaya nyavesta [The False Bride] (ballet, Ye. Romanovich), Minsk, 1958; Svet i tseni [Light and Shadows] (ballet, N. Altukhov, after P. Brovka), Minsk, 1962; Ranak [Morning] (op, Ye. Shaban), Belarusian television, 1967; Posle bala [After the Ball] (ballet, O. Dadashkiliani after L. Tolstoy), Minsk, 1970; Stsezhkay zhitstsya (On the Path of Life] (op, S. Shteyn, A. Vertinski, after V. Bïkov), Minsk, 1980

4 syms.: 1970, 1972, 1992, 1996

3 pf concs.: 1964, 1977, 1981

RADOSLAVA ALADOVA

Vaillant [Vayllant], **Jehan** [Johannes] (*fl* ?1360–90). French composer and theorist. In the *Règles de la seconde rhétorique* (see Langlois) he is named immediately after Machaut as a 'maistre ... lequel tenoit à Paris escolle de musique'. His works, however, survive in the Chantilly Manuscript (*F-CH* 564), the chief source for the secular works of the papal singers Matheus de Sancto Johanne, Hasprois and Haucourt. It therefore seemed likely that Vaillant should be identified with a *capellanus* Johannes Valentis or Valhant, who was enrolled by Clement VI in the papal chapel at Avignon on 26 November 1352 and continued in papal service until he died in 1361, probably during the plague epidemic. But that assumption is contradicted in an anonymous Hebrew treatise by a Parisian student of Vaillant (*I-Fn* Magl.III 70, described in Adler): according to Adler these student's notes from lectures on music show that Vaillant's activity extended into the late 14th century, so it is far more probable that he was one of the men with that extremely common name who are documented in high positions in the court of the Duke of Berry between 1377 and 1387 – the 'clerc des offices de l'ostel' in 1377, or the *secretarius* in 1385 who in 1387 became keeper of the duke's seal. Another possible candidate is 'Poitevin Jean Vaillant' who made an 'abrégé du roman de Brut' in 1391, according to Delisle.

Vaillant's polymetric style suggests that he was a younger contemporary of Machaut, a supposition reinforced by the transmission of his five works in the Chantilly Manuscript. According to an entry in the manuscript, however, the double-texted rondeau was copied in Paris in 1369, which would place it rhythmically in advance of Machaut's style. Only his ballade is fully in the style of Machaut. Vaillant's rondeau *Pour ce que je ne say* is isorhythmic and was conceived as a richly syncopated instructional piece for his pupils. The other two rondeaux are polytextual. The style of his virelai, too, with its 'realistic' bird-calls and cross-rhythms (four against three), is substantially different from Machaut, without extending to the complexities of the Ars Subtilior. It must have been one of the most popular works of its time, since it survives in nine sources, sometimes as a two-voice work, once with an added texted cantus, and also as contrafacta with Latin or German texts. Vaillant may be the composer of the anonymous polymetric rondeau *Quiconques veut*. He was the author of a treatise on tuning.

WORKS

all ed. in CMM, liii/1 (1970) and PMFC, xviii–xix (1981–2) unless otherwise stated

Dame doucement/Doulz amis, rondeau, 3vv

Onques Jacob, ballade, 3vv

Par maintes foys, virelai, 3vv; facs. in Nádas and Ziino, 170–71; version with added 4th v, ed. in Leclercq, 222–6, and PMFC, xxi (1987); Ger. contrafactum by Oswald von Wolkenstein, ed. in Pelnar

Pour ce que je ne say, rondeau, 2vv

Tres doulz amis/Ma dame/Cent mille fois, rondeau, 3vv

Quiconques veut, rondeau, 3vv; ed. in PMFC, xxii (1989) (anon., possibly by Vaillant)

URSULA GÜNTHER

Vainiunas, Stasis (*b* Riga, 2/15 April 1909; *d* 18 Oct 1982). Lithuanian composer and pianist. He graduated in 1933 from the Riga Conservatory, where he studied with Vītols, after which he took a postgraduate course with Emil von Sauer in Vienna. He was later active as a pianist, and then taught at the Kaunas Conservatory (1942–9) and then at the Lithuanian Conservatory (from 1951). His style combines elements of Lithuanian folklore with 20th-century compositional techniques; he was particularly inclined towards complex rhythmical structures and polyphonic thematic development. His work includes orchestral pieces – a Symphony (1957), the symphonic poem *Sutartinė* (1969) and four piano concertos – as well as chamber works, piano pieces (a Sonata of 1936 and *Variations on a Lithuanian Song* of 1934) and songs.

□

Vainonen, Vasily Ivanovich (*b* St Petersburg, 21 Feb/6 March 1901; *d* Moscow, 23 March 1964). Russian choreographer. *See* BALLET, §3(iii).

Väisänen, Armas Otto (Aapo) (*b* Savonranta, 9 April 1890; *d* Helsinki, 18 July 1969). Finnish ethnomusicologist. He studied at Helsinki University under Ilmari Krohn (MA 1919), taking the doctorate there in 1939 with a dissertation on Ob-Ugrian folk music; this was one result of his extensive fieldwork, which included travels in Estonia (six visits, 1912–23), Karelia (1915, 1918, 1919), Vepsä (1916), Inkeri and Mordva (1914), Finnish Lapland (1926), Swedish Lapland (1946) and central Europe (1925, 1927). Between 1929 and 1957 he was director

of the Helsinki Conservatory and from 1940 lectured at Helsinki University, where he was also professor of musicology (1956–9). As an active promoter of early Finnish (especially Karelian) and national culture he worked at the Kalevala Society as manager (from 1919), secretary (from 1930) and chairman (from 1942); he organized the Kalevala centenary celebrations (1935) and those of the New Kalevala (1949). This interest was reflected in his work as chairman of the Musicological Society of Finland (1951–68) and as a member of the International Folk Music Council (1948) and Norwegian Academy of Sciences (1955). In his research on folk music he continued the tradition established by Krohn and did valuable work collecting, classifying and editing instrumental and vocal folktunes. He also translated Estonian folk poetry and early Russian epics into Finnish.

ERKKI SALMENHAARA

Vajda, János (*b* Miskolc, 8 Oct 1949). Hungarian composer. At the Liszt Academy of Music, Budapest (1968–75) he studied choral conducting with István Párkai and composition with Petrovics. After working as répétiteur for the Hungarian Radio and Television Chorus (1974–9) he enrolled at the Amsterdam Conservatory to continue studies in composition. In 1981 he won the Erkel Prize and was appointed professor at the Budapest Academy. The free 12-note writing of Vajda's early works was transformed by his introduction to repetitive music when studying in the Netherlands. The period of change that followed is represented by a dual path: light music written for the Győr ballet, and concert works such as the cimbalom duo *All that Music* which use repetition as a constructive principle. Vajda gradually assimilated the Dutch influence and created an integrated style, of which the opera *Márió és a varázsló* ('Mario and the Magician', composed 1980–85) is a fine example. The harmonic language of this opera is frequently modal, and musical functions of familiar elements come to assume increasingly surprising roles through the music's progressive divergence from the action on stage. Later songs such as *Nebenlieder* (1996) are couched in a neo-romantic style. An interview with the composer is published in M. Hollos: *Az életmű fele: zeneszerzőportrék beszélgetésekben* [Half a life's work: portraits of composers in conversations] (Budapest, 1997).

RACHEL BECKLES WILLSON

Vakhnyanyn, Anatol' [Natal'] (*b* Sin'yava, Galicia, 1 Oct 1841; *d* Lemberg [now L'viv], 24 Feb 1908). Ukrainian teacher, writer, diplomat and composer. He organized anti-Russophile communities, published periodicals and established, in 1868, the educational organization Prosvita. He was founder of the choral associations Sich (Vienna, 1867), Torban (Lemberg, 1870) and Boyan (Lemberg, 1890); and in 1904 he established the Lysenko Music Institute (later a conservatory) in Lemberg. As a diplomat he was a member of the Galician assembly and parliament at Vienna (1894–1900). His musical training was limited, and his works reveal the influence of Lysenko. He composed solo songs, choral pieces, some incidental music, several cantatas and the four-act opera *Kupalo* (composed 1870; performed Khar'kiv, 1929); he also compiled an anthology of harmonized folksongs.

ANDRIY V. SZUL

Vala, Do. (*fl* *c*1430–40). Composer, possibly Franco-Flemish. Although his music is north European in style, it survives only in the north Italian choirbook *I-Bu* 2216 (ed. in MLMI, 3rd ser., Mensurabilia, iii, 1968–70). It is not clear whether 'Do.' stands for 'Dominus' or something like 'Dominicus', but there are no other titles among the ascriptions in this manuscript. His three songs (two rondeaux and a virelai) are very much in the style of Binchois, though the cantilena-motet *O Toma Didime* and the Gloria setting are closer to the manner of Du Fay, particularly in the overlapping hocket sections with which both close. All his works are for three voices. (See also D.

Fallows: *A Catalogue of Polyphonic Songs, 1415–1480*, Oxford, 1999)

DAVID FALLOWS

Valabrega, Cesare (*b* Novara, 27 Dec 1898; *d* Munich, 4 Feb 1965). Italian pianist and musicologist. He studied the piano with Lodovico Rocca in Verona and with Ivaldi in Bologna as well as composition with Alfano; he took a diploma in piano at Pesaro Conservatory (1916) and an arts degree at Bologna University. He began his professional career as a pianist and critic and continued to give lecture recitals throughout his life (tour of the Middle East and East Asia, 1963). He founded (1950) and became artistic director of the Associazione Romana dei Concerti Storici; subsequently he was professor of music history at Naples Conservatory (1953) and concurrently taught at the Università per Stranieri, Perugia (from 1954). He was head of music for the Associazione Nazionale per l'Educazione Artistica, under the Istituto di Pedagogia at Rome University. His most ambitious achievement was *Storia della musica italiana*, a series of 40 recordings sponsored by the Italian government, the International Council for Music and UNESCO. The accompanying explanatory booklets provided excellent illustrations and reproductions, but the records themselves were criticized for musical and historical inaccuracies. He was awarded a silver medal by the government for his contribution to Italian music.

CAROLYN GIANTURCO

Valcárcel, Edgar (*b* Puno, 4 Dec 1932). Peruvian composer and pianist. He studied at the National Conservatory in Lima, at Hunter College in New York, at the Di Tella Institute in Buenos Aires and at the Columbia-Princeton Electronic Music Center. He has frequently appeared as a solo pianist with the Lima SO, and has played at concerts of the Pan American Union in Washington, DC. In 1965 he was appointed professor of composition at the Lima Conservatory. Despite his studies abroad, he sees himself as a composer with a Peruvian viewpoint; like most Latin American musicians of his generation, he recognizes the importance of indigenous roots without falling into a narrow nationalism. His music follows the most recent technical and aesthetic trends, and he actively promotes new music from Europe and North America, but he also believes that Latin America's role should be in forging a new language from native and Western sources. Research in pre-Columbian music has indicated some possibilities for this synthesis. While his early works show the search for an individual style, Valcárcel's mastery of technique is evident in such chamber pieces as *Espectros I* and *Hiwaña uru*. Of his orchestral works, the Piano Concerto contains some most accomplished writing for the soloist, but the *Checán* ('Love' in Mochica language) series is perhaps his most representative contribution. The two-part *Canto coral a Tupac Amaru* is another important work, and it has survived its immediate political intention.

WORKS
(*selective list*)

Orch: Sinfonietta, 1956; Aleaciones, 1966; Queña (Estudio sinfónico), 1966; Pf Conc., 1968; Checán II, 1970; Sajra, 1974

CÉSAR ARRÓSPIDE DE LA FLOR

Valcárcel, Theodoro (*b* Puno, Peru, 19 Oct 1900; *d* Lima, 20 March 1942). Peruvian composer. After a brief musical training in Arequipa with Luis Duncker Lavalle he went to Milan in 1914 where he studied with Appiani and Schieppatti, until the war forced him to return to Peru two years later. He was influenced by French Impressionism in some of his early piano pieces. Later he turned his attention to native music and this brought him recognition, and also nomination as the Peruvian representative at the Ibero-American Music Festival in Barcelona and Seville (1929). He remained in Europe for two years, and in 1930 he presented with Viñes a concert of his music at the Salle Pleyel to critical acclaim. From his return to Peru until his death he occupied several official positions within the cultural field.

Valcárcel belongs to the nationalist movement that emerged in Peru around 1920, when artists and musicians looked to folklore for source material, including pre-Columbian as well as *mestizo* traditions. By the beginning of the 20th century, folk music research in the Andean area had identified the pentatonic scale as a characteristic trait of what was called 'Incaic music'. This allowed the nationalist composers to separate pre-Hispanic music from any other tradition.

In such strongly evocative works as the two symphonic suites (1939), two pieces for piano – *Estampas del ballet Suray surita* and *Kachampa* – and the symphonic poem *En las ruinas del Templo del Sol* (1940) Valcárcel achieved a very effective stylization of indigenous melodies and rhythms within a modern harmonic vocabulary. Numerous performances of his works were well received in Europe. He was one of the most successful Peruvian composers, described by Slonimsky as the 'Stravinsky of Peru', but his early death did not allow a full development of his talent. Rodolfo Holzmann was responsible for the orchestration of much of his work.

WORKS
(*selective list*)

Ballets: Ck'ori Kancha ballet, 1928; Estampas del ballet Suray surita
Orch: movts from Estampas del ballet Suray surita, arr. orch, 1928; Suite incaica, 1929; En las ruinas del templo del sol, tone poem, 1940 [orchd R. Holzmann]; Concierto indio, vn, orch, 1940; 4 danzas; Ckori witchinka, reflejo de la cumbre
Other works: IV canciones incaicas (trad. Quechua), 1v, pf, 1930; Fiestas andinas (6 estampas de la cordillera), pf, 1933; XXX cantos de Alma vernacular (trad. Quechua and Spanish), 1v, pf,

1935; 12 pieces from Estampas del ballet Suray surita pf, 1939 arr. Kachampa, pf (Montevideo, 1944)
Other works for pf, v and pf, orchs of own works

CÉSAR ARRÓSPIDE DE LA FLOR/J. CARLOS ESTENSSORO

Valdambrini, Francesco (i) (*b* probably Rome; *fl* 1646–7). Italian composer and guitarist. He published two engraved tablatures of music for the five-course guitar, *Libro primo d'intavolatura di chitarra a cinque ordini* (Rome, 1646) and *Libro secondo d'intavolatura di chitarra a cinque ordini* (Rome, 1647), both using chordal alfabeto and Italian guitar tablature. The first book contains a wide selection of pieces in the *battute*/pizzicato style, including toccatas, correntes, partitas, ballettos and various other Italian songs and dances. The second has 12 passacaglias (some quite lengthy), 12 *capone* and six chaconnes (some with variations). Both books are written in a highly ornamented, thin-textured style with much use of slurs, *campanelas* (the playing of many open strings in the notes of scale passages so that notes ring on) and passages of *battute* chords. The second book also contains brief explanations of slurs, ornaments and an arpeggio similar to that recommended by Kapsberger for the theorbo, as well as a five-page treatise on playing from a continuo part. Valdambrini was quite thorough in his explanation of accompaniment from a figured bass line: chords are given, in *alfabeto*, in a variety of positions on the fingerboard, and intervals are located both in staff notation and tablature. His use, unusual for his time, of the fourth and fifth courses exclusively at the upper octave separates his style from that of north Italian guitarists of the period, such as Foscarini, Bartolotti and Granata. This re-entrant tuning was also recommended by Sanz.

GARY R. BOYE

Valdambrini, Francesco (ii) (*b* Turin, 24 March 1933). Italian composer. He studied with G. Turdù at the Conservatorio di Musica S Cecilia in Rome, following which he was long associated with Dallapiccola and Maderna: they strongly influenced his style and affected his introduction into the European avant-garde circles. He taught in Vienna at the Akademie [now Hochschule] für Musik und Darstellende Kunst (1963–8) and, from 1968, at the conservatory in Bolzano, the most Germanic in Italy, where, at the start of the 1990s, he began to direct specialist composition courses. For a long time he was very close to German musical culture, from the late 1970s cultivating a degree of detachment from the vagaries of changing artistic fashion. His language is marked by an original exploration of novel harmonic formations.

WORKS
(*selective list*)

Dramatic: Penteo (op, Euripides, Puecher, Mumelter) (Bonn, 1971); C'era una volta (Omaggio a G. de Nerval) (azione scenica), 1971; Der gestiefelte Kater (op, K. Robensteiner) (Bonn, 1975)
Other works: Alleluia, 2 pf, 1964; Dialogue, cl, 2 orch groups, 1965; Dioe, ob, cl, 1969; Ritornelli, chbr orch, 1969; Quarantine, fl, vc, pf, 1971; Suite, solo vv, chorus, orch, *c*1971 [based on op Penteo]; Strofe, hpd, tape, 1972; Cantica terza, 1981

STEFANO A.E. LEONI

Valdarfer, Christoph (*b* Regensburg; *fl* 1470–88). German printer, active in Italy and Switzerland. After an unsuccessful attempt to set up a printing shop in Milan in 1470 he moved to Venice and issued several books. He returned to Milan to print between 1474 and 1478, and then went to Basle to work with Bernhard Richel from 1479 to 1482 during which time Richel issued two missals, including one with music. Valdarfer returned to Milan to issue the *Missale ambrosianum* of 15 March 1482 with the first printed Ambrosian plainchant. His *Missale romanum* of 1 September 1482 used a second roman plainchant type.

M.K. DUGGAN

Valdengo, Giuseppe (*b* Turin, 24 May 1914). Italian baritone. After studying in Turin, he made his début in 1936 at Parma as Rossini's Figaro, then sang Sharpless at Alessandria. Though engaged at La Scala in 1939, he did not sing there (because of military service) until 1941, when he made his début as Baron Douphol (*La traviata*). In 1946 he performed at the New York City Opera, then in 1947 made his San Francisco début as Valentin, returning as Escamillo, Sharpless, Iago, Amonasro and Rigoletto. At the Metropolitan (1947–54) he sang Tonio, Marcello, Germont, Count Almaviva, Belcore, Ford, Paolo (*Simon Boccanegra*) and Puccini's Lescaut. In 1955 he sang Don Giovanni and Raimbaud (*Le comte Ory*) at Glyndebourne, and in 1961 he created the Lawyer in Rossellini's *Uno sguardo dal ponte* in Rome. His recordings of Iago, Amonasro and Falstaff, deriving from NBC broadcasts (1947–50) conducted by Toscanini, are vividly and firmly sung, with an even, flexible line. He wrote an autobiography, *Ho cantato con Toscanini* (Como, 1962).

ALAN BLYTH

Valderrábano, Enríquez de (*fl* 1547). Spanish vihuelist and composer. He is cited as a citizen of Peñaranda del Duero in his *Libro de musica de vihuela intitulado Silva de sirenas* (Valladolid, 1547/*R*1981; partly ed. in MME, xxii–xxiii, 1965, and in Jacobs, 1988), whose dedication to Francisco de Zúñiga, 4th Count of Miranda, is the probable source of Juan Bermudo's unconfirmed assertion (*Declaracion*, 1555) that Valderrábano was in the count's service. Both Bermudo and Suárez de Figueroa (*Plaza universal*, 1615) name him among the leading players of the age.

Intabulated vocal music predominates in the seven 'books' of *Silva de sirenas* alongside original fantasias, songs and variations. Book 1 contains two canonic *fugas* and several mass fragments. Book 2 is for vihuela and voice (bass and tenor) with the vocal parts indicated in the tablature by red ciphers. Works include motets by Compère, Gombert, Lupus Hellinck, Jacquet of Mantua, Josquin, Layolle, Morales, Verdelot and Willaert, together with secular songs, principally Spanish *romances* and villancicos, some of which appear to be original. Also for vihuela and voice (falsetto), book 3 is printed with the vocal parts on a separate staff, including motets and madrigals by Verdelot, Arcadelt and Willaert and songs by Vásquez and Valderrábano. Book 4 offers the only known music for two vihuelas: motets and mass movements by Gombert, Josquin, Morales and Willaert, original variations on *Conde Claros* and a *Contrapunto sobre el tenor de la baxa*. The 33 fantasias of book 5 are Valderrábano's most original contribution. Among the 19 parodies are three fantasias on lute works by Francesco da Milano and Ripa, and another on a popular dance tenor. Four of the independent fantasias are imitative, but it is the seamless polyphony and virtual absence of imitation that is the hallmark of Valderrábano's style. Book 6 contains intabulations for solo vihuela of mass sections, motets and secular works together with 19 *sonetos*, mostly reworkings of popular melodies. Book 7 presents variations on *Conde Claros*, *Guárdame las vacas* (romanesca) and the *pavana* (folia) scheme, and concludes with an improvisatory piece in which a second vihuela provides a drone accompaniment. The preliminary pages of *Silva de sirenas* provide detail on instrumental technique and performance practice, including Valderrábano's use of the symbols ₵, ₵ and ₵ to indicate slow, moderate and fast tempos. Numerous works from *Silva de sirenas* were reprinted by Phalèse (*Hortus Musarum*, 1552–3) and (arranged for keyboard) by Venegas de Henestrosa (*Libro de cifra nueva*, 1557).

JOHN GRIFFITHS

Valdès, Santino detto. *See* GARSI, SANTINO.

Valdovin [Baldobin, Valdobin], **Noe.** *See* BAULDEWEYN, NOEL.

Vale, Walter (Sydney) (*b* Hillingdon, Middx, 15 March 1875; *d* Aix-en-Provence, 27 Jan 1939). English organist and choir trainer. He studied at the RAM from 1894 to 1900, returning there in 1924 to become professor of organ, a post he held until his death. After a period as organist of St Stephen's, Ealing, he was appointed organist and choir director of the London church of All Saints, Margaret Street, in 1907. During his 31 years in this post he made the choir of All Saints, with its resident choir school, internationally famous. He wrote much choral and organ music, mainly for All Saints, including a fine Requiem for double choir. His books include *The Training of Boys' Voices* (London, 1932), *Tone Production in the Human Voice* (London, 1934) and *Plainsong* (London, 1937). He was awarded the DMus (Lambeth) in 1938.

MICHAEL FLEMING

Valen, Fartein (*b* Stavanger, 25 Aug 1887; *d* Haugesund, 14 Dec 1952). Norwegian composer. The son of a missionary, he spent five years of his early childhood in Madagascar. He received his first musical education in Kristiania (now Oslo) between 1907 and 1909, qualifying as an organist and studying composition with Elling, an advocate of the Brahms tradition; he also published his first work. At the Berlin Conservatory (1909–11), where he studied the piano, theory and composition, one of his teachers was Bruch. Valen remained in Berlin for further study, working also as a teacher and accompanist. His first published works, such as Legend for piano, the Piano Sonata No.1 and the Violin Sonata, reflect the style of late German Romanticism and the influence of Brahms, Bruckner and Reger.

Valen returned to Norway in 1916 and settled in his secluded ancestral home, Valevåg, in the north-west. Preferring solitude, he made only short visits to the capital; he did, however, make a four-month visit to Italy in 1922. During these years he studied the music of J.S. Bach and developed his distinctive atonal style, which, independently of Schoenberg, he labelled 'dissonant counterpoint'. By the Trio op.5 (1924) he was freely expressing himself in this modern idiom. He moved to Oslo in 1924 and worked part-time in the university library, staying at his farm during the summer. He began to earn a fine reputation as an innovative teacher, and taught music theory to a growing number of pupils, including some of the radical young. During his first years in Oslo he composed mostly songs, but after a four-month stay in Paris in 1928 he wrote an orchestral poem and two string quartets. During a six-month stay in Mallorca in 1932–3 he composed many single-movement orchestral pieces (e.g. *Le cimetière marin, Sonetto di Michelangelo, Epithalamion*), most of them inspired by European poetry or impressions of nature.

Most of Valen's polyphonic music met with antagonism from critics and composers who were rooted in the strong national movement prevailing in Norway. (Valen himself felt a closer affinity to and was more at ease with the young modernist painters.) Some of his modernist works, however, were warmly received, and in 1935 the national assembly awarded him an annual grant for life. This sign of recognition enabled Valen, who with his international outlook felt alienated in the city, to return to the country. His self-imposed isolation, from 1938, brought about a change in his style. He began to compose large-scale works, which included four symphonies, a violin concerto and a piano concerto. In these works he refined his atonal

counterpoint and gradually returned to simpler, more classical forms. His themes lengthened, often employing all 12 notes of the scale. He used a modified row technique, but did not write dodecaphony in the Viennese sense. The violin's opening statement of his concerto for the instrument demonstrates his flexible lines, the material suited both to free linear treatment and to strict polyphonic use, canonic and fugal.

His music is marked by grace and wit, sometimes even by humour, though it also reflects his intense inner life. Valen mastered many languages and cultivated interests in literature, philosophy and the pictorial arts. He also drew inspiration from his deep religious faith, which had undercurrents of mysticism, and from nature, which he regarded as a manifestation of God's greatness. All these influences can be felt in his symphonies, the third of which has been called Valen's 'pastoral' symphony, as it bears an affinity to the seasons and the landscape of Valevåg.

During his last years he felt the taste of success in Norway and abroad. A shy man, he turned down many invitations and opportunities of performance that other composers coveted. His secluded life stemmed from his conviction that he had an obligation to make full use of his talent, creating with his universal, contemplative music a world of beauty rich in subtle expressive details. He was one of the most unique composers to emerge in Scandinavia during the 20th century, with ideals that served as a source of inspiration for subsequent generations of Scandinavian composers and musicians.

WORKS

Syms.: no.1, op.30, 1937–9; no.2, op.40, 1941–4; no.3, op.41, 1944–6; no.4, op.43, 1947–9

Other orch: Pastorale, op.11, 1930; Sonetto di Michelangelo, op.17 no.1, 1931–2; Cantico di ringraziamento, op.17 no.2 (1932–3), Nenia sulla morte d'un giovane, op.18 no.1 (1932–3); An die Hoffnung, op.18 no.2, 1933; Epithalamion, op.19, 1933; Le cimetière marin, op.20, 1933–4; La isla de las calmas, op.21, 1934; Ode til ensomheten (Ode to solitude), op.35, 1939; Vn Conc., op.37, 1940; Pf Conc., op.44, 1949–50

Chbr and solo inst: Legend, op.1, pf; Pf Sonata no.1, op.2, 1906–12; Str Qt, 1909; Sonata, vn, pf (1912–17); Pf Trio, op.5, 1917–24; Str Qt no.1, op.10, 1928–8; Str Qt no.2, op.13, 1930–31; Variations for Pf, op.23, 1935–6; Prelude and Fugue, op.33, org (1939); Pastorale, op.34, org (1939); Intermezzo, op.36, 1939–40; Pf Sonata no.2, op.38, 1940–41; Serenade, op.42, wind qnt, 1946–7; other pf pieces

Vocal: Ps cxxi, S, chorus, orch, 1911; Ave Maria, op.4, S, orch, 1914–21; Darest Thou Now, O Soul (W. Whitman), op.9, 1920–28; Mignon (J.W. von Goethe), op.7, S, orch, 1925–7; 2 chinesische Gedichte (Chin., trans. H. Bethge), op.8, 1925–7; Die dunkle Nacht der Selle (J. de la Cruz), op.32, S, orch, 1939; several songs, motets

ARVID O. VOLLSNES

Valencia. City in Spain. In the 11th century it was the capital of the Moorish kingdom of Valencia. The antiquity of its musical tradition is indicated by martial and ritual dances, accompanied by oboes and flutes, depicted on ceramics discovered in the nearby village of San Miguel de Liria. The city's earliest surviving musical document is the 13th-century *epístolas farcidas*, containing troped liturgical texts and music. Two epistles of this type are in the cathedral archives: one for the Missa in Nocte Nativitatis Domini (Missa in Gallicantu: 'Mass at cock-crow') troped in Latin, and the other for the Mass of St Stephen, troped in Valencian language. The SONG OF THE SIBYL was sung in Valencia, and in other Valencian villages such as Gandía. The *Cançoner de Gandía* (see Climent, 1995) contains two verses with polyphonic music. The tradition of medieval liturgical drama survives in the *Misterio de Elche*, relating the Virgin's death and assumption, which is still performed annually in mid-August and in odd years on 1 November.

From the 13th century the cathedral had an important *capilla*, which formed the nucleus of the city's musical life. It was among the first ensembles to cultivate the devotional villancico (early 16th century). Among outstanding *maestros de capilla* were Ginés Pérez de la Parra (1581–95), Ambrosio Cotes (1596–1600), J.B. Comes (1613–18 and 1632–43), Pedro Rabassa (1714–24) and José Pradas Gallen (1728–57). Juan Cabanilles, connected with Valencia all his life and organist at the cathedral from 1665 to 1712, was the leading Spanish organist of his day and also wrote fine choral music. Because of its position on the east coast the city had close cultural contacts with Italy, especially with Naples, and the cathedral *capilla* was among the first in Spain to cultivate the polychoral style and to exploit contrasts of colour and texture. With the foundation of the Real Colegio de Corpus Cristi (part of the Colegio del Patriarca) by S Juan de Ribera in 1605, Valencia had a second *capilla*, which, although it did not attract such distinguished musicians as that of the cathedral, made a significant contribution; an inventory of 1625 lists works by Morales, Guerrero, Victoria and others. Its musical archive is still important, although it contains no villancicos, as these were forbidden by the college's founder. The musical *capilla* of the Calabrian Duke Ferdinand of Aragon cultivated both sacred and secular music in the 16th century; among musicians associated with it were Mateo Flecha (i) (1534–44), Pedro de Pastrana (1541–7) and Luys Milán, who gives a vivid picture of court life in his book *El cortesano* (Valencia, 1561) and published the first collection of vihuela music, *Libro de música de vihuela de mano intitulado El maestro* (1536/*R*). Music performed at the court is contained in the *Villancicos de diversos autores* (Venice, 1556), also known as the 'Cancionero de Upsala' and, more recently, the 'Cancionero del Duque de Calabria'.

In the 18th century the most renowned Valencian musician was Vicente Martín y Soler, who successfully rivalled Mozart in Vienna. Pradas Gallén, having studied with Cabanilles, wrote numerous villancicos including solo arias with continuo and obbligato instruments, as introduced by Rabassa, in which he mixed Italian charm with the serious polyphonic tradition. Vicente Rodríguez

succeeded Cabanilles at the cathedral (1713–60), and cultivated one-movement virtuoso keyboard sonatas in the manner of Scarlatti, collected in his *Libro de tocatas para címbalo* (1744). His successor Rafael Anglés (1762–1816) wrote sonatas of that kind as well as more modern examples showing the influence of Haydn. The theorist Antonio Eximeno was born in Valencia in 1729, and worked there until expelled as a Jesuit in the 1760s. In the 19th century the city's musical life was dominated by Italian music; opera was performed by Italian troupes from 1761 onwards in the Palacio Real, the Casa de las Comedias or Corral de la Olivera and in the palace of the Duke of Gandía; works of Francesco Corradini, Piccinni, Rutini, Paisiello, P.A. Guglielmi and, later, Rossini, Bellini, Donizetti and Verdi were performed. In the later 19th century Valencian composers such as Ruperto Chapí and José Serrano contributed to the development of the zarzuela.

In the early 20th century musical life in the city developed considerably. In 1917 the school of music, originally founded in the mid-19th century with the support of the cathedral organist Pascual Pérez y Gascón, became a conservatory, and in 1968 was raised to the status of Conservatorio Superior de Música, now the Conservatorio Joaquín Rodrigo; its most important directors were Salvador Giner y Vidal (1894–1911) and Manuel Palau Boix (1952–67). Eduardo López-Chavarri y Marco was professor of aesthetics and music history there from 1910 to 1921. In 1986 the municipal Conservatorio José Iturbi was established. Under the influence of Giner y Vidal the city's wind bands were organized into the Municipal Banda in 1901, directed initially by Santiago Lope. An annual band competition is held in July. The Orquesta Municipal was founded in 1943, and its first concert was conducted by Juan Lamote de Grignon. Choral music is vigorously supported by numerous societies, such as the Coral Polifónica Valentina, Orfeón Universitario, Orfeón Sant-Yago, Orfeón Navarro Reverter, Pequeños Cantores and Coral Infantil Juan Bautista Comes. Every two years in September the international José Iturbi piano competition is held, since 1987 in the Palau de la Música. The national José Roca piano competition has also been held there annually since 1998.

JOSÉ CLIMENT

Valencia, Antonio María (*b* Cali, 10 Nov 1902; *d* Cali, 22 July 1952). Colombian pianist and composer. He studied first in Cali with his father, Julio Valencia Belmonte, who was a cellist, and was then a piano pupil of Alarcón at the Bogotá Conservatory (1917–19). In 1917 he toured the southern USA, and from 1923 to 1926 he studied composition with d'Indy at the Schola Cantorum, Paris, also graduating in piano. After teaching at the conservatory of the National University in Bogotá (1929–31) and many disagreements with its director, Guillermo Uribe Holguín, he founded his own conservatory in Cali, the Conservatorio y Escuela de Bellas Artes (1933). He remained its director until his death, with the exception of a period of 18 months in 1937–8 as head of the Bogotá Conservatory.

Valencia was a dedicated teacher and wrote extensively on the topic. As a composer, in the 1930s his output became the paradigm of the Colombian national idiom to which most composers of his generation aspired. His elaborations of folk melodies and rhythms are intermingled with Impressionist harmonies. He favoured short salon pieces and avoided symphonic formats. In the 1930s, many of his piano, chamber and choral compositions were included in periodical publications. His complete works were published in 1991 by Mario Gómez-Vignes.

WORKS

ROBERT STEVENSON/ELLIE ANNE DUQUE

Valens, Ritchie [Richard Valenzuela] (*b* Los Angeles, 13 May 1941; *d* Clear Lake, IA, 3 Feb 1959). American rock and roll singer and guitarist. He made his first recording (of his own composition *Come On Let's Go*) for the local Del-Fi label while still at high school. In 1958 he had hit records with his own composition, the melodramatic teenage ballad *Donna*, and a dynamic rock and roll version of the traditional Mexico huapango, *La Bamba*, becoming the first singing star to come from California's Chicano (Mexican American) community. He made a cameo appearance in the film *Go Johnny Go* before joining a major tour of the United States with other rock and roll performers. He died in a plane crash during that tour, along with the singers Big Bopper and Buddy Holly. Valens's recording career continued with the posthumously issued singles *That's my little Susie* and *Little Girl*. In 1987, the chicano group Los Lobos collaborated

on a biographical film about Valens, *La Bamba*, and their re-recording of the Valens arrangement was highly successful. See also B. Mendheim: *Ritchie Valens: the First Latino Rocker* (Tempe, AZ, 1987) [incl. bibliography and discography].

DAVE LAING

Valente, Antonio (*fl* 1565–80). Italian composer and organist. He was blind from early childhood according to Frat'Alberto Mazza's preface to Valente's *Intavolatura de cimbalo* of 1576. He served as organist at S Angelo a Nido (or Nilo), Naples, from November 1565 to May 1580, during which time his salary nearly doubled. Scipione Cerreto listed him in 1601 among the deceased organists of Naples, indicating that he was Neapolitan by residence rather than by birth.

Valente's *Intavolatura de cimbalo* and Rodio's *Libro di ricercate* (1575) are the earliest publications of a school of keyboard composition which flourished in Naples in the late 16th and early 17th centuries and included such figures as Macque, Mayone and Trabaci. The *Intavolatura* is notated in an unusual variant of Spanish keyboard tablature similar to that of Cabezón or Bermudo: the numerals 1 to 23 represent white keys (with a short octave); an 'X' above a number means the note is to be raised a semitone. Valente expressed the hope in his preface that the student might 'discover a new means of achieving facility in performing on a harpsichord'.

The *Intavolatura* contains representatives of most of the keyboard forms of the time. The single fantasia is divided into a figural and a contrapuntal section, a characteristic which it shares with Trabaci's toccatas of 1603 and 1615 and the later prelude and fugue. The six ricercares are for the most part multithematic; only the second employs a single subject throughout. His intabulations and variations use chordally accompanied figural passages in the tradition of 16th-century lute music. The first of two settings of Philippe de Monte's chanson *Sortez mes pleurs* ('Sortemeplus' in Valente), called 'con alcuni fioretti', contains only occasional trills and turns, whereas the other, called 'disminuita', shows almost continuous diminution. The dances are all galliards, whatever their titles; Valente does not hesitate to employ parallel triads, injecting a popular flavour into these pieces. The contrapuntal writing in the *Versi spirituali* of 1580 shows a considerable advance over that of the earlier book. The versets were intended for use in all religious services and were not limited to the Office as was often the case. Thus they do not employ reciting-note formulae; they are the first known versets to be free of such formulae, preceding even those of Trabaci.

WORKS

Intavolatura de cimbalo … libro primo (Naples, 1576) [dated 1575 at the end of the volume]: 1 fantasia; 6 ricercares; Salve regina; 3 intabulations; 6 sets of variations; 3 dances; ed. C. Jacobs (Oxford, 1973)

Versi spirituali sopra tutti le note, con diversi canoni spartiti per sonar ne gli organi, messe, vespere, et altri officii divini (Naples, 1580); ed. I. Fuser (Padua, 1958)

ROLAND JACKSON

Valente, Saverio (*fl* Naples, late 18th century to early 19th). Italian composer and singing teacher. He studied with Fenaroli at the Conservatorio di S Maria di Loreto in Naples; from 1767 he worked there as *terzo maestro di cappella* and from 1777 to 1806 as *secondo maestro*. In 1807 he joined the staff of the newly formed Real Collegio di Musica, where he gave singing instruction to Luigi Lablache. He composed sacred music primarily for the church of S Francesco Saverio, where he was *maestro di cappella*. By 1811 he bore the title Accademico Filarmonico. (*GiacomoC*; *RosaM*; *SchmidlD*)

WORKS

MSS in I-Nc unless otherwise stated

Oratorio per il Santo Natale; Oratorio per S Gennaro, lost

Mass, 3vv, insts; Mass, 4vv, insts; Credo, 4vv, 1811; mass parts

Passio in Dominica Palmarum, 4vv; Magnificat; Miserere; works for Holy Saturday, 4vv; psalms; motets

La primavera (cant.), 4vv, insts; solfeggios and duets for singing instruction

Divertimento, org, insts, *I-Bc*

SIEGFRIED GMEINWIESER

Valenti, Fernando (*b* New York, 4 Dec 1926; *d* Red Bank, NJ, 6 Sept 1990). American harpsichordist. His first musical training was as a pianist and included some lessons with José Iturbi. While an undergraduate at Yale reading history, he began serious work at the harpsichord with Ralph Kirkpatrick. He made such remarkable progress that in 1946, before taking his degree, he made a concert tour of South America. After further study with Kirkpatrick, he made his formal concert début in New York in 1950, after which he was invited to participate in the first Prades Festival, thus making a European début in the same year. He subsequently made numerous tours of the USA, Latin America and Europe. In the spring of 1951 the Juilliard School of Music in New York appointed him as its first harpsichord professor. He also taught at the Cleveland Institute of Music, the California Institute of the Arts and at the Aspen summer music academy. Valenti performed and recorded a large and varied repertory of 18th-century harpsichord music, but was best known as a brilliant exponent of the works of Domenico Scarlatti and his Iberian contemporaries, to which his fiery temperament and virtuosity were especially well suited.

Valentim de Carvalho. Portuguese firm of music publishers. It was founded in Lisbon in 1914 by Valentim de Carvalho (1888–1957). In 1953 it took over the firms of Neuparth & Carneiro and Heliodoro de Oliveira. Its record company, established in 1945, issues Portuguese music and re-recordings from about 20 foreign firms. The firm also owns studios for recording film soundtracks. Until the mid-1980s Valentim de Carvalho published educational works, piano music by Portuguese and foreign composers, and the 'Polyphonia' collection of scores in two series, one of popular Portuguese music, the other devoted to Portuguese music from the 16th century to the 18th (works by Manuel Cardoso, Francisco Martins,

Filipe de Magalhães, King João IV, Diogo Dias Melgaz, Francisco António de Almeida and Carlos de Seixas). The company now specializes in record production; its record catalogue includes works by all the major Portuguese composers.

CARLOS DE PONTES LEÇA

Valentin, Erich (*b* Strasbourg, 27 Nov 1906). German musicologist. He studied musicology (with Adolf Sandberger), Germanic philology and education at Munich University, where he took the doctorate in 1928 with a dissertation on the evolution of the toccata in the 17th and 18th centuries. He subsequently lectured at the Staatliches Privatmusiklehrer-Seminar in Magdeburg (1929–35), and was concurrently a lecturer at the Salzburg Mozarteum and director of the Zentralinstitut für Mozart-Forschung (1939–45), remaining a member of the institute after relinquishing his directorship. He later lectured at the Nordwestdeutsche Musikakademie in Detmold (1948–53). From 1953 he taught at the Staatliche Hochschule für Musik, holding a professorship from 1955 and the directorship from 1964 to 1972.

Valentine was editor-in-chief of the *Zeitschrift für Musik* (1950–55) and co-editor of the *Neue Zeitschrift für Musik* (1955–9). In 1954 he became editor-in-chief of *Acta mozartiana*, and in 1952 he was made deputy president of the Deutsche Mozartgesellschaft, of which he was a co-founder. He has been awarded the Silver Mozart Medal (1956), the Mozart Medal of the Mozartgemeinde Wien and the Bavarian Order of Merit (1971). His pictorial biographies of Beethoven (Munich, 1957) and Mozart (Munich, 1960) have been translated into several languages, and he has edited selections of the letters of Mozart (Munich, 1972), Beethoven (Munich, 1973) and Schubert (Munich, 1975). Valentin has applied himself to contemporary problems in choral music and musical education, drawing valuable conclusions from his practical experience.

HANS HEINRICH EGGEBRECHT

Valentin, Karl Fritjof [Fritiof] (*b* Göteborg, 30 May 1853; *d* Stockholm, 1 April 1918). Swedish composer, critic and conductor. At Uppsala University he studied music with J.A. Josephson (1873–9), and after attending the conservatory and university in Leipzig (1879–84), he took the doctorate at the university with a thesis on Swedish folksongs. He then settled at Göteborg, became music critic of the *Göteborgs handelstidning* and re-established the Harmonic Society in 1886, which he conducted until 1897, performing many large works for chorus and orchestra. He gave lectures in music history and conducted concerts of the workmen's institute. In 1897 he went to Stockholm, where he was critic of *Svenska dagbladet* until 1902 and teacher of music history at the conservatory (professor from 1912). He was elected a member of the music academy in 1897 (appointed secretary in 1901) and gave many public lectures on music.

Valentin first attracted attention as a composer at Leipzig in 1886, when some of his songs were performed at the festival of the Allgemeiner deutscher Musikverein. For his *Åtta sånger* ('Eight songs') op.7, he was awarded a prize by the Musikaliska Konstföreningen; he conducted a performance of his *Festouverture* in Stockholm in 1887, and his *Brudfärd* ('Bridal procession') for chorus and orchestra was performed by the Stockholm Philharmonic Society in 1890, and also at Göteborg and Uppsala. He wrote many cantatas and other occasional works for chorus and orchestra, 11 collections of solo songs, an Adagio for violin and orchestra, op.17, and two books of piano pieces. He also published an illustrated history of music (1900–01, revised 1916) and wrote many articles in Swedish music journals.

KATHLEEN DALE/ROBERT LAYTON

Valentine, John (*b* Leicester, bap. 7 June 1730; *d* Leicester, 10 Sept 1791). English composer, violinist and music teacher, a great-nephew of Robert Valentine. He was the most important musician in Leicestershire during the second half of the 18th century, teaching and performing throughout the county and beyond. He taught a wide range of string and wind instruments, including the violin, the cello, the harpsichord, the guitar, the flute, the oboe, the trumpet and the French horn. He performed on the violin (and later on the cello) in subscription and benefit concerts in Leicester and many of the surrounding county market-towns. He also owned a music shop in Leicester,

where he both taught and sold a wide variety of instruments and music.

He composed music mostly for the use of his students, to assist them in gaining experience in ensemble playing. His orchestral works have been described as 'of popular and easy character', reflecting 'the kind of music played at meetings of provincial musical societies, several of which subscribed to their publications' (*Grove6*; M. Tilmouth). Judging from the size and variety of the subscription lists in his publications, his music was widely used and quite popular. He wrote several occasional compositions that show him to have been a capable composer of concert music on a higher level than the pedagogical pieces for which he was best known. His *Epithalamium*, his only theatrical work, is a scena on a par with theatrical music by Hook, Shield and Kelly. It was performed in Leicester in Thomas Southerne's play *Isabella* on 27 February 1762 and published with his *Ode on Peace*, which was performed in Leicester at a thanksgiving celebration on 5 May 1763. His *Thirty Psalm Tunes in Four Parts* (London, 1784), composed for use by country church choirs, show a flexible scoring that permits them to be performed *a cappella*, or with instrumental bass, or with organ accompaniment. Several of his *Eight Easy Symphonies in Eight and Nine Parts* (London, 1782) reach the level of concert music and show competent handling of orchestral timbres and balance.

He married Tabitha Simpson of Aylestone on 1 May 1755. They had eight children, three of whom became professional musicians. Thomas (*b* Leicester, bap. 10 Feb 1757; *d* Ruabon, 2 April 1800), a violinist, joined the orchestra at Covent Garden in about 1780 but died in Ruabon as organist to Sir Watkins Williams Wynne. Ann (*b* Leicester, bap. 15 March 1762: *d* Leicester, 13 Oct 1845) was organist of St Margaret's, Leicester, from 1785 until her death. She was also a composer, publishing *Ten Sonatas* (pf/hpd, vn/Ger. fl, op.1; London, 1790), *Three Favorite Waltzes* (pf; London, 1805) and *A Favorite March and Rondo* (pf; London, 1808). Sarah (*b* Leicester, bap. 23 June 1771: *d* Leicester, 19 Dec 1843) became organist of St Martin's, Leicester, in 1800, and retained that position until her death. She was in competition with a male applicant for the post, Frederick Hill.

WORKS

all printed works published in London

op.	
1	14 Marches, a 4 (before 1759); lost, advertised in *Leicester Journal*, 30 Sept 1769
2	The Compleat Dancing Master for the Year 1760 (1759); lost; advertised in *Leicester Journal*, 11 Aug 1759
3	31 Duets, 2 hn, fls, vns, obs, etc. (1759); lost, advertised in *Leicester Journal*, 11 Aug 1759
4	Epithalamium, in Isabella, or The Fatal Marriage (T. Southerne), 1762, vv, hns, str, bc, with an Ode to Peace (*c*1765)
5	24 Marches, Minuets and Airs, 2 vn, 2 ob/fl, 2 hn, b (1769)
6	8 Easy Symphonies, 2 vn, 2 ob/fl, 2 hn, va, bc (1782)
7	30 Psalm Tunes in Four Parts, with Symphonies, Interludes and an Instrumental Bass (1784)
8	16 Marches & Minuetts &c., 2 vn, 2 ob/fl, 2 hn, va, b (1787)

Ode on the Birthday of the Marquis of Granby (I. Tree) (*c*1760–69)
Marches, minuets, airs, *GB-Lbl*
6 Anthems ... with Preludes, Symphonies ... Adapted for the Use of Country Choirs, 4 vv, obs, bns; lost, subscription advertised in *Leicester Journal*, 11 June 1774

KARL KROEGER

Valentine [Follentine], **Robert** [Valentini, Roberto; Valentino, Roberto] (bap. Leicester, 16 Jan 1674; *d* 1735–40). English composer, flautist and oboist. He was resident in Rome and Naples for virtually all his professional life. The son of Thomas Follentine, an itinerant musician who had arrived and settled in Leicester about 1670, he was unable to secure a position as a town wait and so moved to Rome during the later years of the 17th century. By 1707 he was well established as a performer there, on both the flute (recorder) and the oboe, and is known to have performed during the period 1708–10 at the Ruspoli palace at events organized by Caldara, Corelli and Handel. His integration into musical circles in Rome is attested by the competent writing in his op.1 trio sonatas, which date from this period. Though showing evidence of an English training, specifically in respect of localized tonality, the overall style demonstrates a clear understanding of what Manfred Bukofzer referred to as a developed 'bel canto' style.

Valentine's first patron of any note was Sir Thomas Samwell (later MP for Coventry, 1714–22), whom he appears to have met in Rome and to whom he dedicated his op.2. His Divertimento for two flutes, which dates from this period, was dedicated to the Medici Gian Gastone, Grand Duke of Tuscany, which substantiates Italian connections before 1708. The works published after his op.4 ballettos (Rome, 1711) tend generally to have appeared first in Amsterdam or London without initially appearing in Rome – a result of his having established connections in Naples by 1715, specifically through John Fleetwood, the British consul there. His music written between 1714 and 1725 falls into two contrasting categories. The majority of his output consisted of music for 'young practitioners and amateurs' and was largely intended for the London market. Yet he maintained an output of more stylistically developed music, much of which remains in manuscript, but some of which, specifically opp.5, 6, 11 and 12, was published in Amsterdam and London. The best of this work, which tends towards the *galant* style, has much in common with the music of Valentine's Neapolitan friend Francisco Mancini, who shared the patronage of Fleetwood.

After Fleetwood's death in 1725 Valentine appears to have re-established his connections in Rome. In May 1730 he published a set of sonatas dedicated to the Duca dell'Oratina; totally distinct from the London set of solos published in 1728, it is among Valentine's most competent works. Although Valentine is thought to have returned to London in 1731, there is no primary evidence for this; however, the popularity of his music led Walsh to reissue opp.1–12 in London at this time. Valentine may have

travelled to Amsterdam in about 1735, possibly renewing an acquaintance with Locatelli, who had established himself there in 1729.

Valentine's music is very much a product of its age and far from a mere simplistic imitation of Corelli. He possessed a particular skill for detached observation of musical styles. Rhythmic, melodic and harmonic features tend to be exaggerated, resulting in a style that seems clichéd to the modern ear. At the time, however, these features were more novel, and so, together with his popularity in Rome, he retained a secure popularity in the aspiring amateur markets of northern Europe for a period after his death. Hawkins compared him with Christian Schickardt as a composer of masterful works for the recorder and German flute.

WORKS

op.	
1	[12] Sonatas, 2 vn, vc, bc (Amsterdam, *c*1708)
2	[12] Sonate, rec, bc (hpd/violone) (Rome, 1708), embellished versions of nos.1, 11 and 7 with 4th movt of 6, *D-HV*
3	12 Sonatas, rec, bc (Rome, 1710)
4	[12] Balletti da camera, 2 vn, vc, bc (Rome, 1711)
4	6 Sonatas, 2 vn, bc (Amsterdam, 1715)
5	[6] Sonate, 2 rec (Amsterdam, 1716; 2/*c*1718 as op.6)
6	12 Sonatas, rec, bc (Amsterdam, *c*1716; 2/1718 as op.5) (1718)
7	6 Sonatas, 2 rec/2 vn (London, *c*1720), arr. of op.4 (1715)
[8]	6 Setts of Aires and a Chacoon, 2 rec, b (London, 1718)
9	7 Setts of Aires, 2 rec, b (London, 1721)
10	7 Setts of Aires, 2 rec, b (London, 1721)
11	[6] Sonatas or Solos, rec, bc (hpd/b) (London, 1727)
12	12 Solos, vn, bc (hpd/b) (London, 1728)
12	[6] sonate, fl/vn/mandola/ob, b (Rome, 1730)
13	[6] Sonatas or Solos, fl, b (London, 1735)

6 concerti grossi, 4 vn, bc, *S-Uu*
Concerto, fl, vn, va, vc, bc (hpd/violone), *I-Nc*
Concerto, 2 fl, str, *D-ROu*
Concerto, inc., ob, *ROu*
Sonata (concerto), fl/ob, str, *ROu*
12 sonatas and a pastorale, 2 ob, *GB-Lbl*
12 sonatas, ob, bc, *Lbl*
11 sonatas, inc., fl, *D-W*
6 sonatas, *GB-Lbl*: 3, vc, bc; 3, 2 vc
18 sonata movts ('sù l'aria di Tromba'), 2 ob, *Lbl*
Divertimento, 2 fl, *I-Ac*

MARTIN MEDFORTH

Valentini [Urbani, Valentino] (*b* Udine; *fl* 1690–1722). Italian alto castrato. He was a pupil of Pistocchi and later in the service of the Duke of Mantua. His first known appearances were in 1690 in Venice (in Perti's *Brenno in Efeso*) and Parma (in Sabadini's *Il favore degli dei*). He sang in Bologna in 1691 and 1695 (with Pistocchi in another Perti opera), Piacenza and Ferrara in 1691, Reggio nell'Emilia in 1692, Rome in 1694, Venice again in 1695 in two operas by C.F. Pollarolo and in Turin in 1696. Between 1697 and 1700 he was in the service of the Electress of Brandenburg in Berlin; he sang the title role in *La festa del Himeneo* by Ariosti and others in 1700. In 1703 he was at Mantua in Caldara's *Gli equivoci del sembiante* and the following year sang in two operas in Genoa. He was the first castrato to sing regularly in London, making his début at Drury Lane in a revival of Haym's version of *Camilla* on 8 March 1707 and returning in the next four seasons (1707–11) and again in 1712–14. He sang in many of the early Italian operas in London, most of them pasticcios and some bilingual – *Tomyris* (1707), *Love's Triumph* and *Pirro e Demetrio* (1708), *Clotilda* (1709), *Almahide* and *Idaspe fedele* (1710), *Dorinda* (1712 and 1714), *Ernelinda* (1713), *Croeso* and *Arminio* (1714) – and in the first performances of Handel's *Rinaldo* (1711, Eustazio), *Il pastor fido* (1712, Silvio) and *Teseo* (1713, Egeo). He was in the May 1713 revival of *Rinaldo* and probably played Silla in a private performance of that opera on 2 June 1713. He sang frequently at concerts and had a benefit each year, the last at Hickford's on 31 March 1715, though he did not appear in opera that season. He was himself responsible for the production of *Love's Triumph*, adapted from Gasparini's *Il trionfo d'amore*, adding choruses and dances after the French manner and commissioning English words from P.A. Motteux; but the venture was a failure. In December 1707 he and other artists lodged complaints against Rich, manager of Drury Lane, about the payment of their salaries; Valentini then received £7 10s. a night. In 1712–13 his emoluments, including a benefit, amounted to £537 10s. After leaving London Valentini sang in five operas in Venice in 1717–19 and Conti's *Don Quixotte* in Hamburg in 1722.

Valentini's compass in his Handel parts was restricted (*a* to *e*♭″) and they are not remarkable for inspiration or virtuosity; but his powers seem to have been on the decline. Burney gathered 'from those who frequented operas at this time' that 'his voice was feeble, and his execution moderate', but his acting so good that, in the words of Cibber, 'his hearers bore with the absurdity of his singing the part of Turnus in Camilla, all in Italian, while every other character was sung and recited in English'. Of his part in *Teseo* Burney remarked (with some justice) that Valentini 'seems to have been gifted with very limited powers .... It seems manifest that Handel was obliged, in writing for this performer, to ride Pegasus with a curb-bridle'. Galliard in his notes to Tosi said that Valentini, 'though not so powerful in Voice or Action as Nicolini, was more chaste in his Singing'. There are two caricatures of him by A.M. Zanetti in the Cini collection (*I-Vgc*), and one by Marco Ricci at Windsor Castle. (*SartoriL*)

WINTON DEAN

Valentini, Giovanni (i) (*b* ?Venice, 1582/3; *d* Vienna, 29/30 April 1649). Italian composer, keyboard player and poet. Antimo Liberati (*Lettera ... in risposta ad una del Sig. Ovidio Persapegi, 1684*, 1685, p.52) called him 'a Venetian of the famous school of the Gabrielis'. There are a number of contemporary and later references to him as a keyboard player. His earliest printed collections of canzoni (1609) and motets (1611) identify him as organist of King Zygmunt III of Poland, whose chapel he joined in 1604 or 1605. He arrived at the Graz court of Archduke Ferdinand of Inner Austria in 1614 as the 'newly appointed chamber organist from Poland'. In 1617 Urban

Vielhawer von Hohenhaw, court organist to Archduke Karl, Bishop of Breslau, praised him as a virtuoso performer in connection with an enharmonic 'clavicymbalum universale, seu perfectum' with 77 keys for the four octaves from C to *c‴* (also mentioned by Michael Praetorius in his *Syntagma musicum*, ii, Wolfenbüttel, 1618, 61–66). Following Ferdinand II's election as Holy Roman Emperor in 1619, Valentini moved to Vienna with the other musicians of the Graz music chapel. A list of the court officers dated 10 December 1619 names him as first imperial court organist with an annual salary of 360 florins. He received several large monetary gifts from the emperor during the 1620s and was appointed imperial Kapellmeister on 15 June 1626, following the death of Giovanni Priuli. In the following year he was ennobled and, at about the same time, assumed the duties of *regens chori* at the Michaelerkirche in Vienna, a post he retained until at least 1631. He continued to serve as imperial Kapellmeister under Ferdinand III, and was involved in the production of the earliest operas in Vienna during the 1620s and 30s. He taught Kerll in the 1640s and seems to have devoted his last years to writing sacred dramatic works and Italian poetry (including the earliest *sepolcri*, for which only librettos survive). He enjoyed an unusually close relationship with the imperial family during Ferdinand III's reign (1637–57), serving as an authority on musical and literary matters.

Valentini cultivated most of the important styles and genres of the early 17th century. Some of his large-scale sacred works are cast in a stolid polychoral style, but much of his music employs a modern concertato idiom that reveals a highly adventurous, even avant-garde composer. Capricornus cited Valentini as an authority on compositional technique and Liberati commended his fine sense of the difference between vocal and instrumental writing. Valentini's *Secondo libro di madrigali* (1616) was the first published collection of madrigals to combine voices and instruments, and many of his madrigals show the Viennese predilection for large scorings combining voices and instruments. At times, the instruments merely furnish ritornellos or double vocal lines in tutti passages; at other times, especially in the *Musiche concertate* (1619), the instruments are fully integrated into the vocal texture. The *Musica di camera* (1621) includes a number of compositions built on ostinato bass patterns, including the *pass'e mezzo*, romanesca and Ruggiero. The *Musiche a doi voci*(1621) contains early examples of the dramatic dialogue and shows his flair for the experimental: three verses of 'Con guardo altero' are entirely in 5/4 time, and 'Vanne, o cara amorosa' contains consecutive bars with proportional signs 9/8 and 7/9, presumably to encourage the singer to declaim the recitative-like line freely.

Valentini's sacred works include large-scale ceremonial compositions, works in the *stile antico*, polychoral pieces reminiscent of Giovanni Gabrieli's later style, parody masses, concertato works, as well as few-voice motets and monodies. His seven-choir *Messa, Magnificat et Jubilate Deo* is written in a larger number of parts than any music printed hitherto and contains some of the earliest printed trumpet parts. His printed masses are unadventurous: a conservative concertato style pervades the 1619 collection and three of the four masses from the 1621 print are polychoral parody masses. In contrast, many of his large-scale psalm and motet settings employ an up-to-date concertato style that unites virtuosic instrumental writing with monodic, duet and dialogue textures. His *Sacri concerti* (1625) include some of the earliest sacred works written north of the Alps to make extensive use of the *stile recitativo*. They also employ the duet and dialogue textures that Valentini had pioneered in his *Musiche a doi voci* and contain vocal writing in a luxuriant manner reminiscent of the duets from Monteverdi's seventh book of madrigals. Several motets feature striking shifts between the natural and flat hexachords and other forms of chromaticism. Similar harmonic experiments are found in some of the instrumental sonatas, for example the so-called 'enharmonic sonata', whose opening phrase in G minor is answered immediately in B minor. These chromatic experiments may be related to the *musica reservata* of Graz court and to the court's use of enharmonic keyboard instruments. Like Biagio Marini and Buonamente, Valentini was one of the first composers to introduce the new italianate style of violin writing north of the Alps. Valentini's sacred dramatic works and Italian poetry frequently treat themes central to the so-called *Pietas Austriaca*, a unique strain of Catholic piety cultivated by the Habsburg dynasty during the 17th and 18th centuries.

WORKS

published in Venice unless otherwise indicated

Canzoni, libro primo, 3, 5, 6, 8vv (1609)

HELLMUT FEDERHOFER/STEVEN SAUNDERS

Valentini, Giovanni (ii) (*b* ? Naples or Rome, *c*1750; *d* ? Naples, 1804). Italian composer. He may have been born in Rome and educated in Naples: some librettos describe him as *maestro di cappella napoletano*, others as *romano*. His earliest known work was performed in Rome in 1770, with other works in Civitavecchia (1774–6), Florence (1777) and Naples (1777); he wrote several comic operas in Venice between 1779 and 1786. The success of two of his operas, *Le nozze in contrasto* (1779) and *La statua matematica* (1780), made his name known in many Italian opera centres and in some cities beyond the Alps; according to Gerber (1790–92), *Le nozze* was performed in Leipzig in 1784. By the summer of 1784 Valentini had been elected a member of the Accademia Filarmonica of Verona, and by 1786 he was serving as music director at the Ospedaletto, Venice.

WORKS

La pastorella tradiata (farsetta), Rome, Tordinona, carn. 1770
Gioas (componimento sacro, P. Metastasio), Civitavecchia, 1774

JOHN A. RICE

Valentini, Giuseppe (*b* Florence, 14 Dec 1681; *d* Rome, Nov 1753). Italian composer and violinist. It is not known precisely when he settled in Rome, but in 1692, at the age of 11, he was a member of the Congregazione di S Cecilia, membership of which was essential to practise as a musician in that city. From a sonnet published in his *Rime* (1708), we learn the name of his teacher, Giovanni Bononcini, with whom he studied in Rome between 1692 and 1697. The first indication of Valentini's activity as a violinist is in 1694, but only from 1708 does his name – often his nickname, Straccioncino ('Little Ragamuffin') – begin to appear with any regularity in the lists of performers at churches and colleges, or in the lists of musicians playing in performances patronized by Prince Ruspoli and Cardinals Ottoboni and Pamphili.

Between 1701 and 1714 Valentini published seven collections of instrumental compositions (opp.1–8; op.6 was never published) and he also composed several oratorios and cantatas. In spite of the intention, expressed in the preface to op.8, to issue six further collections and a 'poemetto in ottava rima', none of his works was published in Italy after 1714. This was not only because of the high cost of printing, to which Valentini referred in the preface to op.4 when explaining why he had not published the 'sonate a due, e tre corde', but also because after 1710, as an established musician, he no longer needed to demonstrate his talents to obtain a post as *maestro di cappella* or first violin in churches and colleges. Until the publication of his op.7 in 1710, Valentini had not succeeded in obtaining such a post in Rome nor in finding a real patron, but from that year, partly as a result of having published sonatas and concertos, the situation changed. 1710 saw the beginning of his activity at S Luigi dei Francesi (1710–41), where he succeeded Corelli as director of the concertino. According to Geminiani, Valentini's success as a composer and violinist was one reason for the worsening illness of Corelli, for whom Valentini nevertheless showed great respect, dedicating to him a sonnet published in his *Rime* (1708) and the seventh sonata of op.5 ('la Corelli'). In 1710, according to the title-page of his op.7, he was made 'Suonator di Violino, e Componitore di Musica' to Prince Michelangelo Caetani, in whose service he remained at least until 1727. From 1711 to 1726 he was active as violinist at S Giacomo degli Spagnoli and he attended the Sunday *conversazioni* in the Ruspoli residence. His activities increased in the years that followed, and to the two churches already mentioned were added S Giovanni dei Fiorentini (1720–53) and S Maria Maddalena (1727–50), where he became *maestro di cappella*, and the Collegio del Nazareno (1720–49), where between 1721 and 1747 six of his cantatas were performed on the Feast of the Nativity of the Virgin (8 September). He also played at S Maria Maggiore (where in 1736 he was appointed *maestro* of the Cappella Borghese, or Cappella Paolina), at S Lorenzo in Damaso and at the Oratorio di S Marcello. Confirmation of the high regard in which he was held came with his election to the Arcadian Academy (as Euginaspe Leupinto), an honour bestowed on few musicians before him. From the third decade of the 18th century he acted regularly as *maestro di cappella* in these churches, while his compositions became fewer; with the exception of cantatas performed in 1733 at the Palazzo Apostolico and S Lorenzo in Lucina and those written in 1746 and 1747 for the Collegio del Nazareno, his career as a composer was virtually over. The exact date of his death is not known, but his personal file in the archive of the Accademia di S Cecilia reads 'defonto in Novembre 1753' and on 12 November the Congregazione di S Cecilia had a Mass said for him.

Only since the 1980s has Valentini's music received some critical attention and his role in the history of early 18th-century instrumental music begun to be appreciated. Even then, it is usually in discussions of 'greater' composers, such as Corelli, Vivaldi and Locatelli, that he has been mentioned, and according to the context he has been considered either as an epigone or as an important

precursor. However general and inappropriate these terms may be (if only because Valentini's works have not yet been sufficiently studied), they might both have some basis in truth. What characterizes Valentini's instrumental writing is on the one hand a continual attempt to surprise the listener with something new, original or fantastic, and on the other an apparent difficulty to free himself from the model supplied by the work of Corelli and followed by his contemporaries. The titles of the printed collections (*Bizzarrie per camera*, *Fantasie musicali*, *Idee per camera*, *Villeggiature armoniche*), but more especially their character (which is indeed sometimes bizarre), seem to indicate Valentini's determination to be different from Corelli and his imitators, and to offer an alternative to them. In the preface to his op.4 one reads: 'and if you think this work in some places diverges from the correct rules, remember that I have written it to give more pleasure to those listeners who do not like to be confined within narrow limits'; and that to op.7 says he has 'tried to write them [the concertos] in a new style, thinking that novelties do not usually displease'.

The desire for originality, sometimes too selfconscious and ineffectual, led Valentini to some important innovations in the concertos (more than in the sonatas) that have not been sufficiently recognized. One of these is the inclusion of the viola in the concertino and the resulting possibility of a string quartet in contrast to the ripieno, an innovation wrongly attributed to Geminiani. Michael Talbot has stressed the importance of op.7 no.11, where for the first time the traditional distinction between concertino and ripieno is set aside: the two ripieno violin parts are replaced by parts for a third and fourth violin. This must have influenced Vivaldi when he chose this arrangement for some of the concertos in *L'estro armonico* op.3. The trio sonatas, and in some ways the violin sonatas, are closer to the Corellian model, although they are not without surprises, especially in the harmony. Technically the violin parts are not as advanced as might be expected from a virtuoso player and a composer who liked to surprise his audience; but it must be remembered that the collection 'a due, e tre corde', which doubtless constituted Valentini's major contribution, is lost (the manuscript was sold at The Hague in 1759). Nevertheless, the sonatas as a whole reveal a strong and individual personality and, as Talbot has written, it is difficult to agree with Burney's judgment that Valentini's works 'have been long since consigned to oblivion, without any loss to the public, or injustice to the author'.

The music of Valentini's operas and oratorios, and of most of his cantatas, is lost, making it difficult to form any idea of his achievements as a vocal composer.

WORKS

OPERAS

La finta rapita [Act 1] (favola boscareccia, 3, D. Renda), Cisterna, Principe di Caserta, 17 Jan 1714 [Act 2 by N. Romaldi, Act 3 by C.F. Cesarini]; lib pubd

La costanza in amore (dramma per musica, 3, A. Rossi), Cisterna, Principe di Caserta, 1715; lib pubd

ENRICO CARERI

Valentini [Valentino], **Michelangelo** [Michele Angelo] (*b* Naples, *c*1720; *d* after 1768). Italian composer. Valentini called himself a student of Leonardo Leo, although no attendance has been traced at either Neapolitan conservatory where Leo taught. In February 1744 he applied unsuccessfully for a position as organist in the royal chapel in Naples. Like many other young composers of the time, he first brought himself to public notice with the production of comic operas: *Il Demetrio* (A. Palomba; Naples, Teatro Nuovo, winter 1745) and *La villana nobile* (Palomba; Naples, Teatro dei Fiorentini, spring 1748). The popular singer Regina Valentini was the composer's sister; Prota-Giurleo speculated that he travelled with her on tour.

Although no notice of any regular position has been found, it can be assumed from the production of Valentini's next six operas that he was in north Italy a good deal for the next ten years: *La clemenza di Tito* and *Adriano in Siria*, both for Bologna (Metastasio; Teatro Formagliari, 3 January 1753 – probably rewritten for the opening of the Teatro Nuovo di Corte in Modena, 26 December 1768 – and Carnival 1753), *Andromaca* for Milan (Zeno, addns by A. Salvi; Teatro Ducale, 26 December 1754), *Solimano* for Turin (Migliavacca; Teatro Regio, 1756; rewritten, though with little success because of production difficulties, for Naples, Teatro S Carlo, 4 November 1756), *La sconfitta di Dario* (S.A. Morbilli; Genoa, Teatro S Agostino, Carnival 1757) and *Viriate* (after Metastasio's *Siface*; Pavia, Teatro Omodeo, Carnival 1761). The works for Turin and Modena were particularly successful.

For a not very prolific composer, an unusual amount of Valentini's music survives: four arias and a duet (some possibly misattributed) in the Istituto Musicale, Genoa; 13 arias, including seven from *Adriano*, in the British Library; two arias and the score of *Solimano* in the Biblioteca do Palácio Nacional da Ajuda, Lisbon (where the score of *La statua matematica* is misattributed to Michelangelo; the opera was written by the later composer Giovanni Valentini); and four arias in the Biblioteca del Conservatorio Giuseppe Verdi, Milan. A letter to Padre Martini is in *I-Bc*.

JAMES L. JACKMAN

Valentini [Valentino], **Pier** [Pietro] **Francesco** [Pierfrancesco] (*b* Rome, *c*1570; *d* Rome, 1654). Italian composer, theorist and poet. According to Antimo Liberati (*Lettera scritta ... in risposta ad una del Sig. Ovidio Persapegi, 15 Ottobre 1684*, 1685) he was of noble birth. He studied with G.B. Nanino but remained an amateur musician, describing himself as such in the 'Discorso alli studiosi professori et amatori della musica' published with his canon *Illos tuos* (1629). He was, however, a remarkable theorist and was regarded as one of the most learned contrapuntists of the early 17th-century Roman polyphonic school, as is mentioned not only by Liberati but also by Romano Micheli in his *Avviso inviato da me* (Rome, 1650). Only when he was dying did he arrange with his heirs that they should publish 22 of his works or collections remaining in manuscript; a note to this effect appears in the first of the volumes of madrigals published in 1654.

Like such men as A.M. Abbatini, Paolo Agostini and Orazio Benevoli, Valentini was one of the great exponents of sumptuous, typically Baroque choral polyphony for large forces, closely akin to the sculpture and architecture of Bernini. He was attracted by the theory and bygone artifices of Netherlandish polyphony. In the dedication of *Illos tuos* he said that he had wanted to imitate plants which produced flowers and fruit, in accordance with a taste for the ornamental and the marvellous typical of the Baroque period: however, the sheer complexity of his structures and the excessive technical bravura that inform such music are ultimately self-defeating. For example, another of his canons, the *Canone nel modo Salomonis*, is written for 96 voices but can be multiplied to as many as 144,000 – at different speeds and in different metres – as many as the singers of the Apocalypse. Such a work is, in Ambros's phrase, a 'musical Hydra forever growing new heads'. Like *Illos tuos*, this canon achieved great fame; the themes of both were reproduced by Kircher (*Musurgia universalis*, 1650/*R*, vol.i, pp.402, 404).

Valentini displayed a many-sided interest in questions of music theory, ranging from temperament and tuning to counterpoint, from rhythm and the beat to tonality. His theory of the 24 modes expounded in his *Duplitonio* and other treatises is particularly significant: 'the area of composing and playing is broadened and extended' by it. In addition to the 12 traditional modes – for example the authentic mode *d′–a′–d″* and the plagal form *a–d′–a′* – Valentini proposed a further 12 based on an arithmetical subdivision, producing, for example, the authentic form *d′–g′–d″* and the plagal form *g–d′–g′*. These 24 modes demand that composers observe particular beginnings, cadences and endings. The *Duplitonio* ends with a discourse in which Valentini discussed tones in cantus-firmus writing; they can be 'perfect, imperfect, more than perfect, compound, mixed, regular and irregular'. In his *Trattato della battuta musicale* he considered a problem much debated in his day: the practical application of the beat in musical performances. Among other views he upheld the theory of AGOSTINO PISA that 'the beat starts in the air at the moment when the hand begins to fall', but unlike Pisa he maintained that one sang not only when the hand was in motion, whether up or down, but also in its brief moments of repose, which, whether at the top or the bottom of the beat, should encourage singing more than the motion does.

SERGIO MARTINOTTI, AGOSTINO ZIINO

Valentini, Regina. *See* MINGOTTI, REGINA.

Valentini-Terrani, Lucia (*b* Padua, 29 Aug 1949). Italian mezzo-soprano. She studied at the Padua and Venice conservatories. Her début was at the Teatro Grande, Brescia, in 1969 as Angelina (*La Cenerentola*), a role that also introduced her at La Scala (1973) and at Covent Garden (1976) with the Scala company in the Ponnelle production conducted by Abbado. She toured with the company to Washington, Moscow and Tokyo, and first sang at the Metropolitan in 1974 as Isabella; she appeared with the Royal Opera at Covent Garden in 1982 as Mistress Quickly in *Falstaff*, conducted by Giulini. Her rich, firmly focussed tone, buoyant rhythm and control of *fioriture* are heard to particular advantage in Rossini; but she also excels in roles such as Massenet's Dulcinée and Charlotte and Musorgsky's Marina. Frequent engagements at the Rossini Festival, Pesaro, have included *La donna del lago* and *Il viaggio a Reims*, both of which are among her recordings, as are roles in *La fedeltà premiata*, *L'italiana in Algeri*, *Aida*, *Don Carlos*, *Nabucco*, Vivaldi's *Orlando furioso* and Offenbach's *La Grande-Duchesse de Gérolstein*.

NOËL GOODWIN

Valentino, Henri Justin Armand Joseph (*b* Lille, 14 Oct 1785; *d* Versailles, ?28 Jan 1865). French conductor. At the age of 14 he conducted a theatre orchestra (probably at Lille); later he held a similar post in Rouen. He became deputy conductor at the Paris Opéra in about 1820, and from 1824 to 1830 shared conducting duties there with Habeneck; he directed the premières of *La muette de Portici* and *Guillaume Tell*. As chief conductor of the Opéra-Comique from 1831 he led the first performance of *Zampa*. He resigned and settled in Chantilly in 1836 but returned to Paris the following year to direct the Concerts St Honoré, in which programmes mixed the instrumental works of Haydn, Mozart, Beethoven and turn-of-the-century French composers (conducted by Valentino) with quadrilles, waltzes and contredanses (directed by Fessy and Dufresne). The 'Concerts Valentino' were popular but always on the edge of extinction; the 1839 season was finished early; the series was closed definitively in 1841, possibly (if the *Revue et gazette musicale* is to be believed) by government order. In addition to introducing the Viennese Classical repertory to a new audience, Valentino's concerts provided one of the few public arenas for the performance of instrumental works by contemporary composers, including Lindpaintner, Mendelssohn, Rosenhain, Tessier and Turcas. Despite being offered extremely favourable terms by Léon Pillet, Valentino refused an invitation to succeed Habeneck as conductor of the Opéra in 1846. During his lifetime, Valentino's reputation as a conductor equalled that of Habeneck; Pougin praised his energy, precision and ability to inspire performers and listeners.

JEFFREY COOPER/KATHARINE ELLIS

Valenzuela, Pedro [Valenzola, Pietro] (*fl* 1569–79). Italian composer of Spanish origin. He was in Verona in September 1569, and the Accademia Filarmonica, which favoured foreign musicians, engaged him for a public musical ceremony; he performed with such success that they offered him a permanent post as their *maestro*, a salaried position which involved giving private lessons to the members and which was second in rank to the then vacant post of *maestro di musica dell'Accademia*. However, he could not have been the successor of Ippolito Chamaterò (as stated in *EinsteinIM*), who was *maestro dell'Accademia* only until December 1563. Valenzuela, dissatisfied perhaps with his salary, resigned from his post in December 1569 and received 2 scudi as a gratuity. On 15 September 1577 the Procurators of S Marco, Venice, appointed him as a singer in the choir of the basilica, at a

salary of 500 ducats a year, in recognition of his abilities as singer and composer. He still occupied this post in 1578, as the title-page and the date of publication of his madrigals prove; the *maestro di cappella* at that time was Zarlino. Soon afterwards, however, Valenzuela left Venice and in 1579 he appears to have become an alto in the choir of SS Annunziata in Naples, which was one of the best choirs in Europe at that time; the musical director was Giovanni Domenico da Nola. This move to Naples explains the frequent appearance of the epithet 'da Napoli' added to his Italianized name Valenzola.

The variety of content of Valenzuela's collection of madrigals of 1578 reflects a taste characteristic of the connoisseurs of an Accademia. The volume includes a madrigal cycle on Petrarch's eight-stanza canzone, *In quella parte dove Amor mi sprona*, as well as settings of two of the poet's most famous sonnets: *Pace non trovo* and the penitential *Padre del ciel*. Also included are a setting of Ariosto's, *La verginella*, suitable for a wedding, and one of a poem by Girolamo Parabosco, *Voi volete ch'io muoia*. The authors of the other texts, all in the style of Petrarch, have not yet been identified: the most impressive among them are the opening madrigal written in honour of the members of the Accademia, *Là dove altiero*, and the customary final dialogue, *Laura gentile*.

Valenzuela was unaffected by the flowering of Spanish secular polyphony dominated by the villancico; he adopted the term 'madrigale', as did other Catalan composers, and faithfully observed the spirit and forms of the contemporary Italian madrigal. It is likely that he received his musical instruction in the region of Venice, which included Verona in its area of influence at that time. An exception to this style of writing is provided by the setting of the canzone, which is fairly bold in conception; it is almost anachronistic and static in its harmonies, but more 'modern' in its flowing rhythm and flexible alternations of faster and slower movement: these features bring the music close to the ideal of the 'cantus suavis' of Palestrina, recalling Festa or Arcadelt in certain archaic symmetrical patterns. In other madrigals, however, there is a somewhat cautious stylistic change; Valenzuela, stimulated by a bolder artistic climate, gradually tried to achieve a more lively style, characteristic of Venetian music. Among other features of this new style are a greater concern with text expression, the domination of colour over line, and exactness of declamation. Although the polychoral works, which were written for specific occasions, have a complex, rich and colourful sound, they are far surpassed by the delicate lyricism and exquisite grace of a piece such as *La verginella*. Valenzuela's setting is worthy to stand alongside the more celebrated and simpler versions by such composers as Andrea Gabrieli, Ingegneri, Wert and Byrd.

FRANCESCO BUSSI

Valera (Chamizo), Roberto (*b* Havana, 21 Dec 1938). Cuban composer and educator. He studied piano and singing at the Municipal Conservatory in Havana and education at Havana University. From 1961 he worked at the Cuban Institute for Cinematic Art and Industry (ICAIC); his music written that year for the documentary *Revolución en el mar* launched his composing career. Other early works include the ballets *Estudio rítmico* (1962) and *Ensayo* (1963). From 1965 to 1967 he took postgraduate studies in composition at the State Higher School of Music in Warsaw with Rudzinski and Dobrowolski. From 1968 he taught at various music schools in Havana, and in 1976 became professor of composition at the Instituto Superior de Arte, where he also acted as vice-dean and then dean of the music faculty. From 1989 to 1992 he was president of the Asociación de Músicos de la Unión de Escritores y Artistas de Cuba.

Valera was a leading figure among the Cuban avant garde of the 1960s. In works as such as *Conjuro* (1968) and *Devenir* (1968), serial and aleatory techniques are coupled with a highly dramatic, intrinsically Romantic style. Works with different approaches followed, preserving, nevertheless, the stylistic consistency of an output, rooted in a combination of native Cuban characteristic and 'international' composition techniques. Choral works are an important part of Valera's music, notable among which are *Iré a Santiago* (1969) and *Quisiera (Guaguancaglia, quasi una passacaglia)* (1971); they contain his clearest and most authentic use of the *son* and the rumba in a musical language accessible to performers and audience alike. *Movimiento concertante* for solo guitar, wind band and percussion (1980), was written for the American Wind SO in Pittsburgh; with the Violin Concerto (1982) and *Concierto por la paz* for saxophone and orchestra (1985), it forms a trilogy of works which all employ greatly expanded sonata form, and which avoid the use of perfect intervals, preferring seconds, thirds and their inversions. Valera has also composed electro-acoustic tape works and music for educational purposes. He has contributed to conferences on Latin American music.

VICTORIA ELI RODRÍGUEZ

Valeri, Gaetano (*b* Padua, 21 Sept 1760; *d* Padua, 13 April 1822). Italian composer, organist and pianist. After studying art he received musical instruction from F.G. Turini at the basilica of S Giustina in Padua and became organist at the churches of S Maria del Carmine and S Agostino. He was known as an excellent pianist, a reputation which his own piano works substantiate. In addition to his sonatas for two and four hands, a group of 15 piano cadenzas reveal a formidable technique.

Most of Valeri's surviving compositions are sacred works written for Padua Cathedral, which he served for nearly 35 years. On 1 December 1785 he was appointed organist there in succession to M. Sibiliato, and held the post until 20 January 1803 when A. Mini replaced him; on 9 August 1805 he succeeded F.A. Marchetti as *maestro di cappella*, a position he held until his death. Many of his liturgical works were first written for mixed choir (SATB) and later rewritten for men's chorus (TTB or TTBB), reflecting the gradual disappearance of castratos from the ranks of the cathedral singers. His accompaniments were usually for large orchestra or wind band but sometimes reworked for small ensemble or organ alone; the organ parts are often written out on two staves with indications of registration. In a few works, like the *Laudate pueri* in B♭ for four voices, the organ has a brilliant concerto-like obbligato part.

Valeri's organ sonatas are remarkably fine compositions, possibly the last Italian works in this genre before the 19th-century decay in Italian organ playing. Rarely in more than one movement, they nonetheless exploit the tonal range of the late 18th-century Italian instrument. A dozen were published in 1785 and reprinted three times during his lifetime. Valeri composed little for the theatre, but his short *Il trionfo di Alessandro sopra se stesso* (given at Padua in 1792) is unusual: its libretto, recalling that of Rousseau's *Pigmalion*, not only gives the dialogue and describes the stage actions of the singers, but indicates the length (from a few seconds to several minutes) of 40 passages of music and characterizes the music as it changes during the opera's 11 scenes. Regrettably, the score, like that of an oratorio written for the Convento dei Padri Scalzi, is lost.

SVEN HANSELL/LUISELLA MOLINA

Valerius, Adriaen [Adrianus] (*b* ?Middelburg, *c*1570; *d* Veere, 27 Jan 1625). Dutch magistrate, lawyer and poet. He was probably a son of François Valéry, a French soldier who from 1569 lived in Middelburg, where he became a notary and was musically active. Valerius became burgomaster of Veere about 1592, and from 1598 he was a member of the Chamber of Rhetoric. His first known publication was a poem in the anthology *Zeevsche Nachtegael* (Middelburg, 1623), but his place in music history was established by the posthumously published *Neder-landtsche gedenck-clanck* (Haarlem, 1626/*R*; ed. P.J. Meertens, N.B. Tenhaeff and A. Komter-Kuipers, Amsterdam, 1942), a history of the wars between the Netherlands and Spain including 76 popular songs, most of the texts of which were written by Valerius himself. The collection is unusual in that the tunes of the songs were printed, whereas most other collections of the time gave only the names of the tunes to which texts were set. The songs, which have inspired several 20th-century Dutch composers, have accompaniments in French tablature for one or more seven-stringed lutes and four-stringed cittern; their melodies are derived from English, German, French and Italian popular tunes. Some of them have regained their popularity, for example *Wilt heden nu treden*, which after World War I became known in Germany and Austria as *Das niederländische Dankgebet* and in the USA as the *Prayer of Thanksgiving*.

ALBERT CLEMENT

Valesi, Fulgenzio (*b* Parma, ?*c*1565; *d* ?after 1614). Italian composer and printer. From the dedication of his *Primo libro di napolitane* it appears that he was born and grew up in Parma and that this was his first work. He was a Cistercian monk at the convent of S Croce in Gerusalemme, Rome, from 1593 to 1600. At this time many references to him appeared in documents relating to the plan for the printing of the Roman Gradual, corrected in accordance with the dictates of the Council of Trent. Together with Leonardo Parasoli, Valesi obtained from Pope Clement VIII on 16 September 1593 the privilege of printing the books of chants by a presumably new process of their own invention, using notes and letters of large proportions. The musical text to be printed should have been corrected by Palestrina, who died, however, before finishing the work. Iginio, the son and heir of Palestrina, supplied a text tampered with by other hands, which led to a long lawsuit, begun in 1596. During the complicated proceedings Valesi, originally the holder, with other associates, of Palestrina's manuscript, left the association and was instructed by the Congregation of Rites to examine the manuscript with G.M. Nanino, G.A. Dragoni and Marenzio to see if it corresponded to correct liturgical usage; the lawsuit occasioned several informed and authoritative statements from Valesi. Soon after 1600 he left Rome and seems to have begun a life of adventure. According to the testimony of his former associate Giovanni Battista Raimondi, he may have been seen on the way to Geneva wearing a soldier's uniform. He may have been in Milan in about 1611, for his op.2 was printed there and some of his compositions were included in Milanese collections. In 1614 he was probably in touch with Adriano Banchieri, who included one of his canons in his *Cartella musicale*, published in Venice in that year.

MARIANGELA DONÀ

Valesi [Vallesi], **Giovanni** [Walleshauser, Johann Evangelist] (*b* Unterhattenhofen [now Hattenhofen], Upper Bavaria, 28 April 1735; *d* Munich, 10 Jan 1816). German tenor and singing teacher. A pupil of Camerloher, he held posts as a court singer in Munich and was a member of the Munich Hofkapelle, 1770–94. He also sang in Amsterdam and Brussels (1755), in Italy (after 1757, when he assumed the name Valesi, and 1770–75) and in Prague, Dresden and Berlin (1777–8). He sang in the first performance of Mozart's *La finta giardiniera* (1775) in Munich, where he also created the part of the High Priest of Neptune in the first performance of *Idomeneo* (1781). He trained over 200 singers, among them his children Anna (1776–92), Joseph (1778–1807), Magdalena (*b* 1781), Crescentia (*b* 1785) and Thekla (1789–1868), Valentin Adamberger and Carl Maria von Weber.

HANS SCHMID

Valet, Nicolas. *See* VALLET, NICOLAS.

Valla, Domenico [Fattorin da Reggio] (*fl* 1600–05). Italian composer. He was engaged as a singer at Reggio nell'Emilia Cathedral in January 1600 and from 14 August functioned also as assistant to the *maestro di cappella*. His only known work is *Il primo libro de madrigali* (Venice, 1605), for three voices, published under the name Fattorin da Reggio. The pieces in it, some of which are settings of texts by Guarini and Marino, combine the conventional imagery of the polyphonic madrigal with a fairly well-developed trio texture, similar to the three-voice madrigals of Baccusi and Antonio Il Verso. He was probably related to Pellegrino Valla.

RICHARD DI GENNARO

Valla, Giorgio (*b* Piacenza, aut. 1447; *d* Venice, 23 Jan 1500). Italian professor of classics and humanities. He was the first Italian student of Greek letters to examine in some depth the ancient treatises of Aristoxenus, Euclid, Cleonides, Nicomachus of Gernsa, Aristides Quintilianus, Ptolemy, Porphyry and Bryennius, of which he personally owned good copies, several of which survive (in *I-MOe* and *Nn*). He studied Greek with Constantin Lascaris in Milan and sciences and mathematics at the University of Pavia. He later taught humanities at Pavia between 1467 and 1484 and for brief periods also in Milan and Genoa. In 1485 he moved to Venice as professor of Latin language and literature.

His most important work is *De expetendis, et fugiendis rebus opus*, published posthumously by his adopted son Gian Pietro Valla Cademusto (Venice, 1501). Books 5 to 9 form a treatise *De harmonica*, which Valla had completed by 1491. It is unique for its time in that it did not depend on Boethius for its exposition of Greek music theory but was based directly on Greek sources, mainly the treatises on harmonics of Ptolemy, Aristides Quintilianus, and especially Bryennius, whose books 2 and 3 are translated in Valla's books 4 and 5 on music. Valla transmitted much of the doctrine faithfully, but misunderstood some aspects. Thus he described the functioning of Ptolemy's system of *tonoi* correctly but he transposed the Hypodorian instead of the Dorian octave species to produce the other *tonoi* (including the Hypermixolydian

rejected by Ptolemy). He also enumerated the octave species incorrectly. He published for the first time Ptolemy's tunings in the three genera: enharmonic, chromatic and diatonic. Among his numerous translations from Greek into Latin are the *Harmonicorum introductorium* of Cleonides, Euclid's *Sectio canonis* (Venice, 1497), under the misapprehension that it belonged to the same treatise, and Aristotle's *Poetica* (Venice, 1498).

CLAUDE V. PALISCA

Valla, Pellegrino [Peregrino] (*fl* 1587–95). Italian composer, probably related to Domenico Valla. He was a priest and *maestro di cappella* of the Reggio nell'Emilia Cathedral, taking up this position on or before 1 June 1593 and leaving between 19 November 1594 and 24 January 1595. His only publication, the *Psalmorum Davidis cum octo vocibus … liber primus* (Venice, 1589, inc.) contains, in addition to the psalm settings, a *Magnificat* and a *Te Deum*. Valla also edited and contributed three madrigals to Pratoneri's *Madrigali ariosi* (RISM 1587[11]); this collection, whose dedication to Fabio Masetti is signed by Valla, opens with his own contributions, the first of which commemorates the departure of Masetti 'del bel Reggio nostro'.

IAIN FENLON

Vallade, Johann Baptist Anton (*b c*1722; *d c*1780). German organist and composer. He was married in Mendorf, Ingolstadt, on 11 November 1747 and served as an organist there. With the exception of a collection of German arias, *Nepomucenische Sing- und Lob-Octav* (Augsburg, 1756), his publications consist of keyboard pieces. Two of them, *Dreyfaches musicalisches Exercitium auf die Orgel oder VII. Praeambula und Fugen nach dem heutigen Goût* (Augsburg, 1755) and *Der praeludierende Organist* (Augsburg, 1757), have a didactic purpose. The first includes realizations of figured bass in a florid, prelude-like style; the second provides the inexperienced player with preludes in all 24 keys together with a system of numbered cadence points so that he may lengthen or shorten them at will. Vallade also wrote 16 fugues for the organ or harpsichord, *Musicalische Gemüths-Ergötzung* (Nuremberg, n.d.), which contain little material distinct from the bulk of south German organ music of the time. (*FrotscherG*)

HUGH J. McLEAN

Vallara, Francesco Maria (*b* Parma, 30 Aug 1687; *d* ?Mantua, 1740). Italian composer and authority on plainchant. He was held at his baptism by the Countess Barbara Ardizzi-Anguissola, representing Anna Isabella Duchess of Mantua, which suggests that his parents were of considerable social standing. Little is known of his life, except that he joined the Carmelite fraternity at Mantua; he was still with it in 1740, the supposed year of his death. He left several works on Gregorian chant which were highly admired in their day for their practical approach. His works are, however, of limited artistic value and now hold little interest for musicians.

GIAN PAOLO MINARDI

Vallas, Léon (*b* Roanne, 17 May 1879; *d* Lyons, 9 May 1956). French musicologist. After studying medicine (from 1897) he devoted himself entirely to music, taking the doctorate at Lyons in 1908 with a dissertation on music at the Académie de Lyon in the 18th century, and the doctorat d'Etat there in 1919 with dissertations on music and theatre at Lyons between 1688 and 1789 and on the theatre and town from 1694 to 1712. In 1900 he met d'Indy, and following his example founded a schola cantorum at Lyons with Georges Witkowski (1902); subsequently he gave courses in music history at the university (1908–11) and conservatory there (1912), and also at the Sorbonne (1928–30). In 1904 he organized lecture-recitals at Lyons (called Les Petits Concerts de Lyon from 1919) and in 1925, with Gabriel Bender, he founded the Paris Musique Vivante lectures, which dealt with contemporary music; he also gave series of lectures in the USA (1930–31).

As a music critic he wrote for *Tout Lyon* (1902), *Guide du concert* and *Guide musical* before joining the staff of *Progrès de Lyon* (1919–54); in 1903 he founded the *Revue musicale de Lyon* (from 1912 the *Revue française de musique* and from 1920 the *Nouvelle revue musicale*). He was also artistic director of Radiodiffusion de Lyon (1938–41), and president of the Société Française de Musicologie (1937–43). His main area of interest was French music of all periods; his books on Debussy, d'Indy and his teacher Franck combine thorough scholarship with fierce independence of mind.

Valle, Barbara. *See* STROZZI, BARBARA.

Valle, Pietro della. *See* DELLA VALLE, PIETRO.

Valle, Raul do (*b* Leme, São Paulo, 27 March 1936). Brazilian composer. He studied composition and conducting at the Santos Music Conservatory with Camargo Guarnieri, graduating in 1973. Earlier he studied theoretical subjects with Osvaldo Lacerda. He also studied with Nadia Boulanger at the Fontainebleau American Conservatory in 1974. The municipality of Campinas, São Paulo, commissioned from him a work to celebrate the bicentenary of the city. This resulted in his mass *Da nova e eterna aliança*. In 1975 he went to Geneva to enrol in Ginastera's course on composition for percussion. There he was awarded a prize for *Cambiantes* (1975), one of several he has received. From Switzerland he travelled to Baltimore, USA, where he presented several of his works. His compositions reveal atonal tendencies at first, then the experimentation with timbres and electro-acoustics which he undertook with Reibel at the Paris Groupe de Recherches Musicales. Raul do Valle has taught at the State University of Campinas since 1976. He is also a member of the Brazilian Academy of Music.

GERARD BÉHAGUE

Valledor y la Calle, Jacinto (*b* Madrid, 1744; *d* Madrid, *c*1809). Spanish composer. The son of a famous Madrid actor and actress, he received a literary and musical education. In 1768 he married the actress Gabriela Santos, for whom he wrote *La tonadilla de las seguidillas del apasionado* (ed. in J. Subirá: *La tonadilla escénica*, iii, Madrid, 1930), perhaps the first of his successful *tonadillas*. In 1781 he was in the service of the theatre in Barcelona, where he distinguished himself by his ability and his numerous productions. He spent 1784 in Madrid, hoping to succeed Pablo Esteve y Grimau there, but returned to Barcelona; however (as a document of 1800 shows), he was soon ordered to return to Madrid by virtue of a privilege granted to the capital to 'seize' promising provincial artists. In 1785 his *tonadilla La cantata vida y muerte del General Malbrú* (partly ed. in F. Pedrell: *Teatro lírico español*, La Coruña, 1897–8) was so extraordinarily successful in Madrid that a flurry of contemporary productions alluded to its music or characters. In spite of this popularity, Valledor's name only appears in a secondary role from 1785 to 1790 in two Madrid theatres (the Príncipe and de la Cruz), where he taught members of the companies for the modest sum of nine reales per day. On this salary, he feared by March 1800 that he would be 'thrown into the streets'; in 1807 he was granted ten reales, and though retired was permitted to collect them daily as 'an act of charity' in token of his 24 years of service to the Spanish theatre. A *sainete* and 25 *tonadillas* are in the Biblioteca Municipal, Madrid, and some uncatalogued works are in the Real Conservatorio Superior de Música.

ELEANOR RUSSELL

Vallee [Vallée], **Rudy** [Hubert Prior] (*b* Island Pond, VT, 28 July 1901; *d* North Hollywood, CA, 3 July 1986). American bandleader, singer, saxophonist, actor and publisher. From 1918 he learnt the saxophone and played in a theatre orchestra in Portland, Maine, then attended the University of Maine (1921) and Yale University (to 1927). In 1928 he formed his own band, the Connecticut Yankees; he made his début as a singer in *George White's Scandals* (1931), and appeared in Broadway musicals, television and over 20 films, mostly as a musician or comic actor. During the 1930s and 1940s, with his salutation 'Heigh-ho, everybody!', he was one of the most successful American bandleaders and singers, among the first crooners to inspire mass hysteria in his audience. With his thin, nasal voice and using a megaphone – later a microphone – he popularized the Maine *Stein Song*, the Yale *Whiffenpoof Song*, his own *I'm just a vagabond lover* and his theme song *My time is your time*. From 1945 he appeared frequently as a comic actor in films, and in the 1950s as a standup comedian in nightclubs. He returned to Broadway as an eccentric millionaire in the 1961 Loesser musical *How to Succeed in Business Without Really Trying*. He was president of the American Federation of Actors in the 1930s, founded the Ruval Music Company (1945) and later the Rudy Vallee Music Publication Company, and wrote several memoirs (1930, 1962 and 1975). An archive of personal papers, photographs, music scores and other materials documenting his career through 1975 are in the Thousand Oaks (California) Public Library.

DEANE L. ROOT

Vallerand, Jean (*b* Montreal, 24 Dec 1915; *d* Montreal, 24 June 1994). Canadian composer, critic and administrator. He had violin lessons with Lucien Sicotte (1922–35), studied composition with Claude Champagne (1939–42) and took a literature degree at the University of Montreal (1939). Throughout his life he dedicated himself to the education of the young and the general public. He served as secretary of the Quebec Province Conservatory (1942–63), lecturer at the University of Montreal (1951–66), director of music broadcasting for the CBC (1963–6) and cultural adviser with the Quebec delegation in Paris (1966–70). Vallerand was then successively director-general for training (1970), the conservatories (1971) and

the performing arts (from 1972) for the Quebec Ministry of Cultural Affairs. His career as a music critic began as editor of the *Quartier latin* (1936–41); thereafter he contributed to the newspapers *Le Canada* (1941–6), *Montréal-matin* (1947–8), *Le Devoir* (1952–61), *Nouveau journal* (1961–2) and *La presse* (1962–6). A stylish writer, he coupled a profound knowledge with a perceptive judgment of different musical currents. His works are few and belong to the mainstream of compositional development: the earliest, up to the Violin Sonata (1950), are marked by the influences to which he was introduced as a student; the *Etude concertante* (1969) returned to the serial language that had dominated his works during the 1950s. He became a member of the Order of Quebec in 1991.

LYSE RICHER/MARIE-THÉRÈSE LEFEBVRE

Valleria [Lohman; Schoening], **Alwina** (*b* Baltimore, 12 Oct 1848; *d* Nice, 17 Feb 1925). American soprano. She studied in London at the RAM and, after further instruction from Arditi, made her concert début in 1871 and was promptly engaged for Italian opera in St Petersburg, where she made her stage début on 23 October in *Linda di Chamounix*. She sang next in Germany and Milan, later in London at the Drury Lane Theatre (1873–5), Her Majesty's Theatre (1877–8), where she was highly successful as Micaëla, and, in a large number of parts, at Covent Garden (1879–82).

On 22 October 1879 Valleria made her début in New York under Mapleson as Gounod's Marguerite, adding Aida to her repertory in the same season. In 1882–3, back in England, she sang under Carl Rosa in productions in English of *Der fliegende Holländer* and *Tannhäuser*; in 1883 she was praised for her spirited creation of Mackenzie's Colomba. She made her Metropolitan Opera début on 26 October 1883 as Leonora (*Il trovatore*). Having returned to London, she created the principal parts in Goring Thomas's *Nadeshda* (1885) and Mackenzie's *The Troubadour* (1886). In 1882 she sang in oratorio for the first time in Manchester and the following year was very successful at the Handel and Leeds festivals. Her voice, which extended from *b*♭ to *d'''* (in her earlier years to *f'''*), was of considerable flexibility, fair power and volume and pleasing quality, and she was an admirable actress. (See O. Thompson: *The American Singer*, New York, 1937, pp.141–3.)

ALEXIS CHITTY/R

Vallerius, Harald (*b* Vallerstad, Östergötland, 25 Dec 1646; *d* Uppsala, 8 March 1716). Swedish mathematician, composer, organist and writer on music. After attending the secondary school at Linköping he went to the University of Uppsala, where he matriculated in 1666. His many-sided talents and humility soon attracted the attention of Olof Rudbeck, whose foremost pupil he became. In 1675 he was appointed director of music and in 1676 organist of the university; he held both posts until 1691. He graduated MA in 1679 and was appointed lecturer in mathematics in 1680 and professor in 1690. He retired in 1711. Vallerius also periodically lectured on music, and musical events took place regularly at his house. Through his manuscript theoretical works *Disputatio physico-musica de sono* (1674), *Disputatio physico-musica de modis* (1686) and *Disputatio de tactu musico* (1698) he inaugurated a tradition of writing music dissertations that continued through the first half of the following century.

Only one of Vallerius's compositions is extant, an unpretentious epithalamium (*Fägnesång*, in *S-LI*, *Sk*) of 1700. The rest of his music was destroyed by fires at his house (1692) and in Uppsala (1702), but through a letter of Olof Rudbeck's and the funeral oration by Johann Upmarck-Rosenadler (1716) it is known that it included an *Ode acclamatoria* (1675) for the coronation of Carl XI, a mourning cantata (1686) and music for the synod of the Swedish church in Uppsala (1693). Vallerius is musically most important for his work on the Swedish hymnal (1697) which, by royal command, he edited together with Rudbeck. Exactly how they divided the work between them is not clear, but all the evidence indicates that Vallerius must have been responsible for most of it. As some of the melodies have not been found elsewhere the possibility cannot be excluded that the editors wrote these particular ones themselves.

EVA HELENIUS

Vallet [Valet], **Nicolas** [Nicolaes] (*b* Corbény, Ile-de-France, *c*1583; *d* ?Amsterdam, after 1642). Netherlandish lutenist and composer of French birth. He settled in the Netherlands about 1613 and in his early years in Amsterdam published four costly lute books, which appeared under various Latin, French and Dutch titles. The two parts of *Secretum musarum* (1615–16) contain secular music, the other two books are of Calvinist psalm settings. The ambitious *Regia pietas* (1620), containing all 150 psalms, was sponsored by wealthy Amsterdam merchants. After 1620 Vallet concentrated on performing and teaching. A number of contracts between him and other musicians (mostly English) throw light on the work and social conditions of musicians in Amsterdam in the first half of the 17th century. On several occasions he

hired a musician to assist him in his musical duties, providing them with room and board as well as various agreed fees for playing in public with him. On 12 November 1626 he entered into a six-year partnership with the English musicians Richard Swift, Edward Hancock and Robert Tindel, who all lived in Amsterdam; the contract precisely stipulated their duties, fees and fines for non-participation and also included the founding of a dancing-school by Vallet and Hancock. The last known archival reference to Vallet, on 30 April 1633, makes it clear that he had been forced to give up all claim to his possessions, furniture and clothing because he was unable to pay his rent.

The publication in the 1640s of two instrumental collections with French and English song and dance tunes popular in the Netherlands reflects Vallet's activities as an entertainer at parties, weddings and other events. With Emanuel Adriaenssen and Joachim van den Hove, he was one of the most important figures in Netherlandish lute music at the time of Sweelinck. His music takes full advantage of the lute's resources. Except for some original fantasias and dances, the early lute music consists mainly of arrangements. His elaborate variations on popular tunes recall Sweelinck's keyboard works, and his 21 psalms for voice and lute, which are among his finest works, are also reminiscent of the older composer. Vallet's lute quartets reflect a semi-improvised ensemble practice. Concordances in sources from Germany, Austria and Sweden suggest that his lute music was influential in an eastward direction. His later publications are cited in Netherlandish sources of instrumental music.

RANDALL H. TOLLEFSEN/LOUIS PETER GRIJP

Vallette, Pierre (*b c*1525; *fl* 1552–61). French composer active in Switzerland. He temporarily replaced Loys Bourgeois as cantor at St Pierre, Geneva, in 1552 and from January to September 1553. He taught at the choir school from 1553 to 1561 and married in 1559. He returned to France in April 1561. His editions of the Calvinist Psalter, published in Geneva in 1556 and 1559 as *Octanteneuf pseaumes de David*, are remarkable for their notational innovations designed to aid in the teaching and collective singing of these melodies. In the 1556 edition solmization syllables were printed beside each note; by 1559 Vallette had in addition transposed some tunes so that all of the psalms were notated with the same clef (*c*4). Each edition also includes a modest preface by Vallette explaining the basic principles of solmization and its relationship to the performance of monophonic melodies. This preface seems likely to be the *Libret de la chanterie pour instruyre les enffans à chanter* that the Genevan authorities granted Vallette permission to print in 1556.

PAUL-ANDRÉ GAILLARD/RICHARD FREEDMAN

Valletti, Cesare (*b* Rome, 18 Dec 1922; *d* Genoa, 14 May 2000). Italian tenor. After studying privately he made his début at Bari in 1947 as Alfredo. In 1950 he took part in *Il turco in Italia* at the Teatro Eliseo, Rome, with Callas and Stabile; that autumn he sang Fenton (*Falstaff*) with the Scala company at Covent Garden. He sang regularly at La Scala, as Nemorino, Almaviva, Filipeto (*I quatro rusteghi*), Lindoro and other *tenore di grazia* roles. In 1953 he made his American début at San Francisco as Werther, and from 1953 to 1962 sang regularly at the Metropolitan, where he was especially admired as Don Ottavio (a role he also sang at the Salzburg Festival), Des Grieux, Ferrando and Ernesto. He returned to Covent Garden in 1958 to sing Alfredo opposite Callas, a performance which was recorded live. He also recorded Lindoro, Almaviva, Ernesto and Fenton, all of which display his exemplary, assured tenor technique and refined sense of style.

HAROLD ROSENTHAL/ALAN BLYTH

Vallin, Ninon [Vallin-Pardo, Eugénie] (*b* Montalieu-Vercieu, 8 Sept 1886; *d* Lyons, 22 Nov 1961). French soprano. She studied in Lyons and made her début in 1912 as Micaëla with the Opéra-Comique, where she continued to sing throughout her career in a repertory that included Mimì, Mignon, Louise, Manon and Carmen. At La Scala (1916–17) she sang Mignon, Wolf-Ferrari's Susanna and the Princess (*Marouf*). She first appeared at the Teatro Colón, Buenos Aires, in 1916 as Gounod's Marguerite, returning there regularly for 20 years. In 1920 she made her Opéra début as Thaïs. She appeared at San Francisco (1934) and Monte Carlo (1943). Her repertory also included the three *Hoffmann* heroines, as well as Alcestis, Mélisande and Countess Almaviva, which she sang in 1946 at the Opéra-Comique. Vallin was a distinguished interpreter of *mélodies*, as her excellent

records confirm, including many Hahn songs and arrangements by Joaquín Nin of Spanish folksongs, in both cases with the composer as accompanist. Her many operatic recordings reveal the distinctive flavour of her voice and her inborn sense of style that did not preclude impassioned involvement with the music in hand, all heard at their best in her complete *Werther* with Georges Thill.

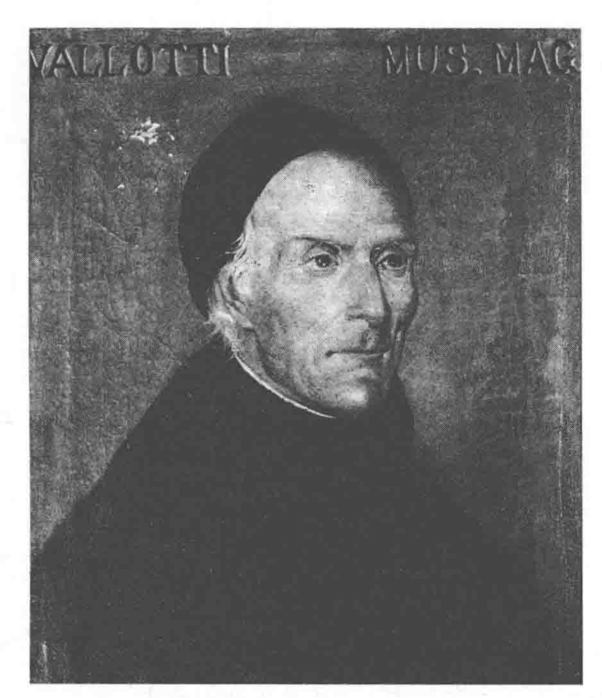
MARTIN COOPER/ELIZABETH FORBES/ALAN BLYTH



Vallotti, Francesco Antonio (*b* Vercelli, Piedmont, 11 June 1697; *d* Padua, 10 Jan 1780). Italian composer and theorist. He was enabled by Padre Beccaria, superior of the Franciscan monastery of S Eusebi (the cathedral of Vercelli), to study with G.A. Bissone, *maestro di cappella* at the cathedral. His scores dated 1710 and 1712 demonstrate a thorough schooling in composition. An interest in theology and philosophy led him to further studies; at the age of 18 he visited Chambéry to join the Franciscan order, and he then spent a year in Crest (Dauphiné) where he took vows on 16 December 1716. By special dispensation, on account of his youth, from the Bishop of Saluzzo, Vallotti was ordained priest on 7 July 1720, after a period of study in Cuneo under the philosopher Castellani the elder. In 1721 Castellani sponsored him in a public debate possibly in Milan where he went to study with the theologian D.F. Donati; Donati moved to Padua and Vallotti followed him, arriving on 6 November 1721.

It is generally believed that Vallotti continued musical studies in Padua with F.A. Calegari, *maestro di cappella* of the basilica of S Antonio. He was elected third organist of the basilica, succeeding G.L. Albori, on 28 December 1722 and took up the post the following February. There he could learn Calegari's musical theory, upon which, he later admitted, his own was partly based. While his dedication to his musical duties may not initially have exceeded those of other university students who sometimes served as temporary organists or choristers, it doubtless increased after his failure in October 1723 to qualify for advanced theological studies. In the latter half of 1725 he replaced Alessio Quadrio at the fourth organ at functions not requiring the third, and late in 1727, when the Paduan composer G.A. Rinaldi took over from Calegari as *maestro di cappella*, Vallotti was granted an increase in salary (from 80 to 100 ducats annually) for assisting the ailing *maestro*. Several compositions from this time as well as his theoretical work – Vallotti later claimed that his theoretical system was worked out by 1728 – must have recommended him as Rinaldi's successor. After Rinaldi's death (8 December 1729), however, Vallotti's candidacy was challenged, but recommendations from Antonio Lotti, Antonio Biffi and Antonio Pacelli in Venice prompted the basilica's administrators to appoint him *maestro* (by four votes to three) on 21 February 1730. He held the position for 50 years, with an annual salary of 200 ducats plus 40 ducats for music paper and copyists.

Vallotti was now in charge of a choir of 16 singers and a celebrated orchestra of 16 string players, with Tartini as leader and Vandini as first cellist. There were also several wind players; although inexplicably absent from Tartini's scores, an oboe, trumpet and at least two organs were usually available and Vallotti's music calls for these along with bassoon and horn (the two last reserved for high feasts). Vallotti, rather than Tartini, was officially consulted when new instrumentalists were engaged, and he conducted the orchestra whenever it accompanied the choir. Curiously, in some of his liturgical works the instrumental sections lacked a melodic line, unless (as Tebaldini conjectured) Tartini or another violinist improvised a part against the figured bass. The quality and size of the orchestra gradually declined after a fire in the basilica in 1749. When Burney heard the group in 1770, he thought it inferior to its reputation and complained of the loud accompanying organ. By the beginning of the 19th century the musical forces had further deteriorated, and Vallotti's successors Antonio Calegari and Melchiorre Balbi reduced many of his works for four voices and orchestra to two-part men's choir with organ.

As well as a concerted choral style, Vallotti cultivated a strict contrapuntal manner based on his study of 16th-century masters. Between about 1730 and 1760 he transcribed numerous masses of Palestrina, the introits of Costanzo Porta (1566) and other Renaissance works (now in *I-Pca*). His own antiphons and introits with a tenor cantus firmus in long notes represent a masterful synthesis of Renaissance contrapuntal techniques and tonal harmonic requirements. His reputation as a contrapuntist prompted other Franciscans such as G.B. Martini in Bologna, Giuseppe Paolucci in Venice and A.M. Belli in Assisi to request scores to study and perform. Frederick the Great commissioned a mass and *Te Deum* for the dedication in 1773 of St Hedwig's Cathedral, Berlin, and a few years later Carl Theodor, Elector Palatine, sent Vallotti a gold medal to commemorate performances of his music in Mannheim (as related in correspondence with Vallotti's former pupil G.J. Vogler in 1776). Knowledge of Vallotti's contrapuntal art was transmitted to the 19th century mainly by L.A. Sabbatini's *Trattato sopra le fughe* (Venice, 1802), which quoted extensively from Vallotti's compositions. Verdi's admiration for Vallotti was probably fostered by that book or by Asioli's *Trattato d'armonia* (Milan, 1813), which quoted Vallotti's music briefly but called him 'the greatest of Italian harmonists'. In 1896, when Verdi was composing his *Te Deum*, he reported to Boito his youthful studies of Vallotti's music and wrote to Tebaldini at Padua asking for a copy of a Vallotti's *Te Deum*.

Vallotti's importance as a theorist has not yet been gauged. Except for the first volume of his magnum opus *Della scienza teorica e pratica*, published shortly before his death, his theoretical writings have remained little known. In 1783 the second, third and fourth books of this treatise were entrusted to G.B. Martini and, although Martini wrote prefaces to each and enthusiastically recommended their publication, they were not printed until 1950 when they were issued in an unscholarly edition as *Trattato della moderna musica*. In addition to technical descriptions of intervals, chords and other elements of music, Vallotti included practical guidance on numerous musical problems, including an elegant system of unequal temperament for tuning keyboard instruments (*see* WELL-TEMPERED CLAVIER). In the third book Vallotti explains that F.A. Calegari discovered the relationship between the root position and inversions of chords, and that both he and Vallotti applied this knowledge in their

Francesco Antonio Vallotti: portrait by an unknown artist (Biblioteca Antoniana, Basilica del Santo, Padua)

compositions from the mid-1720s even though they did not learn until about 1737 of Rameau's treatment of inversions in his *Traité de l'harmonie* (1722). Vallotti's ideas on this subject are discussed by L.A. Sabbatini in his *Trattato di contrappunto* (*I-Pca*). It should be mentioned that Vallotti did not agree with Calegari in all matters, nor with Tartini in certain theoretical details. Vallotti's treatise is not a simplification of Tartini's *Trattato* of 1754. While the published portion is less technical than Tartini's, manuscripts with Vallotti's algebraic calculations in the S Antonio archives (along with his acknowledgement of assistance from Abbot Suzzi and Alessandro Barca, professors at Padua University) indicate a mathematical interest in no way inferior to Tartini's. Vallotti's correspondence with Count Giordano Riccati di Castelfranco from 1734 until 1777 probes deeply into scientific matters relating to music.

In a letter of 22 November 1733 to J.J. Fux, Vallotti argued that Fux's *Gradus ad Parnassum* of 1725 should have recognized the 12 modes used by Palestrina, Porta and others instead of claiming that there were but six; he added that the 12 modes of the ancients were replaced by two scales, the major and minor (as he explained in the treatise that he was then writing). As well as this letter to Fux, Vallotti's correspondence includes 74 letters to G.B. Martini (dated 1734–79, in *I-Bc*) and a further 63 folders of letters (*Pca*), many of which await examination. His detailed criticisms made in 1760 and 1779, when helping to select *maestri* for S Petronio, Bologna, and Milan Cathedral, are extant with the candidates' pieces (in *Bc*, *Bsf*, *Md*). Vallotti's private collection of letters, compositions, theoretical writings and other papers were deposited in the archive of the Arca del Santo, the governing body of S Antonio, in May 1791. A marble statue of Vallotti was to have been erected in the basilica according to a decree of 16 December 1782, but instead his bust was placed with a full-length statue of Tartini in the Prato della Valle in 1806. A tablet commemorating Vallotti was added in the same park in 1881. Two portraits in oil are in the basilica, one of which is reproduced here (see illustration).

WORKS

For thematic catalogue, see Massaro (in Cattin, 1981)
many MSS in I-Ac and Pca are autograph scores; most works a 4 for SATB; most accompaniments for organ and strings

MASSES, MASS MOVEMENTS

Kyrie–Gloria–Credo: 2vv, *A-Wgm*, *Wn*, *I-Pca*, *Vnm*; 3vv, *VId*; 4vv, *A-Wgm*, *D-Bsb*, *Dl*
Kyrie: 3vv, *I-Vnm*; 4vv, *D-Mbs*, *I-Pc*, *Pca*; 5vv, *Pca*, *Vnm*; 8vv, *Pca*
Gloria: 2vv, *Pca*, *Vnm*; 4vv, *A-Wn*, *D-Mbs*, *I-Ac*, *Bc*, *Pca*; 5vv, *Bc*, *Pca*; 8vv, *D-Mbs*, *I-Ac*, *Bc*, *Pca*, *Pl*
Credo: 2vv, *Pca*, *Vnm*; 4vv, *A-Wn*, *D-Bsb*, *Mbs*, *I-Bc*, *Pc*, *Pca*, *Pl*, *Vnm*; 5vv, *D-Mbs*, *I-Pca*; 6vv, *Vnm*; 8vv, *Ac*
Gratias agimus, 1v, *Pca*; Qui tollis, 1–4vv, *D-Mbs*, *I-Pca*; Qui sedes, 1v, *Pca*; Quoniam, 1v, *Pca*; Cum sancto spiritu, 8vv, *Bc*; Crucifixus, 2vv, *Vnm*

REQUIEM MASS MOVEMENTS

Introit: 2vv, *I-Pca*; 4vv, *Bc*, *Pc*, *Pca*, *Pl*
Sequence: 2vv, *Pca*; 4vv, *A-Wgm*, *Wn*, *D-Bsb*, *I-Bc*, *Bsf*, *Pc*, *Pca*, *Pl*, *Vnm*; 5vv, *A-Wn*, *D-Dl*, *GB-Lbl*, *I-Pca*, *Tn*
Other movts: 4vv, *D-Mbs*; 8vv, *I-Bc*, *Pc*, *Pca*

OTHER SACRED VOCAL

Esequie per i teologi defunti, 4vv, *I-Pca*
Vespers for the dead, 8vv, *Pca*, *Vnm*
Introits, 2–8vv, *A-Wn*, *I-Pca*
Antiphons: Alma Redemptoris mater, 1–8vv, *I-Pca*; Ave regina, 1–8vv, *Pca*, *Vnm*; Regina coeli, 1–8vv, *Pca*; Salve regina, 1–8vv, *A-Wn*, *D-Bsb*, *Dl*, *Mbs*, *I-Bc*, *Pca*; 4 ants with pss for Compline, 8vv, *Ac*, *Pca*; Vesper ants, 1–8vv, *D-Mbs*, *I-Pca*
Psalms: Beati omnes, 2vv, *Pca*; Beatus vir, 4–8vv, *A-Wgm*, *Wn*, *D-Bsb*, *Dl*, *Mbs*, *I-Ac*, *Bc*, *Pca*; Benedictus, 4vv, *VId*; Confitebor, 2–8vv, *Pca*; Credidi propter, 8vv, *Pca*; Cum invocarem, 2–4vv, *Pca*; De profundis, 4–8vv, *A-Wgm*, *Wn*, *I-Bc*, *FAN*, *Pca*, *Vnm*; Dixit Dominus, 4–8vv, *Bc*, *Pca*; Domine ad adiuvandum, 4–8vv, *Pca*; Ecce nunc, 2–3vv, *Pca*; Ecce quam bonum, 8vv, *Pca*; In convertendo Dominus, 8vv, *D-Bsb*, *I-Pca*; In exitu Israel, 8vv, *D-Bsb*, *Mbs*, *I-Pca*; In te Domine speravi, 2vv, *Pca*; Laetatus sum, 8vv, *A-Wn*, *I-Pca*; Lauda Jerusalem, 8vv, *Pca*; Laudate Dominum, 4–8vv, *Pca*; Laudate pueri, 2–8vv, *Pca*, *Vnm*; Memento Domine, 8vv, *Pca*; Miserere, 2–4vv, *A-Wgm*, *GB-Ob*, *I-Fc*, *Mc*, *Pc*, *Pca*, *VId*, *Vnm*; Nisi Dominus, 2–8vv, *Pca*; Quaemadmodum, 8vv, *Pca*; Quam dilecta, 8vv, *Pca*; Qui habitat, 8vv, *Pca*; Voce me ad Dominum, 8vv, *Ac*, *Bc*, *Pc*; Pss for Terce, 8vv, *Pca*; Compline pss with 4 antiphons, 8vv, *Ac*; Pss for Vespers for the dead, 8vv, *Pca*
Responses: for Holy Week, 4vv, *A-Wn*, *D-Mbs*, *I-Pca*; for Pontifical funeral, 8vv, *Pca*; for S Spina, 8vv, *Pca*; others, *D-Bsb*, *Mbs*; In monte olive, 4vv, *LÜh*; O lingua benedicta, 1v, *I-Pca*; Si quaeris miracula, 2–8vv, *A-Wgm*, *D-Dl*, *Mbs*, *I-Bc*, *Pca*, *Vnm*
Hymns: Pange lingua, 1–4vv, *Bc*, *Pca*; Tantum ergo, 4–8vv, *Ac*, *Pc*; Te Deum, 2–8vv, *D-Bsb*, *I-Ac*, *Pca*; Te lucis, 1v, *Pca*; Ut queant laxis, 3vv, *Vnm*; Veni creator, 8vv, *Pca*, *VId*; others, 1–4vv, *Pca*; Trisagio ed inno pei Martedi di S Antonio, *Vnm*
Canticles: Mag, 4–8vv, *A-Wgm*, *Wn*, *I-Pca*, *Vnm*; Nunc, 2–4vv, *Pca*
Litanies: *VId*; della BVM, *Pca*; pel Sabato Santo, *Pca*; dei Santi, *Pc*, *Pca*
Versicles: De torrente, 1v, *Pca*; Et misericordia, 1v, *Pca*; Gloria Patri, 1v, *Pca*; In manus tuas, 1v, *Pca*; In noctibus, 1v, *Pca*; Jube Domine, 2–4vv, *Pca*; O vos omnes, 3–4vv, *A-Wgm*, *Wn*, *F-Pn*, *I-Bc*, *BGc*, *Md*, *Pc*, *Pca*, *Vnm*; Quid sum miser, 1v, *Pc*, *Pca*; Qui sicut, 1v, *Pca*; Sepulto Domino, 3–4vv, *A-Wn*, *F-Pn*, *I-Bc*, *BGc*, *Md*, *Pca*, *Vnm*; Tecum principium, 1v, *Pca*
Others: Confiteor Deo, 1v, *Pca*; En gratulemur, 8vv, *Pca*; Laetare Doctor inclyte, 1v, *Bsf*; Lauda Sion, sequence, 4vv, *Pc*, *Pca*; 9 lessons for Holy Week, 1v, *Pca*; O lingua benedicta, 1–8vv, *Pca*; Pietà vi supplico, 2vv, *A-Wn*; Popule meus, 4vv, *A-Wgm*, *D-Bsb*; Salve Sancte Pater, 8vv, *I-Ac*; Transiti di S Antonio, 3vv, *A-Wn*, *D-Bsb*, *F-Pn*, *I-Pca*, *Vnm*; Alleluia, Benedictus, Tract, etc., for Holy Saturday, 8vv, *Pca*; 3 motets, 1v, *A-Wn*, *D-Bsb*, *I-Pca*

SECULAR

Figli, qual duol v'ingombra? (cant.), T, *D-Mbs*, *I-Vnm*
22 fugues, 4 insts, *D-Mbs*
8 fugues, insts, *I-CORc*

THEORETICAL WORKS

Della scienza teorica e pratica della moderna musica, bk1 (Padua, 1779); bks2–4, MS, *I-Pca* [preliminary drafts of bks1–4, *Pca*]; ed. G. Zanon and B. Rizzi as *Trattato della moderna musica* (Padua, 1950)
Una memoria di varie decisioni teorico-pratiche spettanti al giusto intendimento delle materie musicali (MS, 1725, *Pca*)
Serie di vari autori greci, latini, italiani e francesi che hanno scritto della musica o antica o moderna con varie erudizioni ed opinioni diversi (MS, 1732, *Pca*)
Trattato dei tuoni modali, si ecclesiastici corali, che musicali ed armoniali, i: *Compendio storico de' tuoni modali della musica greca, del canto ecclesiastico, del canto figurato e della moderna musica*; ii: *Trattato de' tuoni modali, in cui si tratta dei dodici tuoni ecclesiastici e corali* (MSS, 1733–5, *Pca*)
Se il tuono minore naturale abbia per base la corda e ottava di D la sol re ovvero quella di A la mi re (MS, *Pca*)
Dell'estensione e carattere dei più comuni stromenti (MS, *Vnm*)
Contrappunto principii (MS, *Vnm*)
11 bassi del prete Francescantonio Vallotti (MS, *Vnm*); others, *D-MÜs*
2 untitled MSS: calculations to establish the weight of bells according to their sounds, project to construct an organ, both *I-Pca*

SVEN HANSELL

Valls, Francesc [Francisco] (*b* ?Barcelona, ?1665; *d* Barcelona, 3 Feb 1747). Catalan composer and theorist. His birth date is usually given as 1665, but Pavia i Simó (1990) proposed a date of about 1671, based on evidence from Valls's *Missa regalis*. In 1688 he was placed in charge of the music at the Mataró parish. Later that year he was made *maestro de capilla* at Gerona Cathedral, and early in 1696 took up a similar appointment at S María del Mar, Barcelona. When Joan Barter retired as *maestro de capilla* of Barcelona Cathedral in December 1696, Valls was appointed to succeed him, first as substitute, then as interim and finally, on 18 February 1709, as titular *maestro*. According to Martín Moreno (1985), Valls had retired from the post by 1726; León Tello (1974), however, placed his retirement much later, at 1741.

Valls was a prolific composer, and his works survive in archives throughout Spain, but he was known in his lifetime (and has been remembered since) primarily for the controversy that surrounded his *Missa 'Scala aretina'* and for his impressive treatise *Mapa armónico*. The polemics to which the mass gave rise centred on the second soprano's entry on an unprepared 9th at 'miserere nobis' in the Gloria. Gregorio Portero, *maestro de capilla* at Granada Cathedral, fired the first salvo in 1715; he was joined the following year by Joaquín Martínez de la Roca, the organist at Palencia, who argued that 'music consists of established principles and general rules; when these are broken the very essence of music is destroyed'. Valls defended himself 'not so much for my own reputation as for the freedom and honour of the art of music'. Over 50 Spanish musicians joined the debate in writing, and even Alessandro Scarlatti, in Italy, became involved. Other issues touched on in the dispute included the question of whether or not the 4th should be viewed as a consonance (Valls argued that it should), the use of B♭ in the scale on F, and matters of text expression.

Valls's treatise *Mapa armónico*, dating from 1741–2, was not published in his lifetime, but circulated widely in Spain. It contains a wealth of information on modal theory, harmony and counterpoint, continuo realization, instruments, national styles, genres and matters affecting performance. There are numerous music examples, many of them complete compositions.

WORKS

all in E-Bbc unless otherwise stated

MA – *Mapa armonico (see* THEORETICAL WORKS)

9 masses, some with orch: De difuntos, 7vv, *E-PAMc*; De difuntos, 8vv; De difuntos, 10vv, 1723, *Ac*; De dos tiples; De tiple solo; De tiple y tenor; Haec est virgo sapiens, 9vv; Regalis, 5vv, 1740; Scala aretina, 11vv, 1702, ed. J. López-Calo (London, 1978); Tu es Petrus, 8vv; Sine nomine, 16vv; Sine nomine, 12vv
Letanías a la SS Virgen, 6vv, *VAc*; 9 Magnificat settings, 6–8vv
Motets etc.: Beata quae credidisti, MA; Beatus vir; Conceptio gloriose Virginis Mariae, MA (*Bbc*); Confitebor; Credidi; Dies irae, dies illa; Dixit Dominus; Domine [? ne infurore]; Domine probasti; Himno de S Agustín, *PAMc*; In exitu; Laetatus sum; Lauda Jerusalem; Laudate Dominus; Libera me, Domine; Memento; Nunc dimittis; O sacramentum pietatis, MA; Parce mihi, *PAMc*; Primer salmo de prima; Salve regina; Suscipe verbum, MA; Tercer salmo de prima; Tota pulchra, in A. CRAIG H. RUSSELL

Valls (Gorina), Manuel (*b* Badalona, 21 July 1920; *d* Barcelona, 9 Sept 1984). Catalan composer and critic. He began his musical studies at the Barcelona Conservatory. Afterwards, he studied composition and orchestration with Zulaica. He soon became active in the cultural life of Barcelona as a music critic (*Diario de Barcelona*, *Serra d'or*, and several radio stations), composer and teacher. In 1946 he founded the Cercle Manuel de Falla, which supported music by Falla and French modern composers.

Valls's music comprises a wide variety of genres and forms and his style is diverse and eclectic, drawing from many different sources. Overall, his output has many affinities with Les Six, not only in terms of the music – charming melodies supported by slightly dissonant chords – but also aesthetically. The immense variety of his cultural interests is reflected in the innuendoes, allusions and ironic references to culture and society found in his music. *Els preceptes*, for example, uses legal texts ranging from the Middle Ages to this century; his *Suite canalla y sentimental*, with its farcical title, is a parody of several genres of popular music in the Americas, such as the habanera and foxtrot.

Valls was also a shrewd critic. A fine and solidly educated writer, he was the author of several seminal surveys of modern Catalan and Spanish music. He also wrote essays, such as *La música en el abrazo de eros*, in which he relates music to culture at large, often creating unexpected connections between apparently disparate cultural fields.

WORKS
(*selective list*)

Stage: Primera història d'Esther (op, S. Espriu), 1955; CAL 33–33 o El bon samarità-cabaret, chbr op, 1967

Vocal: Salmo penitencial, chorus, 1957; Canciones del alto Duero (A. Machado), 1v, pf, 1962; Cançons de la roda del temps (Espriu), S, ens, 1963; 12 canciones sefarditas, S, fl, gui, 1965; Els preceptes, S, chbr orch, 1967

Orch: Invenciones, vn, orch, 1957; Estudis concertants, pf, orch, 1958; Las máquinas de Paco Todó, 1964; 2 movimientos sinfónicos, 1964; Gui Conc., 1965; Pf Conc.

Chbr: Tema con variaciones sobre la muerte de Béla Bartók, ob, bn, str qt, 1946; Trio, fl, vc, pf, 1951; Str Qt, 1962

ANTONI PIZÀ

Valois. Rulers of France from 1328 to 1589 and patrons of music. The direct line of Valois rulers reigned up to 1498, thereafter power was held by Valois-related rulers, first stemming from Orléans, then from Angoulême. Many members of the family were keenly interested in music, and some were performers; all maintained the customary royal chapels with professional singers and organists and employed instrumentalists for both private and public entertainment.

1. Valois kings. 2. Valois-related kings

1. VALOIS KINGS. The first Valois king was Philippe VI (ruled 1328–50), who inherited Philippe de Vitry as a member of the royal household. Tassin was one of his minstrels. Jean II 'the Good' (1350–64) supported Vitry's appointment as Bishop of Meaux, and his interest in music is underlined by the report that he even took an organ with him on a visit to England. His first wife, Bonne of Luxembourg (*d* 1349), was a patron of Machaut, who was also supported by the next monarch, Charles V 'the Wise' (1364–80), though there is no evidence for the theory that he wrote his *Messe de Notre Dame* for Charles's coronation. Charles owned at least three organs and in his last years employed as one of his chapel

musicians Charles Cuvelier (or Cunelier) from Tournai, perhaps the composer. He also retained household musicians to play soft-toned instruments after his meals. His brother, Jean, Duke of Berry, was the dedicatee of Solage's complicated ballade *S'aincy estoit*, employed Nicolas Grenon in 1412 and remained a generous patron of the arts throughout his long life; he was particularly fond of organ music. Charles VI (1380–1422) employed 11 *haulx menestriers* in 1418 and maintained a large chapel, which probably performed polyphony as well as plainchant. The catalogue of his library made for the Duke of Bedford included several volumes containing sacred music. In 1401 he founded a court of love, whose members (including Briquet) continued the trouvère tradition. Towards the end of his reign (1422–61) Charles VII heard daily Mass performed by his organist and 15 chaplains, including Ockeghem, who was promoted, under Louis XI (1461–83), to be *premier chapelain de chant*. Descriptions survive of Louis' entry into Paris at his accession, in which music played a part, while for the entry of his second wife, Charlotte of Savoy, on 1 September 1467 the choristers of the Ste Chapelle sang 'beaux virelais, chaçons et autres bergerettes moult mélodieusement' and were supported by a variety of instruments both loud and soft. His 12 *cantores-capellani* included Jehan Sohier (Johannes Fede), Jean Escatefer dit Cousin and Jehan Fresneau. Charles VIII (1483–98) had both Ockeghem and Compère in his chapel and pleaded with Cosimo de' Medici to send back Alexander Agricola from Florence. Among his instrumentalists were the brothers Jean and Charles Fernand of Bruges, who played duets on viols. His wife, Anne of Brittany (who subsequently married his successor), sang and played the mandora; she maintained her own retinue of musicians, some of whom she had brought from Brittany.

Burgundy, which had reverted to the French crown in 1361 on the death of Duke Philippe de Rouvre, was conferred by Jean II on his son Philip the Bold (ruled 1364–1404). Philip's successors up to 1477, John the Fearless, Philip the Good and Charles the Bold, outshone their royal cousins as patrons of music. *See* BURGUNDY.

2. VALOIS-RELATED KINGS. When the direct Valois lineage ceased, with the death without issue of Charles VIII, the throne passed to Louis XII (ruled 1498–1515), son of Charles d'Orléans and great-grandson of Charles the Wise. In 1506 his *maître de chapelle* was Johannes Prioris, and his singers included Févin (whose talent won royal praise), Divitis, Jean Braconnier, Verjus (ii), Ghiselin, Longueval (from 1509), Mouton (from 1513) and Claudin de Sermisy (from 1515); several of these men wrote polyphonic motets for the royal family, celebrating various events. According to Glarean, Josquin spent some time in Louis' service: he certainly had some connections with music at the court, which was distinguished enough for Pope Leo X to seek to acquire several of its musicians for his own chapel. A manuscript containing three-part chansons by Agricola, Compère, Hayne van Ghizeghem, Josquin, Ockeghem and Prioris (*F-Pn* fr.2245) was probably compiled by Crespinet for Louis before he became king.

After the death of Louis XII the French crown passed to his son-in-law, François, Count of Angoulême, who ruled (1515–47) as FRANÇOIS I; he too was descended (as great-great-grandson) from Charles V, through a younger branch of the Valois. He was a poet, a champion of the new humanism and one of the most generous patrons of the arts of his day. He retained the services of Mouton, Sermisy and Longueval, who directed the royal chapel between 1517 and 1522. His expansion of the musical organization at court led to the separation of *chapelle*, *chambre* and *écurie*. By 1532 the *chapelle*, which was subdivided into the *chapelle de plainchant* and *chapelle de musique* (i.e. polyphony), included, as well as choirboys and a few instruments, about 20 singer–clerics, under the direction of Sermisy, the leading French composer of his generation. Among his colleagues were Divitis, Guillaume Nicolas, Jacotin le Bel, Pierre Moulu and Pierre Sandrin, who distinguished themselves as composers; their music was printed by Pierre Attaingnant, who in 1527 was given a royal privilege to publish music at Paris. The secular *chambre* included a few singers alongside the 'instruments bas' (flutes, recorders, viols, lutes and keyboards), among them the lutenist Giovanni Paolo Paladino and the organists Rogier Pathie and Antoine de La Haye (who also played the spinet and sang). Other musicians, such as the lutenist Alberto da Ripa and the singer and composer Jean de Bouchefort, were independently employed with the status of *valet de chambre*. The *écurie* involved the 'instruments hauts' (brass, loud woodwind and violins) and included many Italians. The royal musicians followed the itinerant court and performed at such events as the meetings with Pope Leo X at Bologna in 1515 and with Henry VIII of England at the Field of the Cloth of Gold in 1520, but they were based in Paris and for special festive occasions at Notre Dame combined with the choirs of the cathedral and the Sainte-Chapelle. The queen and the princes of royal blood maintained musical forces commensurate with their prestige and interest.

Henri II (1547–59), the second son of François I, included among his musicians under Sermisy the new singers Arcadelt, Janequin and Jean Rousée. His *chambre* included the organists Jacques Du Buisson, Thomas Champion (called Mithou) and Jean Dugué. As Dauphin he had been particularly fond of Marot's psalms and according to one contemporary account composed his own tune for his favourite, *Bienheureux est quiconques* (Psalm cxxviii). He ended Attaingnant's music publishing monopoly, granting privileges to Du Chemin (1548), Robert Granjon (1550), Michel Fezandat (1552) and Le Roy & Ballard (1553). His wife, Catherine de' Medici, fostered ballet and musical pageantry of the type given in her native Florence, and like preceding Valois queens she maintained her own chapel. Janequin dedicated a set of psalms to her in 1559 and Jean Maillard a book of motets in 1565. The boy king François II, who reigned for only a year (1559–60), was the dedicatee of a monumental collection of 120 chansons published by Le Roy & Ballard in 1560. He was succeeded by a younger brother, Charles IX (1560–74), who, like his father, is reported to have sung treble and tenor with his own singers. He raised the status of the (mainly Italian) violin band by removing it from the *écurie* to the *chambre*. He was attracted by musical humanism and particularly by chromatic pieces: the idea of music as the mirror of the new state was echoed in the royal statutes establishing the Académie de Musique et Poésie, which from 1570 met at the house of one of its founders, the poet Jean-Antoine de Baïf. Shortly before his early death, Charles attempted to engage Lassus, who collaborated in the *Ballet des polonais*,

mounted in 1573 by Catherine de' Medici. The last Valois king was Henri III (1574–89), who in the year of his accession organized the Académie du Palais, which met at the Louvre with Guy du Faur de Pibrac as its principal animator. Henri's chapel included Didier Leschenet as 'compositeur' and Nicolas Millot and Eustache Du Caurroy as *sous-maîtres*, with four adult *dessus*, six boys, nine *hautes-contre*, seven *tailles* and ten *basses-contre*, and two flutes and cornetts – more than double the personnel available to François I in 1532. He retained most of his father's chamber musicians, such as the organists Costeley and Mithou, the lutenist Courville and the spinet player La Grotte. The greatest musical event of his reign was the celebration of the wedding of his favourite, the Duke of Joyeuse, which included the *Balet comique de la Royne*, organized by Balthasar de Beaujoyeaux, violinist and valet de chambre to Catherine de' Medici. The king's brother, François, Duke of Anjou and Alençon, was a generous patron of music, receiving the dedications of printed collections by Philippe de Monte (1575), Lassus (1577) and Guillaume Boni (1582) and surrounding himself with distinguished musicians, among them Beaujoyeux, Claude Le Jeune and Etienne Le Roy. *See also* FRANCE, §I, 3(iv) and PARIS, §II, 1–2.

FRANK DOBBINS

Valois, Dame **Ninette de** [Stannus, Edris] (*b* Blessington, Co. Wicklow, 16 June 1898). Irish dancer and choreographer. *See* BALLET, §3(ii).

Vals [valse]. An instrumental genre closely related to the waltz of the European tradition. It was cultivated by the Latin American colonial aristocracy as a pianoforte genre of the salon. In the folk tradition it is performed by groups including harp, guitar, *tiple* (small 12-string guitar), *cuatro* (small four-string guitar), violin and *bandola* (*bandurria*: flat-backed lute). In Colombia its characteristic 3/4 rhythm has given rise to the modern *torbellino* and *pasillo* genres. In Peru the *vals criollo* is primarily a vocal genre and is of great socio-cultural significance in the urban areas.

WILLIAM GRADANTE

Valse (Fr.). *See* WALTZ.

Valse à deux temps (Fr.: 'waltz in two-time'). A ballroom dance popular around the middle of the 19th century. The term is misleading, since, like the conventional waltz (*à trois temps*), the music was written in 3/4 time. The distinction lies in the number of steps danced to each bar of music. The steps were derived from the GALOP with the spring while turning replaced by a glide, and thus consisted simply of a sideways sliding movement (*pas glissé*) which occupied the first two beats of a bar followed by a gliding turn (*chassé*) on the third beat. (The assumption that three turns occupied two bars of music is thus incorrect.) The music was livelier than that of the conventional waltz, being played more quickly (88 bars to the minute compared with 66) and with the time more strictly marked. Examples of the dance were composed by Jullien and Charles d'Albert.

The term 'valse à deux temps' has also been generally though erroneously applied to waltzes whose melody forms a cross-rhythm to the accompaniment.

ANDREW LAMB

Valse Boston (Fr.). *See* BOSTON (ii).

Valsini, Frencasco. *See* SILVANI, FRANCESCO.

Valvasensi [Valvasense, Valvasensis, Valvasone], **Lazaro** [Lazzaro] **Girolamo** (*b* Valvasone, nr Pordenone, bap. 20 June 1585; *d* Valvasone, 26 June 1661). Italian composer and organist. A priest, he worked in his native town as organist of SS Corpo di Cristo and of the Valvasone noble family. He also held similar positions in other towns in northern Italy. He was organist of Gemona del Friuli Cathedral, Friuli, from 19 June 1608 to 4 May 1609, and at Valvasone again at least from 1613. On 3 March 1617 he was elected *maestro di cappella* of Sacile Cathedral but resigned on 28 February 1619. In May 1622 he became organist of the cathedral of Marano Lagunare, Udine, but was back in Valvasone in 1623. Perhaps as early as 1624 he became *maestro di cappella* of Tolmezzo Cathedral and in October 1626 he was in Tricesimo as an organist. At the end of 1628 he returned to Valvasone and to his former posts as organist of SS Corpo di Cristo and of the Valvasone family, remaining there until his death. Before 1647 he became a canon penitentiary of Caorle, and later an apostolic protonotary.

Since the 1640 collection was Valvasensi's op.16 and only nine books survive (four incomplete), it is clear that much of his music is lost. Probably, as is the case with the surviving works, most of it was church music in the concertato style, suitable for, and in some cases dedicated to, the communities in which he worked. Opp.3 and 6, influenced by the *seconda pratica*, employ harmonic modulation and melodic virtuosity. Of the 23 monodies that form his op.8 the most interesting are three cantatas, two of them designated as such, the third *Margarita, ben che m'aleti*, in fact a strophic-bass cantata; the first two are through-composed, both with tempo directions (like another piece in the volume). The two-part canzonetta

which concludes this book, *Gioldin, gioldin*, preserves a popular quatrain in Friulan dialect, which Valvasensi claimed to have heard two peasant women sing.

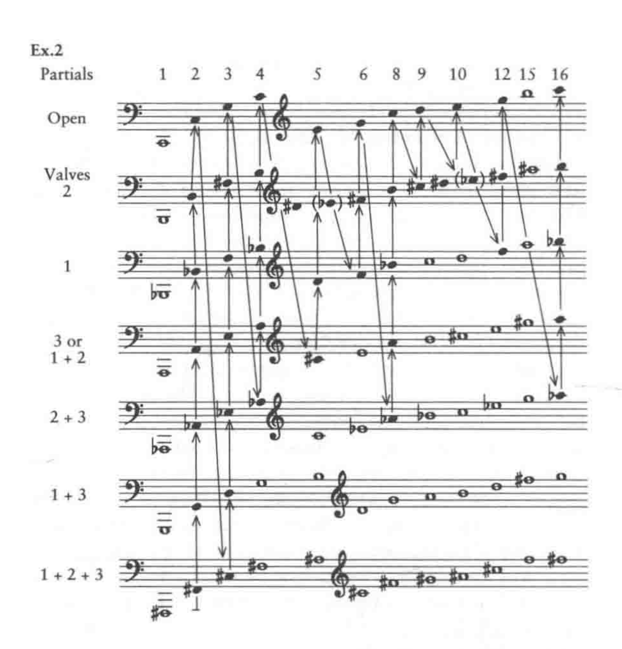
NIGEL FORTUNE/FRANCO COLUSSI

Valve (i). A mechanical device for altering the basic tube length of a brass instrument by a predetermined and fixed amount while it is being played.

1. Function and description. 2. History. 3. Compensating and key-changing valves.



1. FUNCTION AND DESCRIPTION. It is a useful, if not strictly accurate, convention to call the lowest vibration frequency theoretically possible in a given air column (mainly governed by its length) the 'fundamental', and its overtones 'harmonics' (the fundamental and the harmonics being referred to collectively as 'partials'), even if they do not quite form a mathematically true harmonic series (for a stricter definition of these terms *See* SOUND, §5(ii)). Ex.1 shows, up to the 16th partial, the notes theoretically

Ex.1

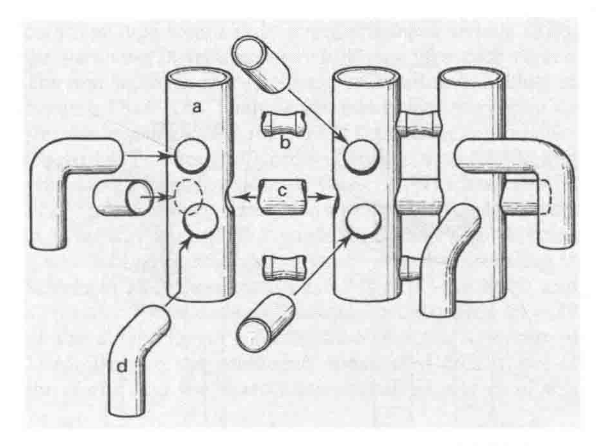
obtainable from an 8′ tube, and the portions of the series used for musical purposes on three types of simple or unmechanized brass instrument. Partials *7*, *11*, *13* and *14* are out of tune with the equal-tempered scale. (For a discussion of the resonance properties of air columns, *see* ACOUSTICS, §IV). Although some skilled players can extend the upper range by eight or more harmonics, such a sequence clearly has little potential in music based on the chromatic scale. If, however, the air column is lengthened by an appropriate amount, a new fundamental and its attendant series of harmonics will be introduced. The valve accomplishes this by, in effect, introducing extra lengths of tubing. Three valves – to lower the fundamental of the primary tube by a semitone, a whole tone and three semitones respectively – when used singly and in combination make available seven different

Ex.2

fundamentals. Ex.2 shows how the player can command a chromatic scale with a selection of harmonics from the seven corresponding series. The sounds under *1* are fundamentals. Partials *7*, *11*, *13* and *14* have been omitted as they are out of tune with the equal-tempered scale and are not used by valved instruments; *15* is seldom used in practice, though the note is a good one. The lines with arrows show the fingering. The void notes between partials *5* and *16* are used only occasionally, for convenience in fingering, since the equivalent sounds can usually be better tuned with standard fingering.

In most brass instruments of fairly narrow bore (trumpets, cornets etc.) the fundamental is not usually playable and the useful scale begins on the 2nd partial, an octave above. In wide-bore instruments (e.g. tubas) the fundamental is a valuable note; three valves, however, are not sufficient to connect it chromatically with its octave. A fourth valve, bringing in additional tubing to lower the pitch of the instrument five semitones, fills the gap when combined with the basic three valves in different ways and thus renders the instrument fully chromatic from the fundamental upwards. An inherent defect in any additive valve system, however, is that a supplementary tube designed to lower the pitch of an instrument by a given amount will be too short to do this if the main tube has already been lengthened by another supplement. Thus notes requiring the use of two or more valves together tend to be sharp – as much as a semitone in some instances where all three essential valves are combined. On small instruments the player can usually 'pull' or 'lip' the defective notes into tune, but on the larger ones this is hardly possible; consequently, on a tuba, a fifth or even sixth valve may be added to improve intonation. The extra valves are arranged differently by different makers, or according to the ideas of particular players; in six-valve instruments the commonest arrangement is for the fourth and sixth valves to supply a perfect 4th and perfect 5th respectively. The fifth valve is then tuned to an approximate semitone which can be used to fill in deficiencies elsewhere.

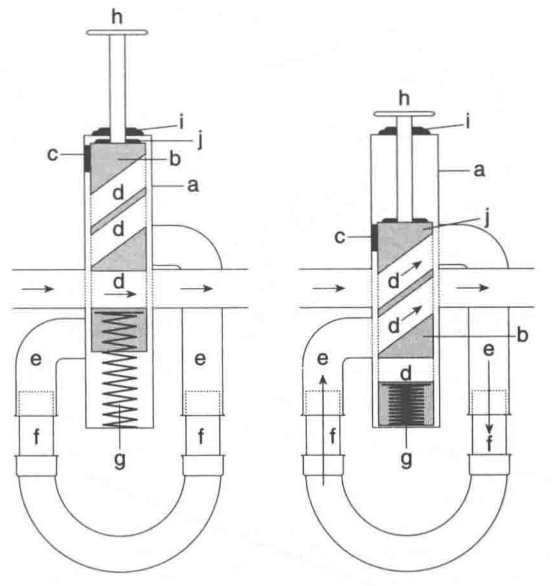
The 'ascending third valve' was until recently favoured by many orchestral and solo horn players, especially in



France. In this system the third valve, instead of adding a supplementary section, cuts out a section of the main tube, thus raising the pitch of the instrument. An 'independent' valve system introduced by Sax of Paris in 1852 comprised six valves, each of which added its own complete length of supplementary tubing to lower the fundamental by a semitone more than the preceding length. Thus, using the open note and then each valve in turn, the player could command seven different harmonic series. As applied to the trombone this system had some success, but the weight of the necessary tubing and the generally unfamiliar fingering led to the system's ultimate disappearance.

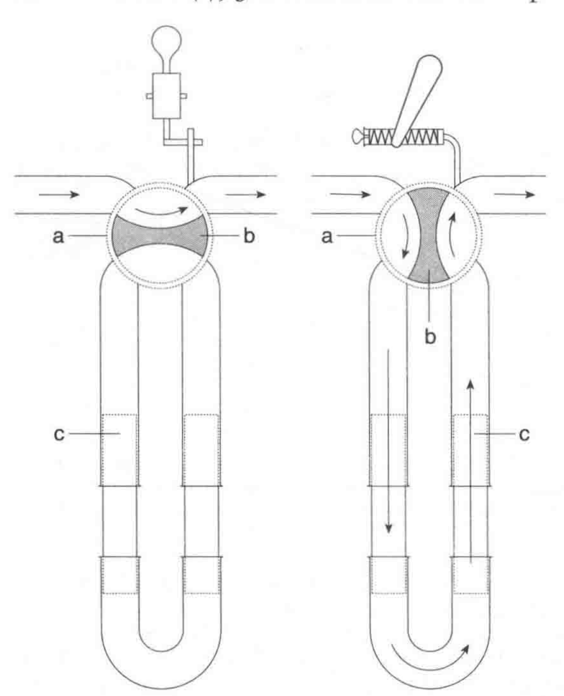
Three types of valve are in use today – the piston valve (Fr. *piston*; Ger. *Pump(en)ventil*, *Périnet-Ventil*; It. *pistone*), the rotary valve (Fr. *cylindre rotatif*; Ger. *Drehventil*, *Zylinderventil*; It. *cilindro rotativo*) and the double piston or Vienna valve (Fr. *piston double*; Ger. *Wiener Ventil*). The first two are used by most brass players and appear to be equally favoured. The Vienna valve (Ger. *Wiener Ventil*) is employed today only on horns, and only in the area around Vienna. According to Pierre, 1890, a related version was once very popular with Belgian instrument makers to the extent that it was called *système belge*.

The piston valve consists of a cylindrical outer casing of brass and the piston or 'pump'. The latter is a cylinder of thin sheet metal ground into the casing with abrasives so as to be as airtight as possible while able to move freely. It is held at rest in the 'up' position by a spring, either above or below it (the latter is cheaper), according to the preference of the maker. Frequently it is made of, or plated with, some metal of low friction when opposed to brass. The casing is perforated to correspond with the main tubing of the instrument and has elbows leading to the supplementary tubing or 'valve slide', which is telescopic and may be pushed in or out for tuning purposes or withdrawn entirely to drain off the moisture that condenses during playing. The structure and interconnection of a normal cluster of three valve cases is shown in fig.1. The wall of the piston is also perforated and is fitted with three transverse tubes so placed that when the piston is in the up position one of these provides a direct passage through the valve, and when it is down the others divert the windway through the supplementary tubing, thus adding its length to the main tubing of the instrument (fig.2).

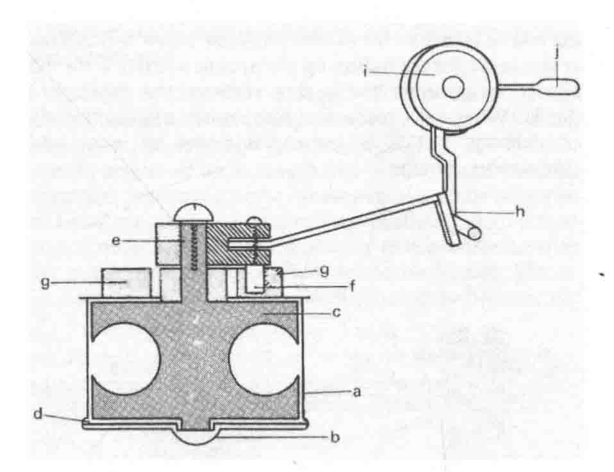


The rotary valve also has an outer casing perforated to accommodate the main and supplementary tubing, but the perforations are all in the same plane, placed at four points equidistant from each other. Two tangential passages are arranged so that when the inner part, or rotor, is at rest there is a clear passage through the valve. A quarter-turn of the rotor diverts the windway through the valve slide, which is essentially similar to that of a piston valve (fig.3). (The rotor may be turned from solid metal or may be built up from sheet.)

Complications arise, however, in converting a downward finger pressure into rotational movement. Thus various return mechanisms have been devised. The earliest non-tubular valves (Ger. *Federstecher*; first developed in Leipzig in 1821) were activated by a rod around which a spring was wound, both of these elements being enclosed in a short casing otherwise much resembling that of the modern piston valve. Josef Kail's Vienna valves of 1823



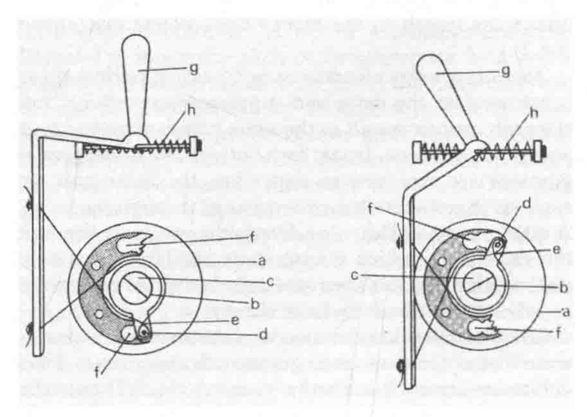
1. Structure and interconnection of a normal cluster of three piston valve cases, shown in a partly 'exploded' sketch: a – valve case, b – supporting strut, c – connecting tubing, d – elbow leading to valve slide



were activated by touchpieces attached to long flat springs, a system which was subsequently employed by C.A. Müller of Mainz (first working for Schott and then on his own). In his patent of 1830 Leopold Uhlmann displayed a type of clockspring in a separate casing anchored to a fixed axle (placed at some convenient point on the instrument) and to the inside of its own casing. To the outside of this is attached the touchpiece, which remains up at rest. The touchpiece is linked to the rotor by a crank and a connecting rod, so that pushing down on it causes the rod to rotate as far as two buffered 'stops' will allow, at the same time winding up the spring a little. With the release of pressure the spring reverses the movement (fig.4). When well made this mechanism proves entirely satisfactory, but it is somewhat prone to wear and inadvertent damage.

2. Piston valve (schematic view) in up position (left) and down position (right): a – outer casing, b – piston, c – guide, d – elbows serving as channels for the airstream, e – additional tubing, or valve slide, f – slide, g – spiral spring, h – finger button, i, j – cork buffer and cork (or felt) washer (both for noise prevention); arrows show direction of air from mouthpiece towards bell

3. Rotary valve with articulated crank action, in normal position (left), and with American string action, depressed (right): a – outer casing, b – rotor, c – valve slide; arrows show direction of air from mouthpiece to bell



4. Section of rotary valve with articulated crank action: a – outer casing, b – valve cap, c – rotor, d – inner cover plate (to support rotor), e – rotor spindle, f – reciprocating driver pivot, g – cork buffers, h – articulated crank, i – spring box containing coiled clock spring (outside ratchet sometimes provided to facilitate alteration of spring tension), j – touchpiece or finger-plate

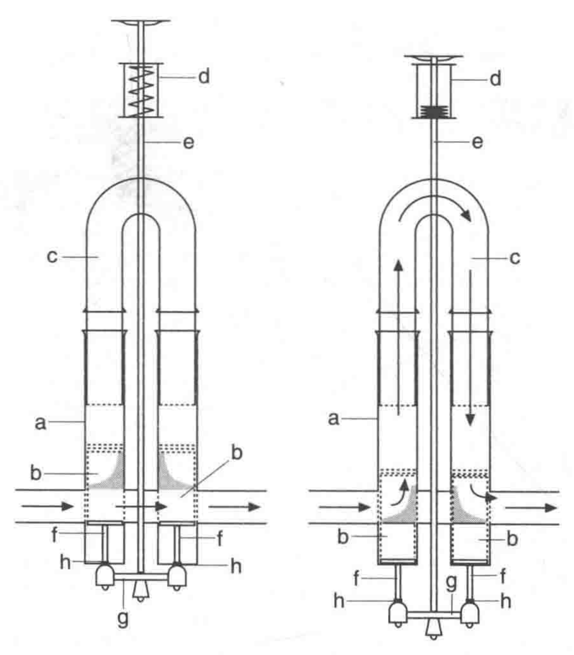
A mechanism (Ger. *Spiralfederdruckwerk*) developed in the 1840s eliminated the clock spring and casing. Here the touchpiece is kept at rest by a simple spiral spring wound round its axle. A further development was the 'American string action' (Ger. *Schurmechanik*), patented in 1848 by Thomas D. Paine of Woonsocket, Rhode Island, and also taken up in 1855 by Wenzel Schamal in Prague, on Kail's suggestion. This system also employs a spiral spring at the axle of the touchpiece, from which a connecting rod passes close to the associated valve casing (thereby eliminating the articulated crank), carrying near its end a loop of fine cord anchored to it at two points (at a distance from each other about equal to the valve's diameter). The cord passes round a pulley on the rotor spindle to which it is also fastened (fig.5). This arrangement gives an efficient and silent rotary motion, its only disadvantage being the possible breaking of the cord. String action was also part of the US patent granted in 1866 to Isaac Fiske of Worcester, Massachusetts, for a cornet with three rotary valves activated by vertical rods passing through a casing containing the spring – an arrangement which, except for the string action, very closely resembled one for which Joseph Higham had already obtained a British patent in 1857.

A completely different return mechanism involved long cumbersome levers mounted on leaf springs. This system was developed in Bavaria from about 1828 to 1840 and can also be found on instruments by Hirsbrunner (Sumiswald) and certain Saxon makers. Trumpets with two valves of this type, usually with the half step fingered '1' and the whole step '2', can be found on steel engravings of itinerant or peasant musicians into the late 1880s (fig.6).

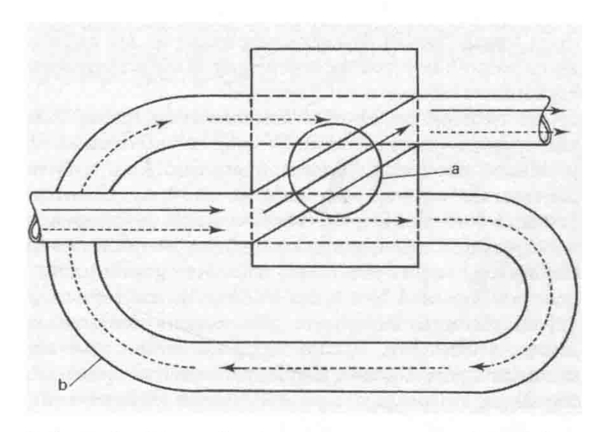
It is not difficult to explain why the Vienna or double piston valve (fig.7), once so popular in central Europe, has passed almost completely out of use. Its chief advantage lies in its right-angled windways, producing a gentler tone than is currently in vogue.

2. History. The first recorded idea for altering the sounding length of a brass instrument other than by means of detachable crooks must, it seems, be credited to Ferdinand Kölbel (*fl* 1735–69), a Bohemian musician active in St Petersburg. He first demonstrated his chromatic horn, *Amor-Schall*, in 1766. A surviving drawing (see Porfir'yeva and Stepanov, 1998) reveals that his was a kind of omnitonic horn with six push-buttons activating a return mechanism allowing the instrument's tonality to be changed instantaneously. Kölbel's invention bore no fruit. Nor did that of Charles Clagget, an Irishman, who in 1788 obtained an English patent for his 'Cromatic Trumpet and French Horn'. This invention consisted of twinned instruments a semitone apart, with a kind of rotary valve operated by a lever at the mouthpiece end activating first one, then the other instrument. In July 1814 Heinrich Stölzel, a horn player in the court orchestra

5. Return mechanism of a rotary valve with American string action, in normal position (left) and depressed (right): a – valve casing, b – rotor spindle, c – screw to hold rotor in place, d – screw to hold the string in place, e – reciprocating driver pivot, f – cork buffer, g – touchpiece, h – spiral spring



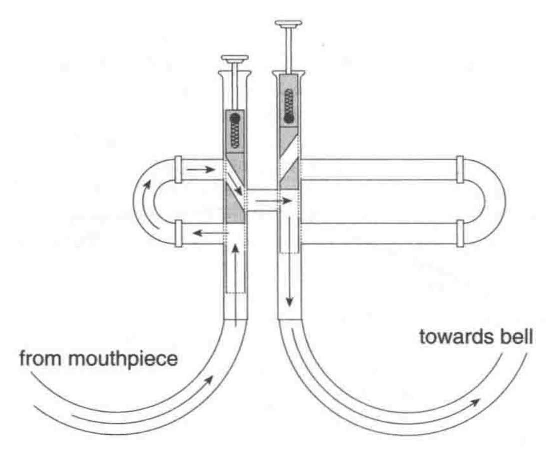
6. *'Das Trompeter': lithograph after a sketch by Hugo Kauffman, from K. Stieler's 'A Hochzeit im Gebirg' (Munich, c1880/R), showing an itinerant musician holding a trumpet with two Vienna valves activated by levers mounted on leaf-springs*



of Pless, brought to Berlin a horn equipped with two tubular valves (for lowering the pitch of the instrument by a whole tone and a semitone respectively), which he claimed as his invention. This was taken up and exploited by the firm of Griesling & Schlott. Stölzel's idea was to make it unnecessary for a horn player to carry a full set of crooks for all keys. His device permitted the transposition of an F horn into E, E♭ or D without extra crooks.

In the meantime Friedrich Blühmel, a works band musician, had contested Stölzel's primacy with the 'box' valve (Ger. *Kastenventil*; fig.8), which he demonstrated in 1816 on a trumpet and a horn, each with two valves. He then showed a three-valved trombone in February 1818. Instruments with box valves survive in the large collections in Berlin, Nuremberg and Brussels. After considerable litigation, the two men finally joined forces. Together they secured a ten-year Prussian patent for both kinds of valve on 12 April 1818, Stölzel furthermore buying out Blühmel's rights for 400 thalers. It is important to note that it was not the specific type of valve, but rather the general principle as applied to brass instruments, which the patent office considered protectable. Later patent applications were often refused for this reason.

Stölzel's tubular valve (or 'Stölzel valve'; Ger. *Schubventil*, Fr. *piston Stoelzel*), in which the lower part of its casing also serves as a windway (fig.9), is the most common type found on instruments made before 1850, the surviving instruments often having two such valves. The first were made for Stölzel by Griesling & Schlott of Berlin (*c*1816–18). Their design was copied very soon by J.F. Anderst (St Petersburg, 1825), Labbaye and Halary (Paris, 1827), Pace and Köhler (London, after 1830), and even James Keat for SAMUEL GRAVES (Winchester, NH, *c*1837). In London, chromatic Russian brass instruments (a gift to the Second Life Guards band from Tsar Nicholas I, who had purchased such instruments from Griesling & Schlott in 1824) were heard as early as 6 May 1831, and a 'Russian Valve or Stop Trumpet' is illustrated on p.38 of the elder Harper's *Instructions for the Trumpet* of 1835. Despite the somewhat constricted cross-tubes of the piston and the sharp angles involved, valves of this

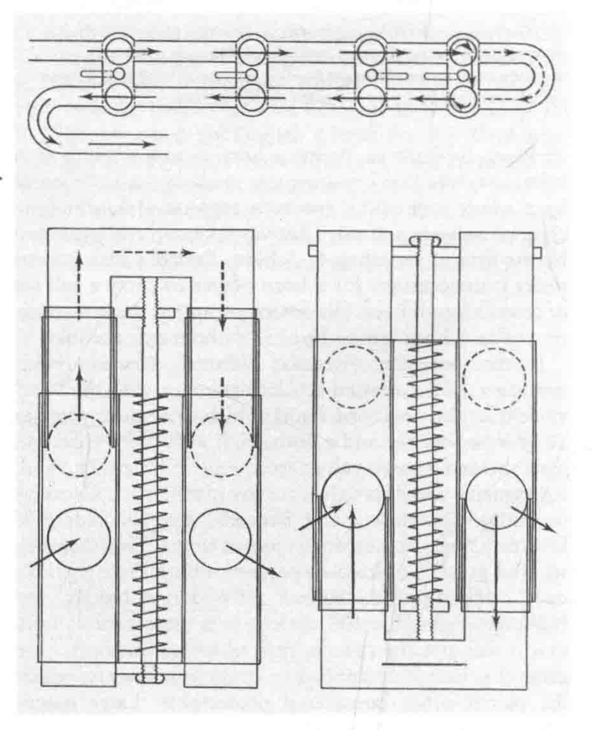


7. *Vienna valve, in normal position (left) and depressed (right): a – outer casing forming part of the windway, b – pistons, c – valve slide, d – spring box and spiral spring, e – push rod, f – plunger, g – connecting piece, h – cork buffers*

8. *'Box' valve (piston valve of square section), patented by Stölzel and Blühmel, seen from above (arrows with continuous tails show direction of airstream when valve is in normal position, arrows with broken tails show airstream when valve is depressed): a – finger-button, b – additional tubing (no tuning-slide)*

9. Stölzel valves, depressed (left) and in normal position (right)

type were still in use on inexpensive French cornets as late as 1916, no doubt because they were relatively easy to make.



When their patent expired in 1828, Blühmel and Stölzel applied for a new one, this time for a rotary valve (which they called *Drehbüchsenventil*), which both of them had worked on even before their first patent was granted; Blühmel had had a trumpet fitted out with an early kind of rotary valve by 1819. The authorities refused their application, however, for the reason mentioned above. A horn built by an unknown maker between 1828 and 1831, with two of Blühmel's rotary valves, survives in the Musikinstrumenten Museum, Markneukirchen (for illustration see Heyde, 1987, p.129). It remained for Kail and J.F. Riedl to make the most of this kind of valve (see below).

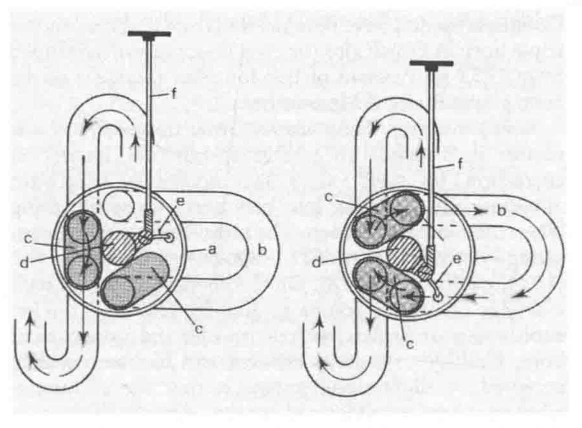
The next valve to claim attention was a 'transverse spring slide' (British patent no.5013 of 1824) devised by John Shaw of Glossop, Derbyshire, a farmer and part-time brass worker. Its application required that a large part of the main tube of the instrument take the form of a long narrow U, much like the slide of the trombone. Both limbs of the tube passed through twin pairs of piston cases set perpendicular to the plane of the U, and these were bridged by two pistons connected at the top by a cross-tube. When depressed, the paired pistons either short-circuited a section of the main tube or cut in an extra length (fig.10). No surviving examples are known, and it seems likely that the complexity of the arrangement kept it from being generally adopted.

The twin piston cases of the transverse spring slide anticipated to some extent the Vienna valve, which is still in limited use today. A forerunner, with long rods to activate the valves, was built in 1820 by Christian Friedrich Sattler of Leipzig. The first usable double-piston valve was developed by the horn player Joseph Kail and the maker Joseph Felix Riedl, who were granted a ten-year privilege on 1 November 1823 in Vienna for a two-valved trumpet. This form was eagerly imitated in southern Germany, Saxony and Mainz but had the disadvantage of allowing condensed water to squirt out, for which reason they were nicknamed *Spritzerventile*. The addition of a third valve is attested by an illustration in Andreas Nemetz's *Allgemeine Trompeten-Schule* (Vienna, 1828). Leopold Uhlmann made an improvement in 1820 by adding cork buffers which eliminated the squirting; he was not the inventor of this kind of valve, as is sometimes claimed. A far-reaching aspect of Uhlmann's privilege, however, was its barrel or clock-spring action (Ger. *Trommeldruckwerk*) described in §1 above.

There were several variants of double-piston valves which strictly speaking are not 'Vienna' valves. The most common were the 'Mainz valves' made by C.A. Müller, the touch pieces of which are activated by elegant leaf springs. There were several generations of these valves, known as *Altmainzer Maschine* (1830–40), *alte Neumainzer Maschine* and *Neumainzer Maschine* (from *c*1833). Another is the so-called Hanoverian model (Heyde, 1987) of the 1840s, also called *système belge* (Pierre, 1890), which is held with the valve slides pointing up, the valves being activated by a squat piston-type return mechanism mounted parallel to and at the lower part of the slides. Finally, there were the double-piston valves patented in England on 3 April 1849 by Richard Garrett. His 'registered double piston cornopean' is held with the valve slides pointing down; they are activated by simple touchpieces mounted directly at the top of the moving parts. One example of each of these three systems survives in the Bad Säckingen Trumpet Museum.

Not long after, another important type of valve was designed in Prussia, the Berlin valve (Ger. pl. *Berliner Pumpen*). Formerly attributed to Wilhelm Wieprecht, an important figure in German military music, it is now believed to have been developed in 1827 by Stölzel, and independently by Wieprecht in 1833. Both their patent applications were refused, again for the reason given above. According to Heyde, the inlet and outlet of Stölzel's valve slides are on the same side of the casing, whereas Wieprecht's are on opposite sides so that the valve slide (which often is fixed and does not slide at all) forms a

10. Transverse spring slide devised by John Shaw: general layout, as applied to the trumpet (top), used as an ascending valve (left), and as a descending valve (right); arrows show direction of air from mouthpiece towards bell



loop passing around or under the casing. Through Wieprecht's influence, instruments with *Berliner Pumpen* made by Mortiz soon became standard in all Prussian military bands. When the young Belgian Adolphe Sax established himself in Paris in 1842 he immediately (and without acknowledgment) began to make the Prussian type of valve, calling them *cylindres*, and through the Distin family the Sax version became well known in England (1844–53).

A rotary-action valve ('Rad-Maschine') with *Trommeldruckwerk*, designed by Kail and Riedl, was given a privilege on 11 September 1835. Except for changes in its driving mechanism, this has hardly been improved on since. A trumpet with a form of rotary valve had been produced in the USA by Nathan Adams of Boston, some time before 1825. Another trumpet, with two primitive (and leaky) rotary valves operated by levers, was built around this time by the otherwise unknown Swiss makers Schupbach & Guichard in Yverdon. Adams also built a 'permutation trumpet' in 1825 in which paired internal vanes diverted the main windway into and out of the supplementary slides. Other American workers – Paine about 1848, and J. Lathrop Allen, about 1850 – produced practical rotary valves, examples of which survive. The small-diameter rotor adopted by Allen, however, necessitated some distortion of the windways. A French invention termed 'valvules', which operated on the same principle as Adam's permutation trumpet, was patented in 1834 by the horn player J.E. Meifred and the mechanic Deshays, but proved too costly to pursue.

For some reason the very efficient rotary valve did not become popular in France or England. A few rotary-type instruments were made by A. Courtois, Gautrot and Sax in Paris, by Distin in London and by Higham in Manchester. It was only after World War II, with the wide-bore German orchestral horn superseding the old French model, that the rotary valve became familiar in Great Britain. The German type of horn and trumpet had been introduced about a century earlier into the USA, but rotary-valved trumpets were supplanted by those with piston valves after about 1870.

In 1838 John Shaw took out a patent for what he called 'patent swivel valves for brass instruments', and J.A. Köhler acquired the right to manufacture instruments with such valves for a ten-year period. A year or two later Köhler brought out an improved version called the New Patent Lever valve. This was very similar to the *plaques tournantes* or *disques mobiles* which the Parisian maker Halary (ii) had developed (but not patented) in 1835. Köhler sold a number of instruments with disc valves to the British Army, and no fewer than 18 to the band of the Crystal Palace at its opening in 1854. This type of valve, however (Ger. *Scheibenventil*), with one disc rotating against another fixed one containing the valve slides (fig.11), generated too much friction to work rapidly enough, and it never gained acceptance.

In 1838 François Périnet of Paris redesigned and patented (French patent no.9606, 27 October 1838) the tubular valve to its present form, now called the piston valve. He eliminated the sharp angles which had been a feature of the tubular valve, whose windways pass through the bottom of the valve casings. Sax and other French makers soon adopted Périnet's valve (although they continued to make brass instruments with tubular valves and with *cylindres* as well). Piston-valved trumpets

11. Patent lever valve, in normal position (left) and depressed (right): a – back plate (fixed) showing attachment of main windways, b – valve slide, c – bows fixed to revolving cover plate, d – spring box, e – 'finger' connected with the revolving outer part of the spring box, and engaged in a ring fixed on the cover plate, thus driving the cover plate round when valve is depressed, f – push-rod and touchpiece

became standard not only in France, but also in England and, after about 1870, in the USA. In the 1930s, such trumpets became known in Germany and Russia as 'jazz trumpets'; after World War II they saw nearly universal use except in a few Germanic tradition-conscious orchestras such as the Berlin and Vienna POs. (After 1965, following the lead of Adolph Herseth of the Chicago SO, rotary-valved trumpets began to be reintroduced for certain works of the symphonic repertory.)

After Périnet's invention and apart from the compensating devices mentioned below, there now remained little for instrument makers to do beyond improving the layout of either rotary or piston valves and their cross-passages to keep them free of constriction and to improve response. New alloys were introduced, notably Monel metal for piston valves, to reduce friction. Engelbert Schmid in Kirchheim (1980) had made the most recent improvements to rotary valves (and horn design). One new type, the Thayer axial valve, invented in 1976 by Orla Ed Thayer (*b* 1 April 1920) of Waldport, Oregon, should be mentioned (with four US patents between 1978 and 1984). A cross between the box valve and the rotary valve, it has been used with great success on trombones; only its size precludes its use on higher-pitched brasses. A related design is the 'free-glow' valve of René Hagmann in Geneva (with Courtois, 1996).

3. Compensating and key-changing valves. Modified piston or rotary valves have been employed for two additional functions: to compensate for the increasing sharpness in pitch when two and three valves are used; and to make a brass instrument playable in two or even three different keys by adding supplementary lengths of tubing. The ancestor of both these systems is generally considered to be Besson's *registre* of 1856: a long fourth valve placed horizontally, through which all the supplementary valve slides passed. A still earlier system, however, with a horizontal piston and barrel which closes or extends the tuning slide, was registered by J.B. Ziegler on 7 May 1847.

The first true double horn in B♭/F, its rotary valves possessing two-storey windways, was built from 1896 and registered on 13 November 1897 by Fritz Kruspe of Erfurt after an idea by the horn player F.A. Gumpert.

Countless models have been derived from it, including the triple horn in F/B♭/F alto (or even B♭ soprano), developed from 1958 by Paxman of London after the ideas of the horn player Richard Merewether.

'Compensating' brass instruments, however, do not require in principle an additional valve for intonation correction, for their valves have additional windways automatically throwing into play extra loops of tubing when used in combination. The most successful compensating system was that of D.J. Blaikley of Boosey & Co. (1874, patented in 1878). On trumpets and cornets such a system invariably results in a stuffy response, but on euphoniums and tubas, with their wider and more conical bore, Blaikley's system is efficient and has been widely accepted. A slight disadvantage is that the additional windways have no slides and are thus difficult to clean.

Numerous later inventions were too complicated to have lasting success (see Heyde, 1987). J.-B. Arban (1825–89), a professor at the Paris Conservatoire who was almost obsessively concerned with intonation, invented several cornets with compensating systems (his first developed with Sax and demonstrated in 1848). The first compensating 'Cornet Arban' (1883; earlier cornets with a non-compensating system, made by Courtois for Arban, were also so-called), manufactured by Auguste Mille, had a lever to lengthen the third valve slide, and a *barillet* (a quick-change rotary valve) that lowered the pitch from C to A (with integrated levers that lengthened the first and second slides accordingly). The second (1884) had an extremely complex compensating system on the first and third valve: no less than ten different tubes emanated from the first valve (one example survives in the Kampmann Collection, Paris). The 'noveau Cornet Arban' of 1887, produced with L. Bouvet, was a double instrument in C and A: a fourth valve activated by the index finger of the left hand made the key change, and there were two slides per valve. It required an elaborate chart for its 21 fingerings. Even though Arban simplified this system over the following year, after his death the Conservatoire returned to the simple three-valved cornet.

Undeterred, Martin Lessen, who in 1983 had presented a Benge-built four-valve C trumpet after Arban's system, obtained a US patent in 1991 for a compensating C trumpet with only three valves, following the Blaikley system and built by Zigmund Kanstul. The third valve slide passes through valves one and two; a true innovation is that the corrective additional lengths of tubing are contained within the first and second pistons. The advantage of Lessen's instrument is that traditional fingerings can be retained. Time will tell if it is free-blowing enough.

PHILIP BATE/EDWARD H. TARR

Valve (ii). A term found in some early patent specifications where 'key' is implied. It also occurs occasionally in this sense in early music dictionaries.

Valve (iii). A term used occasionally in organ building as an alternative to PALLET.

Valverde, Joaquín [*padre*] **(i)** (*b* Badajoz, 27 Feb 1846; *d* Madrid, 17 March 1910). Spanish composer and conductor. He began his musical studies in his native city, and as a boy he played the piccolo in a military band. He later studied at the Madrid Conservatory, where he won first prize for flute in 1867 and composition in 1870. In 1871 his *Sinfonía Batilo* was awarded a prize by the Sociedad Fomento de las Artes. He composed flute studies and in 1882, during an unsuccessful attempt to become a flute teacher at the Madrid Conservatory, wrote a pamphlet *La flauta: su historia, su estudio* (Madrid, 1886), which was later adopted by the conservatory as a text. In all he composed over 200 instrumental works, but his prime preoccupation was with the theatre. He was a theatre conductor throughout the 1870s and 80s and composed many zarzuelas, often in collaboration. Of these the best-known are those with Chueca, including *La canción de la Lola* (1880), *La gran vía* (1886), *Cádiz* (1886) and *El año pasado por agua* (1889). Others were with Caballero, Bretón, Romeo and Rogel, as well as with his son.

ANDREW LAMB

Valverde (y Sanjuán), Joaquín [*hijo*; 'Quinito'] **(ii)** (*b* Madrid, 2 Jan 1875; *d* Mexico City, 4 Nov 1918). Spanish composer, son of Joaquín Valverde. He was taught by his father and Irache. His first zarzuela, *Con las de Caín*, produced when he was only 15, was a great success, and during a short but prolific career he composed over 200 theatre works, some in collaboration. Among the most successful was *La marcha de Cádiz* (Madrid, Eslava, 11 October 1896), based on his father's and Chueca's *Cádiz* (1886), composed with Ramón Estellés and produced also in Paris, where his music became popular. Other collaborations were with his father, with Tomás López Torregrosa, Rafael Calleja, Ruperto Chapí and José Serrano.

ANDREW LAMB

Vamp. As a verb, to extemporize the simple accompaniment to a vocal or instrumental solo, or, as a noun, a short passage played in preparation for the entry of a soloist. It appeared as early as 1716, in a song in *The Merry Musician, or A Cure for the Spleen* (i, 68):

> Next Morphew the harper with his pig's face
> Lies tickling a treble and vamping a base.

Burney in 1789 (*History of Music*, ed. F. Mercer, New York, 1935, ii, p.88) wrote of having 'heard one of the town waits, at Shrewsbury, *vamp a base* upon all occasions'. In popular music and jazz it is an introductory or transitional progression of simple chords repeated until a soloist's entrance; this device became particularly common in the music hall, where performers' stage routines preceded their songs and the orchestra had to 'vamp till ready'. Although the term 'vamp' may be almost synonymous with 'ostinato' in jazz, it carries the additional idea that its duration is at the descretion of the soloist. In some forms of jazz (modal, jazz-rock, Latin jazz) and popular music (especially funk), an entire piece may be based on a succession of open-ended vamps.

FRANK KIDSON/DEANE L. ROOT/R

Vamp-horn [vamping-horn]. A type of speaking-trumpet or megaphone invented in 1670 by Samuel Morland and used in English churches until the early 19th century to concentrate and project (albeit with some degree of unavoidable distortion) an individual voice, usually that of the parish clerk or the leader of the choir. It was used musically to give out the first line of a psalm or hymn, to lead congregational singing or to supply vocally a missing line of harmony. Vamp-horns were originally designed for non-musical uses such as summoning labourers to and from the fields or making announcements to the village community. The device, varying in length from about 90 cm to nearly 2·5 metres, was constructed in a conical shape from thin sheet-iron, with a bore of about 5 cm flaring (in the case of the widest noted example, from Braybrooke, Northamptonshire) to a bell measuring 64 cm; at least one was originally provided with a wooden 'mouthpiece'. The first recorded vamp-horn, at Walgrave,

Northamptonshire, is noted as being audible at a distance of a mile. Another, from Harrington, Northamptonshire, was built in telescopic sections for ease of transportation. Eight surviving examples are known in England: two each in Northamptonshire and Lincolnshire, and one each in Buckinghamshire, Kent, Nottinghamshire and Sussex. Their use in churches may have originated in Northamptonshire, where the earliest documentation is found. Although vamp-horns have often been regarded as 'amplifiers', they incorporate no means of supplementing the actual energy supplied by the user.

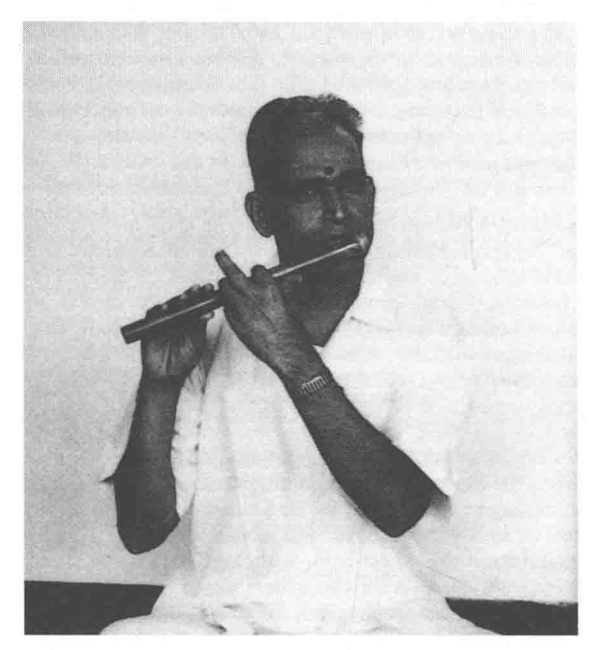
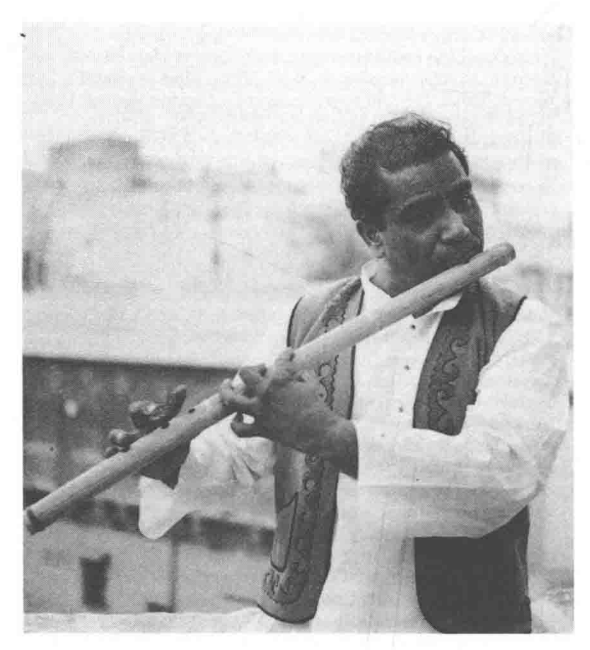
Vaṃśa [basurī, veṇu]. A classical Indian term, meaning 'bamboo', 'flute' in Sanskrit. It is the root of common names found in modern North Indian languages – *bas, basī, basurī, basrī, baslī, basulī* usually denoting a transverse flute. The Sanskrit synonym *veṇu*, also used since classical times, is more often adopted in South India.



1. History. 2. Local traditions. 3. Modern classical transverse flutes.



1. HISTORY. The term *vaṃśa* does not occur in the oldest literature, the *Ṛgveda* (later 2nd millennium BCE), in which *nāḍī* (Vedic *nāḷī*: 'pipe') is used to refer to the flute of Yama, King of the Dead. In later Vedic literature of the 1st millennium BCE the common term for flute is *tūṇava*. Here, and into classical times, the flute, together with the *vīṇā* (harp) and *dundubhi* (drum), is frequently recorded.

In the classical period of Sanskrit literature (roughly, the 1st millennium CE) *vaṃśa* and *veṇu* are the terms most used, referring to the transverse flute, played in chamber music and in the drama of court and temple. The *Nāṭyaśāstra* (early centuries CE) places the *vaṃśa* in the melody section of the classical theatre orchestra, together with strings and singers, and it prescribes the use of bamboo in its making. In the classical period, also, the flute is established as the emblem of the god Krishna, though in literature the name *muralī* is more common for this instrument. In this period in the South, the Dravidian *kuḻal* of classical Tamil literature was an equally important instrument.

By the Middle Ages the flute, and its music and theory, had been greatly developed, and texts such as the *Saṅgītaratnākara* describe the *vaṃśa* made in many sizes and with different tunings and materials (including acacia wood, sandalwood, ivory, iron, bronze, silver and gold, as well as bamboo). This account, partly based on that of earlier writers, gives 15 (or 17) principal models of the *vaṃśa*, each with its keynote tuned successively to each of the seven degrees of the lower and middle octaves and the upper tonic (much as today, when classical Indian flautists bring a bag of different-sized flutes to a performance, suited to the range and tuning of different ragas). The four smallest, however, are said to be uncommon in being too shrill.

With the spread of Turko-Afghan Muslim rule over the greater part of South Asia from the end of the 12th century, the eclipse of the transverse flute as a court and art-music instrument is remarkable. When a flautist is mentioned at a Muslim court, it is often a player of the *nāy* (the Persian oblique flute). This is the more remarkable considering that it was during this period that the Krishna cult grew most significantly, and countless homes and temples had their idols of *madanamohana* ('the charmer', 'the seducer') holding a transverse flute.

1. Classical transverse flutes of India: (a) veṇu of the South; (b) basurī of the North

2. LOCAL TRADITIONS. The transverse flute is not common in local traditions, except in the East – Bengal, Orissa, Assam and the north-eastern areas – where it is known variously as *basī*, *basurī*, *rutu*, *shumul* and *tirạyu*. This region, especially Assam, is held to produce the best-quality bamboo. Elsewhere, the terms *bas*, *basī*, *basurī* and *bainsirī* are frequent but usually denote end-blown flutes, with or without ducts.

3. MODERN CLASSICAL TRANSVERSE FLUTES. Over the past century or so, the transverse flute has been redeveloped as an important instrument of northern and southern classical musics. In the South this is credited to Sarabha Sastri (1872–1904). Here, the *veṇu* (Tamil *pullāṅkulal*) is a short bamboo tube, little more than a foot (about 30 cm) long, but comparatively wide (fig.1*a*). It is closed by a node at one end, and has eight finger-holes. In its range (about two-and-a-half octaves), use of ornamentation (*gamaka*) and repertory it follows the voice (the model for all Karnatak instruments). In the same period the *veṇu* replaced the oboe *mukhavīṇā* in the accompaniment of the classical Tamil dance *Bharata nāṭyam*.

The northern or Hindustani concert flute (*basrī*, *basurī*; fig.1*b*) has been developed especially by Bengalis, above all the late Pannalal Ghosh. Here, especially for heavy *rāgas*, a very long flute (at least twice the length of the southern one) is often played, though flautists play a selection of sizes suitable to different pieces. It is closed by a node at the top end, and usually has seven finger-holes, the lowest on the side to accommodate the little finger. Again the model is vocal music, especially the Hindustani 'heavy' *khayāl* and the lighter *ṭhumrī*, though some players use Hindustani instrumental techniques such as *joṛ* and *jhālā*.

ALASTAIR DICK/R

Vamvakaris, Markos (*b* Syros, 1905; *d* Athens, 1972). Greek *rebetika* musician. He went to Piraeus as a young man and began to play the *bouzouki*. He frequented the hashish dens and was influenced by refugee musicians from Turkey. Together with Delias, Stratos and Batis he formed a quartet that soon became famous, establishing what came to be known as 'Piraeus-style' *rebetika*.

From 1934 to 1935 the quartet played regularly in a small club in Piraeus where Vamvakaris wrote many of the songs that became classics of the *rebetika* repertory, such as *Antilaloun oi filakes* ('The prisons ring out'), *Kantone Stavro!* ('Fix it Stavro!') and *M'ekapses tsaxpina mou oraia* ('You burnt me, pretty teaser'). Both his gravelly voice and the subject matter of his songs belonged to the world of the *manges*, the inhabitants of the Piraeus underworld. Between 1930 and 1940 he wrote and recorded dozens of songs about prison life, the pleasure of smoking hashish in the illegal *tekes* of Piraeus and his relationships with women.

The Athenian public developed a taste for his music and, together with a number of other Piraeus-based musicians, he began performing in a fashionable Athens club. Censorship imposed by the Metaxas regime in the late 1930s forced him to alter the words of his songs and after World War II, as tastes in popular song changed, Vamvakaris's popularity waned. With the revival of *rebetika* in the 1970s his songs were re-recorded and he was treated as a celebrity until his death.

For bibliography *see* REBETIKA.

GAIL HOLST-WARHAFT

Van, Guillaume de. *See* DE VAN, GUILLAUME.

Van Allan, Richard (*b* Clipstone, Notts., 28 May 1935). English bass. He studied at the Birmingham School of Music with David Franklin and made his début in 1964 in the chorus at Glyndebourne, where he subsequently sang many roles, creating Jowler in Nicholas Maw's *The Rising of the Moon* (1970). He made his Covent Garden début in 1971 as the Mandarin (*Turandot*) and sang frequently with the WNO and the ENO; he also sang at the Paris Opéra, Wexford, Nice, Bordeaux, Boston and the Metropolitan. His repertory included Mozart's Figaro, Don Giovanni, Leporello, Don Alfonso and Osmin (roles to which he brought real resonance as well as wit), and Verdi's Zaccaria, Banquo, Massimiliano (*I masnadieri*), Silva (*Ernani*), Padre Guardiano, Philip II and Grand Inquisitor, as well as King Henry (*Lohengrin*), Pizarro, Boris, Berlioz's Méphistophélès, Vodník (*Rusalka*), Colline and Ochs, which he first sang at San Diego in 1976. Van Allan's voice was not particularly large but was firmly focussed and intelligently used, while his dramatic gifts were effectively demonstrated in roles such as Claggart (*Billy Budd*), Collatinus (*The Rape of Lucretia*) and Tiresias, which he created in Buller's *Bakxai* (1992). Among his recordings are Masetto and Don Alfonso (both with Colin Davis), Wurm (*Luisa Miller*), Truelove (*Rake's Progress*), Sir Walter Raleigh (*Gloriana*) and Hobson (*Peter Grimes*). He became director of the National Opera Studio in 1986.

ELIZABETH FORBES

Van Appledorn, Mary Jeanne (*b* Holland, MI, 2 Oct 1927). American composer. She studied the piano and theory at the Eastman School of Music (BM 1948, MM 1950, PhD 1966), where she received informal training in composition with Bernard Rogers and Alan Hovhaness. In 1982 she undertook postdoctoral studies in computer-synthesized sound at MIT. She joined the music department at Texas Technical University in 1950. Her numerous honours include the Premier Prix, Dijon, awards from the Texas Composers Guild and ASCAP, and commissions from the Music Teachers National Association and National Intercollegiate Bands.

Van Appledorn's music displays a wide range of styles and compositional procedures. The character of each work is rooted in its text or in the performance context of the group for which it was composed. Many works combine strong jazz influences, unusual timbres and extended instrumental techniques with highly organic structures, intricate contrapuntal procedures and substantial motivic development. Some compositions are inspired by programmes or descriptive titles; others require virtuoso technique.

WORKS

INSTRUMENTAL

Orch: Concerto brevis, pf, orch, 1954; A Choreographic Ov., band, 1957; Conc., tpt, band, 1960; Passacaglia and Chorale, 1973; Lux

Vanbrugh [Vanbrughe], **George** (*fl* London, early 18th century). English bass and composer. He was probably related to the dramatist and architect Sir John Vanbrugh, perhaps as the son of Sir John's cousin, William Vanbrugh. George Vanbrugh was for a time in the service of the Duke of Chandos at Cannons.

Most of Vanbrugh's songs are in three slender volumes: *Modern Harmony or a Desire to Please* (London, 1720) and the two books of *Mirth and Harmony* (London, 1730, 1732); others were published singly and in miscellaneous anthologies. Each of Vanbrugh's collections includes a single italianate cantata to an Arcadian text; in two cases the words are by Henry Carey, and all three comprise two da capo arias each preceded by recitative. The three volumes also contain 53 songs and duets, mostly in a strophic binary form with an opening ritornello, though some are more ambitious in design. Among the best is *Soft God of Sleep* ('Morpheus Adrest'), which is Purcellian in style; but the majority of Vanbrugh's vocal works aimed to satisfy a conventional taste with neatly balanced phrases, at the expense of any real sensitivity to the words. Verbal accentuation is often faulty.

Modern Harmony also contains the only purely instrumental music by Vanbrugh: two Corellian sonatas (one each for violin and flute, with continuo) and a set of *Lessons for the Harpsichord or Spinnet*. The *Lessons* (in reality a single G minor suite, consisting of a prelude and five dance movements) are remarkable chiefly for their unusually irregular phrase lengths.

Van Bunnen, Hermann. *See* BONNUS, HERMANN.

Vancea, Zeno (Octavian) (*b* Bocşa-Vasiova, 8/21 Oct 1900; *d* Bucharest, 15 Jan 1990). Romanian composer and musicologist. He studied music at Lugoj and at the conservatories of Cluj (with Dimą, 1919–21) and Vienna (with Kanitz, 1921–6, 1930–31). He held posts as professor of music history, theory and harmony (1926–40) and director (1946–48) at the Tîrgu Mureş Conservatory, professor of counterpoint and music history at the Timişoara Conservatory (1940–45), director of music in the Ministry of Arts, Bucharest (1948–50), and professor of music history and counterpoint at the Bucharest Conservatory (1949–73). In Tîrgu Mureş he founded and directed the State Philharmonic (1926–40); he was secretary (1949–53) and vice-chairman (appointed 1968) of the Romanian Composers' Union and editor-in-chief of the Bucharest journal *Muzica* (1953–64). His publications are concerned with 19th-century eastern European musical schools and with their main representatives (Enescu, Bartók, Kodály, Janáček), and especially with the shaping and crystallization of the Romanian idiom; his series of records, Istoria Muzicii Universale pe Discuri, includes Romanian music in the context of world art. Vancea's compositions, particularly his two *Rapsodii bănăţene* for orchestra, Concerto for string orchestra, eight string quartets and the ballet *Priculiciul* ('Werewolf', 1933, rev. 1957), show a keen response to the lyricism and modal chromaticism of Romanian folk music, and a skilful handling of polyphony and classical forms. He is one of the chief composers of Romanian chamber music and was the first Romanian musician elected to the Deutsche Akademie der Kunst (1975).

VIOREL COSMA

Vancouver. City in British Columbia, Canada. Its musical life expanded rapidly after its incorporation in 1886; within a decade it had two opera houses, a number of choral groups, opera and music societies, a conservatory of music (now defunct) and an orchestra of 23 players. By the 1920s there were two part-time orchestras and a theatre on the Orpheum circuit which presented occasional performances by visiting celebrities, including Rachmaninoff and Casals. The city owns the Queen Elizabeth Theatre (cap. 2820), the Queen Elizabeth Playhouse (648) and the Orpheum Theatre concert hall (2900), and there are good facilities at the Vancouver Academy of Music (Koerner Recital Hall, 284), Simon Fraser University, the University of British Columbia (including the Chan Shun Concert Hall at the Chan Centre for the Performing Arts; see illustration) and in North Vancouver. There are a number of small theatres for recitals, drama and dance, among them the Vancouver East Cultural Centre (250–350) and the Firehall Arts Centre (200).

Financial problems thwarted serious attempts in 1897, 1907, 1915, 1919 and 1921 to create a permanent orchestra, and it was not until 1931 that the present Vancouver SO and its parent society were founded by Allard de Ridder. From 1941 to 1947 the orchestra was directed by a series of guest conductors, including Barbirolli, Beecham, Klemperer and Steinberg. Jacques Singer became conductor in 1947, followed by Irwin Hoffman (1952–64), Meredith Davies (1964–71), Simon

Chan Centre for the Performing Arts, Vancouver, designed by Bing Thom Architects with Artec Consultants Inc., opened 1997

Streatfeild (1971–2), Kazuyoshi Akiyama (1972–85), Rudolf Barshay (1985–7) and Peter McCoppin (1989–92). Sergiu Comissiona became music director in 1991. The orchestra was the first in North America to present a concert series devoted exclusively to 20th-century music. Its 38-week season features international guest soloists and a variety of special-interest series. It has twice toured Japan (1974 and 1985) and was the first major Canadian orchestra to undertake a cross-country tour (1976).

The Canadian Broadcasting Corporation Vancouver Chamber Orchestra (since 1980 the CBC Vancouver Orchestra) was founded in 1938; conductors have been John Avison, John Eliot Gardiner (from 1980) and Mario Bernardi (from 1982). The last surviving radio orchestra in North America, it broadcasts nationally and has toured in Canada and the USA. Under Avison it performed mostly 20th-century music, particularly Canadian; Gardiner gave more emphasis to earlier music, but Bernardi's advent marked a return to modern works. The orchestra commissions at least two substantial compositions a year and offers an annual public concert series.

The Vancouver Opera Association (now Vancouver Opera) was founded in 1961, with Irving Guttman as artistic director. Subsequent officers have been Richard Bonynge (1974–8), Anton Guadagno (1980–82), Guttman again (1982–4), Brian McMaster (1984–9), Guus Mostart 1989–92) and David Agler (from 1992). The company has commissioned works by British Columbian composers and librettists: *The Architect*, by David McIntyre and Tom Cone (1994), and *Alternate Visions*, by John Oliver and Genni Gunn (1995). Joan Sutherland first sang the title roles in *Norma* (1963) and *Lucrezia Borgia* (1972) with the company, which has also mounted productions jointly with companies in Edmonton, Calgary, Seattle and Portland.

Five Vancouver choirs – the Vancouver Bach Choir (founded 1930), the Cantata Singers of Vancouver (1958), the Gallery Singers (1968), the Vancouver Chamber Choir (1971) and the Phoenix Choir (1983) – have taken first place in the BBC contest *Let the Peoples Sing*. Other choirs are the Vancouver Men's Chorus (1981), the Electra Choir (female, 1987) and its partner, the Chor Leoni (male, 1992).

In a tradition established by the city's oldest music organization, the Vancouver Woman's Musical Club (founded 1905), concerts by local and visiting musicians are presented by the Friends of Chamber Music (1948), the Music in the Morning Society (1984) and the Vancouver Recital Society (1980; since 1986 it has also presented a two-week summer festival), the Festival Concert Society (founded as the British Columbia branch of Les Jeunesses Musicales du Canada in 1961, renamed in 1972), and Overture Concerts (1955). At the Vancouver East Cultural Centre, the Masterpiece Chamber Music ensemble has given an annual concert series since 1975. Vancouver New Music (founded 1972) produces new works by local, national and international composers. The Vancouver Early Music Society was founded in 1970. Local business has supported visits to Vancouver by the Calgary PO and the Seattle SO as well as a performance of Peter Maxwell Davies's oratorio *Job*, which opened a new performance hall at the University of British Columbia in 1997.

The University of British Columbia music department was established in 1946 under Harry Adaskin; his successors as head have included G. Weldon Marquis (1958–71), Donald McCorkle (1972–5), Wallace Berry (1978–84), William Benjamin (1986–91) and Robert Silverman (from 1991). The department became a music school in 1986. The first BMus degrees were awarded in 1962. There is a strong department of oriental music offering a master's degree. Simon Fraser University has a School for Contemporary Arts (formerly Centre for Communications and Arts, founded 1965) and for many years accommodated resident composers, musicians and ensembles; the composer Owen Underhill was appointed director in 1994.

The Vancouver Academy of Music (until 1979 the Community Music School of Greater Vancouver, founded 1969) offers a four-year diploma course in performance and music tuition from primary to professional levels. A BMus degree was introduced in 1994. The Junior Symphony Society, incorporated by the Vancouver Symphony Society in 1945, is a training ground for music students. The Kiwanis Music Festival competition, founded in 1923, is an annual two-week event with about 12,000 participants. The Vancouver International Festival, an annual summer event from 1958 to 1968, presented a wide variety of theatrical and musical performances and attracted many visitors from abroad.

The Canadian Music Centre, which represents the country's professional composers, established a Vancouver branch in 1977 with 14 members; by 1995 the number had risen to 71. Vancouver is the home of the Sabathil harpsichord manufacturing company and several firms making replicas of early instruments.

Outdoor concerts and theatrical events are staged in summer in Stanley Park, notably by Theatre Under the Stars (1940–63) and Theatre in the Park. The city's night clubs and cabarets engage local and visiting performers of jazz, pop, rock and light music, and its active pop and rock recording industry has nurtured, among others, Bachman Turner Overdrive, Bryan Adams and k.d. lang.

Van Crevel, Marcus. *See* CREVEL, MARCUS VAN.

Vančura [Wanžura, Wanczura, Wanskura], **Arnošt** [Ernest] (*b* Vamberg [now Vamberk], Bohemia, *c*1750; *d* St Petersburg, Jan 1802). Russian composer and musical entrepreneur of Czech birth. After a short career as a lieutenant in the Austrian army, he arrived in Russia in 1783, passed himself off as a noble dilettante and took part in the reorganization of the St Petersburg theatres. After resettling in Moscow, he attempted to found a theatre of his own, but was out-manoeuvred by Michael Maddox, the established Moscow impresario, and spent a couple of years instead directing the music school attached to Maddox's Petrovsky Theatre. By February 1786 Vančura was back in St Petersburg, where he served until 1796 as a lavishly remunerated official in the directorate of the Court (later Imperial) Theatres, also appearing as 'court forte-pianist' in a quartet with violin, cello and harp (he also specialized in imitating animal

cries and human bodily functions at the keyboard). After the failure of Fomin's setting of Catherine II's second opera libretto, *Noogorodskiy bogatïr' Boyeslavich* ('Boyeslavich, Champion of Novgorod'), the fast-talking newcomer was entrusted with her third, written in collaboration with her literary secretary, Alexander Khrapovitsky: *Khrabroy i smeloy vityaz' Akhrideich* ('The Brave and Bold Knight Akhrideich'), a comic opera in five acts, also known as *Ivan-Tsarevich*. 'Baron Vančura's' pastiche of folktunes was successful and remained in the repertory until 1810.

As an official of the Imperial Theatres, Vančura may have had a hand in revising the music of the popular folktune-based comic opera *The Miller* for its St Petersburg performances. This would help explain how the first movement of Vančura's 'Russian' Symphony (*Rossiyskaya simfoniya*, subtitled 'Sinfonie russe, composée d'airs ukraïniens') became attached to *The Miller* as an overture; in the original vocal score (Moscow, 1884), the whole opera is misattributed to Fomin.

WORKS

Stage: Khrabroy i smeloy vityaz' Akhrideich (Ivan-Tsarevich) [The Brave and Bold Knight Akhrideich] (op, 5, Catherine II, A.V. Khrapovitsky), St Petersburg, Hermitage, 23 Sept/4 Oct 1787, *Ru-SPtob*; ov. ed. in *IRMO*

Inst: 3 National Syms., 'Ukrainian', C, 'Russian', E♭, 'Polish', B♭ (St Petersburg, 1798), nos. 1–2 arr. pf, in *Journal de musique* (St Petersburg, 1785); 3 syms., C, f, d (St Petersburg, 1799); dances, pf (Vienna, 1773); 3 qts, kbd, fl, vn, b (Vienna, n.d.), mentioned in *GerberL*; other pf pieces in *Journal de musique* (1785–6)

RICHARD TARUSKIN

Vancy, Joseph-François Duché de. *See* DUCHÉ DE VANCY, JOSEPH-FRANÇOIS.

Van Dam. Dutch family of organ builders. Lammert [Lambertus] van Dam (i) (1744–1820) first trained as an organ builder in Gouda from 1764, presumably with Hendrik Hermanus Hess. As early as 1768 he worked for Albertus Anthoni Hinsz. In 1777 he set up a workshop in Leeuwarden, the capital of Friesland. The house he bought there in 1779 remained in the family as a workshop until 1917. He completed his first organ in Oldeboorn in 1779. This move to Friesland proved to be fortuitous, not only for the firm, but also for the province, in which organs had been scarce, and which gained about 125 organs from the four generations of Van Dam builders. Lambertus (i)'s enlargement of the Hinsz organ of Wassenaar, near The Hague, with a *Rugwerk* helped the firm to receive regular work in the western provinces as well.

Although Lammert did not make many large organs (his largest was Voorburg, 1806; dismantled in 1877), the quality of his work, which initially was in the Hinsz tradition, was highly praised. His later organs, beginning with those in Voorburg and Garnwerd (1809), show a more individual style. His sons Luitjen Jacob (i) (*b* Langweer, 1783; *d* Leeuwarden, 1846) and Jacob (i) (*b* Bergum, 1787; *d* Leeuwarden, 1839) became his partners in about 1812 (under the name of L. van Dam & Zonen). Their organ for 's-Gravenzande in 1818 set the style of the second generation of Van Dam builders. From then on the cases were built in the then dominant Biedermeier style, and the tone became milder, with *Bovenwerk* divisions replacing the traditional *Rugwerk* (the last *Rugwerk* was built in 1832). Several organs were also given independent Pedals and the new-style magazine bellows, following in the tradition of the German organ school. When Luitjen Jacob (i) died the firm passed to his oldest son Lammert (ii) (1823–1904), who was joined by his two brothers, Pieter (i) (1824–89) and Jacob (ii) (1828–1907).

The third generation produced 150 new organs over a period of 58 years. Lammert (ii) kept pace with changing tastes and demands and from 1860 onwards the Empire style of façade was replaced with a kind of Regency style, while neo-Gothic façades were also introduced. Internally, from 1852, the wind-chests of the Great of larger organs were arranged chromatically, while free reeds, string stops and swell boxes were introduced. Yet the approach to construction, pipe scaling and voicing remained much the same as that of the 18th century. The largest organ of this generation is the extant three-manual, 40-stop organ of Enschede.

When Lammert (ii) died the firm was continued by his sons Pieter (ii) (1856–1927), Luitjen Jacob (ii) (1850–1915) and Haije (1853–1927). Although at first the organs were still of high quality (even during and after World War I), the rising costs of materials and labour and increasing competition led the company to buy prefabricated organ parts and pipes from mass manufacturers, causing the firm to turn to pneumatic action. This development, along with the conversion of the business to a limited liability company in 1917, estranged the firm from its age-old tradition of excellence. Pieter retired as director in 1926 and in the same year, due to increasing competition from the successful Leeuwarden firm of Bakker & Timmenga, sold the firm to the organ builder A.S.J. Dekker.

ADRI DE GROOT

Van Dam, José [Van Damme, Joseph] (*b* Brussels, 25 Aug 1940). Belgian bass-baritone. He studied in Brussels, making his début in 1960 at Liège as Rossini's Don Basilio. From 1961 to 1965 he was engaged at the Paris Opéra and Opéra-Comique, singing minor roles. After two seasons at Geneva, where he sang in the première of Milhaud's *La mère coupable* (1966), he joined the Deutsche Oper, Berlin; his roles there included Mozart's Figaro, Leporello and Don Alfonso, Verdi's Attila, Prince Igor and Rangoni (*Boris Godunov*). Equally at home in the French, German or Italian opera, he had a repertory ranging from the four villains (*Les contes d'Hoffmann*), Golaud and Guillaume Tell to Sarastro, Caspar (*Der Freischütz*), Wozzeck, Amfortas and Boccanegra. A notable Escamillo, he sang the role on his San Francisco

(1970), Covent Garden (1973) and Metropolitan (1975) débuts. He created the title role of Messiaen's *Saint François d'Assise* in Paris (1983). Van Dam possessed one of the smoothest, most resonant bass-baritones of his generation and was also a notably versatile actor. His lithe Don Giovanni and athletic Escamillo early in his career were succeeded by subtle and penetrating portrayals of such tormented souls as Philip II, the Dutchman, Golaud, John the Baptist and Enescu's Oedipus, all of which he recorded. He was also unsurpassed as Méphistophélès in Berlioz's *La damnation de Faust*, both in concert and on disc. He was less successful as Falstaff and Hans Sachs, while his preoccupation with even, mellifluous tone often created a rather anonymous impression in lieder and *mélodies*.

ELIZABETH FORBES/ALAN BLYTH

Vande Gorne, Annette (*b* Charleroi, 6 Jan 1946). Belgian composer. After studying classical music at the conservatories of Mons and Brussels and with Absil, she encountered the acousmatic music developed by Pierre Schaeffer's Groupe de Recherches Musicales. Fascinated by the work of such composers as François Bayle and Pierre Henry, she attended the Paris Conservatoire to study with Schaeffer and Reibel. On returning to Belgium she founded the Musiques et Recherches association and the Métamorphoses d'Orphée studio, soon to be among the leading centres of musical teaching and creativity specializing in acousmatic and electro-acoustic music. Since 1986 she has taught in the main Belgian conservatories, at Liège, Brussels and finally at Mons, where she is building up a class in electro-acoustic composition. Her works are played at the leading festivals of electronic music. Faithful to her commitment to acousmatic art, she uses technological aids as a method of composition, the studio as her processing tool and the loudspeaker as a means of sound diffusion. She also collaborates with writers and poets, including Werner Lambersy, to attain a close fusion of text and sound.

Van Delden, Lex. *See* DELDEN, LEX VAN.

Van den Berghe, Frans. *See* TIBURTIUS VAN BRUSSEL.

Vanden Berghen, Josse (*fl* Brussels, 1749–91). Flemish bookseller and printer. He was the son-in-law of the Liège printer Jean-François Bassompierre and was established as a bookseller in Brussels by 5 April 1749. From 1764, Vanden Berghen regularly advertised musical compositions sold in his shop in the Brussels journal *Gazette des Pays-Bas*. On 11 September 1769 he took over the privilege to print librettos for the Théâtre de La Monnaie from Jean-Joseph Boucherie. Recognized as a printer of the lyric repertoire in Brussels, Vanden Berghen's editions of librettos, which included musical supplements from 1770 to 1773, were of *opéras-comiques* and *comédies mêlées d'ariettes* by M.P. Baccelli, Dezède, Fridzeri, Grétry and Martini.

MARIE CORNAZ

Van den Borren, Charles (Jean Eugène) (*b* Ixelles, nr Brussels, 17 Nov 1874; *d* Brussels, 14 Jan 1966). Belgian musicologist. He first studied law, becoming a *doctor juris* of the University of Brussels in 1897. After practising as a barrister in the court of appeals there until 1905 he abandoned his legal career to pursue musical studies, attending Maurice Kufferath's lectures on music history, and working on harmony, counterpoint and fugue with Ernest Closson. From 1909 to 1914 he served as music critic of *L'indépendance belge*; he also contributed criticism to other journals and lectured at the Brussels Institut des Hautes Etudes Musicales et Dramatiques on the origins of polyphony and the history of music in the Low Countries, and at the Free University on the history of keyboard music. In 1919 he succeeded Wotquenne as librarian of the Brussels Conservatory and remained in that post until his retirement in 1940. During his tenure the library continued to make important accessions, such as the Fonds Ste Gudule (several hundred 18th-century manuscripts from one of the principal churches in Brussels). He held the chair of the history of music at the Free University (1926–45) and a lectureship in musicology at the University of Liège (1927–44). Van den Borren was an active member of the IMS and a member of its directorate (1927–54). In 1939 he was elected to the Académie Royale de Belgique, Classe des Beaux-Arts, and served as its president during 1953. With the formation of the Société Belge de Musicologie in 1946, Van den Borren served as its first chairman. Together with his son-in-law, Safford Cape, he founded the Pro Musica Antiqua in 1933 to perform early music (1200–1600) as authentically as possible, and served as its musicological adviser.

In 1945 a Festschrift including essays by 20 Belgian musical scholars was published in honour of Van den Borren's 70th birthday. It included a complete list of his articles and reviews to date, some 400 items. Van den Borren remained so active until almost the end of his life that, when his 90th birthday was similarly celebrated in 1964, the revised list of his publications took up 30 pages of fine print (*RBM*, xviii) and contained almost twice as many entries as the 1944 enumeration.

Van den Borren achieved great distinction as a historian and critic. In his research he concentrated largely on Netherlandish music, a subject which he interpreted in its broadest geographical and temporal senses, covering both Belgian and Dutch music from medieval to modern times.

He was especially interested in English music of the late Middle Ages and Renaissance, and its interrelationships with contemporary music in the Low Countries. His writings on such subjects as the 15th-century origins of the rich development of vocal polyphony in the 16th century, and early keyboard music in England and the Low Countries, remain authoritative, as do his studies of such individual composers as Du Fay and Lassus. He contributed several hundred articles and chapters to major music dictionaries and encyclopedias. His outstanding accomplishments include the book on Du Fay (1925), the monograph on the lost Strasbourg manuscript, the inventory of manuscript sources of early polyphonic music in Belgian libraries, the chapters (on the Middle Ages, the Renaissance, musicology, manuscripts and prints) contributed to the book written with Ernest Closson on music in Belgium, and the monumental history of music in the Netherlands. Unaccountably this last work was published only in a Dutch translation and has never appeared in the original French text. In his writings and teaching Van den Borren achieved an extraordinary combination of impersonal objective analysis and informed subjective aesthetic judgment. In his comprehensive studies of the music of the Netherlandish Renaissance masters, such as Du Fay and Busnoys, he dealt not only with the form and structure of their music but also presented the personality of the composers, placing them in their social and historical contexts.

Van den Borren's influence was not confined to his native country. He published and lectured in many countries and he was the mentor of notable scholars from abroad, such as Thurston Dart. His many distinguished Belgian pupils include Suzanne Clercx-Lejeune and Robert Wangermée, his successors as university professors in Liège and Brussels, and Albert Vander Linden, librarian of the Brussels Royal Conservatory. As a teacher Van den Borren is credited with having advanced historical musicology in Belgium to the status of a university discipline: building on the work of his predecessors, such as Fétis, Vander Straeten and Gevaert, he added the essential and previously lacking elements of system and method.

HOWARD SCHOTT

Van den Bosch, Pieter Joseph (*b* Hoboken, 1736; *d* Antwerp, 19 Feb 1803). Flemish composer, organist and harpsichordist. He was living in Antwerp by 1762, when he married there. He succeeded Dieudonné Raick as organist at the cathedral in 1765, a post he held until the closing of the churches in 1797. During this period he was a highly influential figure in Antwerp's musical life and its most fashionable teacher. Burney, after hearing him play the organ in 1772, wrote: 'He is a spirited and masterly player. ... His style of playing is modern, and he is very dexterous in the use of the pedals. ... He has a very good taste, and great fire, both in writing and playing'. Although appearing in Paris, Van den Bosch's published works probably reflect the uncertain musical resources of Antwerp as they are designed for performance either as keyboard solos or with various instrumental accompaniments as concertos or symphonies. The first collection is characterized by tasteful melodic writing and contrapuntal touches, but these give way in the later works to pompous themes, weak harmony and quasi-orchestral effects.

WORKS

6 sonates, hpd, by 1760, *B-Ac*; 6 divertissements, hpd, with 2 vn, b ad lib, op.2 (Paris, *c*1762); 4 concerts, hpd, org, with 2 hn, 2 vn, va, b, db ad lib, op.3 (Paris, ?1769); 6 suites, hpd, vn ad lib, op.4 (Paris, ? by 1772); 4 sonates, hpd, with vn, b ad lib, op.5 (Paris, *c*1773); 3 sonates dans le gout de simphonie, hpd/pf, with vn, b, fl, hn ad lib, op.6 (Paris, after 1778); 12 hpd sonatas, mentioned by Gregoir (1865)

PAUL VAN REIJEN

Vandenbroek [Brock, Vandenbrock, Van der Broeck] **Othon-Joseph** (*b* Ypres, 20 Dec 1758; *d* Passy, nr Paris, 18 Oct 1832). Flemish composer and horn player. After studying at The Hague and Amsterdam, by 1781 he joined the French theatre of Maastricht as a violinist, and his first operas were produced there. He made his Parisian début as a horn player at the Concert Spirituel in 1784; it may be assumed that he then had some function at the new Théâtre des Beaujolais since his operas *Colin et Colette* and *La ressemblance supposée* were staged there. He subsequently played the horn first at the Théâtre de Monsieur and then at the Opéra (1793–1816). Besides several instrumental works, Vandenbroek published two pedagogical treatises, which brought him an appointment as professor at the Conservatoire, 1795–1800. The only one of his operas to acquire a certain notoriety was *Le codicille* (1793), which was however considered too obviously influenced by the *charmant* style of Nicolas Dezède. His later stage works, mostly for the Cité-Variétés and the Ambigu-Comique, are more in the nature of theatre music than genuine opera.

WORKS

STAGE

first performed in Paris unless otherwise stated

Tircis et Céphise, ou Le lotto de l'amour (op, 3, Vallier), Maastricht, 6 July 1782
Les étrennes de la nouvelle année (comédie-vaudeville, 1, Vallier), Maastricht, 1783
Colin et Colette, ou Le milicien (opéra bouffon, 1), 8 June 1786
La ressemblance supposée (opéra bouffon, 1), 26 July 1788
Le codicille, ou Les deux héritiers (comédie mêlée de chants, 1, J.G.A. Cuvelier), 5 Aug 1793, incl. music by Cuvelier, J. Haydn and I. Pleyel, *F-A*
La fête à l'Etre Suprême (scènes patriotiques mêlées de chants, pantomimes et danses, Cuvelier), 9 June 1794
La fille hermite (oc, 1, Cuvelier), 23 Oct 1795
Le génie Assouf, ou Les deux coffrets (pantomime, ?Cuvelier), 25 Dec 1795
C'est le diable, ou La bohémienne (drame à grand spectacle, 5, Cuvelier), 18 Nov 1797, collab. Cuvelier
Les Incas, ou Les Espagnols dans la Floride (mélodrame), 1797
L'anniversaire, ou La fête de la souveraineté (scène lyrique et mélodramatique, Mittié and Cuvelier), 20 March 1798
La fontaine merveilleuse, ou Les époux musulmans (pantomime-féerie, 5, Loaisel de Tréogate), 13 Sept 1799

Orch: Concs. nos.1 & 2, hn (Paris, *c*1788); Symphonie concertante, 2 hn (Paris, *c*1792), lost; Symphonie concertante, cl, hn, bn (Paris, *c*1793), lost; Sym. 'La prise de la Bastille' (Paris, *c*1797); Symphonie concertante, E♭, 2 hn (Paris, n.d.); Premier concert, cl (Paris, n.d.), lost, mentioned by Fétis; Sym., C (Paris, n.d.); 3 syms., *D-Rtt*; Symphonie concertante, F, frag., *F-Po*
Chbr: 3 quatuors concertans, hn, vn, va, vc/bn, op.1 (Paris, 1788); 6 quatuors concertans, fl, vn, va, vc, op.2 (Paris, 1788); 3 quatuors concertans, hn, vn, va, vc, 2e livre de quatuors de cor (Paris, *c*1790); 3 duos concertants, cl, hn (Paris, n.d.), lost, mentioned by Fétis

PEDAGOGICAL WORKS

Méthode nouvelle et raisonée pour apprendre à sonner du cor (Paris, *c*1789) [incl. 40 petits airs, romances, vaudevilles et allemandes]
Traité général de tous les instruments à vent, à l'usage des compositeurs (Paris, *c*1794/R)

MICHEL NOIRAY/R

Van den Eeden [Eede, Ede, Eethe, Eden, Vandeneet], **Gilles** [Aegidius] (*b* ?Liège, *c*1708; *d* Bonn, 17 June 1782). German organist and composer. He was a son of Henri van den Eeden, a singer in the Liège court in 1695, and attended the choir school at the electoral court in Cologne in 1716. There he was appointed second organist with a salary of 150 gulden on 11 March 1723, but apparently

lost the post soon after, though his name still appears in the court calendar of 1724. In 1727 he was reinstated as second organist, without salary until he applied for one in 1728. In 1741 he took part in the 'Frankfurt Suite' of Elector Clemens August. According to another petition in August 1780 he had then been in the electoral service 54 years, which evidently does not include his activities before 1727. He was replaced as court organist by C.G. Neefe on 15 February 1781.

Though Van den Eeden has particular claim to attention as the teacher of the young Beethoven, there is some disagreement as to the precise date, length of time and nature of the instruction that the boy received from him. His friendship with the Beethoven family dated from at least 1733, when he was a witness of the marriage of the composer's grandfather, and on 17 November 1770 (just a month before Beethoven's birth) he and Beethoven's mother stood godparents to the son of a bass singer in the Bonn court Kapelle. According to Bernhard Joseph Mäurer, then a cellist at the Bonn court, Beethoven was eight years old when he was Van den Eeden's pupil, though Mäurer could report nothing of his progress. The piano and organ are probably the instruments he would have studied, and Mäurer specifically mentioned thoroughbass playing. Schindler claimed to have heard Beethoven repeatedly telling anecdotes about Van den Eeden and his organ lessons, but no credence can be given to his additional claim that Beethoven had profited but little from Neefe by comparison. Wegeler and Ries could produce nothing more than conjecture about Van den Eeden, in the absence of reliable sources. His name does not appear in the records kept by Gottfried Fischer in Bonn, unless in the mistaken form of 'Santerrini'.

HANS SCHMIDT

Vandeneet, Gilles [Aegidius]. *See* VAN DEN EEDEN, GILLES.

Vanden Gheyn [Van den Ghein, Gheine, Gein, etc.]. Flemish family of bellfounders, carillon builders and carillonneurs. Willem Van den Ghein (*d* 1533) from Goorle, near Tilburg, was the ancestor of ten founders who were to produce bells and carillons in Mechelen until 1697. His son Peter (i) (*d* 1561) was one of the first to make carillons. The bells and original barrel of the one he made for the town hall at Zierikzee (Netherlands) in 1554 were moved to the Zuidhavenpoort (at Zierikzee) in the early 1960s, and is the oldest known carillon still chiming. Although built as an automatic instrument, it was also played manually (although possibly not at first). His grandson Peter (ii) (1553–1618) cast a carillon for Monnickendam (Netherlands), which is now the oldest manually-played carillon in the world. In 1638 Peter (iii) (1607–59), nephew of Peter (ii), cast the 6-tonne 'Salvator' bell, which still exists, for Ste Gudule, Brussels, with his nephew Peter De Klerck.

After brief periods in St Truiden and Tienen the family settled in Leuven in 1727. Peter (iv) (*b* 1698), a monk, built a number of fine carillons, of which the instruments in Veere (Netherlands) and Steenokkerzeel (Belgium) are extant. His nephew and successor Andreas Jozef (1727–93) is regarded as the most gifted bellfounder to have emerged from the southern Low Countries. Of his 23 carillons, parts of nine have survived at St Truiden; Hasselt; St Lambert, Liège; Huy town hall; Notre Dame, Huy; Turnhout; Schoonhoven; the Nijkerk and Gertrudiskerk, Leuven. His carillon bells are accurately tuned and have a clear sonority; in the treble bells he achieved an even higher proficiency than the Hemony brothers.

The latter's son Andreas Lodewijk was the last bellfounder to bear the Vanden Gheyn name. His business was continued by his grandsons André-Louis (1814–88) and Séverin (1819–85) Van Aerschodt, who separated in 1851. Séverin's son Félix (1870–1943) closed the foundry just before World War II. Another dynasty with family ties to the Vanden Gheyns, the Sergeys family, continued to cast bells in Leuven until 1980 when the Belgian bellfounding tradition reached its end.

Matthias Vanden Gheyn (*b* Tienen, 7 April 1721; *d* Leuven, 22 June 1785), brother of Andreas Jozef, was a bellfounder, carillonneur, organist and composer. He was organist of the Pieterskerk, Leuven, from 1741 and the town's municipal carillonneur from 1745. Widely regarded as the most gifted carillonneur of his time, he was also an expert restorer of organs and carillons. He published two collections of harpsichord pieces and one set of sonatas for harpsichord and violin. An autograph harmony treatise dates from 1783 (*B-LVu* 195-29). A number of other works by Matthias, variously for harpsichord, organ and carillon, were discovered in manuscript in about 1861 by Xavier van Elewyck and copied by him (*B-Bc* ms.6255). The eleven virtuoso preludes for carillon in this collection are the earliest surviving genuine compositions for the instrument, and have formed part of the standard carillon repertory since the beginning of the 20th century. Their strict structure and toccata-like character have earned Vanden Gheyn the nickname 'Bach of the Carillon' (for a music example *see* CARILLON, ex.1). The rediscovery of Matthias's autograph of these preludes in 1995 (now *B-LVu* Van Elewyckfonds P-195) led to substantial improvements to Van Elewyck's transcription. Another carillon manuscript, the *Leuvens Beiaardhandschrift* (1755–60; now shelved with the preludes autograph), was probably supervised by Vanden Gheyn. It contains 151 pieces, with dance music, marches, music for formal occasions, and two dazzling variation works: *Les folies d'Espagne* and *Cecilia*.

LUC ROMBOUTS

Van den Heuvel. Dutch firm of organ builders. Jan Leendert van den Heuvel (*b* 5 Nov 1946) learnt organ building with the Flentrop firm. At the age of 20 he set up his own business in his father's painting workshop in Dordrecht. His first ten-stop organ was well received and this led to a contract for a three-manual, 32-stop instrument for the Singelkerk, Ridderkerk, completed in 1972. In 1975 he was joined by his brother Peter Aart van den Heuvel (*b* 13 Feb 1958); the firm became known as J.L. van den Heuvel-Orgelbouw B.V. in 1979.

The Van den Heuvels' love of French Romantic organs and their music inspired a study tour of Cavaillé-Coll instruments with Michelle Leclerc and Daniel Roth. Much of the knowledge gained from this tour was applied to the construction of the four-manual, 80-stop organ behind an old case for the Nieuwe Kerk, Katwijk-aan-Zee, in 1983. This instrument was received with mixed reactions, some suggesting that quantity had been given preference over musical quality and coherence. However, several prominent French organists, especially Daniel Roth, praised it, and the firm was honoured with a contract to build a unique organ with five manuals, 101 stops (five at 32′, including one on the *Grand orgue*), 147 ranks, 8000 pipes, and 33 wind-chests in the old case at St Eustache, Paris. This, the largest organ in France (completed in 1989), has a second, electric remote control console equipped with MIDI. Jean-Louis Coignet and Jean Guillou acted as consultants.

Although the Van den Heuvel firm has suffered setbacks at home due to controversies over the quality of their work, it still thrives, mainly on foreign contracts, and has built organs for the Martinikerk, Sneek (1986; based on Cavaillé-Coll's model no.8), Victoria Hall, Geneva (1992), the RAM, London (1993), Rotterdam (1996; this was originally ordered by the Concordian Theological Seminary, Tai-pei, and a sister organ was installed in the Royal College of Music, Stockholm, in 1995), St Franziskus Kirche, Munich (1997), and Katarina Church, Stockholm (1999). There is also a Van den Heuvel organ in the Holy Apostles Church, New York (the instrument was formerly in Texas). For further information see J. Jongepier: 'Groot, maar niet groots: over het Van den Heuvel-orgel te Katwijk', *De Mixtuur*, no.44 (1983), 554–65.

ADRI DE GROOT

Van der Elst, Johannes. *See* ELST, JOHANNES VAN DER.

Vanderhagen, Amand (Jean François Joseph) (*b* Antwerp, 1753; *d* Paris, July 1822). Flemish clarinettist. He was the son of an organist originally of Hamburg, but subsequently resident at Rotterdam and Antwerp. He began his musical education as a choirboy and continued it in Brussels under P. van Maldere and his uncle A. Vanderhagen, first oboist in Prince Charles of Lorraine's orchestra. By 1785 he had migrated to Paris and had written his *Méthode nouvelle et raisonnée pour la clarinette*. This work was the first tutor for the new instrument and was in scope and design far in advance of the jejune methods published for other woodwind instruments. He was a clarinettist in the regimental band of the royal Gardes-Françaises from 1786 to 1788. (Records show that a Vanderhagen was a bassoonist in the same ensemble between 1776 and 1785.) Fétis suggested that his marches and skilful arrangements drew the attention of Sarrette to him after the fall of the monarchy and procured him important military appointments under the directory, consulate and empire. From 1805 he appears in the list of clarinettists of the orchestra of the Théâtre-Français (Comédie Française). In 1807 Vanderhagen was decorated with the Légion d'honneur, and he ended his military career as Sous-chef de musique des Grenadiers de la Garde Impériale.

Vanderhagen was a prolific composer and arranger of military and wind instrument music, but his importance lies rather in his instructional works. In addition to the tutor for the clarinet already mentioned, which was several times reprinted, he wrote *Nouvelle méthode de clarinette* (Paris, 1798/*R*1972), *Méthode nouvelle et raisonée pour le hautbois* (Paris, *c*1792/*R*1971) and a tutor for the flute. (See B. François-Sappey: 'Le personnel de la musique royale de l'avènement de Louis XVI à la chute de la monarchie (1774–1792)', *RMFC*, xxvi (1988–90), 159.)

F.G. RENDALL/HERVÉ AUDÉON

Vander Linden, Albert(-Charles-Gérard) (*b* Leuven, 8 July 1913; *d* Brussels, 22 July 1977). Belgian musicologist. He took the doctorate in law in 1940 at the Free University of Brussels; at the same time he studied musicology there and at Liège University with Van den Borren. A period spent in Switzerland during World War II gave him the opportunity to attend a number of lectures given by Handschin and Merian. From 1948 to 1953 he taught music history at a secondary school, and in 1951 became a librarian at the Brussels Conservatory. He was appointed lecturer (1965) and then reader (1967) at the Free University of Brussels. He served as chief editor of *Acta musicologica* (1954–5) and of *Revue belge de musicologie*, to which he contributed a large number of articles and short but significant reviews. An executive member of the Société Belge de Musicologie from 1946, he became its president in 1976; in the same year he was also appointed president of the Académie Royale de Belgique. His special interests were the musical life of Brussels in the 19th and 20th centuries and musico-bibliographical topics. His writings are based primarily on modern archive sources,

for example, correspondence, chronicles, periodicals as well as inventories.

Van der Mueren, Florentijn [Floris] **Jan** (*b* Hoogstraten, 2 Nov 1890; *d* Leuven, 23 Dec 1966). Belgian musicologist and art historian. He studied at the Lemmens Institute, Mechelen, with Paul Gilson, and at Leuven University (doctorate in art history and archaeology, 1931). He was first a lecturer (1923–36) and then professor of music history (from 1936) at Ghent University. From 1939 he was a member of the Koninklijke Vlaamse Academie voor Wetenschappen, Letteren en Schone Kunsten van België and held office in the Société Belge de Musicologie and the Société Flamande de Musicologie. His writings on music include studies of Belgian composers, all periods of music history and the parallels to be drawn between music and fine arts.

□

Van der Putten, Hendrik. *See* PUTEANUS, ERYCIUS.

Vander Straeten, Edmond [Vanderstraeten, Edmond] (*b* Oudenaarde, 3 Dec 1826; *d* Oudenaarde, 25 Nov 1895). Belgian musicologist, critic and librarian. After studying classics in Aalst and philosophy at the University of Ghent, he returned to Oudenaarde, where he directed several opera performances and began his research into local archives. In 1857 he went to Brussels, where he studied harmony with Bosselet and counterpoint and palaeography with Fétis, becoming his private secretary. On Fétis's recommendation he was appointed music critic for *Le nord* and in 1859 joined the catalogue department of the Bibliothèque Royale. He also wrote reviews for *L'écho du parlement*, *L'étoile belge* and other publications. Subsequently he did research at the Algemeen Rijksarchief in Brussels (1862–75) and in Italy, France and Spain. He represented the Belgian government on several missions; at Weimar in 1870 he attended performances of Wagner's operas and supported them enthusiastically in his report, *Muzikale feesten van Weimar*. In 1884 he returned to Oudenaarde and devoted himself to publishing the results of his research.

Vander Straeten's chief contribution to musicology is *La musique aux Pays-Bas avant le XIXe siècle*. Although he has frequently been criticized for his unsystematic approach, unsubstantiated opinions, mistakes in reading and interpretation of archival notices, inconsistency in the citation of composers' names and other faults in method, it is an invaluable collection of documents on Netherlandish music, musical institutions and musicians active in the Low Countries, Italy, Spain, France and elsewhere.

WRITINGS

Coup d'oeil sur la musique actuelle à Audenarde (Oudenaarde, 1851)
Notice sur Charles-Félix de Hollandre, compositeur de musique sacrée (Ghent, 1854)

M. ELIZABETH C. BARTLET

Van der Straeten, Edmund S(ebastian) J(oseph). *See* STRAETEN, EDMUND S(EBASTIAN) J(OSEPH) VAN DER.

Vandervelde, Janika [Lynn] (*b* Ripon, WI, 26 May 1955). American composer. She received the BME degree from the University of Wisconsin, Eau Claire, and postgraduate degrees in composition from the University of Minnesota (MA 1980, PhD 1985), where she studied with Eric Stokes and Dominick Argento, among others. Her work first drew wide interest when the musicologist Susan McClary championed *Genesis II*, later the subject of a chapter in *Feminine Endings* (Minneapolis, 1991). She has since received commissions from such organizations as the Minnesota Orchestra and the St Paul Chamber Orchestra. In 1990 she accepted teaching positions at the Minnesota Center for Arts Education and the University of Minnesota's Department of Independent Study.

The *Genesis* cycle, a series of seven chamber works, reveals a minimalistic technique guided by a feminist concept of life's cycles. In *Genesis III* a medieval-sounding theme, scored for the flute, viola and harp, generates concentric circles of variation, twice broken by free cadenzas that contrast sharply with surrounding material. *Ancient Echoes across the Stara Planina* is less strictly minimalist and more postmodern in approach, employing strikingly contrasting timbres of a full orchestra, a Bulgarian women's folk choir and soloistic instrumental lines. The opera *Seven Sevens* merges a variety of popular idioms and uses both acoustic and electronic sounds. Constantly changing metres and cross-rhythms, as well as the juxtaposition of additive rhythms and freely lyrical lines, are regular features of her style.

WORKS
(*selective list*)

KARIN PENDLE

Van Der Velden, Renier (*b* Antwerp, 14 Jan 1910; *d* Antwerp, 19 Jan 1993). Belgian composer. He studied at the Antwerp Conservatory, but was mainly self-taught as a composer. In 1945 he was appointed music producer at the Antwerp radio studios, and was principal music producer there from 1961 until his retirement in 1975. He won the provincial prize for ballet composition in 1961 and a SABAM (Belgian Composers' Union) prize in 1967. He became a member of the Royal Flemish Academy of Arts, Letters and Sciences (1979) and was awarded the 'Fuga' trophy by the Belgian Composers' Union (1989). He was active in promoting contemporary music in Antwerp.

His compositions are characterized by contrapuntal mastery, harmonic originality and evocative, colourful sound combinations. Some of his compositions show complete chromaticism. His dramatic talent and sense of rhythm are displayed most favourably in his ballets.

CORNEEL MERTENS/DIANA VON VOLBORTH-DANYS

Van der Vinck, Herman. *See* FINCK, HERMAN.

Vander Wielen, Jan Pieterszoon. *See* WIELEN, JAN PIETERSZOON VANDER.

Van de Vate [née Hayes], **Nancy** (*b* Plainfield, NJ, 30 Dec 1930). American composer, active in Austria. She studied at Wellesley College, Massachusetts (BA 1952), and composition at the University of Mississippi (MMus

1958) and Florida State University (DMus 1968). Her first professional performance (1958) was of the Adagio for orchestra. During the early part of her career she taught at various North American universities and worked as a violist and pianist. In 1975 she founded the League of Women Composers and moved to Hawaii, becoming visiting associate professor at the University of Hawaii, then associate professor and dean of academic affairs at Hawaii Loa College. She lived in Indonesia from 1982 to 1985 and the influence of gamelan music can be heard in the harmonies and rhythms of works such as *Gema Jawa* (1984) for strings. In 1985 she settled in Vienna and, with her second husband Clyde Smith, founded the record company Vienna Modern Masters (1990), which specializes in contemporary orchestral music and has issued recordings of most of Van de Vate's significant works.

Van de Vate uses compositional techniques ranging from modality to serialism and tone clusters, while always retaining a deep emotional intensity. Her mature musical language can be clearly heard in the orchestral piece *Dark Nebulae* (1981), in which dense orchestral sounds mingle with lyrical instrumental lines. Her works often reflect her love of travel, as in *Journeys* (1984), for orchestra, as well as her concern with events of political and social significance. Her acclaimed orchestral work *Chernobyl* (1987) clearly depicts the disaster's approach with tone clusters and a characteristic use of percussion followed by the mourning of a descending 'weeping motif'. *Katyn* (1989), a massive choral-orchestral work, is a memorial to the 4000 Poles executed by Soviet forces during World War II. In the 1990s she turned increasingly to vocal and dramatic music. Her operas *In the Shadow of the Glen* (1994) and *Nemo: Jenseits von Vulkania* (1995) were followed by the anti-war opera *All Quiet on the Western Front* (1998).

SOPHIE FULLER

Vandewoestijn, David. *See* VAN DE WOESTIJNE, DAVID.

Van de Woestijne, David (*b* Llanidloes, Wales, 18 Feb 1915; *d* Brussels, 18 May 1979). Belgian composer. His father Gustave was a painter and his paternal uncle Karel was one of the greatest Flemish poets. Van de Woestijne studied at the Mechelen Conservatory under Godfried Devreese and then took private lessons with Gilson and Oscar Espla, but considered himself as self-taught. He became a sound engineer, and later head of music production, for Belgian radio. His music is sober in style, with carefully balanced structures and a masterly use of contrasting colours and sharp nuances. The influence of Stravinsky, later rejected, is particularly evident in the Concertino (1945), and *La belle cordière* (1954) shows a characteristic combination of firm structure and controlled lyricism. With Louis De Meester he was one of the first Belgian composers to use tape. Their pieces – at first primitive, since their equipment was limited – were similar to the contemporary Parisian *musique concrète*. De Meester later pursued his electronic interests, but Van de Woestijne returned to conventional sources.

Music in Belgium (Brussels, 1964)

CORNEEL MERTENS/DIANA VON VOLBORTH-DANYS

Vandini, Antonio (*b* Bologna, *c*1690; *d* Bologna, 1778). Italian cellist and composer. Documents of 1721 at the basilica of S Antonio, Padua, indicating his appointment as first cellist, disclose that he had served as cellist at S Maria Maggiore, Bergamo. He was also at the Ospedale della Pietà in Venice as *maestro di violoncello* from 27 September 1720 until before 4 April 1721, when his salary ceased, indicating a tenure of only a few months, but Vivaldi may have composed concertos for him, as Giazotto conjectures.

On 1 November 1721 Vandini began playing in the Paduan basilica orchestra, having been appointed on 9 June. His approximately 50 years of service there were interrupted on 18 June 1722, when he resigned in order to go to Prague. Here he participated in the musical celebrations for the coronation of Karl VI in June 1723; he was joined there by Tartini and together they remained in the service of Count Ferdinand Francesco Kinsky until spring 1726. Despite invitations to visit London and elsewhere, they returned to Padua, resuming service at S Antonio on 1 June 1726. Tartini's letter to G.B. Martini of 17 January 1737 reveals that they had travelled to the Marches together and heard Martini's oratorio en route; another letter, of 7 April 1769, mentions that since the death of his wife (23 February 1769), Tartini had shared his house with Vandini. They often played together in Padua at meetings of the Accademia dei Ricovrati (1728–48) and at ceremonies of the Pia Aggregazione di S Cecilia to which they both belonged. On 4 October 1750 Vandini was at the basilica of S Francesco, Assisi, with the violinist Carlo Tessarini for the feast of the patron saint.

Vandini retired from service at Padua in June 1770, suggesting his pupil Giuseppe Callegari as his replacement. By 1776 Vandini was in Bologna, where he died two years later. A manuscript describing Tartini's early career, *Appunti sulla biografia di Tartini* (*I-Ps*), has been attributed to Vandini on the basis of its calligraphy.

Some Paduan documents call Vandini a player of the viola or 'violoto', probably because he held his cello bow in the manner of a viol player. His portrait (reproduced by Vander Straeten) shows this position, of which Charles Burney wrote: 'It is remarkable that Antonio [Vandini] and all the other violoncello players here, hold the bow in the old fashioned way, with the hand under it'. Burney also explained that Italians admired Vandini's performing, saying that he played '*a parlare*, that is, in such a manner as to make his instrument speak'.

Vandini's extant compositions include a cello concerto in D (*D-SWl*) and six cello sonatas in C, 1717 (*I-Vnm*), A minor and B♭ (*F-Pn*), B♭, C and E (*D-Bsb*). The attribution to Vandini of two cello sonatas, printed by Augener in London, is apparently erroneous. While Tartini's musical influence on the cellist may have been considerable, Vandini's moral influence on Tartini was of crucial importance (according to Frasson, 1972), especially during the 1720s but also throughout their 50-year friendship. Probably Tartini's two cello concertos were composed for Vandini. Some letters from Vandini to Martini survive (*I-Bc*).

SVEN HANSELL (with MARIA NEVILLA MASSARO)

Van Dinter, Louis Hubert (*b* Weert, Netherlands, 20 Feb 1851; *d* Mishawaka, IN, 9 March 1932). Dutch-American organ builder. His father, Mathieu H. Van Dinter, was an organ builder, and his mother, Elizabeth Vermeulen, the daughter of an organ builder. Louis received his training in the Netherlands with the Vermeulen firm, emigrating to Detroit in 1870 or 1871 with his parents and brothers. In 1874 he married Mary Plets, and the following year established his own workshop in Detroit. In 1886 he moved to a small factory in Mishawaka, where he built organs until his retirement in 1930. Van Dinter's son, John Joseph (1889–1954), sold the factory, but continued to do organ maintenance, rebuilding and piano tuning until 1945. Louis Van Dinter is said to have built 180 organs, a large proportion of them for Catholic churches, including his own church, St Joseph's, Mishawaka (1884). One of his largest instruments was built in 1909 for Holy Trinity Church, Chicago.

BARBARA OWEN

Van Doorslaer, Georges (*b* Mechelen, 27 Sept 1864; *d* Mechelen, 16 Jan 1940). Belgian musicologist. A doctor of medicine by profession, he devoted his spare time to the history of art and music, in particular that of his native Mechelen. He spent the years 1914–18 in England, collecting material for his standard reference work on Philippe de Monte, whose provenance from Mechelen he was able to prove; later, with Jules van Nuffel and Charles van den Borren, he undertook the publication of the complete works of Monte (1927–39). Another of his interests was campanology: the founding of the world-famous school at Mechelen in 1922 owed much to his efforts. He published numerous articles in the *Bulletin* of the archaeological circle of Mechelen, of which he was a member and president (1919–26).

Van Doorslaer's work on Monte and his contemporaries owed its scholarly soundness to critical archival research, as did his work in other fields such as bell-casting and the copper industry, choir schools and court music, organists and organ building, gold- and silversmiths, tapestry, the plastic arts and their exponents, and medical history.

GODELIEVE SPIESSENS

Vandor, Ivan (*b* Pécs, Hungary, 13 Oct 1932). Italian composer and ethnomusicologist of Hungarian origin. Having moved to Italy in 1938, he began his musical studies at a young age, and took his composition diploma in 1959 under Petrassi at the Rome Conservatory. He had a busy career as a saxophonist in jazz bands and in the improvisation group Music Elettronica Viva (1965–8) before studying ethnomusicology at UCLA with Ki Mantle Hood and Charles Seeger (1968–70). His extensive research into Tibetan Buddhist music in monasteries in Nepal and north India between 1970 and 1971 led to his writing of numerous articles and the book *La musique du Bouddhisme tibétain* (Paris, 1976). He was director of the Internationales Institut für vergleichende Musikstudien in Berlin (1976–83) and the founder and director of the Scuola Interculturale di Musica in Venice (1979–92). He was subsequently appointed to teach composition at the Rome Conservatory of S Cecilia.

The manifold nature of his education is reflected in his musical output, which demonstrates the expressive potential found in a vast array of traditions, and which juxtaposes various compositional idioms, from atonality to serialism, and from polytonality to the recalling of tonality within a chromatic context. His distance from the complications of post World War II avant-garde styles can already be seen in his *Esercizi* for 23 wind instruments (1965), which projects a single chord in space and time by repeating – with subtle fluctuations of register and figuration – simple melodic and chordal figures among a meandering contrapuntal texture. The spiritual element in his work can be seen in the choice of various sacred texts used in *Cronache 2* (1989) and *Offrande II* (1993). In these works, purely expressive sounds are combined with linguistic material in a poised and organic edifice of timbre and form.

SUSANNA PASTICCI

Vándor [Venezianer], **Sándor** (*b* Miskolc, 28 July 1901; *d* Sopronbánhida, nr Sopron, 14 Jan 1945). Hungarian composer, conductor and choirmaster. Barred from the Budapest High School of Musical Art for his left-wing activities, he studied at the Leipzig Hochschule für Musik under Graener. Then he worked in Italian opera houses as a conductor, répétiteur and prompter. Early in 1932 he returned to Hungary to take a position at the Sopron Musical Theatre. He moved to Miskolc and then to Budapest, where he was appointed deputy conductor and répétiteur at the City Theatre (later the Erkel Theatre). In 1936 he founded a workers' chorus (eventually named after him) under the sponsorship of the Ironworkers' Trade Union. His music contains Weill-like harmonies and follows the ideals of *Gebrauchsmusik*, since most of his compositions, particularly those for chorus, were designed to serve socialist aims.

JOHN S. WEISSMANN

Van Durme, Jef [Jozef] (*b* Kemzeke-Waas, 7 May 1907; *d* Brussels, 28 Jan 1965). Belgian composer. He studied harmony with Edward Verheyden and counterpoint with Alpaerts at the Antwerp Conservatory. For further studies he went to Vienna where he received advice from Alban Berg. In 1936 he took a course in conducting given by Scherchen in Brussels.

As a composer Van Durme was directly influenced by the Expressionism of the Second Viennese School, especially Berg, but over the years he developed his own style of Expressionism which impressed Koussevitsky and Martinů. In 1935 Scherchen conducted his opera *Remous* in the Palais des Beaux-Arts in Brussels with great success. The same year his *Heldendicht* received the first prize at the ISCM festival.

WORKS
(*selective list*)

Ops: Remous (1, J. Weterings), op.15, 1935, excerpts, Brussels, Palais des Beaux-Arts, 31 July 1935; La mort d'un commis-voyageur (2, Van Durme, after A. CORNEEL MERTENS/DIANA VON VOLBORTH-DANYS

Van Duyse, Flor. *See* DUYSE, FLOR VAN.

Van Dyck [van Dijck], **Ernest (Marie Hubert)** (*b* Antwerp, 2 April 1861; *d* Berlaer-lez-Lierre, 31 Aug 1923). Belgian tenor. He studied with Saint-Yves Bax in Paris, and having sung at the Concerts Lamoureux from 1883, he made his stage début in 1887 at the Eden-Théâtre as Lohengrin. After intensive coaching from Julius Kniese he sang Parsifal at Bayreuth in 1888, returning there in the same role until 1912 and as Lohengrin in 1894. From 1888 to 1900 he was engaged at the Vienna Hofoper, where he appeared in Smareglia's *Il vassallo di Szigeth* (1889). He first sang Des Grieux in Massenet's *Manon* at Vienna (1890), and he made his London début in that role at Covent Garden (1891), where he also sang Faust and Lohengrin (1891), Tannhäuser, Siegmund and Mathias in Kienzl's *Der Evangelimann* (1897), Loge in *Das Rheingold* (1898) and Tristan (1901). In Vienna he created the title role of Massenet's *Werther* (1892), and took the part of Marcel in Leoncavallo's *La bohème* (1898). He made his début at the Paris Opéra as Lohengrin in 1891 and at the Théâtre de la Monnaie, Brussels, in the same part (1894), becoming a regular visitor to the latter house in Wagner and Massenet roles. He made his American début at Chicago on 9 November 1898 as Tannhäuser, and first appeared at the Metropolitan, New York, 20 days later in the same role. In 1907 he managed a season of German opera at Covent Garden and also appeared as Tristan and Siegmund. He returned to the Paris Opéra in 1908 as Siegfried in *Götterdämmerung* and finally, in 1914, as Parsifal. After his retirement from the stage he taught singing, first in Paris and later in Brussels. His voice, both powerful and sweet-toned, not only encompassed the heavy Wagnerian tenor roles with ease, but also the more lyrical French repertory, and he was particularly admired as Des Grieux.

ELIZABETH FORBES

Van Elewyck [Elewijck], **Xavier (Victor Fidèle)** (*b* Ixelles, nr Brussels, 24 April 1825; *d* Tienen, 28 April 1888). Belgian conductor, composer and musicologist. He studied the piano, the violin, harmony and composition but obtained a degree in administrative and political sciences. At the age of 19 he published some light piano music. In 1860 he helped found a Cecilia Society in Leuven and represented Belgium at the Congress of Religious Music in Paris. He became the *kapelmeester* at St Pieterskerk in Leuven (1868), where he performed his own music as well as that of other little-known composers. In 1883 he was publicly honoured at Leuven and elected to the Royal Belgian Academy. Three years later he invented a machine which, when attached to any keyboard instrument, instantly produced a printed version of whatever was played on the keyboard. Elewyck's compositions include numerous motets, songs and piano works. His collection of Flemish keyboard music stimulated interest in Belgian music of the 17th and 18th centuries. He contributed historical and critical articles to Belgian, Italian, French and English periodicals.

PATRICK PEIRE

Vaness, Carol (*b* San Diego, 27 July 1952). American soprano. She studied at California State University and with David Scott, who changed her vocal orientation from mezzo-soprano to soprano, in which guise she has become one of the foremost American singers of her generation. She made her début in the 1977 spring season of the San Francisco Opera as Vitellia, a role which was to bring her acclaim in many opera houses later in her career and in which she has displayed to advantage her mezzo-like vibrancy of timbre, near-instrumental evenness of emission across a wide compass and fluent delivery of florid passagework. Outstanding among her other Mozart roles are Donna Anna (notably at Glyndebourne in 1982, a performance she later recorded) and Electra. A statuesque presence, somewhat cool response to words and detachment in matters of characterization lend her best Mozart performances a special classical distinction, a quality which has also made her an impressive exponent of Handel's Armida (*Rinaldo*), Alcina, Cleopatra and Delilah, and of the heroines of Gluck's *Iphigénie en Tauride* (which she has recorded with Muti) and *Alceste*. Latterly Vaness has begun to focus on the larger-scaled, more dramatic roles of the Italian repertory, including Bellini (Norma), Verdi (Lenora in *Il trovatore* and *La forza del destino*, Violetta, both Amelias), and Puccini (Tosca, which she has recorded, also under Muti). As Rosalinde she shows an unexpected flair for comedy. Vaness is also an admired concert singer, and has recorded works such as Beethoven's Ninth Symphony and *Missa solemnis*, and Verdi's Requiem.

MAX LOPPERT

Van Eyck, Jacob. *See* EYCK, JACOB VAN.

Van Ghelen. Austrian firm of music publishers. Johann Peter van Ghelen (1673–1754), son of an Antwerp bookdealer, served an apprenticeship in Brussels and in his father's Viennese printing works, which he took over in 1721. In 1722 he bought the *Wiener Diarium* (renamed the *Wiener Zeitung* in 1780), which remained in the firm's ownership into the 19th century and exercised an important monopoly as the advertising organ of the book and music publishing trade until 1848. In 1725 Van Ghelen published Fux's *Gradus ad Parnassum* and reissued Georg Muffat's *Apparatus musico-organisticus* (1690). His eldest son Johann Leopold took over the business in 1754, succeeded in the 1760s by Jakob Anton van Ghelen, with whom the family's male line died out in 1782. The amount of music advertised by the firm increased greatly under his management after 1770; with Trattner and Krüchten the firm was the biggest music dealer in Vienna. After Jakob Anton's death the firm changed its name to Edle v. Ghelenschen Erben.

ALEXANDER WEINMANN

Van Gheluwe, Leo (*b* Wanneghem-Lede, 15 Sept 1837; *d* Ghent, 20 July 1914). Belgian composer and educationist. From 1856 he studied theory, harmony and counterpoint at the Ghent Conservatory, with his cousin Gevaert and Miry among others, and entered for the Belgian Prix de Rome several times without success. He travelled in Germany and Italy on a scholarship, and met Bülow and Wagner. As a result of his excellent report on musical education in Italy, he was appointed inspector of musical education in Belgium. In 1871, in succession to Waelput, he also became director of the conservatory at Bruges, and after his resignation as music inspector, he devoted himself entirely to the school, instituting the Conservatory Concerts in 1895. He resigned as director in 1900. His compositions include several cantatas: *Paul et Virginie* (1863), *De wind* (1865), *Het woud* ('The Wood') (1867) and *Van Eyck's Cantate* (1878). He also wrote choral music, songs, overtures and orchestral suites; most of the original manuscripts are in the library of the Brussels Conservatory.

PATRICK PEIRE

Vanguard. American record company. It was founded in 1950 by Seymour Solomon with his brother Maynard, who established two distinct labels, Vanguard and Bach Guild. Three discs of Bach cantatas conducted by Jonathan Sternberg in Vienna were issued on the Bach Guild label in December 1950, and Seymour Solomon then went to Vienna to produce subsequent recordings. This label was reserved for Baroque and earlier music, while music of later periods and folk music were issued on the Vanguard label. Joan Baez and the Weavers were featured singers of folk music from the beginning. Felix Prohaska, Franz Litschauer and Anton Paulik conducted in Vienna, and Gustav Leonhardt made his recording début with Bach's *Art of Fugue* on the harpsichord. Anton Heiller recorded on the organ and harpsichord and also conducted. The pianist Eugene List made his first recording for Vanguard, and Alfred Deller made a series of recordings, as soloist, with his Deller Consort and, later, as a conductor. Mogens Wöldike conducted in Vienna and later in Copenhagen, I Solisti di Zagreb and the Wiener Solisten recorded Baroque music, and Nikolaus Harnoncourt made his first recordings with the Concentus Musicus of Vienna.

Vanguard recorded music conducted by Sir Adrian Boult in cooperation with Nixa and later issued recordings conducted by Sir John Barbirolli for Pye. The label's recordings were issued in Britain by Nixa, Top Rank and, finally, Philips. The first stereo discs appeared in 1958. In the USA Fritz Mahler made a series of recordings in Hartford, Connecticut, and Maurice Abravanel in Utah, while Johannes Somary conducted Baroque music (notably Handel oratorios) and the Waverly Consort performed medieval music. Mischa Elman also made a series of recordings for Vanguard. In 1964 the low-priced Everyman series grew out of a demonstration series, followed in 1968 by the mid-priced Cardinal label. In 1972 the Bach Guild Historical Anthology of Music reissued earlier recordings in systematic order. The firm was sold to the Welk Record Group in 1986, but in 1992 Seymour Solomon bought back the classical part of the catalogue and began to reissue the recordings on CD.

JEROME F. WEBER

Van Hagen, Peter Albrecht. *See* HAGEN, P. A. VON.

Vanhal [Vanhall, Wanhal, Wańhal, Wanhall], **Johann Baptist** [Jan Ignatius] [Vaňhal, Jan Křtitel] (*b* Nechanicz [now Nechanice], nr Hradec Králové, Bohemia, 12 May 1739; *d* Vienna, 20 Aug 1813). Bohemian composer, violinist and teacher, active in Austria. His present reputation is derived mostly from his symphonies, his many published keyboard pieces and the comments of writers. He himself spelt his name Johann Baptist Wańhal; his Viennese contemporaries and most scholars until World War II used the spelling Wanhal, but later in the 20th century a modern Czech form, Jan Křtitel Vaňhal, was erroneously introduced. Only one writer, Bohumír Dlabač, had extensive contact with him, acquired in 1795 in Vienna. An anonymous Viennese necrology, based mostly on local gossip, is complementary, but differs somewhat from Dlabač's account. Additional observations based on fleeting contact in Vienna were mostly derived from one or other of these writers or from Charles Burney, who visited Vanhal on 12 September 1772.

1. LIFE. Although there is indirect evidence that his father's ancestors may have originated in the Netherlands, both of Vanhal's parents' families (Vaňhal and Volešovský) had lived in Bohemia for several generations. He was bonded to Count Schaffgotsch, in whose estates his family lived. During his early years in Nechanicz he was trained to sing and to play string and wind instruments; he also went to the nearby town of Marscherdorf to learn German and other subjects. His favourite teacher, Anton Erban, taught him to play the organ, and at the age of 13 he became organist in Opocżna (Opocžno). He later became choir director in Niemcżowes (Nemyčeves) in the province of Jicin, where Mathias Nowák trained him to be a virtuoso violinist and to write concertos.

In 1760–61 Vanhal moved to Vienna. He lived there until May 1769, entering 'the most imposing circles' (*DlabacžKL*) and giving instrumental and singing lessons; among his keyboard pupils was Ignace Pleyel. His income enabled him to purchase his freedom from bondage; he apparently returned to Bohemia only once, on the death of one of his parents. In 1762–3 he probably received some help from Dittersdorf (then Carl Ditters), who was a member of the imperial theatre orchestra. Dittersdorf later referred to Vanhal as 'a pupil of mine', but there is little evidence of his influence in Vanhal's music. Payment records, however, suggest that Ditters helped by introducing Vanhal to the musical scene as a violinist. An encounter in 1762 with the child Mozart has also been reported. During this period Vanhal established himself as one of the leading composers in Vienna, contributing to the rise of the 'Viennese style'. He also made contact with the Parisian publisher Huberty, who issued his six *Simphonies quatours* op.1 in 1769. Baron I.W. Riesch of Dresden offered to finance Vanhal's musical tour to Italy, so that he could prepare himself to become Kapellmeister of Riesch's court in Dresden. Reaching Italy in May 1769, Vanhal spent about a year in Venice, then travelled to Bologna, Florence, Rome and elsewhere. He met many prominent composers, including Gassmann (with whom he returned to Vienna) and Gluck. Two operas which he may have written in Rome, *Il trionfo di Clelia* and *Il Demofonte*, both to texts by Metastasio, have not been found.

On his return to Vienna in September 1771, he declined the Kapellmeister's position in Baron Riesch's orchestra. The often-stated (but mistaken) idea that he was overcome with a debilitating mental disease has its source in Burney's statement that a 'little perturbation of [Vanhal's] faculties' had caused his compositions to become 'insipid and shallow'. During the succeeding decade Vanhal paid several visits to the estate of a new patron, Count Ladislaus Erdödy, at Varaždin (now in Croatia), but his home continued to be in Vienna. In response to the changing musical tastes of the Viennese public, he stopped composing symphonies in the late 1770s, and string quartets a few years later, and began to cultivate the unique opportunities offered by the fledgling Viennese music publishing industry to control the character and dispersal of his works; Viennese publishers subsequently issued more than 270 prints of his music.

The first of Vanhal's Viennese publications (six violin duos op.28, issued by Artaria) appeared in 1780. Foreign publishers such as André, the Hummels and English firms such as John Bland and Robert Bremner had already copied his compositions from earlier French publications. The focus of Vanhal's composing now shifted away from the nobility and more towards the public and, increasingly, the church. For the former he continued to compose serious music, such as concertos and the seven-movement cantata *Trauergesang bey dem Tode Ioseph des Zweiten*, a remarkably intense work published by Artaria in 1790, but he concentrated principally on music for and with keyboard, of which he wrote a wide variety. Most of Vanhal's church music remained unpublished, and little is known about its background other than the names of the churches and monasteries that appear on the title-pages. He was unmarried and left no heirs; when he died, in an apartment near the Stephansdom, he had obviously been living in modest but comfortable circumstances.

Vanhal's career was strongly influenced by his character. Dlabač, in addition to recounting the pleasing social qualities that gained him quick access to Viennese noble circles called him 'a zealous Christian'. It can also be seen that, although he was hard-working, conscientious, pragmatic and determined, he was not personally ambitious. He must have been a fine performer, but, other than that he was listed as a first violinist in a performance of Gluck's *Orfeo* in 1763 and that in 1784 he played (perhaps the cello) in a quartet with Haydn, Dittersdorf

and Mozart, little is known about his ability. He was not related to a travelling virtuoso flautist known as Vanhal.

2. WORKS. In spite of the appearance in 1988 of a new thematic catalogue, the total number of Vanhal's compositions can be only roughly estimated. His earliest works, written in Bohemia during the two decades before he came to Vienna, are lost. In Vienna he turned his attention to the new genres of symphony and chamber music (especially quartets and trios). For the symphonies, only one autograph survives (for C28, an atypical one-movement 'symphonie', *HR-Vu*), but there is credible evidence that a further 76 of the normal symphonies attributed to him can probably be considered authentic, and that they can be divided chronologically into ten groups, which reveal the basic changes in his style during the years between about 1760 and 1780. The 34 symphonies that Vanhal wrote before going to Italy reveal the evolution in his concept of the symphony. The first two are, exceptionally, three-movement overtures – active, busy and almost entirely *forte*. The remainder have four movements (normally fast–slow–minuet–fast). The earliest works show their Baroque heritage in their use of fugal and canonic movements and passages, a slow French overture-type first movement, dance-derived finales, concerto grosso textures and motivic construction based on the opening theme. During this period, Vanhal began to use minor keys and the so-called *Sturm und Drang* style; he also made increasing use of incipient sonata form (with discernible development sections), and of cantabile thematic material.

It is impossible to assess the effects of Vanhal's stay in Italy upon his style. But there is less experimentation in the symphonies that he produced after his return. They feature distinct sonata form movements with full-size cantabile themes, and opening thematic material may be re-used both within a movement and in a subsequent one. Some are in minor keys, though not in characteristic *Sturm und Drang* style.

Vanhal's attempt to widen the range of timbres is seen in many small changes; the most dramatic is his apparently pioneering use of three, four and five horns. Compared with the earliest group, all the later symphonies are longer overall as well as in the lengths of the first, second and last movements. Most of their finales are in sonata form. A basic slowing in the tempos of both the slow and the fast movements is discernible in these symphonies.

Similar structural developments are found in Vanhal's other instrumental works from the same period, such as the string quartets and the concertos. D.W. Jones's study (1978) of 53 'authenticated' string quartets (out of 94 that Weinmann (1988) attributed to Vanhal) points also to important differences from the symphonies, especially in the treatment of the first violin, which is treated as a virtuoso solo instrument. Other unusual features include the fugal-style finale of C9, one of his last quartets and written-out cadenzas for all four instruments in ten others. The normal order of movements (fast–minuet–slow–fast) also differs from that in the symphonies. Jones points to Vanhal as second only to Haydn in the number of quartets he composed, and describes him as the prominent figure in the evolution of the virtuoso string quartets of the early 19th century.

All the 72 keyboard sonatas discussed in M. Dewitz's study (1933) were composed about 1783 or later, that is, after the symphonies. Most are in three movements (some with slow introductions); the sonata form first movements have clearly contrasted themes (which are harmonically accounted for in the developments) and complete recapitulations. The finales are mostly stylized dances, such as rondos, but nine are in sonata form. Dewitz stresses that the caprices, with their free forms, virtuoso elements and Romantic traits, constitute an important group of Vanhal's sonata-type compositions and point towards the lyric and Romantic piano pieces of the 19th century. They were well received by the public, both in Vienna and abroad. So too were the many other keyboard pieces, although Vanhal was criticized by several north German writers, especially Gerber, for composing programmatic pieces.

From the studies carried out so far, it is clear that Vanhal was one of the best composers of the time – innovative, imaginative and original. He was also influential, but to what extent is difficult to assess. Haydn was presumably familiar with the ten Vanhal symphonies preserved in the Esterházy collection (*H-Bn*), but there is more affinity between Vanhal's style and Mozart's. Comparisons with other contemporary composers are necessary for an accurate account of Vanhal's role. However, he unquestionably contributed significantly to music in Europe, and his published music, issued by many publishers, stimulated the public and the entire industry. His career, which led him from bondage to comfortable independence, reflects the influence of Emperor Joseph II and the democratic principles he espoused in Viennese society. Vanhal's music, in turn, contributed to the development of Viennese musical style.

WORKS

provisional list; categories and numbering follow Weinmann (1988) except where otherwise stated; for printed works usually only the first use of an opus number is noted (for fuller list of opus numbers see Bryan, 1977)

II: CONCERTOS

only solo instruments listed

(*a*) 19 for hpd/pf: C2, pf, vn, by 1776–7, ed. in Diletto musicale, no.1107 (Vienna, 1990); C3 (Vienna, 1783); C4 (Vienna, 1809); C5 (Vienna, 1802); C6 (Vienna, 1810), ed. M. Csurk and L. Vígh (Budapest, 1990); A1 (Vienna, 1785); D1, op.14 (Offenbach, 1788), ed. H. Gmür (Zürich, 1985); G1 (Vienna, 1804); C1; C7; C8; C9; C10; C11; D2; D3; E♭1; F1, by 1786, ed. as org conc. in Diletto musicale, no.562 (Vienna, 1973); F2
(*b*) 15 for vn: C1, by 1774; D1, by 1775; D2, by 1775; G1, by 1770; G2, by 1771; G3, by 1772; A1, by 1775; B♭1, by 1775, ed. C. Eisen (Wellington, 2000); C2; C3; D3; D4; E♭1; G4, 'Concertino'; A2
(*c*) 2 for va (both orig. for vc or bn)
(*d*) 4 for vc, incl.: C1, by 1785–7; A1, ?*c*1780, ed. in MVH, l (1984)
(*e*) 11 for fl: C1, by 1775; D1, by 1776–7; D2, by 1782–4; E♭1 (Paris, n.d.), ed. B. Meier (n.p. 1988); F1, by 1775; Conc., G, =Vn Conc. IIb:G2; A1, fl/ob (Paris, n.d.), ed. B. Meier (n.p. 1993); A2 (Paris, n.d.), ed. F. Pohanka (Prague, 1958); B♭1, fl/ob (Paris, n.d.), ed. B. Meier (n.p. 1993); D3; G2
(*f*) 1 for ob; see also fl concs. IIe:C1, A1, B♭1, E♭1 (? for fl.ob)
(*g*) 1 for cl (orig. as Fl Conc. IIe:C1), ed. G. Balassa and M. Berlész (Budapest, 1972)
(*h*) 1 for db ed., (in E) by H. Hermann (Leipzig, 1957) and (in D) in Diletto musicale, no.556 (Vienna, 1977)
(*i*) 3 for bn: C1, ed. K. Schwamberger (Hamburg, 1964); F2, ed. in Diletto musicale, no.537 (Vienna, 1978); F3, 2 bn, ed. H. Voxman (Monteux, 1985), also attrib. Zimmermann
Tpt conc., 9 org concs., listed in inventory of Vanhal's estate

III: DIVERTIMENTOS, CASSATIONS, PARTITAS, ETC.

29 works, incl.: C4, Divertimento, 2 ob, 2 hn, bn, ed. H. Steinbeck (Zürich, 1970); D4, Cassation, vn, va, db obbl, fl, 2 hn, ed. R. Malarić (Vienna, 1986); the same titles, esp. 'divertimento', were used for many other works in categories I–XIV

IV: QUINTETS AND SEXTETS FOR STRINGS AND WINDS

(*a*) 6 qnts, incl.: IVa:2, vn, va, 2 hn, b; IVa:3, 2 vn, 2 va, b (Paris, n.d.); IVa:5, Notturno, G, vn, va, 2 hn, b
(*b*) sextets: IVb:1, 6 quatuors concertantes op.3 (Paris, 1770); IVb:2, Notturno, fl, bn, vc, 2 hn, b

V: QUARTETS

(*a*) str qts: op.1 [E♭1, F11, G6, c2, ed. in J, D3, G1] (Paris, 1769); op.2 [F1, E♭2, B♭9, B♭1, E5; no.6 = wind qnt by J.C. Bach] (Paris, 1769); op.6 [F6, ed. in J, E1, C3, G4, A2, B♭5] (Paris, 1771); op.7 [F7, d1, C4, g2, B♭7, E♭8] (Paris, 1771), also as op.26 (Paris, 1779–80); op.9 [E♭4, G2, F2, B♭2, F3, E♭3, all spurious] (Paris, 1772); op.13 [E2, C1, ed. in J, F4, A1, B♭3, G3] (Paris, 1773); op.21 [E♭6, E♭7, doubtful, D2, E3, F8, G5, spurious] (Paris, 1773); op.24 [C6, G7, A3, B♭8, E♭10, E4] (Paris, ?1779), also as op.4 (Berlin, 1779); 6 qts, op.28 [unidentified] (Paris, 1783); op.33 [C7, A4, ed. in J, F10, D4, G9, B♭10] (Vienna, ?1784–5); 6 quatours [F9, E♭11, ed. in J, g3, B♭11, G10, D7] (Vienna, 1785–7); C5; c1; D5; D6; E♭12; G8, ed. in J; A5; *c*26 others
(*b*) 19 fl qts, incl.: op.3 [D4, G3, D2, F4, D6, D7] (Paris, 1770); op.7 (Paris, 1771), incl. F1, ed. G. Dobrée (London, 1973), B♭1, G1, E♭1, A1, C1, the last 3 ed. D. Mulgan (London, 1973)

VI: TRIOS

(*a*) 74 for 2 vn, b, incl.: op.4 (Paris, ?1770); op.5 (Paris, ?1770); op.11 (Paris, 1773); op.12 (Paris, 1773); op.19 (Paris [Bérault], 1774); op.20 (Paris [Chevardière], 1774); op.22 (Paris, 1777); 15 trios, C10–14, F7–13, G12–14, edn (Offenbach, 1976); B2, ed. L. Klemen (Budapest, 1990)
(*b*) 22 for vn, va, db, incl. VIb:13, ed. D. Jones (London, 1982)
(*c*) 7 for fl, vn, b, incl. VIc:7, ed. T. Thomas (St Cloud, MN, 1982)
(*d*) 12 others: 6 Trios, cl, cl/bn, b, op.18 (Paris, 1775), incl. VId:9, 12, ed. N. Morrison (Dorn, n.d.) and VId:10–11, edn (Winterthur, 1992)

VII: DUETS

(*a*) 65 for 2 vn, incl.: VIIIa:1–6, 6 duetti (Paris, *c*1779); VIIa:7–12, op.28 (Vienna, 1780); others, pubd Vienna
(*b*) 4 for vn, b, incl.: VIIIb:C1, Sonata, vn, b; VIIb:B♭2, Variazioni, vn, vc (Vienna, 1803)
(*c*) 19 for 2 fl, incl.: 6 pubd (London, *c*1780); 1 pubd (Vienna, 1786); nos.1–6 ed. P. Bryan (Vienna, 1980)
(*d*) VIId:1 Variations, fl, vn (Vienna, n.d.)
(*e*) 3 for fl, b, incl. VIIe:D2
(*f*) VIIf:1–6, 6 Solos or Sonatas, fl, b, op.10 (London, 1781/*R*1981 in ECCS, x)
(*g*) VIIg:1, Solo, vc, b; VIIg:2, 6 Variations, vc, va/vc, edn (Prague, 1975)

VIII: QUINTETS WITH KEYBOARD

VIII:1–3, Sonates, kbd, 2 vn, va, vc ad lib, op.12 (Amsterdam, 1784)

IX: QUARTETS WITH KEYBOARD

13 works, incl.: 6 Sonatas, hpd, 2 vn, vc, op.27 (London, 1782); 3 Sonatas, pf, vn, va, vc, op.29 (Vienna, 1782); Quartetto, op.40 (Leipzig, ?1811); XI:13, Concertino, C, hpd, 2 vn, b, ed. in Fillion

X: TRIOS WITH KEYBOARD

(*a*) 51 kbd trios (most entitled 'Sonate'), incl.: Xa:23, pf, vn, vc, ed. T.D. Thomas (St Cloud, MN, 1982); Xa:46, ed. in RRMCE, xxxii (1989)
(*b*) 6 sets of variations, incl. Xb:6, pf, vn, vc, ed. E. Kleinová (Prague, 1969)

XI: KEYBOARD, VIOLIN (OR VIOLA, FLUTE, ETC.) AND CELLO

(*a*) 71 sonatas, incl.: op.29 (Vienna, 1782); op.32 (Vienna, 1784–5); XIa:64 (Vienna, 1799), ed. J. Panocha and A. Dítělová (Prague, 1974); XIa:26, Sonata, pf, cl (Vienna, 1801), ed. B. Tuthill (New York, 1948); 6 sonate piccole (Vienna, 1802); 6 Zwergel Sonaten (Vienna, 1803); XIa:55–7, 3 sonates, pf, vn (Vienna, 1808), ed. as 'op.30' in Diletto musicale, nos.118–3 (Vienna, 1995); 3 sonates (Vienna, *c*1809); Sonate (Vienna, *c*1810); op.43 (Leipzig, 1811); Fantaisie (Vienna, 1811); XIa:35, kbd, fl, ed. M. Klement (Prague, 1968); XIa:68, pf, va, ed. in Diletto musicale, no.544 (Vienna, 1973)
(*b*) 31 sonatinas for kbd, vn ad lib, most pubd Vienna, 1804–12
(*c*) 10 little pieces (kleine Stücke), incl. XIc:5, Kurz u. leichte Klavierstücke, vn, acc. (Vienna, 1804), ed. A. Imbescheid (Vienna, 1978); XIc8–9, Stücke, kbd/gui, vn
(*d*) 36 sets of variations for kbd, vn ad lib, incl. XId:1–36, most pubd Vienna, 1786–1814
(*e*) 3 ovs. for kbd, vn ad lib, pubd Vienna, 1808–13

XII: KEYBOARD FOUR HANDS

(*a*) 31 sonatas and sonatinas incl.: op.32 (Vienna, 1784–5), edn (Bologna, 1993); op.39 (Vienna, 1795); op.41 (Vienna, 1796); op.64 (Vienna, 1799); op.65 (Vienna, 1802)
(*b*) 9 other works, incl. 24 duettini, 2/4 hands (London, 1809)

XIII: KEYBOARD SOLO

sonatas, sonatinas and caprices; for list see Dewitz

196 works, incl.: 3 sonate, op.30 (Vienna, ?1785), also as The Beauties of Apollo, 3 Caprices, op.30 (London, n.d.); 3 neue Caprice-Sonaten, op.31 (Vienna, 1783; London, n.d.; Amsterdam, 1783); caprices opp.33–5 (Vienna, 1784); 3 Caprices op.36 (Vienna, 1784); XIII:70–73, 4 Sonatine (Vienna, 1805), facs. (Brescia, 1985); XIII:124–5, edn (Prague, 1975); XIII:135, 3 Capricio (Vienna, 1809); XIII:168, Sonate (Vienna, 1812)

XIV: KEYBOARD SOLO

other works; for list see Dewitz

(*a*) 44 short pieces, little pieces, etc., incl. XIVa:18, 36 fortschreitende Clavierstücke (Vienna, Leipzig and Mainz, 1813)
(*b*) 32 divertimentos, fantasias, etc., incl. XIVb:2, Pantomina (Vienna, 1802); 3 divertimentos, ed. M. Bizjak (Ljubljana, 1989)

XV: KEYBOARD VARIATIONS

for list see Dewitz

*c*68 sets, incl.: op.36 (Vienna, 1788); op.37 (Vienna, ?1790); op.38 (Vienna, 1795); op.40 (Vienna, 1795); op.42 (Vienna, 1796); op.60 (Vienna, 1798); op.62 (Vienna, 1798); op.63 (Vienna, 1799); *c*57 other sets, mentioned in inventory of Vanhal's estate

XVI: ORGAN AND PEDAGOGICAL WORKS

36 works, incl.: Fugue (Vienna, 1785); 4 praeambula (Vienna, 1801); 6 [12] kurze und leichte praeambula (Vienna, 1801); 12 Orgelfugen (Vienna, ?*c*1801–2); 12 ausgeführte praeambula für Stadt- und Landorganisten (Vienna, 1801–?*c*1814); 24 Cadenzen in allen Tonarten für Organisten (Vienna, 1803); 6 Fugen (Vienna, ?*c*1806); 24 kurze Cadenzen und Präludien durch 24 Tonarten (Vienna, ?*c*1806); 6 [12] leichte Präludien (Vienna, *c*1806–); 6 Fugen (Vienna, ?*c*1810); 6 Fugen (Vienna, *c*1813–14); XVI:23–5, 2 fugues, ed. in MVH, xxi (1968); Anfangsgründe des Generalbasses (Vienna, 1817); Kurzgefasste Anfangsgründe für das Pianoforte, lost; *Flötenschule*, doubtful, advertised in *Wiener Zeitung* (1804), lost; many other pedagogical pubns, incl. duos, kbd pieces, variations etc.

XVII: OCCASIONAL COMPOSITIONS

(*a*) 17 programmatic pieces, incl.: Die Schlacht bei Würzburg (Vienna, 1796); Die Bedrohung u. Befreyung der k.k. Haupt- und Residenzstadt Wien (Vienna, 1797), arr. for 2 fl (Vienna, n.d.), ed. K. Hünteler (Vienna, 1991); Die grosse Seeschlacht bei Abukir (Vienna, 1800); Die Seeschlacht bei Trafalgar (Vienna, 1806)
(*b*) 41 secular songs with kbd (pf/hpd), incl.: When your beauty appears, in 6 Elegant Ballads (London, *c*1788); Trauergesang bey dem Tode Ioseph des Zweiten (cant.), 1v, pf (Vienna, 1790); 8 deutsche Kinderlieder (Vienna, 1796); Die Vollmondsnacht auf dem Kahlenberge (Vienna, 1803); Arietta In questa tomba oscura … da molti autori (Vienna, 1808); Die Poststationen des Lebens (Vienna, 1808); Des Volkes Wunsch (Vienna, 1809); Lied für das der k.k. Landwehr einverleibte Handlungs-Corps (Vienna, 1810)
(*c*) pieces for gui and csakan, mentioned in inventory of Vanhal's estate

XVIII: DANCE MUSIC

47 works incl. minuetti, Deutsche, Ländler, Hungarian dances, waltzes, angloises, écossaises, etc., many pubd, incl.: XVIII:1, 12 minuetti, 2 vn, b (Vienna, 1786); XVIII:2, 6 allemandes, 2 vn, 2 ob, 2 hn, b (Vienna, 1787); XVIII:20, 6 leichte deutsche Tänze, pf 4 hands (Vienna, 1806), ed. J. Ligtelijn (Amsterdam, 1955); XVIII:25, 6 ungarische Tänze, pf (Amsterdam, 1809), facs. (Amsterdam, 1988); XVIII:47, Baten Waltz (New York, n.d.); others, listed in *DlabacžKL*

XIX: MASSES

48, C1–12, D1–9, E♭1–6, F1–5, G1–7, A1–4, B♭1–5, some dated, C8 and G5 pubd (Vienna, 1818); G4, Missa pastoralis, ed. B. MacIntyre (forthcoming); 2 Requiem settings; several other masses (see MacIntyre, 1996); orat, perf. Varaždin, listed in *DlabacžKL*

XX: SMALLER CHURCH WORKS

(*a*) 10 lits, 1 pubd (Vienna, 1818)
(*b*) 3 vespers settings
(*c*) *c*32 motets
(*d*) 10 grads
(*e*) 46 offs, incl. C13 and C14 (Vienna, 1818); 21 others, mentioned in inventory of Vanhal's estate
(*f*) 34 arias
(*g*) 32 Salve regina; 32 Stabat mater; 1 Regina coeli
(*h*) TeD, 1770, ed. M. Eckhardt (Vienna, 1973)
(*i*) 15 Tantum ergo, incl. C7 (Vienna, 1808)
(*j*) 15 ants, hymns, psalms and responses, incl. Pange lingua, C7, and 4 breves et faciles hymni, F2 (Vienna, 1808); Alma regina, 2 Alma, Veni sanctae, Libera, 'ein Benedictus zum Einlegen', lost, mentioned in inventory of Vanhal's estate

XXI: OPERA

not listed by Weinmann

Il Demofonte (P. Metastasio), Il trionfo di Clelia (Metastasio), lost, listed in *DlabacžKL*

PAUL R. BRYAN

Van Halen. American hard rock and heavy metal band. It was formed in 1972 (initially under the name Mammoth, but changed to Van Halen in 1974) by the brothers Eddie [Edward] Van Halen (*b* Nijmegen, Netherlands, 26 January 1955; guitar) and Alex Van Halen (*b* Nijmegen, Netherlands, 8 May 1950; drums), with Michael Anthony (*b* Chicago, 20 June 1955; bass). David Lee Roth (*b* Bloomington, IN, 10 October 1955) joined as a vocalist in 1973 and continued through the band's most influential period; he was replaced in 1985 by Sammy Hagar (*b* Monterey, CA, 13 Oct 1947), who in turn yielded the frontman's position to former Extreme vocalist Gary Cherone (*b* 26 July 1961) in 1996. The band's first album, *Van Halen* (WB, 1978) has long been considered a rock classic; it set the tone for much of the band's future work by combining heavy metal intensity with a brighter pop sensibility. It also introduced the virtuosic playing that made Eddie Van Halen the most influential electric guitarist after Jimi Hendrix. He developed special techniques such as two-handed tapping and extreme vibrato, expanded the instrument's vocabulary of moans and screams, and modified his equipment to produce a hotter, more sustained sound. His playing featured bluesy fluidity, but his innovations also helped accelerate the Baroque impact on 1980s heavy metal; few rock guitarists were unaffected by him. The band's other original asset was the flamboyance, athleticism, good looks, showmanship and swaggering persona but slight androgyny of its first lead singer, David Lee Roth. The band's years with Sammy Hagar were commercially very successful, but many fans prefer the original line-up. Van Halen is usually counted a heavy metal band on the strength of their often weighty sound and guitar virtuosity, but they also incorporated pop-friendly hooks and vocal harmonies. This gained them radio play and record sales far exceeding those of harder bands such as Judas Priest or Iron Maiden. (R. Walser: *Running with the Devil: Power, Gender, and Madness in Heavy Metal Music*, Hanover, NH, 1993)

ROBERT WALSER

Van Helmont, Adrien Joseph (*b* Brussels, 13 Aug 1747; *d* Brussels, 28 Dec 1830). Flemish composer and teacher. Son of Charles Joseph Van Helmont, he was taught music by his father and other musicians of the collegiate church of St Michel et Ste Gudule, though unlike his brother Pierre Joseph he did not serve there as a choirboy. He sang at the royal chapel and in 1777 succeeded his father as choirmaster of Ste Gudule. He lost his directorship in 1794 during the occupation of the Netherlands by the French Revolutionary armies, but resumed his duties at Ste Gudule from 1802 to 1818. In 1813 he helped to establish a free singing school, thus marking the secularization of music education in Brussels, of which he was a strong advocate. This school eventually evolved into the Brussels Conservatory.

Van Helmont's known religious works (all autograph manuscripts) include a Requiem (1791) and two motets (1797) of mediocre workmanship (*B-Bc*), a responsorium graduale for Corpus Christi and a setting of *Homo quidam* (*B-Br*); three other motets are attributed to him by the priest and copyist Franciscus Haseleer and dated 1803–4. An additional motet, a *Missa solemnis* for chorus and orchestra (before 1783) and many other works are lost. His *opéra comique*, *L'amant légataire*, produced in Brussels in 1808, had no success, though its music, which resembles that of Grétry, is charming.

ROBERT WANGERMÉE/LEWIS REECE BARATZ

Van Helmont, Charles Joseph [Carol Josephus] (*b* Brussels, 19 March 1715; *d* Brussels, 8 June 1790). Flemish composer, organist and music director. He studied as a choirboy under Petrus Hercules Brehy at the collegiate church of St Michel et Ste Gudule in Brussels where, at the age of 18, he succeeded Josse Boutmy as titular organist. In 1737 he was appointed choirmaster at the Kapellekerk of Brussels (the parish church of Notre Dame de la Chapelle), and styled himself 'Directeur de musique de la Chapelle roÿale espagnolles'. The premature death of J.H. Fiocco in 1741 enabled him to return to Ste Gudule, this time as music director (*zangmeester*), a position he had aspired to since the onset of Brehy's terminal illness in October 1736, but which had gone to Fiocco. For the next 36 years, Van Helmont lived with his growing family in the *choraelhuys* (*maîtise*) where he supervised the musical and general education of the choristers, composed frequently for the service, and undertook the task of conserving Ste Gudule's extensive music collection. In 1768 he founded a musical association which gave weekly public concerts; this was one of the first societies of its kind in Brussels. In 1777 he resigned from Ste Gudule passing his duties to his son Adrien Joseph.

The majority of Van Helmont's compositions are sacred; they comprise a substantial corpus of the approximately 525 manuscripts of the fonds Ste-Gudule, now housed primarily in the Brussels Conservatory library, with additional manuscripts in the Royal Library Albert I. His numerous motets (written between 1733 and 1769) are nearly all for a choir of four (or more) parts and instruments, with tutti–ripieno technique; a few are for one or two solo voices, instruments and continuo. The works written before 1741 need only a limited instrumental complement as they were intended for a smaller musical establishment, while the later works employ more substantial forces, including transverse flutes, oboes and *cors de chasse* in addition to the customary strings and continuo. Many manuscripts survive with multiple sets of parts and full scores, of which several bear the date of composition and specific liturgical usage.

The extent of Van Helmont's output is only now coming to light. His recently accessible 501-page manuscript *Psalmi vesperarum et competi de officiis decanalibus*, for four voices, strings and continuo, contains numerous motets and miscellaneous religious pieces (including three settings of the *Te Deum* for four voices and continuo by other composers) which the young Van Helmont submitted to the canons of Ste Gudule in his bid

to succeed Brehy. The copious rubrics are invaluable to our understanding of sacred music and liturgical practice in 18th-century Brussels. Many other works are listed in 18th-century inventories, although the whereabouts of these manuscripts are unknown.

Van Helmont's motets are sectional and consist of a series of choruses interspersed with solo and duo sections, arias and solo recitatives. Da capo form predominates in the solo arias and duos. Thematically the works are strongly coloured by Italianate writing with mannerist formulae: the heavily ornamented melodies are set to predictable harmonic progressions underpinned by complex rhythmic devices. The masses are in the same style. *Judith* (1756), an oratorio to a Latin text, is a 'sacred history' of slight musical interest. Similarly, his three 'Simphonies' are not particularly original in nature.

Van Helmont's main secular work, *Le retour désiré* (1749), is a divertissement written to mark the return of the Hapsburg governor-general Charles de Lorraine to the Austrian Netherlands after a French occupation. The *Pièces de clavecin* (1737) consists of two suites showing Rameau's influence and also a self-concious flamboyance. The pieces have evocative titles after the French style such as *La caille*, *La sauteuse*, *La mélodieuse*, *Le parc* and employ both rondeau structure and stylized dance forms. A familiarity with Handel is evident as well. The organ fugues are brief compositions that conclude with a full-voiced ricercar-like cadential structure or with an improvisatory flourish. Texturally they are better suited to the harpsichord than to the organ.

WORKS

SACRED

in MS in B-Bc unless otherwise stated

Masses (4vv, str, bc (org), unless otherwise indicated): Missa pro defunctis, 1739; Missa solemnis S Clarae, 2 ob, str, bc, 1739; Missa solemnis SS Trinitatis, 1741; Missa solemnis, 5vv, str, bc, 1742; Missa solemnis novi altaris, 5vv, 2 fl/ob, 2 cl ad lib, str, bc, 1743; Missa solemnis S Gudilae, 1745; Missa doi chori, 8vv, ob, 2 hn, str, bc, Advent 1746; Missa Jubilemus, 6vv, 2 ob, 2 hn, 2 bn, timp, db, bc, 2 vn, bc, 1751; Missa pastorella, fl, 2 hn, 2 vn, bc, 1756; Missa solemnis, ob, 2 vn, bc, 1757; Missa S Caeciliae, 8vv, str, bc, 1769; Missa de Nativitate; Missa solemnis, 2 ob, str, bc; Missa Venatoria (*B-Br*)

65 motets (most for 4vv, insts, org; some for solo vv): 41 dated, 1733–69, 24 undated, detailed list in Wangermée; 4 addl motets, undated (*B-Br*); others, lost

Other works: Litaniae BMV, 4vv, bc: 5 collections, 1756–9; Litaniae Lauretanae, 4 vv, str, bc, 1739 (*B-Br*); 5 Ants for the Mass of St Roch, 4 vv, bc (*Br*); 3 Mag, 4vv, insts, bc; Lamentations: Les 9 leçons de la Semaine Sainte, 1v, insts, 1737; 3me lamentation du Jeudÿ Sainte, 1v, va/vc, bc, 1756; 6 concentus sacri, incl, 1 mass, 3 motets, lits, 1 TeD, 4vv, str, bc (Brussels, ? 1751–64); Stabat mater dolorosa, 4vv, str, bc, 1759 (*Br*); Tantum ergo, 4vv, bc (*Br*); Tantum ergo, 4vv, bc, 1769 (*Br*); Tantum ergo, 4vv, str, bc (*Br*); Te Domine, 1748, inc. (*Br*); Hymn, 8vv, str, bc (*Br*); Vespers ant, 4vv, str, bc (*Br*)

Psalmi versperarum et completi de officiis decanalibus (organ preludes, office hymns and motets, mostly for 4vv, insts, bc), 1737 (*Br*)

Judith (orat), 5 solo vv, ob, 2 hn, str, bc, 1756

ROBERT WANGERMÉE/LEWIS REECE BARATZ

Van Heusen, Jimmy [James; Babcock, Edward Chester] (*b* Syracuse, NY, 26 Jan 1913; *d* Rancho Mirage, CA, 7 Feb 1990). American composer, publisher and pianist. At the age of 16 he became a pianist, singer and announcer for a radio station and adopted his professional name. He then studied singing with Howard Lyman and wrote college shows at Syracuse University. In 1933 he replaced Harold Arlen as composer at the Cotton Club in Harlem, and worked as a pianist and song plugger for Tin Pan Alley publishers, including Remick and Santley Brothers. He had his first songwriting success in 1938 with *It's the dreamer in me* (in collaboration with Jimmy Dorsey) and wrote for the bandleader Eddie DeLange before teaming up with the lyricist Johnny Burke in 1939. Together Burke and Van Heusen wrote the songs for 16 of Bing Crosby's best-known films, including *Road to Morocco* (1942) and others of the 'Road to ...' series, and *Going my Way* (1944, from which 'Swingin' on a Star' won an Academy Award). In 1944 they established the Burke–Van Heusen publishing company (which became Burvan in 1950). From 1955 to 1969 Van Heusen collaborated with Sammy Cahn on several well-known songs for television and films, many of them for Frank Sinatra; these included 'Love and Marriage' (1955, for a television production of Thornton Wilder's *Our Town*), which won an Emmy Award, and 'All the Way' (1957, in the film *The Joker is Wild*), 'High Hopes' (1959, in *A Hole in the Head*), and 'Call me irresponsible' (1963, in *Papa's Delicate Condition*), all of which won Academy awards. His songs have become standards for many other popular singers including Lena Horne and Rosemary Clooney, and for jazz arrangers.

Van Heusen's songs are sophisticated, with chromatic bass lines and melodies built up sequentially through successions of diminished chords, and 'almost always the suggestion of a rhythm section in the background' (Wilder). Seven holograph manuscripts of his songs are in the Crosby Library at Gonzaga University, Spokane, Washington, but the major collection of his musical works, recordings and papers, 1920–91, is at the University of California in Los Angeles. In 1966 he issued a recording of his own performances of some of his songs, reissued in 1982.

DEANE L. ROOT

Van Hoboken, Anthony. *See* HOBOKEN, ANTHONY VAN.

Van Hove, Luc (*b* Wilrijk, 3 Feb 1957). Belgian composer. He studied composition at the Antwerp Conservatory, where he was a pupil of Kersters. As a teacher in composition from 1984 at both the Antwerp Conservatory and the Lemmens Institute in Leuven, he is one of the most respected and influential Flemish composers.

Van Hove is primarily a composer of chamber and orchestral music. Within the latter, a preference for the concerto form is noticeable (electric guitar, oboe, piano). He shares with Ligeti a fascination for dense orchestral textures moving at full speed and applies set theory to composition by taking properties of pitch-class sets (similarity relations, interval content, the complement of a set, set complex relations) as the point of departure for the construction of chords and motifs. His profound knowledge of 19th-century music is increasingly apparent in his works from 1990 onwards. This can be seen from the gestural and expressive qualities of his melodies, for example in the Oboe Concerto, the Nonet and in subsequent works. It is documented furthermore by his adaptation of the rhetorical forms and instrumentation typical of Romantic music. Consequently, the use of tonality in his recent output comes as no surprise. It functions both as a technique for the large-scale structuring of basically non-tonal pitch materials and as an attempt to draw new meaning from tonal chords by integrating them in a non-tonal context.

MARK DELAERE

Vanhulst, Henri (*b* Leuven, 5 Dec 1943). Belgian musicologist. He studied at the Free University of Brussels, taking degrees in Romantic philology in 1965 and musicology (with Wangermée and Lesure) in 1976. He subsequently gained the doctorate in 1984 for his dissertation on the Phalèse family of music publishers. He was appointed a part-time lecturer at the Free University of Brussels in 1984, later becoming a full lecturer (1991), part-time professor (1993) and full professor (1995). He was also professor of the history of music at the Brussels Conservatory (1980–90). His research is principally concerned with music of the Renaissance, music printing and publishing in the Low Countries up to the 19th century, and musical life in Brussels. His most important publication is his catalogue of the editions of the publishers Phalèse, which has become an invaluable reference book in this field. He is co-editor of the *Revue belge de musicologie* and secretary of the Société Belge de Musicologie. He was a prizewinner of the Belgian Royal Academy in 1984.

MARIE CORNAZ

Van Ijzer-Vincent, Jo. *See* VINCENT, JO.

Van Immerseel, Jos (*b* Antwerp, 9 Nov 1945). Belgian harpsichordist and fortepianist. At the Royal Conservatory in Antwerp he studied with Eugene Tracy, Flor Peeters and Kenneth Gilbert, winning first prizes for piano (1963), organ (1967) and harpsichord (1971), then going on to win the artist's diploma for the harpsichord (1973). From 1963 onwards he won a number of international competitions and in 1973 received the first prize at the Paris Forum International de Clavecin. In 1985 he founded the Baroque orchestra Anima Eterna, with which he has recorded a complete cycle of Mozart piano concertos, directing from the keyboard. Van Immerseel has also conducted the Antwerp Collegium Musicum and Collegium Vocale, published articles and reviews, and produced radio programmes as well as pursuing an international performing career. Besides the Mozart concertos his numerous recordings include harpsichord concertos by C.P.E. Bach, the complete Beethoven piano concertos and violin sonatas, and the Schubert piano trios with his regular chamber music partners, Vera Beths and Anner Bylsma. He frequently accompanied the baritone Max van Egmond, with whom he recorded Schubert's *Winterreise*. His repertory also includes many lesser-known compositions by Belgian composers. Van Immerseel has taught at the Conservatory and at the international academy of the Vleeshuis Museum in Antwerp (from 1972), the Sweelinck Conservatory in Amsterdam (1981–5) and, since 1992, the Paris Conservatoire.

HOWARD SCHOTT

Vanini, Bernardino. *See* VANNINI, BERNARDINO.

Vanini [Boschi], **Francesca** (*b* Bologna; *d* Venice, 1744). Italian contralto. She was in the service of the court of Mantua. Between 1695 and 1700 she appeared in operas in Bologna, Florence, Venice, Mantua and Parma. She sang in Naples in 1701 and in Caldara's *Gli equivoci del sembiante* at Casale in 1703, at Genoa in 1703–6 and Vicenza in 1707. Between 1707 and 1709 she appeared with her husband, the bass Giuseppe Boschi, in 12 operas in Venice (including Handel's *Agrippina*) and Bologna, often playing male parts. She accompanied him to London (1710–11), singing in Alessandro Scarlatti's *Pirro e Demetrio*, Giovanni Bononcini's *Etearco* and Handel's *Rinaldo* (Goffredo). Her voice was then on the decline (Goffredo is her last known part), but earlier she had been an outstanding artist: Tosi praised her for following Pistocchi's method 'of introducing Graces without transgressing against Time'. Handel's two parts for her, Otho in *Agrippina* and Goffredo, have a limited compass of *g* to e''; the tessitura of the former is exceptionally low. Her will, drawn up in 1739, is in *I-Vas*.

Van Lier, Bertus. *See* LIER, BERTUS VAN.

Van Maldeghem, Robert Julien (*b* Dentergem, nr Ghent, 9 Oct 1810; *d* Ixelles, nr Brussels, 13 Nov 1893). Belgian musicologist and composer. He studied with Fétis at the Brussels Conservatory where he won the first prize in composition in 1838. Shortly afterwards he became the organist at St Jacques-sur-Coudenberg in Brussels, and in 1847 he founded the Belgian *Caecilia*, a periodical for religious music. He is remembered particularly for his monumental series, Trésor Musical: Collection Authentique de Musique Sacrée et Profane des Anciens Maîtres Belges (Brussels, 1865–93/*R*), of which two volumes (one sacred and one secular), were published each year. For this series, numerous compositions by 15th- and 16th-century Netherlandish musicians were collected from Brussels, Cambrai, Bologna, Rome, Paris, Munich and Aachen, and thus appeared for the first time in modern print. Despite erroneous attributions and other shortcomings it remains a useful collection. Maldeghem also wrote a number of religious works, songs, an organ method and (with his brother) a singing method; most of these were never published.

PATRICK PEIRE

Vannarelli [Vanarelli], **Francesco Antonio** (*b* Rome, *c*1615; *d* ?Padua, after 1676). Italian composer. He became a Franciscan conventual friar and on 14 May 1646 *magister musices* of his order. In 1647 he became *maestro di cappella* of SS Apostoli, Rome. From 23 February 1649 he was *maestro di cappella* of Spoleto Cathedral, but in 1650 he took a similar post at Terni Cathedral. In 1653 he was *maestro di cappella* to Cardinal Rapaccioli. On 26 March 1656 he was reappointed to Spoleto Cathedral but left in 1658, only to return on 12 May 1659. He remained at Spoleto with frequent, generally short, breaks until the end of 1665. His publication of 1668 names him as *maestro di cappella* of Orvieto Cathedral. On 9 March 1674 he directed the fourth oratorio of the Arciconfraternita del SS Crocifisso in S Marcello, Rome, and a 'soprano del padre Vannarelli' (presumably a pupil) sang in the third choir. From 1674 to 1676 he was *maestro di*

cappella of S Antonio, Padua. He was an able composer of the Roman school, held in high esteem by his contemporaries, as his inclusion in so many collections demonstrates. For the most part his music belongs to the polyphonic tradition of the *prima pratica*.

JOHN HARPER

Van Nes, Jard. *See* NES, JARD VAN.

Vannes, René (*b* Lille, 25 May 1888; *d* Ixelles, nr Brussels, 19 Nov 1956). Belgian musicologist. After attending the Liège Conservatory, he studied the history of music with Victor Dwelshauwers. As a member of a light music orchestra he toured Europe and South America for about 20 years and during this time collected a great deal of hitherto unpublished information in local archives, mainly concerning instrument makers. He was subsequently librarian at the Brussels Conservatory (1939–43). His major work was a dictionary of instrument makers, *Essai d'un dictionnaire universel des luthiers* (Paris, 1932, enlarged 2/1951–9 and 1972–5/*R* as *Dictionnaire universel des luthiers*, addl vol. by C. Lebet 1985); he also wrote an *Essai de terminologie musicale: dictionnaire universel* (Thann, 1925/*R*) and, with André Souris, a *Dictionnaire des musiciens (compositeurs)* (Brussels, 1947).

PAUL RASPÉ

Vanneschi, Francesco (*b* ?Florence, early 18th century; *d* ?London, *c*Aug 1759). Italian librettist and impresario. His most frequently performed comic opera was *La commedia in commedia*, incorrectly attributed to Giovanni Barlocci, first performed in 1731 at the Cocomero in Florence by the company of Pietro Pertici with music by Chinzer. A new score by Rinaldo di Capua for Rome, 1738, was used for a tour by the same company through northern Italy. In 1741 Vanneschi was employed by Charles Sackville, the Earl of Middlesex, as poet and impresario at the King's Theatre, London. He wrote at least two new librettos for his patron: *Scipione in Cartagine* (1742) and *Fetonte* (1747). Otherwise, his seasons at the King's Theatre were dominated by revivals which he reworked to a greater or lesser extent. He was instrumental in bringing the Pertici company to London from November 1748 to May 1750. The company performed nine comic operas, five of which had been staged previously in Florence (1731–43). Though less successful, this introduction of Italian comic opera into England is comparable with the more famous Parisian seasons of 1752 to 1754 directed by Eustache Bambini. Vanneschi's management of the King's Theatre intermittently from 1741 to 1759 was marred by scandals, thefts, disputes (notably with the prima donna, Regina Mingotti) and financial distress resulting in his incarceration briefly in debtors' prison.

Although the language is sometimes crude, hasty and inappropriate, Vanneschi's librettos form a worthy background to Goldoni's works of the 1740s and 50s and an important bridge between the 17th-century Tuscan classic librettos of Moniglia and Villifranchi and the more sentimental Leopoldine ones of Casorri, Coltellini, Somigli and Tassi in the late 18th century.

ROBERT LAMAR WEAVER

Vanneus, Stephanus [Vanni, Stefano] (*b* Recanati, *c*1493; *d* ?Ascoli Piceno, after 1539). Italian theorist. In 1529 he was an Augustinian monk at the monastery at Ascoli Piceno; in the same year he became a choir singer in the cathedral and from 1533 until at least 1540 was organist and *rector cantus* there. He is said by Pamphilus to have published two books of introits and vespers antiphons, but none of his works survive. His *Recanetum de musica aurea* (Rome, 1533/*R*; partial Eng. trans., 1979) was completed in Italian in 1531 and published in 1533 in a Latin translation by Vincenzo Rosetti. It is a well-written introductory treatise directed towards students, presenting the basic areas of plainsong, notation and counterpoint, with less attention to speculative theory. Pietro Aaron's treatises appear to have been his model, not only in the choice of title, honouring his native city, but also in the decision to have the treatise translated (like Aaron's *De institutione harmonica*) into humanistic Latin. Of his contemporaries, Vanneus mentioned only Nicolò Burzio, Giovanni Spataro, Aaron – thus including both partisans and opponents of Ramis de Pareia in the current theoretical disputes – and the Duke of Atri (Andrea Matteo Acquaviva d'Aragona).

The *Recanetum* presents several novel aspects, with personal remarks reflecting Vanneus's experience as a choir director. His gamut extends an octave in both directions beyond the traditional compass, with the positions located on the reverse of the hand; he derided the practice of calling such notes 'musica ficta' and especially writing a flat before F. In singing, he stressed the importance of listening to the other parts, in order to correct emerging dissonances quickly; the tactus should be beaten either physically or mentally. His most original contribution is his extended treatment of cadences and composition, distinguishing between simple and florid counterpoint. He discussed the construction of chords, starting with the interval between superius and tenor, and showed how to form cadences with dissonant suspensions, laying great stress on the proper use of accidentals, with ample musical examples. Grammatical analogies underly his advice on cadential structure and word-setting. The *Recanetum* was an important source for Agostino Pisa's *Breve dichiarazione della battuta musicale* (Rome, 1611) and its expanded version of the same year as well as Giovanni Andrea Angelini Bontempi's *Historia musica* (Perugia, 1695).

Schiele's 17th-century bibliography of writings on music lists 'Stephanus Vanneus, & Petrus Vanneus *de vi Musica*'. The latter author and his book remain to be identified.

Vanni, Stefano. *See* VANNEUS, STEPHANUS.

Vanni-Marcoux [Marcoux, Vanni; Marcoux, Jean Emile Diogène] (*b* Turin, 12 June 1877; *d* Paris, 22 Oct 1962). French bass and baritone. His father was French and his mother Italian; the 'Vanni' which he incorporated into his professional name was originally an abbreviation for 'Giovanni'. He made early appearances in Bayonne (début 1889 as Gounod's Friar Laurence) and in Turin as Sparafucile (1894). But neither heredity nor Italian training affected the timbre of his voice, which was always characteristically French. He was engaged in 1905 by Covent Garden, where he made his début as Rossini's Don Basilio, and where he returned every summer until 1912 in a wide variety of roles, both baritone and bass. Exceptionally, he tended to gravitate towards the higher range as his career developed, moving for example from the bass role of Arkel in *Pelléas* (1909, London) to the baritone part of Golaud (1914, Paris, 1937, London). At the Théâtre de la Monnaie in Brussels, in the 1907–8 season, he was still predominantly a bass, singing even Hunding and Fafner in the *Ring*; and it was as Gounod's Méphistophélès that he made his début at the Paris Opéra in 1908. Thereafter for nearly 40 years he remained an admired figure in Parisian musical life, mainly at the Opéra, but also at the Opéra-Comique, where he was particularly famous as the Father in *Louise* and in the title role of *Don Quichotte*. His American career was centred on Chicago, where he first appeared in 1913 as Scarpia and as Don Quichotte (singing in both operas with Mary Garden), and again frequently between 1926 and 1932. Among his other leading roles were Boris Godunov, Iago (which he studied with Maurel) and Don Giovanni. He was also director of the Grand Théâtre at Bordeaux from 1948 to 1951.

Vanni-Marcoux was a splendid actor as well as an accomplished singer, with exemplary enunciation and a voice remarkable for smoothness and finish rather than for sheer power. Among his many excellent records, those of 'Elle ne m'aime pas' from *Don Carlos* and of extracts from *Don Quichotte* are especially treasurable.

DESMOND SHAWE-TAYLOR

Vannini [Vanini], **Bernardino** (*b* Barbarano, nr Vicenza, ?*c*1590; *d* probably at Rome, early 1666). Italian composer. He was a Camaldolite monk and was *maestro di cappella* of Viterbo Cathedral by 1647. His reputation rests largely on Silvestri, himself a native of Barbarano, who published Vannini's *Sacrae musicales cantiones 8 vocibus et pro processionibus* (Rome, 1666) posthumously, out of local patriotism. In his preface Silvestri appears to recommend the volume for teaching purposes more than for its musical value. He included a piece by Vannini in only one of his numerous collections: *Mons Dei* for three sopranos, alto and organ (RISM 1647[2]). Three five-part motets by Vannini were included in the three parts of Schadaeus's *Promptuarii musici*, one in each part (Strasbourg, 1611[1], 1612[3], 1613[2]; 1 ed. in Musica sacra, xxiv, Berlin, 1883). (A. de Angelis: 'La cappella musicale di Viterbo nel secolò XVII', *RIM*, xix (1984), 21–35)

JOHN HARPER

Vannini, Elia (*b* Medicina, nr Bologna, *c*1660; *d* in or after 1699). Italian composer. He came from a Jewish family, but he converted to Christianity and entered the Carmelite monastery in Bologna. According to the title-pages and dedications of his works, he was *maestro di cappella* of Ravenna Cathedral from 1691 to 1699. The statement (in *EitnerQ*) that he was *maestro di cappella* at Medicina in 1692 may stem from a misreading of the title-page of op.2. Vannini's extant music consists of sacred polyphonic works for voices and instruments; they reveal him as a composer of moderate significance and skill.

WORKS

Vannucci, Domenico Francesco (*b* Lucca, *c*1718; *d* Lucca, 7 Aug 1775). Italian composer and cello teacher. He probably spent his entire life in Lucca, where in 1743 he became *maestro di cappella* at the court of the archbishop. He also taught singing and the cello at the seminary in Lucca; Boccherini was one of his pupils. On his death he left his extensive music library, including his liturgical music, to the seminary.

SIEGFRIED GMEINWIESER

Van Oeckelen, Petrus (*b* Breda, 15 Aug 1795; *d* Harenermolen, 1878). Dutch organ builder, carillon maker, musician and instrument inventor. His father, Cornelis (*b* 1762; *d* 29 Aug 1837) was a clockmaker and inventor of musical instruments who worked on carillons and started

an organ-building business in 1805. Petrus completed his father's last instrument. His brothers were also musicians and gifted craftsmen: Johannes Matthias (1787–1860) was a carillonneur and clockmaker in Breda; and Cornelis Jacobus (1798–1865) was a piano maker and the inventor of several unique mechanical musical instruments.

In 1810 Petrus left his job as municipal carillonneur in Breda and moved to Groningen, where he learned the craft of organ building with H.H. Freytag (*d* 11 April 1811) and his apprentice J.W. Timpe. His first organ was built for the Dutch Reform church of Assen (1814, now in Havelte) re-using older parts. His reputation as a repairer and restorer grew, and he adapted the large organs of Groningen's Martinikerk, Aa-kerk and Zwolle's Grote Kerk in accordance with contemporary musical tastes and practices. Petrus also designed the magnificent case for the 1829 Timpe organ in the Nieuwe Kerk, Groningen, patterned after the famous Müller organ of the Bavokerk, Haarlem.

In 1837 Petrus took over the organ-building firms of his father and Timpe, both recently deceased, and settled in Harenermolen. In 1841 he built one of his first new organs, at the Koepelkerk, Smilde. He secured orders for new instruments through the contacts cultivated by the organist Samuel Trip, who often played the inaugural recitals. Petrus also continued to work on carillons (in 1857 he automated the carillon of the church in Middelstum) and to invent instruments, including an oboe with free reeds which could be played from a keyboard. After his death Petrus's sons Cornelis Aldegundis (1829–1905) and Antonius (1839–1918) continued their father's work (although they produced few organs after 1905). From 1918 the business was run by his chief apprentice Harmannus Thijs (1862–1943); he was succeeded by lesser figures after 1933.

Petrus was an innovator: the first builder to introduce magazine bellows into northern Europe, applied to both new and rebuilt organs; he also made extensive use of metal parts in the action, especially the stop action. He was the first organ builder in the Netherlands to develop a certain degree of mass production: parts were absolutely uniform and made according to standardized procedures, and even the cases could be identical or nearly identical twins, such as those at Usquert and Saaxumhuizen. The churches of Westeremden and Leermens received identical organs in neo-Gothic cases. With these production methods Petrus was able to build up to three organs per year. Both in quality and quantity, Van Oeckelen's work belongs to the greatest of the 19th century. The sound of his organs can be characterized as stately, heavy, full of gravity, and very well suited to the musical practice of his time. For much of the 20th century Petrus's vigorous rebuilding and replacement of old organs was lamented; however, the quality of that work (especially of his newly built organs) has gained recognition and acceptance since the 1980s.

ADRI DE GROOT

Van Parys, Georges (*b* Paris, 7 June 1902; *d* Paris, 25 June 1971). French composer. The son of a textile manufacturer, he studied law at the Sorbonne before deciding to pursue composition in 1924. He formed an early collaboration with Philippe Parès, writing jazz-influenced film scores and musical comedies for the Paris stage in the 1920s and 30s. During the occupation, he wrote a number of stage and film works, including the successful wartime musical *Une femme par jour* (1943). Throughout the 1940s and 50s, up until his final work, *La belle de Paris* (1961), he was a mainstay of Parisian *opéra comique*. He was president of the composer's group in the Syndicat National des Auteurs et Compositeurs, and a member of the Comité des Variétés de l'ORTF. He was admitted to the Légion d'Honneur in the late 1960s.

Van Parys was a prolific composer, writing more than 200 film scores, as well as hundreds of popular songs, two dozen operettas and incidental music. Unlike many film composers of this period, Van Parys did not see himself as part of the high cultural tradition of French music. His leanings were rather towards operetta, lyric theatre, and the *belle époque*. His songs, which include *Si l'on ne s'était pas connu*, *Ça s'est passé un dimanche* and *Complainte des infidèles*, are often light, colourful tunes that reflect the popular style of the Parisian lyric theatre. His best film work was with René Clair, with whom he collaborated on *Sous les toits de Paris* (1930), the first important French sound film, as well as *Le million* (1931) and *Les belles de nuit* (1952). His score for Max Ophüls' *Madame de . . .* (1953) includes a lilting waltz which captures the grace and elegance of the aristocratic life, while simultaneously conjuring up a sense of melancholy and dread as the characters move inexorably towards their doom. His score for Henin-Georges Clouzot's *Les diaboliques* (1955), endlessly imitated, attained a level of tension rare in music for the cinema.

WORKS
(*selective list*)

Van Rossum, Frederik. *See* ROSSUM, FREDERIK VAN.

Van San, Herman (*b* Mechelen, 19 March 1929; *d* Mechelen, 26 Oct 1975). Belgian composer and theorist. He studied theory and piano with Gabriel Minet in Brussels, and law, physics and philosophy at the Université Libre de Bruxelles. A precursor of formalistic composition, he developed his own theories on a mathematical basis and applied the new insights of physics to formal aspects of his compositions. He invented a chemico-electric possibility of sound production and developed the possibilities of 'stimulated' sound to replace natural sound with the help of the methods of quantum physics. He has destroyed many compositions, while others are lost. Until 1953 he wrote dodecaphonic music; from 1953 to 1956 he applied mathematical systems to instrumental and electronic works. From 1956 nearly all his works (many incomplete) were electronic. He divided his works into two categories: 'opus instrumentale mathematicum' and 'opus electronicum mathematicum'. Only a few of his instrumental works were played in the 1950s. His musical thought reflected an analytic-positivistic conception of the world. His prophetic essays consider music as an exact, logical-empirical science of unity.

Vaňura [Waniura, Wanjura, Wanžura], **Česlav** [Ceslaus] (*b* Miletín [Bohemia], 28 Dec 1694; *d* Prague, 7 Jan 1736). Czech composer. As a member of the Minorite order he was appointed first organist to the convent church of St James at Prague in 1734. On the title-page of his *Cultus latriae* op.2, published two years later, he is referred to as *regens chori* there. In 1735 he was awarded the degree of *magister musicae*. Although he might have been active at the Prague Minorite convent in the same years as his elder contemporary B.M. Černohorský, he was apparently not Černohorský's pupil.

Stylistically, Vaňura's works stand near to Černohorský and Šimon Brixi, especially the 12 offertories *Cultus latriae*, written in a late Baroque idiom with a characteristic mixture of concerto style and contrapuntal texture. They are in two, three or more sections, the principal ones sometimes being elaborate fugues. The fugue 'Laudetur sanctissima Trinitas' of no.11 is modelled on Černohorský's famous *Laudetur Jesus Christus* (*c*1728–9). His litanies op.1 are primarily homophonic. He sometimes aimed at pictorial interpretation of the text, and his orchestration is varied, with emphasis on the brass instruments.

MILAN POŠTOLKA

Van Vactor, David (*b* Plymouth, IN, 8 May 1906; *d* Los Angeles, 24 March 1994). American composer, conductor and flautist. He studied at Northwestern University (BM 1928, MM 1935), the Vienna Music Academy (1928–9), the Ecole Normale, Paris (1931), and the Paris Conservatoire (1931). His teachers included Marcel Moyse and Josef Niedermayr (flute), and Paul Dukas and Franz Schmidt (composition). As a flautist, he played with the Chicago SO (1931–43) and was the section leader of the Kansas City PO (1943–7). He was the assistant conductor of the Chicago Civic Orchestra (1933–4) and the Kansas City PO (1943–7), founded and conducted the Kansas City Allied Arts Orchestra, an ensemble emphasizing

contemporary repertory, and conducted the Knoxville SO for 25 years. He also appeared as guest conductor with the New York PO, the Cleveland Orchestra, the Chicago SO, the LPO, the Frankfurt RSO, and the symphony orchestras of Rio de Janeiro and Santiago. His academic appointments included positions at Northwestern University (1935–9), the Kansas City Conservatory (1945–7) and the University of Tennessee, where he founded the department of fine arts. He retired as a conductor in 1972 and as professor emeritus of flute and composition in 1976. His awards include Fulbright and Guggenheim fellowships (1957–8) and the title of Composer Laureate of Tennessee (1975).

A prolific composer, Van Vactor wrote about 140 original works, including seven symphonies (1937–82). His First Symphony won the New York PO symphony competition in 1938. Based on classical forms, his compositions are lyrical and often contrapuntal, showing the influences of Hindemith and Prokofiev. Dance rhythms and marches are characteristic of his style.

Van Vulpen. Dutch firm of organ builders. It was founded in Utrecht in 1940 by brothers Rijk van Vulpen (i) (*b* Utrecht, 11 April 1921; *d* 15 Nov 1997) and Adrianus (Jos) van Vulpen (*b* Utrecht, 5 July 1922). They had already built their first organ in their father's plumbing workshop from old parts. On 10 March 1952 the third brother, Evert van Vulpen (*b* Utrecht, 2 Jan 1929) joined the firm as a salaried worker, and Rijk van Vulpen (ii) (*b* 3 Aug 1955), son of Adrianus, joined likewise on 1 May 1974. In 1983 Rijk (i) retired, leaving Adrianus as sole proprietor. On 27 March 1997 Rijk (ii) took over the firm and changed the name to Gebr. van Vulpen BV. In 1999 Henk Bouwman (*b* 1 Sept 1938) and Rijk (ii) led the firm. The firm started to blossom in 1950, when they bought the building that has since housed the organ building workshop. All parts and pipes are constructed in-house.

As self-taught builders of mechanical-action church, studio and house organs, the brothers' initial orientation was inspired by the neo-Baroque organ revival movement, and especially that of Danish builders. They were introduced to this by Lambert Erné, organist of the large three-manual 1957 Marcussen organ of the Nicolaikerk in Utrecht. Their most famous example and landmark instrument is the 1961 two-manual choir organ for St Eusebius in Arnhem, which has a modern yet classically inspired flat façade and a horizontal Trumpet stop. Other significant organs of that period are in Bremen Cathedral (1966) and the Elisabethkirche in Recklinghausen (1973).

After the restoration of the 1756 Matthijs van Deventer organ in the Hermvormde Kerk, Nijkerk (1975–87) and the 1696 Duyschot organ at Hendrik-Ido-Ambacht (1982), and also owing to a changing tide of opinion in the Netherlands, the firm's approach to the building of new organs changed dramatically to one more fully based on historical Dutch organ building from before the 20th century. This is exemplified by lower mixtures, wider pipe scales, more lead in the pipe metal and an overall warmer sound. The firm employs both historically inspired and modern case designs.

Other notable restorations are: the 1733 Hinsz organ of the Petruskerk, Leens (1967); the 1786 Bätz organ, Petruskerk, Woerden (1971); the 60-stop, three-manual 1830 organ of Utrecht Cathedral, containing much 16th-century pipework (1985); the 1686/1720/1860 organ of the Nicolaaskerk, Vollenhove (1977), and the 1738 Hinsz organ of the Broederkerk, Kampen (1993; new Pedal and Rugwerk added).

The most significant organs built since the 1970s are: the Stephankirche, Andernach (1983); the Maranathakerk, Woerden (1983); the Buurkerk, Utrecht (1984); the Rehobothkerk, Utrecht (1984); the Hervormde Kerk 'de Ark', Ede (1986); the Gereformeerde Kerk Vrijgemaakt, Zuidhorn (1989); the Hervormde Kerk, Arnemuiden (1990); the Hervormde Kerk, Renkum (1994); and the large three-manual organ in North-Germanic/Dutch tradition for the Hervormde Kerk of Ouddorp (1994).

The firm has contributed to the production of small and large house and studio organs, and has delivered new organs to Germany, Norway, Austria and the Czech Republic. (G. Verloop, ed.: *Small Organs in Holland: a Description of Some Modern Instruments*, Schagen, 1978)

ADRI DE GROOT

Van Wilder [de Vuildre, Vanwilder, Van Wyllender, Welder, Wild, Wildroe, Wylde], **Philip** (*b* ?Millam, nr Wormhout, *c*1500; *d* London, 24 Feb 1553). South Netherlandish composer and lutenist, active in England. He was one of Henry VIII's most favoured musicians, rising to the position of head of the secular musical establishment of the royal household, a post later described as 'Master of the King's Musick'. According to his grant of denization Van Wilder was 'a native of the Emperor's dominions'. Francis Tregian in his early 17th-century manuscript anthology (*GB-Lbl* Eg. 3665) further identifies him as 'Maestro Phillippo di Fiandra, chi visse

circa l'Anno 1520, in Inghilterra'. He may, like Peter van Wilder, another lutenist at the English court, have come from 'Millom', possibly the Belgian town of Millam, significantly located near the village of Wyler some 5 km north-east of Wormhout.

London municipal accounts first record Van Wilder's presence in England in 1522 as 'Phyllyp of Wylde, Frensshman', living in the parish of St Olave and having £60 'in goods' and £48 'in Fees', substantial amounts for a foreigner and a musician. His name first appears in the royal account books of 1525/6, where he is listed as 'Philip Welder, mynstrell', and allotted the exceptionally large monthly salary of 50s. At that time the king granted him a licence to import 800 tons of Toulouse woad and Gascon wine, the first of such privileges Van Wilder received to supplement his wages and rewards as a musician. A 1529 list of the King's Musick describes him as 'lewter' with a salary of 66s. 8d. a month, the largest paid to a court musician. In the same year he is named as a member of the Privy Chamber (the small, select company of gentlemen, grooms and pages who attended and entertained the King in private), and by 1540 he rose to the rank of Gentleman of the Privy Chamber, a position of considerable influence.

Van Wilder's wages and rewards reflect not only his special status but also the various services he performed at court. He played at royal ceremonies, entertained the king in his private apartments, supervised the purchase of musical instruments and lute strings (later he was named Keeper of the Royal Collection of Musical Instruments at Westminster), and gave lute lessons to the royal children (Princess Mary in 1537–43, Prince Edward in 1546). He also accompanied the king on his various journeys within and outside of England. One of the most important was the meeting in late October of 1532 between Henry and the French king François I at the Field of Cloth of Gold between Calais and Boulogne, where musicians from both the English and French courts entertained the royal retinues.

In February 1537 Princess Mary gave Van Wilder a gift of 40s. upon his marriage to a woman named Frances, and on 1 May 1538 a son Henry (presumably named after his royal patron) was born. Four other children, Edward, William, John and Katherine, survived the composer.

On 18 March 1538/9 Van Wilder became a naturalized citizen; as such he could now own land. The following August, King Henry bestowed on him and his wife the leaseholds to various properties in the parishes of St Olave and All Hallows near Dowgate for a yearly rent of 35s. 4d. Within the year Van Wilder had sold his rights in these properties back to the Crown, and in exchange leased from the king the grange and certain 'closes' within the manor of Myddlemarshe and Lytlebredye, Dorset (formerly of Cerne Abbey), a valuable collection of properties for which he paid an annual rent of £122 19s. 2d., more than three times his annual salary. In 1550 Edward VI conferred freeholds to the properties in Dorset to Van Wilder and his wife. Shortly thereafter, the composer requested and received a coat of arms and crest. A courtier possessed of such wealth, property and a coat of arms is likely to have had his portrait made by the king's painter, as did several of his colleagues; thus it is possible that Hans Holbein the younger's *Man with a Lute*, now in the Dahlem Museum, Berlin, depicting a proud gentleman in French dress, is a portrait of Van Wilder, painted when the musician was in his 40s.

His will was drawn up on 18 January 1553; it shows him to have died a gentleman of considerable property. Among the witnesses were several members of the Privy Chamber and of the King's Musick, including at least one who had formerly been a child of the Privy Chamber. For most of his time at court Van Wilder had had charge of the 'young Mynstrells' who performed in the Privy Chamber. Between 1529 and 1532 there seem to have been three of them, but by 1548 their number had grown to six children and three men. Thus Van Wilder as 'Master of his Highnes Singing Children' was in charge of the king's private music, as opposed to the music performed in the chapel and other parts of the royal establishment. Its importance for the history of music at the English court is obvious; for at least 20 years a foreign musician was in a position to influence the taste of the king, his court and those in the kingdom for whom king and court set the tone.

Van Wilder's influence can be seen to some extent in the number and variety of sources in which his music is found. No fewer than 55 manuscript and printed sources of both continental and English origin transmit 41 musical works that can be assigned to Van Wilder with certainty. He was the only early Tudor composer whose music appeared on the Continent during the 16th century. A motet was copied in Padua and two chansons in the Netherlands during his lifetime, and his music was printed in Antwerp, Augsburg, Paris and Leuven between 1545 and 1598.

Most of the continental sources ascribe the Netherlander's works to 'Phl. de Vuildre'. English manuscripts, dating mainly from the later Elizabethan and Jacobean periods, often identify Van Wilder by his first name only ('Mr. Phillips' or 'Philippes'). The chief source, a collection of untexted works in table-book format (*GB-Lbl* Add. 31390), includes 17 of Van Wilder's compositions, more than any other single source. It is typical of English manuscript sources in general that his vocal works occur without their texts. Van Wilder's music, particularly his chansons, appear as transcriptions for lute and keyboard, contrafacta with English texts, lute accompaniments without superius parts, and untexted part-music.

Van Wilder's music reflects the stylistic traditions of both his Flemish origins and his adopted country. Among his seven surviving Latin motets, the seven-voice *Homo quidam*, modelled after Josquin's five-voice setting, points to the Netherlandish predilection for contrapuntal artifice with its canon at the 4th between contratenor and tenor. *Vidi civitatem*, *Pater noster* and *Aspice Domine* display the pervading imitation and through-composed form commonly found in continental motets. The five-voice *Aspice Domine*, in particular, exerted an influence on later Elizabethan composers: Byrd alluded to it in his six-voice setting (1575) and again in *Civitas sancti tui* (the secunda pars of *Ne irascaris*, 1591), which he later transformed into the anthem *Bow thine ear*. Some of Van Wilder's other sacred works contain musical features associated with Tudor composers. The 12-voice *Deo gratias*, in which the Ite missa est chant from Mass XI appears as a cantus firmus in the tenor, embodies the flamboyant, differentiated style of pre-Reformation English sacred music. It was obviously written for some important royal ceremony, possibly even the meeting

between Henry VIII and François I in 1532. The votive antiphon *Sancte Deus*, with its scoring for three trebles and tenor, short points of imitation, and unusual cadences, bears a striking resemblance to the well-known setting by Tallis. Van Wilder's only extant English anthem, *Blessed art thou*, is one of the earliest polyphonic settings of Thomas Sternhold's metrical psalms (Psalm cxxviii) and enjoyed a long life in the Anglican church repertory.

Some 31 of Van Wilder's surviving works are French chansons. Their scoring for five or more voices and their predominantly imitative texture identify them with the Netherlandish style. Other musical techniques found in the chansons and used by Netherlanders, such as ostinato points and simultaneous cross-relations, in particuar the so-called English cadence, later became distinctive features of 16th-century English style. The Netherlandish propensity for using pre-existing material in chansons is also striking in Van Wilder's works. His techniques of adaptation varied with each work, including straightforward borrowing, paraphrase and parody; in each case he composed for more parts than his model. Sometimes other composers apparently based their work on his music, as did Lassus and Bonnet in their settings of *Un jeune moyne*. An anonymous five-voice *D'un nouveau dart* found next to the one ascribed to Van Wilder in one of its sources appears to be an updated setting with its high scoring, vocal dialogues and condensation of material. His five-voice *Las que feray* was apparently transformed into the anonymous four-voice English part-song *Shall I despaire*.

Although Van Wilder was especially esteemed for his lute playing (the elegy *On the death of Phillips* is included in every edition of Tottel's *Miscellany*, 1557–87) only one piece by him for lute survives, an attractive four-voice fantasia. The only other surviving example of his instrumental writing, a four-part fantasia preserved in score format, may be performed with or without its rests, reflecting the Netherlandish penchant for musical puzzles.

The eldest of Van Wilder's four sons, Henry (*b* ?London, 1 May 1538; *d* after 1575), served as a court musician to Queen Mary. Two other musicians of the same name were probably related: Matthew de Veldre, who in 1517 was one of the king's minstrels, playing lute and viol, and Peter de Weldre, a lutenist who was in court service from 1519 to 1559. As Peter van Wilder he succeeded Philip as Master of the Children on his death.

JOHN M. WARD/JANE A. BERNSTEIN

Van Wyk, Arnold(us Christian Vlok) (*b* Calvinia district, Cape Province, 26 April 1916; *d* Stellenbosch, 27 May 1983). South African composer. Although he started to compose at an early age, he received no formal instruction until 1938; of his early works, only the *Vier weemoedige liedjies* are regularly performed. In 1938 he became the first South African recipient of a scholarship for overseas study from the PRS, and for four years studied with Theodore Holland at the RAM; he also gratefully acknowledged the advice and encouragement he received from Howard Ferguson. His first mature works, composed before leaving London in 1946, include the Five Elegies, the String Quartet no.1 and the Symphony no.1; notable performances in England include that of the Symphony under Wood and of *Saudade* by the violinist Olive Zorian at a Promenade concert, under Boult. During World War II Van Wyk also worked as an announcer for the BBC Afrikaans programme. After 1946 he settled in South Africa, lecturing at the South African College of Music at Cape Town University (1949–60) and at Stellenbosch University (1961–78). He was made a fellow of the RAM in 1952; his song cycle *Van liefde en verlatenheid* (1953) was highly acclaimed at an ISCM festival in Israel in 1954. He was awarded honorary doctorates by the universities of Cape Town (1972) and Stellenbosch (1982).

Because of his intense self-criticism, Van Wyk composed slowly, and often conceived works over long periods: the initial ideas for his *Missa in illo tempore* were sketched 34 years before its completion in 1979. The basis of each work is normally a few skilfully developed motives, as

illustrated in the 24-minute piano piece *Night Music*, in which he develops four motives exposed in the first two minutes. Although preoccupation with motivic development should have found an ideal expression in contrapuntal textures, the Symphony no.2 remains his only predominantly contrapuntal work. Van Wyk wrote in an expanded tonal idiom, frequently using chromatically altered chords in a colouristic and non-functional way. His harmonic language, often the result of part-writing, employs interlocking major and minor 3rds, sudden tonal shifts, pedal points and ostinato figures. He shows a predilection for the sharpened 4th and flattened 7th degrees, and his melodic ideas evolve slowly, often around a central pedal.

JAMES MAY

Van Wyk, Carl (Albert) (*b* Cape Town, 12 May 1942). South African composer. His composition teachers at the University of Cape Town (BMus 1964, MMus 1965, DMus 1971) were Erik Chisholm, Gideon Fagan, Stanley Glasser and Ronald Stevenson. In 1966 an award from the PRS enabled him to study for a year with Alan Bush at the RAM, where his *Petrusa Variations* (1967) won the Academy's Manson and West awards. He was appointed lecturer at the University of the Witwatersrand in Johannesburg (1976), later becoming associate professor (1982) and head of the school of music (1991–7). He has received many commissions and is prominent in South Africa as an adjudicator. His main compositional influences are Western: earlier works such as the sonata (1968) and concerto (1981) for violin have their roots in the music of Bartók, Schoenberg and Berg, while later works show the influence of modern American music and demonstrate his concern that contemporary music should be easily accessible to its audience. In 1986 Van Wyk's involvement with black choirs and exposure to traditional Zulu music prompted the incorporation into his compositional style of indigenous melodic and rhythmic elements, notably in the Piano Concerto no.2 (1986), *Carmina Afrika* (1992) and *Insimbe Za Se Goli* (1997).

ALISON PRAIN

Van Ypen. Flemish music publishers. Pierre-Joseph Théodore Van Ypen (*d* Brussels, 1 Feb 1792) and his younger brother Philippe-Henri created a music publishing house in Brussels, in partnership from 1774 to 1779 with the engraver, trumpeter and horn player Abraham Salomon Pris (*b* Dieppe, 5 Oct 1740; *d* Brussels, 13 Sept 1800), then until 1789 with the engraver and tenor Paul Mechtler (*b* Strenzendorf, *c*1723). The firm distributed its publications to Paris, Lyons, Lille, The Hague, Amsterdam, Frankfurt and London (through Longman & Broderip). Van Ypen & Pris produced works by Conrad Breunig (opp.5 and 6), J.-T. Brodeckzy (opp.2 and 3), C. Brunings (op.1), J.-B. Jadin (opp.1, 4 and 5), Pierre van Maldere (op.7), Antoine Pallet and J.-M. Rousseau. Van Ypen & Mechtler published works by Eugène Godecharle (opp.5 and 6), Godefroid Staes (opp.1 and 2) and Carl Stamitz (op.17). Two composers had works published by both firms: W.G. Hauff (opp.3, 4 and 5) and Ferdinand Staes (opp.1, 3–7). Van Ypen was responsible for a collection of 14 *Recueil d'ariettes* successfully sold by subscription from 1775 to 1789, presenting *opéra-comique* airs arranged for voice, two violins and bass.

MARIE CORNAZ

Van Zandt, Marie (*b* New York, 8 Oct 1858; *d* Cannes, 31 Dec 1919). American soprano. Her mother, a member of the Carl Rosa company, was her first teacher; she also received encouragement from Patti and further training from Francesco Lamperti in Italy. After a successful début in Turin in January 1879 as Zerlina (*Don Giovanni*), she was engaged for Her Majesty's Theatre, London, as Amina (*La sonnambula*). Her voice was already well developed and pleasant, if not powerful, while her execution was competent and her acting graceful and charming. These gifts contributed to her success as Mignon at the Opéra-Comique in March 1880, and to her popularity in Paris during the next five years. Her interpretations of Mignon, Dinorah and Cherubino found such favour with the critics that Delibes entrusted her with the creation of the title role in *Lakmé* (1883). She left the Opéra-Comique in March 1885 under unfortunate circumstances, having unwittingly antagonized both press and public. Subsequently she sang in St Petersburg and Moscow before returning to Covent Garden in 1889. She made her American début in Chicago as Amina in November 1891, a month later repeating the role at the Metropolitan Opera. She continued to make guest appearances at various houses until her marriage in 1898.

HERMAN KLEIN/JUNE C. OTTENBERG

Vanzo, Alain (Fernand Albert) (*b* Monte Carlo, 2 April 1928). French tenor. A boy chorister in Monte Carlo, he later continued his musical studies at Aix-les-Bains. After winning a competition for tenors at Cannes in 1954, he made his Paris Opéra début that year as a Pirate in *Oberon*. Following a period of small roles at both Paris houses, in 1956 he undertook the Duke of Mantua at the Opéra and Gérard (*Lakmé*) at the Opéra-Comique, and won renown throughout France and Belgium in French lyric parts – Berlioz's Cellini, Gounod's Faust and Vincent (*Mireille*), Lalo's Mylio (*Le roi d'Ys*), Massenet's Des Grieux and Werther – and in Donizetti, Verdi and Puccini. Although he appeared at Covent Garden, as Edgardo (1961) and Rodolfo in *La bohème* (1963), and in Wexford and the USA, it remains surprising that in a time of shortage a French tenor of his elegant, clean style and well-formed vocal timbre should not have received wider international acclaim. His recordings include *Lakmé*, with Sutherland; *Le roi d'Ys*, *Les pêcheurs de perles* and Massenet's *La Navarraise*. After retirement he was active as a singing teacher.

MAX LOPPERT

Vanzo, Vittorio Maria (*b* Padua, 29 April 1862; *d* Milan, 13 Dec 1945). Italian conductor, pianist and composer. He studied with Bazzini at the Milan Conservatory and developed an early interest in Wagner, whom he got to know in Palermo in 1882. He conducted Wagner's works in Italy, giving the Italian première of *Die Walküre* (Turin, 1891) and the Milan première of *Götterdämmerung* (1896). He conducted Italian works in Moscow (1897) and in 1900 visited Buenos Aires. He retired in 1906. As a pianist he gained a fine reputation (Grieg compared him favourably with Liszt and Rubinstein). He undertook many concert tours, often accompanying his wife, the singer Anna Kribel, with whom he opened a singing school in Milan. His opera *Edipo re* was composed in 1893 but not performed; his two other operas, *Fosca* and *Pamela*, were not completed. His one-act operetta *Lubino* (Milan, Pezzana, 1887) was performed under the pseudonym Canard. Several songs, piano pieces, chamber music, small-scale choral works and a symphony are in the Milan Conservatory library (*I-Mc*). He also composed a requiem mass.

FERRUCCIO BONAVIA/MARCO BEGHELLI

Vaquedano [Baquedano], **José de** (*b* Puente la Reina, Navarra, bap. 20 March 1642; *d* Santiago de Compostela, 17 Feb 1711). Spanish composer. He was a pupil of Simón Huarte Arrizabalaga in his native town and studied composition with Matías Ruiz in Madrid. By 1680 he had been ordained a priest, entered the Order of the Trinity and was *maestro de capilla* – probably in a provisional capacity – at the Convento de la Encarnación, Madrid. On 2 October 1680 he was appointed *maestro de capilla* at the cathedral in Santiago de Compostela, but was not able to take up the post until 10 May 1681. About 1700 his health declined and by 1709 he was so frequently ill that he was unable to fulfil his duties; on 4 Feb 1710 he retired with a pension and he died a year later.

Vaquedano is among the most representative composers of the Spanish musical Baroque. Most of his works were composed before 1700, and he must be considered the first Spanish composer to use a true bel canto idiom, particularly in evidence in some of his Lamentations for Holy Week. These are often highly melismatic in both slow and rapid passages, and sometimes rests are used to break up long melodies, enhancing the bel canto effect. Vaquedano also mastered a rich polychoral style; some compositions use as many as 20 voices divided into five choirs. Many works employ instruments to double the voices, in addition to the ubiquitous basso continuo, which normally follows the melodic patterns of the bass voice. All Vaquedano's surviving music is sacred except for a single trio sonata, the only known example of the genre in 17th-century Spanish music.

WORKS

Edition: *Obras musicales de fray José de Vaquedano*, ed. J. López-Calo (Santiago de Compostela, 1990) [L]

5 masses: 1, 4vv, bc; 1, 8vv; 1, 8vv, bc; 1, 12vv; 1, 12vv, bc, *E-SC*

JOSÉ LÓPEZ-CALO

Vaqueras [Vacqueras, Vagares, Vacares, Vassadelli, della Bassa, de Bassea], **Bertrandus** (*b* ?Vacqueyras, *c*1450; *d* Rome, before 21 April 1507). French singer and composer. Although there has been some confusion about Vaqueras's origins (his name suggested to some that he was Spanish, while the appellation 'de Bessea' suggested to others origins in Flanders or western France), the occasional use of 'Vassadelli' as his last name strongly suggests that he was a member of the Vassadel family, who had been the lords of the town of Vacqueyras near Orange since the 14th century. Although born in southern France either in Vacqueyras or near Cavaillon (he always described himself as a cleric of the diocese of Cavaillon and many of the benefices he received during his 24 years in the papal chapel were located in the area of Vaison or Orange), Vaqueras also managed to hold a canonry in the Cathedral of Liège, and one in the collegiate church of Notre Dame, Tongeren; as it was difficult to take possession of benefices in places other than one's home diocese, this may suggest some early connection with the north. Vaqueras is first recorded in Rome in 1481 as a contrabass singer in the choir of S Pietro. In November 1483, he was one of the nine new members to join the papal chapel, where he was to spend the rest of his career. He seems never to have left Rome. Vaqueras was apparently also an active humanist. A manuscript in the Vatican Library (*I-Rvat* Vat. Lat. 2836) contains two long classicizing Latin poems ascribed to 'Bertrandus de Vaqueirassio'. One of these, dedicated to Antonius Flaminio, has been dated 1493–4 (see Vattasso). It shows the poet to be connected with humanistic circles in Rome and with its university. It is not altogether clear if the poet and the singer are the same, but it does seem unlikely that there were two people named Bertrandus Vaqueras in Rome at the same time.

Vaqueras's small number of works survive mainly in manuscripts prepared for the papal singers. His two masses, two settings of the Credo, three motets and one chanson setting are on the whole more than competent, exhibiting a certain eclecticism and a melodic/contrapuntal idiom characteristic of late 15th-century French and Netherlandish compositions; indeed, Ludovico Zacconi mentioned Vaqueras and Obrecht in the same breath as examples of composers who used excessive melodic sequences, printing a melodic fragment which he attributed to Vaqueras, although it relates to no known work. Vaqueras's five-voice *Missa 'L'homme armé'* is almost a compendium of techniques found in other *L'homme armé* masses of the late 15th century. The *Missa 'Du bon du ceur'* paraphrases its cantus firmus (the tenor of a polyphonic chanson) and includes long declamatory sections that may betray Italian influence. The motet *Rex fallax miraculum* has strong affinities with the five-voice motets of Regis, while the setting of *Ave regina coelorum* could be analysed as an example of the *varietas* championed by Tinctoris. The motet *Domine non secundum peccata*, the only sacred work by Vaqueras to appear in print, was compared by Glarean (albeit unfavourably) with a setting of the same text by Josquin (at one time Vaqueras's colleague in the papal chapel). The Credo settings are uninteresting, even clumsy in places; the untexted chanson setting is like many others of the period. Richard Taruskin has suggested that Vaqueras might be the composer of the anonymous *Missa 'L'ardent desir'* in *I-Rvat* C.S.51, but this seems unlikely.

RICHARD SHERR

Varady, Julia (*b* Oradea, 1 Sept 1941). Romanian soprano, naturalized German. She studied in Bucharest with Arta Florescu, joining the Cluj State Opera at 22. Guest engagements took her to Italy, Frankfurt and Cologne, where she soon became known as a Mozart soprano of passionate intensity, vocal warmth and technical smoothness, as Elvira, Fiordiligi and Vitellia. In the 1972–3 season she was engaged at Munich, where her roles included Offenbach's Antonia, Butterfly, Giorgetta (*Il tabarro*) and Liù; in 1977 she sang the title role in Strauss's *Arabella* there. As Gluck's Alcestis in the 1974 Scottish Opera production, she was much admired for her ability to marry emotional power and classically serene line in a portrayal of nobility and dignity, unstrained by the high tessitura of Gluck's music. But in spite of her protean artistry, which enabled her to tackle such parts as Senta (a role she sang at Covent Garden in 1992), it is as a Verdi soprano that she revealed the range of her powers; and she undertook such varied roles as Violetta, Leonora in both *Il trovatore* and *La forza del destino*, Elisabeth de Valois, Desdemona, Aida and Abigaille with thrilling magnetism and vocal *slancio*.

Varady's recordings include Cecilius in *Lucio Silla*, Electra (*Idomeneo*), Vitellia (*La clemenza di Tito*), *Arabella* and *Bluebeard's Castle*, as well as Verdi and Puccini arias. She married Dietrich Fischer-Dieskau in 1978. She retired from the operatic stage in 1997. (A. Blyth: 'Julia Varady', *Opera*, x/iii, 1992, pp. 646–51)

MAX LOPPERT

Varcoe, (Christopher) Stephen (*b* Lostwithiel, Cornwall, 19 May 1949). English baritone. He studied at King's College, Cambridge, and the GSM. After singing in various choral groups and winning a Gulbenkian Foundation fellowship in 1977, he embarked on a career that concentrated on Baroque music and song, although he has made occasional forays into opera, notably as Sarastro in a London performance of *Die Zauberflöte* with Norrington (1989). He also created Father Zossima in the première of Tavener's *Mary of Egypt* at the 1992 Aldeburgh Festival. During the 1980s and early 1990s he was a frequent contributor to Graham Johnson's Songmakers' Almanac, giving many refined performances of *mélodies*, and in the late 1990s he made a special study of, and recorded, many British songs. Varcoe's feeling for the meaning of the text, allied to his gentle warmth of tone and sensitive phrasing, is evident in his many recordings, notably of music by Purcell, Bach, Handel and Rameau and of *mélodies*.

ALAN BLYTH

Vardi, Emanuel (*b* Jerusalem, 21 April 1917). American viola player. At two he was given his first violin lessons by his father and when he was four the family emigrated to New York, where at seven he started serious violin studies with Joseph Borisoff and then Auer's assistant Khusdo. At the Institute of Musical Art (later the Juilliard School) his teachers were Constance Seeger and Edward Dethier; but he never graduated because his chamber music coach Felix Salmond interested him in the viola. He played in the NBC SO with William Primrose, his only viola teacher, studied Bach with Emanuel Feuermann and played in the Stuyvesant Quartet. In 1941 he gave the first complete viola recital at Town Hall, New York, and Toscanini arranged for him to broadcast six sonatas; he was the critics' recitalist of the year for his second Town Hall programme. During the war he played in the US Navy Orchestra as its viola soloist, giving the première of Morton Gould's Concerto (1943). In 1946 he gave a further radio series and a Carnegie Hall recital and he then became one of America's best-known soloists and recitalists. However he periodically took time off to pursue his interests in drawing, painting, sculpture and photography. He played the violin, in 1953–5 he was a member of the Guilet Quartet, he conducted – for a time he was music director of the South Dakota Symphony – and he worked as a recording producer. In the 1970s he virtually retired from playing but he returned in the 1980s rejuvenated, giving regular recitals at Alice Tully Hall, New York, and the Wigmore Hall, London. Seymour Barab, Henry Brant, Michael Colgrass, Alan Hovhaness, Charles Jones, George Kleinsinger, Walter May and Alan Shulman have written works for him. Vardi is one of the virtuosos of the viola, with an eloquent bow arm and a supple left hand. His big tone is produced with no evidence of effort. Most of his teaching has been done privately. From early in his career until a broken wrist curtailed his activities in 1993, he made recordings which, alongside those of Primrose, redefined the scope of the viola. The most legendary is a set of Paganini caprices with his own embellishments and concert endings; but he has recorded such rarities as Tibor Serly's Rhapsody (of which he gave the première) and Concerto and is one of the few viola players to have made anything of the Bliss Viola Sonata. His compositions include a violin concerto and pieces for viola, including Fantasy Variations on a Theme of Paganini and transcriptions. He has owned many vintage violas but in recent years has played an instrument by Hiroshi Iizuki, with sloping viol-like shoulders.

TULLY POTTER

Värdi [Vardina], **Pietro.** *See* VERDINA, PIETRO.

Varela de Vega, Juan Bautista (*b* Lugo, 21 Dec 1933). Spanish musicologist. He studied piano and harmony privately with Isabel Arróniz, disciple of the Galician composer Juan Montes Capón, and took the doctorate in musicology at the University of Valladolid. He also holds a doctorate in law and a Bachelor's degree in sociology. He received various prizes and distinctions, including the diploma de mérito (1982) and the Lira de Ora (1990) of the Sociedad Lírica 'Amigos de la Zarzuela' (Valladolid). He became a member of the Real Cofradía Internacional de Investigadores, Toledo (1989) and the Real Academia de Bellas Artes de la Purísma Concepción, Valladolid (1990) and was named academic librarian and editor of the *Boletín* of the latter in 1996. He has served as music critic for the periodicals *El norte de castilla* (Valladolid) and *El progresso* (Lugo). In 1980, with the ethnomusicologist Joaquín Díaz, he founded the *Revista de folklore*, to which he also contributed numerous articles about folk musical instruments throughout the world.

Varela de Vega has for long been a leading spokesman for the performance of music by Galician composers, whose works he continues to introduce as well as integrate in his numerous lecture-concerts throughout Spain and other European countries. His writings on Galician music take into account significant cultural, literary and musical influences on and from other regions of the Iberian peninsula.

Varesco, (Girolamo) Giovanni Battista [Gianbattista] (bap. Trento, 26 Nov 1735; *d* Salzburg, 25 Aug 1805). Italian poet and musician. Educated at the Jesuit college in his home town, in 1766 he became a chaplain to the Archbishop of Salzburg, serving also in the archbishop's orchestra. When Mozart received the commission for *Idomeneo* (1781) from the Munich court, he turned not to an established theatrical poet but to Varesco, who, as an Italian educated by the Jesuits in the liberal arts, was as capable as more prolific librettists. Furthermore, his presence in Salzburg allowed Mozart to work closely with him during the preparation of the libretto and the early stages of composition. Varesco translated and reworked Danchet's *tragédie lyrique Idomenée* (1712) under Mozart's supervision, producing a libretto in which the grand choruses, spectacular effects and supernatural elements reflect its French origins and probably the influence of Gluck's *Alceste*. Varesco's work is fluent and theatrical, with moments of great beauty, both poetic and dramatic.

Although offended by Mozart's persistent attempts to alter the libretto of *Idomeneo*, Varesco collaborated again with Mozart. When Joseph II organized an *opera buffa* troupe in Vienna in 1783, Mozart, eager to display his abilities as a composer of Italian comic opera, set to work with Varesco on *L'oca del Cairo*. Most of the first act had been completed when, in early 1784, they abandoned the project. After *L'oca del Cairo*, Varesco collaborated with Michael Haydn on the *opera seria Andromeda e Perseo* (1787). Having survived Mozart by 14 years, Varesco died in poverty in his adopted city.

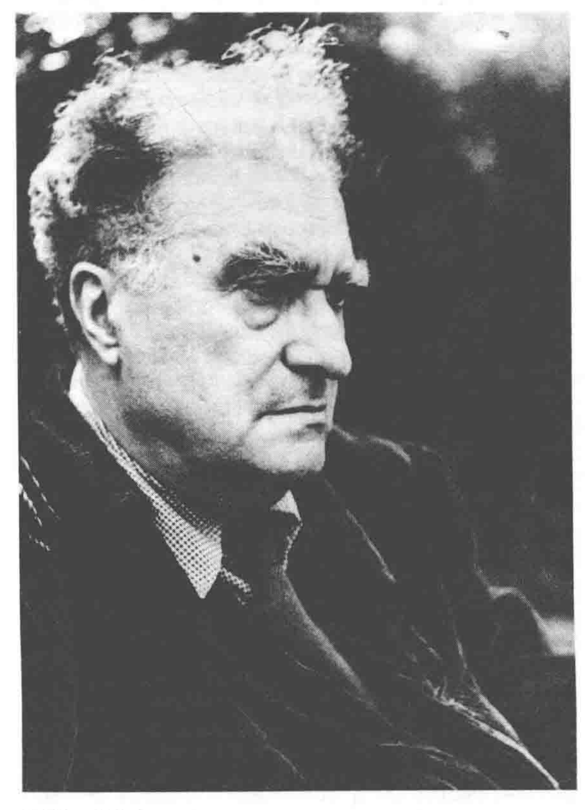
JOHN A. RICE

Varèse, Edgard [Edgar] **(Victor Achille Charles)** (*b* Paris, 22 Dec 1883; *d* New York, 6 Nov 1965). American composer of French birth. He produced in the 1920s a series of compositions which were innovative and influential in their rhythmic complexity, use of percussion, free atonality and forms not principally dependent on harmonic progression or thematic working. Even before World War I he saw the necessity of new means to realize his conceptions of 'organized sound' (the term he preferred to 'music'), and, seizing on the electronic developments after World War II, he composed two of the first major works with sounds on tape.

1. Life. 2. Aesthetics and technique. 3. Works.



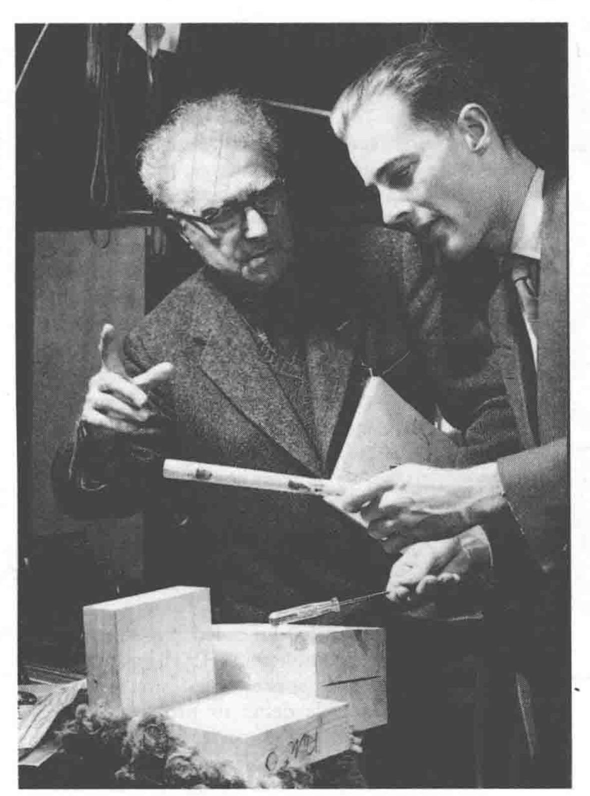
1. LIFE. Varèse spent his early childhood partly in Paris and partly with maternal relatives in Burgundy, a region to which he retained a deep attachment; his first performed orchestral work was entitled *Bourgogne*, and the earlier *Rhapsodie romane* (1905–6) was stimulated by the Romanesque architecture of St Philibert at Tournus. In 1893 the Varèse family settled in Turin, where Henri Varèse, intending his son for a business career, directed his studies towards mathematics and engineering. But, despite his father's opposition, Varèse was able to begin music studies with Giovanni Bolzoni about 1900, and he had already composed an 'opera' for his schoolmates. He left home for Paris in 1903 and the next year entered the Schola Cantorum, where his teachers were Roussel (composition, counterpoint and fugue), Bordes (pre-classical music), and d'Indy (conducting). Bordes had a decisive influence in turning his attention to early music (always the favoured repertory for the choral groups which he directed from time to time), but Varèse was unable to put up with d'Indy's paternalism, and in 1905 he left the Schola to enrol in Charles-Marie Widor's composition class at the Conservatoire.

Late in 1907 Varèse moved from Paris to Berlin. He had been impressed by the radical prophecies of Busoni's *Entwurf einer neuen Ästhetik der Tonkunst* and he soon sought out the author, who became a close acquaintance. In 1908 Hofmannsthal gave him permission to set *Oedipus und die Sphinx* as an opera; through Hofmannsthal his music came to the notice of Richard Strauss, and Strauss persuaded Stransky to perform *Bourgogne* in 1910. During these years he made several visits to Paris, meeting and impressing Rolland and Debussy, to whom he introduced Schoenberg's atonal works (he heard *Pierrot lunaire* in Berlin in 1912). Varèse returned to Paris in 1913, leaving most of his manuscripts in Berlin, where they were destroyed in a warehouse fire. In Paris he took an interest in Jean Bertrand and his electric instrument, the 'dynaphone'; he got to know Apollinaire and Satie, and was involved in Cocteau's unrealized project for a circus production of *A Midsummer Night's Dream*. In 1914 he conducted the Czech PO in a programme including the concert première of the orchestral suite from Debussy's *Le martyre de St Sébastien*, but he was unable to secure a permanent position and on 18 December 1915 he left for the USA.

After his arrival in New York 11 days later, Varèse was introduced into musical circles by Muck, another Berlin acquaintance. He was also on the fringe of a dadaist group around Duchamp and Picabia; he contributed to Picabia's magazine *391*, but he never accepted the iconoclasm of dada. On 1 December 1917 he made his American conducting début with Berlioz's Requiem, and he directed concerts of new music with the Cincinnati SO (1918) and his own New SO (1919). His eagerness to promote contemporary works found a more permanent outlet in the International Composers' Guild, which he founded with Carlos Salzedo in 1921. During the six years of its existence the guild organized performances of chamber pieces by Schoenberg, Stravinsky, Berg, Webern, Ruggles, Cowell and many others; its concerts also saw the first performances of Varèse's *Offrandes* in 1922, *Hyperprism* in 1923, *Octandre* in 1924 and *Intégrales* in

1925. The première of *Hyperprism*, for nine wind and seven percussionists, brought an outburst from the audience, but Kenneth Curwen, who was present, was sufficiently impressed to offer to publish Varèse's scores. After the discontinuation of the International Composers' Guild, Varèse founded the Pan American Association of Composers (1928–34). Dedicated to the promotion of experimental contemporary music and its performance in the USA, Latin America and Europe, the association was one of the first to encourage cooperation among composers throughout the Americas and to stimulate performances of American music outside the USA.

Varèse had visited Europe briefly several times in the 1920s, and in 1928 he began a long stay in Paris, where he was soon involved again in the artistic milieu. He spent a lot of time on a dramatic project, first mooted as *The One-All-Alone*, to a text by his wife Louise on an American-Indian subject. This appears to have been transformed into *L'astronome*, for which he sketched a scenario concerning an astronomer who makes contact with the inhabitants of a distant solar system, incites the anger of the mob, and is finally annihilated by the star's rays. The idea came to nothing, and *Espace*, also begun during these years, similarly failed to materialize, though it continued to occupy Varèse until the 1940s. *Espace* was a Protean project; in its most ambitious state it was to involve simultaneous broadcasts by performers all over the globe. While Varèse was in Paris, several of his works were played there; for the French première of *Amériques* in 1929 the siren was replaced by the newly invented ondes martenot. Varèse also continued his work with Bertrand, and he included two theremin parts in *Ecuatorial* (1932–4).



1. *Edgard Varèse*

Before leaving Paris (in 1933) Varèse wrote to the Bell Telephone Co. and the Guggenheim Foundation in an attempt to raise interest in a centre for electric-instrument research. His failure to obtain funds or facilities was the principal cause of the depression which overtook him for many years; after *Density 21·5*, composed in 1936 for Barrère's flute made from platinum (21·5 is the density of that metal), he completed nothing for a decade. In 1937 he gave classes in composition and orchestration at the Arsuna School of Fine Arts, Santa Fe, and in 1938 he went to Los Angeles, where he tried, again unsuccessfully, to persuade film producers that 'organized sound' held possibilities for the cinema. Back in New York he founded the Greater New York Chorus for performances of Renaissance and Baroque music (1943–7) and lectured on composition and 20th-century music at Columbia University (1948) and elsewhere. Some of his lectures were published in *The American Composer Speaks* (ed. G. Chase, 1966) and *Contemporary Composers on Contemporary Music* (ed. E. Schwartz and B. Childs, 1967). He taught at the Darmstadt summer courses in 1950, and a recording of four of his works was released.

In 1953 Varèse received, from an anonymous donor, an Ampex tape recorder, which enabled him to begin concrete work on the plans he had nurtured for 40 years. He started by collecting sounds for the tape episodes in *Déserts*, whose instrumental parts had been in progress since about 1950. Schaeffer invited him to complete the work in the Radiodiffusion-Télévision Française studios in 1954, and *Déserts* was introduced in Paris later that year in a concert that was broadcast live in stereo, the first music to be so transmitted by French radio. Varèse went back to New York in 1955 and returned to Europe in 1957 to work on the *Poème électronique* at the Philips laboratories in Eindhoven (fig.2). This composition, for tape alone, was designed to fill Le Corbusier's pavilion for the Philips firm at the Brussels Exposition Universelle of 1958.

The last years of Varèse's life brought him honour and renown. In 1960 his scores began to appear in print again; Boulez and Craft made recordings of his works; performances became much more frequent; he was elected to the National Institute of Arts and Letters (1955) and to the Royal Swedish Academy (1962); and he received the Brandeis University Creative Arts Award (1962) and the first Koussevitzky International Recording Award (1963). He also finished work on the *Déserts* tapes at the Columbia-Princeton Electronic Music Center and revised the close of *Arcana*. But in terms of new compositions the period was less rich: it was at this time that he destroyed *Bourgogne* in a moment of despair, and he laboured with several projects on themes of night and death. *Nocturnal* was given in incomplete form at a concert of homage in 1961; at his death, four and a half years later, it was still unfinished.

2. AESTHETICS AND TECHNIQUE. Varèse has frequently been honoured as the precursor of electronic music, the adventurous explorer of techniques and conceptions far ahead of his time. This view of his work as 'experimental' and valuable chiefly for its prophetic character has perhaps been overemphasized, but enthusiasm for the new was undeniably an important part of Varèse's personality. The title of his earliest published composition, *Amériques*, was chosen 'as symbolic of discoveries – new worlds on earth, in the sky, or in the minds of men'. And as early as

2. *Varèse and a colleague working on 'Poème électronique', Eindhoven, 1958*

1916 he was expounding his ideas for the future of music: 'We also need new instruments very badly. . . . Musicians should take up this question in deep earnest with the help of machinery specialists'. In a lecture at the University of Southern California in 1939 he specified the new possibilities that machines might offer: liberation from the tempered system, a pitch range extended in both directions, 'new harmonic splendours obtainable from the use of sub-harmonic combinations now impossible', increased differentiation of timbre, an expanded dynamic spectrum, the feasibility of sound projection in space, and unrelated cross-rhythms. To realize such ideas Varèse recognized that it would be necessary to collaborate with scientists and engineers; indeed, he often spoke of music as an 'art-science', a discipline to stand at the side of mathematics, as it had for the medieval theorist and the Greek philosopher. Nevertheless, it was the mythology of science that Varèse embraced rather than its method; titles such as *Ionisation* and *Hyperprism* are hardly more than evocative. The scientist seems to have been for him a figure parallel to the Romantic artist: an individual elevated above the masses by his access to the mysteries of nature (cf *L'astronome*). His ideal was Paracelsus, from whom he took a hermetic inscription for the score of *Arcana*, not Albert Einstein, who only wanted to talk to him about Mozart.

Another aspect of Varèse's determined radicalism was his love of urban life, something he had in common with the Italian futurists, whose work he knew in Paris before World War I. However, he criticized them for their anecdotal recourse to the sounds and rhythms of machines. For him it was essential to integrate such materials, whether in the tape collages of *Déserts* and the *Poème électronique* or in instrumental works. If some quality of mechanized industry and the city street remains in a piece like *Intégrales*, there is no direct imitation; and the use of sirens in *Amériques*, *Hyperprism* and *Ionisation* was not just a futurist gesture of revolt but a means of obtaining the continuous slow glissandos impossible with conventional instruments. Varèse's intimate incorporation of urban features can be compared with early Léger or late Mondrian more closely than with the work of any other composer. In some respects, too, he shared the ambiguous awe with which surrealist writers regarded the city: as a thing of violent beauty and yet, on occasion, an unintelligible snare. He used surrealist poems in *Offrandes*, wrote one himself, and planned at one stage to work with Artaud on *L'astronome*. Artaud wrote him a text, published as *Il n'y a pas de firmament*, but it was not set. Nonetheless, Artaud's ideas probably suggested the introduction of meaningless syllables in the subsequent *Ecuatorial* and *Nocturnal*; the former, setting a tribal incantation, is particularly Artaudesque. As *Ecuatorial* most pointedly indicates, the distant past was almost as important to Varèse as the present and the future; Leonardo, Paracelsus and the Greeks meant more to him than did later thinkers.

Similarly, Varèse felt closer to Perotinus, Machaut, Schütz and Marc-Antoine Charpentier than to composers of the Classical-Romantic tradition (Berlioz excepted), as his conducting repertory demonstrated. Among contemporaries, Debussy, Stravinsky and Schoenberg had the greatest influence on him, though he was always mistrustful of what he regarded as 'systems', whether neo-classical or serial. His structural use of 'sound-masses' can be viewed as a combination of the block form of Stravinsky's *The Rite of Spring* with the continuously evolving fluidity of Debussy's *Jeux* and the Five Orchestral Pieces op.16 of Schoenberg (all works he knew before World War I). Varèse's music is typically composed of parallel streams, each made up of 'sound-masses' and silences, but with continuity maintained by the overlapping of the streams. They may be sharply distinguished in terms of pitch, interval, register, rhythm, instrumentation, deployment (linear or chordal) or rate of change (an important compositional aspect in the composer's work), or any combination of these; they may alternatively share some of these attributes.

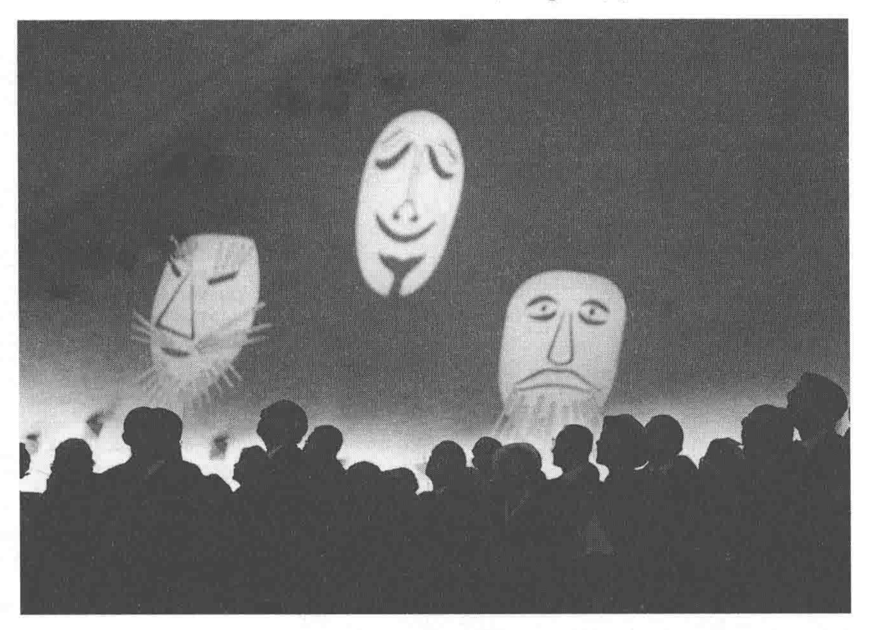
A few aspects of Varèse's technique can be explored in *Hyperprism* (1922–3), a short work for a characteristic ensemble of nine wind instruments (flute, clarinet, three horns, and pairs of trumpets and trombones) and seven percussion players, all using 'noise' instruments, except for the indefinitely pitched siren. Varèse used strings in only four published works; he disliked vibrato, and only wind and percussion could provide sounds of the intensity (not necessarily brutality) he demanded. Unpitched percussion instruments were suitable for complex rhythmic writing (*Hyperprism* has sections of four independent rhythmic parts in the percussion) and the wind family constituted a homogeneous collection of sounds from which Varèse could 'synthesize' his sonorities. The association between wind and percussion is, in *Hyperprism*, typically variable: there are passages of quasi-independence (opening), homorhythm (figure 4) and alternation (figure 6); other sections are scored for wind or percussion alone. Percussion rhythm patterns, which

consist most characteristically of repeated accented 'cells', are often found when rhythmic activity in the winds is at its lowest (in sustained single notes or chords).

Ex.1

One of the elements important to the pitch relationships of *Hyperprism* is the unordered set (henceforth S) of three adjacent pitch classes. The first 13 bars, for example, contain only the pitch classes C♯ (tenor trombone, horns and E♭ clarinet), D (bass trombone), and C (flute). Bars 14–16 build a nine-note aggregate, the missing pitch classes being another instance of S (G, A♭, A). The trombone melody at figure 8 (ex.1) presents three examples of S successively (discounting the grace notes, which themselves form S) in such a way that interval class 1 is emphasized; again, the three pitch classes not included constitute a form of S. Finally, the outer trichords of the last sonority (ex.2) are instances of S; the lower one is removed before the other six notes of the chord. (Chords such as this, generally composed of eight to 11 pitch classes, widely disposed in register and each represented of closure.)

Ex.2



Bars 14–once only, are frequently found in Varèse's music at points 16, to which reference has been made, may be taken as a simple example of the structural idea to which Varèse referred in a lecture of 1936: 'taking the place of the linear counterpoint, the movement of sound-masses, of shifting planes, will be clearly perceived. When these sound-masses collide the phenomena of penetration or repulsion will seem to occur'. The passage opens with a C–C♯ dyad in flute and E♭ clarinet (dyads of interval class 1 in the high woodwind are common in Varèse). There are entries by the brass, and the woodwind instruments exchange pitch classes, returning to their original positions once the horns and trumpets have stopped playing.

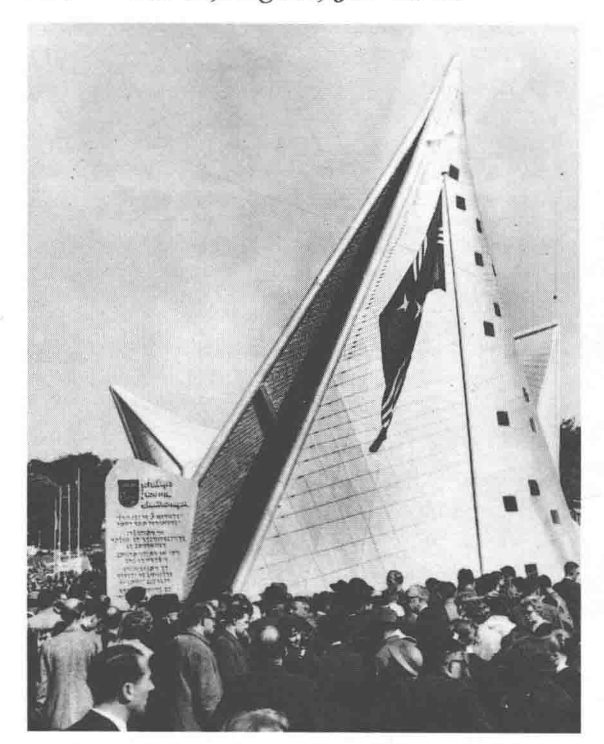
However, any analysis of Varèse's music in terms only of pitch structure must be insufficient (though such analyses have been widely offered – a fact that partly accounts for the favouring of *Density 21·5* in the literature). In order to be convinced of the importance to Varèse of timbre, it is enough to imagine ex.1 played on a cello.

3. WORKS. The two compositions that followed *Hyperprism* – *Octandre* (1923) and *Intégrales* (1924–5) – share several of its features; neither goes so far in avoiding repetition, though again pitch organization is dependent on redispositions of basic sets rather than on thematic development. *Intégrales* is close to *Hyperprism* in instrumentation (it requires 11 wind and four percussionists), material and form. The first of its three main sections (up to two bars after figure 5) is, however, the extreme case of repetition in Varèse: though there is no exact repeat, the 52 bars are dominated by a three-note motif of a rising tritone followed by a rising tone, with the last note sustained or successively attacked. In several respects this is an essentially Varèsian idea: the most characteristic melodic type in Varèse is that in which a single pitch is strongly emphasized (as in ex.1), an emphatic rising 'summons' is found elsewhere as a point of initiation (cf *Nocturnal*), and the *Intégrales* motif itself occurs again in *Arcana* (two bars after figure 9, etc.) and *Ecuatorial* (bar 8). *Octandre* is scored for eight instruments without percussion ('octandrous' flowers have eight stamens) and is uncharacteristically divided into three movements. Although rhythmic activity is here concentrated in melody instruments, the play between independence and unison in the rhythmic domain is as important as it is in *Hyperprism* and *Intégrales*.

The two compositions that preceded *Hyperprism* – the orchestral *Amériques* (completed in 1921 and revised in 1927) and *Offrandes* for soprano and small orchestra (1921) – display Varèse's debts to predecessors most clearly, yet both are full of typical features, such as the use of solo wind instruments in *Offrandes* or the elaborate scoring for 11 percussionists, including two sets of timpani, in *Amériques*. Debussy's influence is evident in the orchestration of these pieces, notably in the writing for harp (an instrument Varèse was not to use again) and strings. And the way in which Varèse employs an exposed alto flute melody as a recurring origin for fresh departures in the early part of *Amériques* has some parallel in the *Prélude à l'aprés-midi d'un faune*. *Amériques* requires an enormous orchestra, as, it seems, did the lost *Bourgogne* and *Prélude à la fin d'un jour*. In revising the work Varèse cut some instrumental parts and excised a considerable quantity of music, but *Amériques* still has a greater profusion of material than any subsequent composition.

Arcana (1925–7) demands a comparably enormous ensemble but is structurally more contained; it deploys many of the principles of *Hyperprism* and *Intégrales* on a scale of greater density and time-span. The surface coherence of the work depends largely on the varied returns of a few basic ideas, and in this sense the music is more thematic than in the smaller compositions. However, development is not linear: ideas disappear and then reappear in transformed states in a perpetual upheaval of sound. Among the germinal 'sound-masses' are the pounding initial figure for bass instruments and the *Intégrales* motif already mentioned. Thus linked to an earlier piece, *Arcana* also looks forward, notably in the section beginning at figure 18, to *Ionisation* for 13 percussion players (1929–31). Fittingly, since *Ionisation* is scored almost entirely for unpitched instruments, it provides the most sustained example in Varèse of the alternation and variation of rhythmic 'cells'. Definite pitches make a dramatic appearance in the last 17 bars of the composition, with a repeated cluster in the piano bass and various rhythmic arrangements of three chords distributed between piano, glockenspiel and tubular bells. The use of percussion instruments for their resonant

3. Back projection shown during the performance of Varèse's 'Poème électronique' in the Philips Pavilion, 1958



capacities, here quite new to Varèse's music, was to be further exploited in later compositions, above all in *Déserts*.

Even in *Ecuatorial* (1932–4) there is a significant part for piano, and Varèse introduces an organ into the ensemble. Possibly his interest in keyboard instruments was reawakened by the French composers then emerging; Jolivet was his pupil while he was in Paris (1928–33), and he would almost certainly have heard Messiaen's music at that time. *Ecuatorial* also adds two parts for electronic instruments; Varèse worked with Thérémin in Paris on those to be used, but in the published score he replaced them by ondes martenots. These enabled Varèse to achieve one of the benefits he expected from electronic music: at one point there is an e'''', a note to which Varèse, even in his most strenuous demands on piccolo players, had not previously stretched. Four trumpets, four trombones and percussion (six players) complete the instrumental forces of *Ecuatorial*. The vocal line, to a prayer from the *Popol Vuh* of the Maya Quiché, was first intended for Chaliapin, though in the printed version it is assigned to a unison bass chorus, perhaps more appropriate for a communal incantation. In either version *Ecuatorial* is a work of drama and vividness, suggesting the 'elemental rude intensity', as Varèse put it, of pre-Columbian sculpture.

Apart from the short *Density 21·5* for solo flute (*see* ATONALITY, §2, esp. ex.6), Varèse's next complete work was *Déserts* for 20 instrumentalists and two-track tape (finished in 1954). The contrast is striking between the 'new worlds' of *Amériques* and these 'deserts', by which Varèse meant 'not only physical deserts of sand, sea, mountains and snow, outer space, deserted city streets . . . but also this distant inner space . . . where man is alone in a world of mystery and essential solitude'. The instrumental music, which was composed first and may be performed without the three tape inserts, requires forces similar to those of *Hyperprism* and *Intégrales* – 14 winds, piano and five percussionists – but the style is changed. Though ejaculatory motifs still occur, they are subsidiary to sustained chords or single pitches, and Varèse's orchestration of these is extremely subtle. Pitched percussion instruments – principally piano, but also vibraphone, glockenspiel, xylophone and tubular bells – are used almost always to double the winds; the assembling and dismantling of sonorities is done with great beauty and effect; and there are moments of *Klangfarbenmelodie*, which are, with other tendencies to transparency, suggestive of Webern. Sparer and stiller than earlier works, *Déserts* has more room for consonant intervals (even emphatic octaves at bars 54–6) and less rhythmic activity; the role of the unpitched percussion is considerably curtailed. In preparing the electronic interludes, whose grating 'noise' character is quite opposed to that of the orchestral material, Varèse modified recordings of factory sounds and percussion instruments.

About the time that he was composing *Déserts*, Varèse was involved in various cinematic projects, principally in collaboration with his friend Thomas Bouchard; he prepared extracts from his own works for a film on Léger (1946), arranged Baroque fragments for one on Seligmann (1950), and composed an electronic soundtrack for one sequence in *Around and About Joan Miró* (1955). He also intended that *Déserts* should be accompanied by a film of images in counterpoint to the sounds, but nothing came of the idea. Another project of this period, a realization of *Intégrales* for tape, was also abortive, but Varèse did produce the *Poème électronique* (1957–8; fig.3). This uses a much greater range of sounds than did the tapes for *Déserts*: pure electronic sounds, machine noises, bells, solo and choral voices, piano and percussion, all with or without modification; there are suggestions of the 'summons' of *Intégrales*, the insistent rhythms of *Ionisation*, and the wide-ranging soprano line of *Nocturnal*. Though hard to analyse, the coherence of the *Poème électronique* is as undeniable as its power to move. Sadly, Le Corbusier's building (fig.4), in which the three-track tape was transmitted through a large number of loudspeakers, was soon demolished, and so Varèse's spatial intentions cannot be realized.

The unfinished *Nocturnal* (1961) – in which, after decades of planning, Varèse left electronic means behind – is still more bleak and reduced than *Déserts*. Varèse had

4. Philips Pavilion, Exposition Universelle, Brussels, 1958: designed by Le Corbusier

investigated texts by Michaux, Novalis and St John of the Cross before choosing some phrases from Anaïs Nin's *The House of Incest*, to be intoned by soprano solo and bass chorus. The orchestral writing is most comparable with that of *Déserts*, with two important exceptions: instruments often double vocal lines, and strings are introduced, most strikingly to present *pianissimo* chords in harmonics, a sound that may have been suggested by the Japanese shō, in which Varèse took an interest after his introduction to gagaku in 1958. Chou Wen-chung made a skilful and coherent completion of *Nocturnal* after Varèse's death, but the piece has to be considered a fragment.

Thus Varèse left only 12 self-sufficient compositions: a smaller output than that of any modern composer of like importance, but a major contribution for itself and for the stimulus it gave. Few other composers enjoyed the respect of such disparate contemporaries as Busoni, Debussy, Schoenberg and Stravinsky; few others excited the interest at once of Babbitt, Boulez, Cage and Stockhausen.

Amériques, orch, ?1918–1921; Philadelphia, Academy of Music, 9 April 1926, Philadelphia Orchestra, cond. Stokowski; rev. 1927, Paris, Maison Gaveau, 30 May 1929, Orchestre des Concerts Poulet, cond. Poulet; later revs. incorporated in edn by Chou Wen-chung (1973)

Offrandes, S, small orch, 1921: Chanson de là-haut (V. Huidobro), La croix du sud (J.J. Tablada); New York, Greenwich Village Theater, 23 April 1922, N. Koshetz, cond. C. Salzedo

Hyperprism, 9 wind, 7 perc, 1922–3; New York, Klaw Theater, 4 March 1923, cond. Varèse

Octandre, fl + pic, cl + E♭ cl, ob, bn, hn, tpt, trbn, db, 1923; New York, Vanderbilt Theater, 13 Jan 1924, cond. R. Schmitz; ed. Chou (1980)

Intégrales, 11 wind, 4 perc, 1924–5; New York, Aeolian Hall, 1 March 1925, cond. Stokowski; ed. Chou (1980)

Arcana, orch, 1925–7; Philadelphia, Academy of Music, 8 April 1927, Philadelphia Orchestra, cond. Stokowski; rev. 1960

Ionisation, 13 perc, 1929–31; New York, Carnegie Hall, 6 March 1933, cond. Slonimsky

Ecuatorial (prayer from Popol Vuh of Maya Quiché, trans. Father Jimines), B (solo/unison chorus), 8 brass, pf, org, 2 ondes martenots, 6 perc, 1932–4; New York, Town Hall, 15 April 1934, C. Baromeo, cond. Slonimsky

Density 21·5, fl, 1936; New York, Carnegie Hall, 16 Feb 1936, Barrère

Etude pour Espace, chorus, 2 pf, perc, 1947; New York, New School for Social Research, 23 Feb 1947, cond. Varèse

Déserts, 14 wind, pf, 5 perc, 2-track tape, ?1950–54, Paris, Théâtre des Champs-Elysées, 2 Dec 1954, Orchestre National, Radiodiffusion-Télévision Française, cond. Scherchen; tape rev. 1960, 1961, 1961

La procession de Vergès (tape for film Around and About Joan Miró, dir. T. Bouchard), 1955

Poème électronique, 3-track tape, 1957–8; Philips Pavilion, Brussels Exposition, 2 May 1958

Nocturnal (from A. Nin: *The House of Incest*, meaningless syllables by Varèse), S, B chorus, small orch, 1961, inc.; New York, Town Hall, 1 May 1961, cond. Craft; ed. and completed from notes and sketches by Chou (1973)

UNFINISHED PROJECTS

The One-All-Alone (stage work, L. Varèse), 1927

L'astronome (stage work, writers involved at various times incl. A. Artaud, P. Carpentier, J. Desnos, Giono), 1928–9 [for scenario by Varèse see Ouellette]

Espace (A. Malraux involved 1937), chorus, orch, 1929–*c*1940 [for scenario by Varèse see Miller]

Metal, S, orch, 1932

Dans la nuit (Michaux), chorus, 15 brass, org, 2 ondes martenot, perc, 1955–61

Nocturnal II (Nuit) (from Nin: *The House of Incest*), S, fl, ob, cl, 1/2 tpt, 2 trbn, perc, db, 1961–5

LOST WORKS

Martin Pas (op, Varèse, after J. Verne), boys' vv, mand, *c*1895

Works of *c*1905–5: Apothéose de l'océan, sym. poem; Chanson des jeunes hommes, orch; Colloque au bord de la fontaine; Dans le parc; Poème des brumes; Prélude à la fin d'un jour, after L. Deubel, orch; Souvenir (Deubel); 3 Pieces, orch; 2 rhythmic prose pieces (Deubel)

Rhapsodie romane, orch, 1905–6; pf version perf. Paris, 1906

Bourgogne, sym. poem, 1908; Bluthner Orchestra, cond. Stransky, Berlin, Bluthner Hall, 15 Dec 1910; destroyed by Varèse, *c*1962

Gargantua, sym. poem, inc.

Mehr Licht, orch, 1911; preworked as Les cycles du nord, orch, 1912

Oedipus und die Sphinx (op, H. von Hofmannsthal), 1909–13

Principal publisher: Colfranc/Ricordi

PAUL GRIFFITHS

Varesi, Elena Boccabadati-. Italian soprano, daughter of FELICE VARESI.

Varesi, Felice (*b* Calais, 1813; *d* Milan, 13 March 1889). Italian baritone. He made his début in 1834 at Varese as Cardenio in Donizetti's *Il furioso all'isola di San Domingo*, then for six years sang throughout Italy, mainly in operas by Donizetti. He first appeared at La Scala in 1841 as Publio in Mercadante's *La vestale*, then sang in Luigi Ricci's *Le nozze di Figaro*, the first performance of Federico Ricci's *Corrado d'Altamura*, Pacini's *Saffo* and the first performance of Nini's *Odalisa* (1842). He sang Sir Riccardo Forth in *I puritani* at the Teatro Apollo, Rome, in 1842, having sung Sir Giorgio in the same opera five years earlier at Faenza. A frequent visitor to the Kärntnertortheater, Vienna, he created Antonio in *Linda di Chamounix* (1842) there, and also appeared in Donizetti's *Alina, regina di Golconda* (1843), *Roberto Devereux* (1844) and *Maria Padilla* (1847). His first Verdi roles were Carlo in *Ernani* at Padua (1844) and the Doge in *I due Foscari* at Bergamo (1845). He created the title role of Macbeth at Florence in 1847, then sang Francesco in *I masnadieri* (1849) and Alphonse in *La favorite* (1850) at the S Carlo, Naples, and Malatesta in *Don Pasquale* at the Argentina, Rome (1850). He took part in two Verdi premières at La Fenice, Venice, singing Rigoletto (1851) and Giorgio Germont (1853). He appeared in Madrid (1856–7) and made his London début in 1864 at Her Majesty's Theatre as Rigoletto. Varesi was a prototype of the modern dramatic baritone who evolved from the operas of Donizetti and of early and middle-period Verdi. Although he made a powerful Macbeth, Rigoletto was undoubtedly his finest role; his singing of 'Si vendetta' always aroused enormous enthusiasm and was invariably encored; he neither understood nor liked the part of Germont.

His daughter, Elena Boccabadati-Varesi (*b* Florence, ?1854; *d* Chicago, 15 June 1920), a soprano, made her London début at Drury Lane in 1875 as Gilda in *Rigoletto*. She also sang the title role in *Lucia di Lammermoor*, Amina in *La sonnambula* and Zerlina in *Don Giovanni*. Her Lucia was considered the best since that of Persiani, the creator of the part. After singing for a decade in Italy and other European countries, she went to the USA and from 1888 taught singing in Chicago.

ELIZABETH FORBES

Varga, Tibor (*b* Győr, 4 July 1921). British violinist, conductor and pedagogue of Hungarian birth. His father was his first teacher and his mother was his accompanist. At nine he had lessons from Carl Flesch and at ten made his début with Mendelssohn's E minor Concerto and was taken by Jenö Hubay into the Liszt Academy in Budapest, where he studied the violin with Ferenc Gabriel, composition with Kodály and chamber music with Leo Weiner. At 14 he began touring Europe. In 1937 he played Hubay's Third Concerto, with Ernő Dohnányi conducting, at Hubay's memorial concert. Having graduated in 1938, in 1939–43 he studied philosophy at Budapest University. During the war he also learnt conducting with Franco Ferrara. In 1947 he settled in England, taking British citizenship, but since 1956 he has been based at Sion, Switzerland. Although Varga did not actually study with Hubay, in his prime he exhibited all the positive qualities of that school, never employing his considerable virtuosity for mere display. His repertory as a violinist covered the major Baroque, Classical and Romantic literature but he gained particular fame for his performances of the music of Bartók (whom he knew) and composers of the Second Viennese School. In 1946–7 he gave the Vienna and German premières of Berg's Concerto and in 1950 the first performance of Boris Blacher's Violin Concerto. Ernst Krenek was among the composers who dedicated works to him. In 1998 he gave up playing to concentrate on conducting and teaching, occupations which have brought him as much acclaim as his solo career. After the war he became professor at the new Győr Academy of Music and in 1949 he formed the violin department at the Nordwestdeutsche Musikakademie, Detmold, remaining there for 37 years. In 1956 he founded the Tibor Varga Chamber Orchestra at Detmold and he directed it until 1988. In 1963 he established a summer school in Sion and in 1964 he began his annual festival there; since 1967 an annual violin competition has been organized there in his honour. In 1988 he founded the Sion Ecole Supérieure de Musique. He is also in demand as an adjudicator and for masaterclasses. Varga began making records when he was 13 and among his many recordings, including most of the major concertos, Bartók's Second Concerto with Ferenc Fricsay conducting must take precedence. His first violin, a Lupot, was destroyed during the war. From 1947 he played a 1757 Giovanni Baptista Guadagnini and since 1960 he has owned the 'Ex-Soil' 1733 Guarneri del Gesù.

TULLY POTTER

Vargas(-Wallis), Darwin (Horacio) (*b* Talagante, 8 March 1925; *d* Santiago, 8 April 1988). Chilean composer. He studied at Santiago Conservatory with Santa Cruz, Urrutia Blondel and Orrego-Salas, simultaneously gaining wide experience as a choral conductor. In 1956 he was appointed assistant conductor of the Catholic University Choir in Santiago, and taught at the Talagante Seminary (1955–62), the Gonzalez Academy, Santiago (1964–8), the Valparaíso Naval School (music history, 1971) and the Catholic University, Santiago (professor of counterpoint and composition from 1972). In addition, he served on the permanent composition jury of the Instituto de Extensión Musical (1968–9). He received several prizes for his compositions, at Chilean music festivals and elsewhere. A personal mysticism is reflected in many works in a prevailing inward, lyric character, often linked to the use of modal scales and Chilean folk music. He has published articles in the *Revista musical chilena* and in *La libertad*.

JUAN A. ORREGO-SALAS/LUIS MERINO

Vargas, Ramón (*b* Mexico City, 1960). Mexican tenor. After studying at the Mexico City Conservatory and then in Vienna, he was engaged at the opera houses in Lucerne (1988–90) and Zürich, his roles including Edgardo, Elvino (*La sonnambula*) and Werther. In 1991 he began to appear regularly in Italy, mostly in Mozart and Rossini, gaining a reputation for his light, flexible and sweet-toned singing, a reputation confirmed when he sang a charming Almaviva in a much lauded recording of *Il barbiere di Siviglia* in 1992. He made a successful début at La Scala in 1993 as Fenton, in a performance of *Falstaff* under Riccardo Muti that was committed to disc. At the same time Vargas appeared regularly at his home house in Mexico City and at the nearby Houston Opera (where he sang his first Hoffmann). His roles at Covent Garden include the Duke of Mantua, Alfredo, and Rudolfo, and at the Metropolitan a much admired Edgardo (the role of his début in 1992), the Duke of Mantua, Alfredo and Ramiro (in a new production of *La Cenerentola*, 1997). He took the role of Don Narciso in Chailly's award-winning recording (with Bartoli) of *Il turco in Italia* (1997), adding a highly accomplished Werther to his discography in 1999. By then Vargas's light, lyric voice had taken on stronger tones without losing quality or flexibility. He has been aptly compared to his mentor, Alfredo Kraus.

ALAN BLYTH

Vargas [Bargas], **Urbán de** (*b* Falces, Navarre; *d* Valencia, bur. 8 Oct 1656). Spanish composer. On 1 October 1626 arrangements were made for him to study music for two years with Luis Bernardo de Jalón, *maestro de capilla* of Burgos Cathedral, but by 1 April 1627 he had attained that position himself at Huesca Cathedral. On 1 May 1629 he was appointed *maestro de capilla* of Pamplona Cathedral, apparently holding both posts simultaneously for some time. From 1646 to 1651 and in 1653 he was *maestro de capilla* of Nuestra Señora del Pilar in Zaragoza. In the interim he held the same post at Burgos Cathedral, beginning his duties on 20 June 1651. His last known position was at Valencia Cathedral, from 24 October 1653.

Vargas was one of the more prolific Spanish composers of the 17th century and, as is shown by the wide distribution of his works, one of the most admired. His villancicos, consisting of an introduction, *estribillo* and *cobles*, are especially noteworthy. Most are serious, but popular melodic and rhythmic elements are occasionally found, as are arpeggiated figures suggesting a guitar. Vargas usually composed for two or three choirs with continuo for organ or harp; in performance, instruments often doubled or replaced the vocal parts.

WORKS

5 masses: 1, inc., 5vv; 2, 8vv; 1, 12vv; 1, 14vv, *E-H*, *VAc*, *Zvp*
22 settings of pss, canticles, Lamentations, offs and ants: 1, 4vv; 5, 8vv; 1, 10vv; 5, 11vv; 8, 12vv; 1, 13vv; 1, 14vv; all with bc (org/hpd), some with harp, *AL*, *Bc*, *VAc*, *Zvp*
23 villancicos, incl. 2, 4vv; 2, 6vv; 3, 8vv; 4, 10vv; 6, 11vv; 3, 12vv, *AL*, *Bc*, *VAc*, *Zvp*
*c*60 villancicos, 8–12vv, *Zvp*

Other works in *BUa*, *CU*, *ORI*, *SEG*

BARTON HUDSON

Vargas y Guzmán, Juan Antonio de (*fl* *c*1770). Spanish theorist and guitarist. He is known primarily for his guitar treatise, one of the earliest for the six-course instrument, which circulated in manuscript under various titles; copies in the Archivo General de la Nación, Mexico City, and the Newberry Library, Chicago, bear the title *E[x]plicación para tocar la guitarra de punteado por mussica, o cifra y reglas utiles para acompañar con ella la parte de el baxo*. Vargas drew on Santiago de Murcia's *Resumen de acompañar la parte con la guitarra* (Madrid, 1717) and Joseph de Torres y Martińez Bravo's *Reglas generales de acompañar* (Madrid, 1702, 2/1736) for the sections on music theory and accompaniment. The treatise deals extensively with most aspects of guitar playing, including stringing and tuning the instrument, scordatura tunings, metres, scales, clefs, accidentals, ornaments, left- and right-hand technique, arpeggios, staff notation and

tablature. Music examples are numerous and include Spanish, French, Italian and English dances, as well as *passacalles*, variations and a substantial *Folías italianas* in both tablature and staff notation. A progressive feature is the use of modern chord names in place of the Italian *alfabeto* system preferred by Baroque guitarists.

A copy of the *Explicación* made in Cádiz in 1773 (Angel Medina's private collection) includes also a comparison of Catalan and Castilian strumming techniques and details of a notation system (different from the Italian *alfabeto*) using letters to denote chords; also appended are nine minuets and four other pieces written on two staves, one with a treble clef, the other (apparently for a second guitarist or a continuo player) with a bass clef. The same two-stave notation is used for 13 single-movement sonatas appended to the Mexico City copy; these exhibit features of Classical style and structure and others which suggest groupings (at least for the first 12 sonatas) into larger units of three movements each.

A villancico for four voices and continuo, *¡Oh, qué buen pastor!* (*E-E*), attributed to 'Vargas' may also be by Vargas y Guzmán.

CRAIG H. RUSSELL

Vargyas, Lajos (*b* Budapest, 1 Feb 1914). Hungarian ethnomusicologist. He studied folk music under Kodály (1932–3, 1935–6), church music at the Budapest Academy of Music (1936–7), and philology at the University of Budapest, where he took the doctorate in 1941 with a dissertation on Hungarian folk music from the village of Áj. After working in the Budapest University library (1941–52), as head of the music department of the Ethnographic Museum (1952–67) and as lecturer at the ethnography faculty of the University of Budapest (1952–4), he was appointed research assistant (1967) of the folk music research group of the Hungarian Academy of Sciences, which he also directed (1970–74). Between 1975 and his retirement in 1983 he was academic adviser at the musicology institute of the Hungarian Academy of Sciences. He was awarded the degree of doctor of sciences for a study of the medieval folk ballad in 1963.

Vargyas's initial research project was the first scholarly account of the music of a Hungarian village; his later work extended to the whole field of folklore, including Hungarian literature. He compiled the music examples in Kodály's fundamental work on Hungarian folk music. Vargyas has worked on the earliest forms of Hungarian folksong, its links with the folksong of neighbouring peoples, and the influence on it of early instrumental music; he is one of the leading scholars of European comparative ballad research.

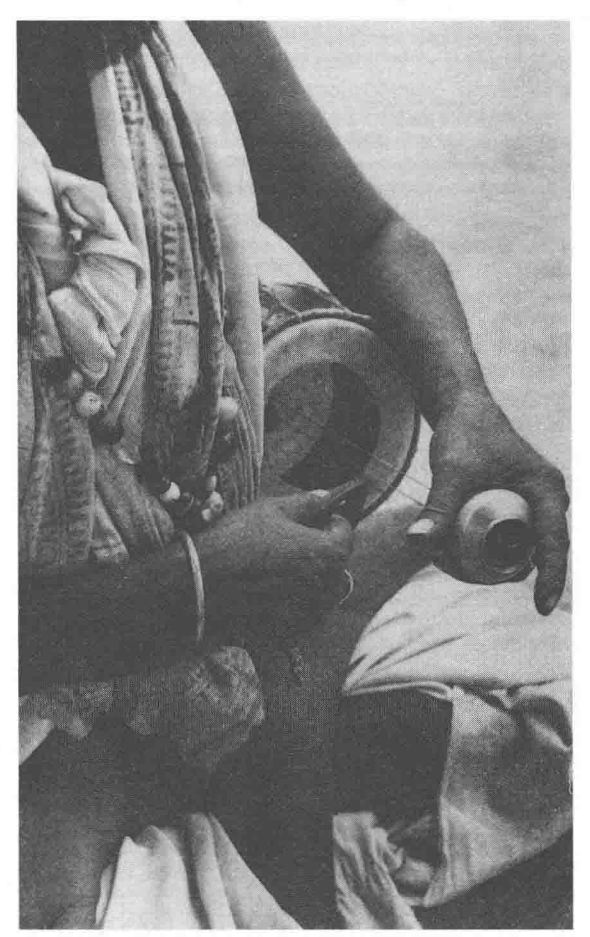
Magyar népballadák [Hungarian folk ballads] (Budapest, 1994)



LUJZA TARI

Variable tension chordophone. Instruments, widespread in South Asia, in which alteration of pitch is produced by the variation of tension in the string, either directly through pressure of the player's hand or arm, or indirectly by the use of a device such as a flexible neck or yoke, or turnable peg. The instruments all consist of a vessel-shaped body: wooden or metal cylinders, gourds or clay pots with no base, one opening covered with skin. A gut or metal string passes at right angles from the middle of the skin through the body, held by a device such as a wooden cross-bar, and is attached at the other end to another cross-bar (held in the hand), a neck or a yoke (either directly or via a peg). They are all plucked and are predominantly single string instruments.

The *ānandalaharī* of Bengal, often known by the onomatopoeic names *gubgubī* and *khamak*, comprises a barrel-shaped or upward-tapering wooden cylinder open at both ends. The lower end is covered with a complete skin, the upper skin with the centre cut away (earlier instruments had only a lower skin, glued on). Both skins are laced to plaited leather hoops and braced by chord V-lacings, each with a metal tuning ring. A string of gut is looped through two holes and a protective button (or piece of bamboo etc.) in the lower skin, passing up

1. *Ektara (one-stringed chordophone) and dotata (lute)*

2. *Ānandalaharī of Bengal*

through the body to a handle formed from a small brass pot. The body is held under the left arm with the left hand gripping the handle to tension the string; the right hand plucks the string with a small plectrum of bone or similar material (fig.1).

The *gopīyantra*, also of Bengal and Orissa, has a body which resembles that of the *ānandalaharī*. Unlike the *ānandalaharī* it has a neck, or yoke, consisting of a split-bamboo fork whose upper node is left whole and whose lower ends are nailed or bound to the sides of the resonator (fig.2). The string is attached to a tuning peg inserted through the node. When the two sides of the fork are squeezed by the right hand the pitch of the string rises. The string is plucked by the index finger of the right hand. The *gopīyantra* is also known as the *ektārā* or *khamak*. A similar instrument known as the *gopīyantra kendrā* is used by the Muṇḍā Ādivāsī people. Both the *ānandalaharī* and the *gopīyantra* are used by religious mendicant singers of the Sādhu type and especially by singers of the heterodox Baul faith.

Sachs (1914) classified these instruments as 'plucked drums'. However, work by Picken and others (1981) shows that they are not only true chordophones but also frequency doublers. When a string is attached at right angles to the centre of a membrane, the fundamental is an octave higher than the expected frequency.

ALASTAIR DICK/R

Variafon. A photoelectric composition machine, inspired by experiments in DRAWN SOUND, four models of which were developed in Leningrad between 1932 and 1949 by Yevgeny Aleksandrovich Sholpo. *See* ELECTRONIC INSTRUMENTS, §III, 2(ii).

Variations. A form founded on repetition, and as such an outgrowth of a fundamental musical and rhetorical principle, in which a discrete theme is repeated several or many times with various modifications. Identifiable as a formal type from the 16th century, it nonetheless reflects a technique and process important in nearly all music, including music in which the improvised repetition of the strophes of song or dance forms is a part. A theme for variations, rarely shorter than eight or longer than 32 bars, may be a melody, a bass line, a harmonic progression or a complex of such elements. When the theme is brief enough to serve as an ostinato, its repetitions generate a continuously unfolding structure with new figurations and textures at each statement of the theme. When the theme is a self-contained sectional structure, such as a small two-reprise form, its repetitions result in a strophic form in which some elements of the theme change and others remain the same; this is known as 'theme and variations'. If instead of successive repetitions the variations recur singly or in groups after intervening material (e.g. episodes, another theme and its own variations, a *B* section), the result may be termed 'hybrid' variations. Sets of variations may be freestanding, independent pieces, most often for solo keyboard but also for orchestra and chamber combinations, or they may be movements in a larger work such as a symphony, piano sonata or string quartet. They may be based on a 'borrowed' theme – a popular or otherwise well-known melody or harmonic scheme – or on an 'original' theme, with the former more often appearing in independent sets and the latter in variation movements (*see* BORROWING). In rare instances, a series of variations occupies only a part of a larger movement, as in the finale of Beethoven's Ninth Symphony or the first movement of Brahms's Piano Quartet in C minor op.60, second theme. Non-essential parts of a variation set, such as an introduction, transitions between variations, and coda, were first introduced in the late 18th century.

Variation form has always had an 'image' problem, for which several factors are to blame. First is its reliance on repetition: the inevitable pattern of cadences suggests that composer and audience prefer limitation and clear signposts to more difficult developmental forms. Secondly, for a large part of its history the variation focussed on the theme's melody, causing commentators to sniff at 'mere decoration' or even at the very concepts of the familiar and recognizable. Most critics of any period applauded the idea of unity and variety within a work of art (*variatio delectat*), but ornament itself was seen as hiding true worth, obscuring the merits of simplicity or giving an unfair advantage in oratory. Variations were thus also implicated in the backlash against virtuosity, with the enormous numbers of variation sets produced by virtuosos between about 1790 and 1840 provoking a reaction against their empty display, or what Momigny in 1818 called 'much speech but little sense'. Finally, the apparent arbitrariness of an additive structure, the series of variations having no necessary ordering or ending point beyond local convention, has similarly served to downgrade the form as one that lacks organic inevitability. Variations are inherently paratactic, based on an iteration of items in a linear series, and thus are comparable to the 'choppy' as opposed to the 'rounded' or periodic style of oratory (the latter is more characteristic of sonata form). Composers have thus typically sought to organize sets of variations in ways that seek the advantages of repetition while sometimes also mitigating it. These are important issues for the critic of variation form: what impels one variation to succeed another? is there any motivation for the number and order of variations? how do composers seek either to accommodate or to overcome the paratactic nature of the form? how is the ending articulated? if closure is achieved by returning to the theme, is the effect artificial or revelatory? At any moment in the form a variation may be considered as a totality, as a species of relationship with the theme and as a building-block in the larger edifice. Ideas central to variations – among them display, ornament, strengthening a theme by means of figures, and the aesthetic effects of repetition – come straight from the art of rhetoric.

1. THE RHETORIC OF VARIATION. The idea that models for variation form might be found in rhetoric arises not only from the explanatory vividness and sheer historical staying power of the latter but also from features common to both: their shared modes of display and their understanding of the persuasive power inherent in repetition and ornament. A specific correlation between rhetoric and variation can be grafted on to the common fund of rhetorical knowledge on which composers and theorists can be assumed to have drawn, and takes three forms: explicit connection, the existence of rhetorical models for the structure of variation form, and the idea of figures and figurations as flexible tools for analysing variations. As Abbé Vogler wrote in 1793: 'Variations are a type of musical rhetoric, where the given meaning appears in different guises, with the distinction that the boundary lines are much more rigorously determined in music than in oratory' (*Verbesserung der Forkel'schen Veränderungen über . . . 'God Save the King'*, 1793, p.2).

Models for the structure of theme and variations come from the *ars praedicandi*, the medieval rhetoric of preaching, still alive in the 19th century. To construct a sermon, one was advised to choose a theme, a quotation from scripture, and then illuminate and amplify it in a series of divisions (in English, a term for variations). Each

division could be a word from the quotation. In the second volume of Joseph Riepel's *Anfangsgründe zur musicalischen Setzkunst* (1755), the student and teacher argue over how much contrast to allow in a musical composition, with the student claiming that the composer, like the preacher quoting scripture, must stick to his theme, and the teacher claiming that digressions strengthen the sermon if the theme remains in memory. A second source for the linkage of variation form and rhetoric is the widely circulated 16th-century treatise by Erasmus on abundant language or copiousness (*De copia*, 1512), based on the necessity for developing the ability to say the same thing in different ways and drawing extensively on Quintilian. After providing the means of variety in a list of figures, Erasmus's demonstration included 150 variations of the sentence 'Your letter pleased me mightily' and 200 variations on 'I will remember you as long as I live'. Variations of the first include:

Your epistle exhilarated me intensely.
Your brief note refreshed my spirit in no small measure.
Your pages engendered in me an unfamiliar delight.
Your communication poured vials of joy on my head.
Your letter promptly expelled all sorrow from my mind.
Good God, what a mighty joy proceeded from your epistle.
May I perish if I ever met with anything in my whole life more agreeable than your letter.

In pointing out the dangers inherent in the pursuit of copiousness, Erasmus echoed the concerns of the rhetoricians of antiquity while at the same time foreshadowing the cautions expressed in 18th-century treatises on variation technique, namely the tendency to fall into 'glibness, which is both silly and offensive' and to 'pile up a meaningless heap of words and expressions without any discrimination, and thus obscure the subject they are talking about, as well as belabouring the ears of the unfortunate audience'. The principal advantage of copiousness is that it enables the speaker to avoid literal repetition ('an ugly and offensive fault') because 'nature above all delights in variety' ('De duplici copia rerum ac verborum commentarii duo', Collected Works of Erasmus, Literary and Educational Writings, ed. C.R. Thompson, xxiv: *Copia: Foundations of the Abundant Style*, ed. and trans. B.I. Knott, 1978).

Rhetorical variations were seen as a means of acquiring and polishing style because a display of copiousness, or varied repetition, might be called into action in many oratorical situations, especially those involved in show-pieces known as epideictic or display orations. Cicero's description of display oratory describes the pleasure it gives, the neatness and symmetry of sentences, the ornamentation done 'openly and avowedly, with no attempt at concealment, so that words correspond to words as if measured off in equal phrases, frequently things inconsistent are placed side by side, and things contrasted are paired, clauses are made to end in the same way and with similar sound' (*Cicero*, v: 'Orator', ed. and trans. H.M. Hubbell, Loeb Classical Library, 1939, xi.37–xii.38). Cicero could as easily be describing the composer of variations. Indeed, as a means of acquiring and polishing style, variations were sometimes considered an early step in compositional training; Brahms urged his only composition student, Gustav Jenner, to begin with variations. Aristotle identified two other important features of epideictic rhetoric: its reliance on amplification, because the subject concerns 'actions that are not disputed, so all that remains to be done is to attribute beauty and importance to them', and its similarity to written prose, making it the only kind of display oratory meant to be read (*Art of Rhetoric*, I.ix.38–40; III.xii.6). Quintilian discussed amplification in detail, offering techniques for its purpose of revealing in ever stronger terms the importance of the subject (*Institutio oratoria*, VIII.iv). Thus both display oratory and variation straddle improvised and written forms, and both offer new ways to reclothe the subject.

The nature, application and control of 'figures' is a problem considered in almost identical terms by writers on rhetoric and writers on variation form. Both conclude that figures are natural and necessary but must not be overused. The tension between *res* and *verba*, or *Gedanke* and *Ausdruck* – how the thought is to be clothed in words – is greater in music than in verbal arts: in purely instrumental music, what is the *res*? Even the theme has its own figural 'clothing', as some early variation sets made clear when they called the first segment 'Prima variatio'. Just as in verbal rhetoric, figures were the means necessary to adorn and make expressive a simpler musical entity, as well as the culprits in freighting it down unnecessarily. Overzealous labelling of motifs by late 16th- and early 17th-century theorists such as Burmeister and their 20th-century counterparts such as Schering, Unger and Gurlitt made the application of rhetorical figures to music appear problematic to more sober 20th-century scholars such as Brian Vickers and Peter Williams. But a figure is not necessarily co-extensive with a motif. Each of Erasmus's variations embodies a figure. As a means of showing mastery of style while elaborating on a theme, varied repetition may itself be seen as a kind of rhetorical figure that could include other figures. For example, 'refining' (*expolitio*), according to the [*Rhetorica*] *Ad Herennium*, 'consists in dwelling on the same topic and yet seeming to say something ever new' for 'when we descant upon the same theme, we shall use a great many variations'; the example of a speech based on this figure includes the Theme expressed simply, the theme expressed in a new form, arguments from comparison, contrary and example, and a conclusion which restates the theme (IV.xlii.54–xliii.56). Puttenham renames this figure 'the Gorgious' because it has the same effect on speech and language as 'rich and gorgious apparell' has on the 'bare and naked body' in order to 'attire it with copious and pleasant amplifications and much variety of sentences all running upon one point & to one intent' (*The Arte of English Poesie*, 1589). Great effect may be produced by 'Dwelling on the Point' (*commoratio*), that is, 'repeating the point several times in different words' (Quintilian, *Institutio oratoria*, IX.i.27), or 'synonymy', which is described by *Ad Herennium* as a figure 'which does not duplicate the same word by repeating it, but replaces the word that has been used by another of the same meaning, as follows: "You have overturned the republic from its roots; you have destroyed the state from its foundations"'; and by Peacham as 'when by a variation and change of words that be of like signification, we iterat one thing diverse times' (*The Garden of Eloquence*, 1577, 2/1593, p.149). Other figures that become central to variations are *periphrasis* (*circumlocutio*), the substitution of many words for one in order to amplify, and *pleonasm*, the addition of superfluous words for decoration and emphasis. It seems more than coincidental that the

especially creative new thrust in Elizabethan rhetorical treatises accompanied the first flowering of variation form in England (see §5). The rhetorical underpinnings of variation form and variation technique reveal the aspects of persuasive (expressive) and pleasurable display common to both, and offer, as compensation for another layer of terminology, new tools for the analysis and valuation of variations even beyond those posited here. (*See also* RHETORIC AND MUSIC.)

2. TERMINOLOGY. The roots of the word *variatio* in the adjective *varius* originally referred, in non-specialized antique usage, to an impression of mixed coloration in plants and animals, either in the sense of 'colourful' or the more negative connotation of 'indeterminate' or 'fluctuating'. In his etymological analysis, Horst Weber (*HMT*, 1986) draws useful distinctions between the transitive and intransitive senses of *variare* (in German, *verändern* and *sich ändern*, respectively) with the connection of the first to process (varying, *verändern*) and the second to the result of that process (variation, *Veränderung*). Thus from the very beginning we see foreshadowed the twofold musical meanings of variation as technique and as form, and its connotations as positive and as problematic. Later associations of variation with colour can be seen in Zarlino's use of 'Chromatico, quasi Colorato, o Variato' for his chromatic genre (*Istituto harmoniche*, 1558, 3/1573, p.100). The idea of variety (*varietas*) played an important role in rhetoric, as the Latin writers drew on Aristotle, who himself had called on the authority of Euripides' *Orestes*: 'Change also is pleasant, since change is in the order of nature; for perpetual sameness creates an excess of the normal condition; whence it was said: "Change [*metabole*] in all things is sweet"' (*Art of Rhetoric*, 1371a, I.xi.20; Eng. trans. J.H. Freese). Quintilian noted that 'artistic structure [*compositio*] must be decorous, pleasing and varied' (*Institutio oratoria*, IX.iv.146). Variety was a goal both in performance, especially in height and tempo of the voice (e.g. *Ad Herennium*, III.xii.22: 'Relaxation from a continuous full tone conserves the voice, and the variety gives extreme pleasure to the hearer too') and in the realm of style (e.g. *Ad Herennium*, IV.xii.18: 'To confer distinction [*dignitas*] upon style is to render it ornate, embellishing it by variety', trans. H. Caplan).

Both *variatio* and its partial synonym *mutatio* are found in discussions of various kinds of 'colourings': the octave-related quality of different voices (Guido of Arezzo, *Micrologus*; Johannes Afflighemensis, *De musica*), hexachordal mutation and *musica ficta* (Marchetto da Padova, *Lucidarium*; Tinctoris, *Diffinitorium*; Finck, *Practica musica*; Zarlino, *Le istitutioni harmoniche*; Demantius, *Isagoge artis musicae*; and others). *Varietas* and *variatio* appear in discussions of the *differentiae*, the many possible ending-formulas for psalm tones used to link them to their antiphons. Whether the later Spanish term 'diferencia' for variation in the 16th century has any connection to this term is unclear; a similar question arises from the term *divisiones* for such endings (Regino of Prüm, *c*900) and the later English term 'divisions' for variations. The longstanding association of *varius* and *variatio* with rhythm, whether in a change of mode in mensural notation (from Franco on) or the rhythmically varied subdivisions of a final tone or cadence (from Guido on), makes the latter connection more plausible, especially in that the earliest variation sets of the 16th century subdivide the rhythm and may change the metre of the theme.

Rhetorical definitions of 'figure' as a *schema*, in which it is 'altered from the simple and obvious method of expression' (Quintilian, *Institutio oratoria*, IX.i.10–11, 13) thus make clear why *variatio* would become a figure to musical theorists of the 17th century: it takes a rhythmically plain (that is, 'unfigured') series of notes and recasts it as something rhythmically special, 'ornate' in the sense of 'ornatus', the soldier's armaments essential in the art of rhetoric. To Christoph Bernhard, *variatio* 'occurs when an interval is altered through numerous shorter notes in such fashion that, instead of the longer note, numerous shorter notes rush to the following [principal] note through all kinds of runs and leaps' (*Tractatus compositionis augmentatus*, p.73, Eng. trans. *Musica poetica*, 1997, p.434). It can thus include other figures and is itself part of other figures, like the *transitus*, one of Bernhard's figures of dissonance resolution. In writings by Bernhard, Prinz, Praetorius and Vogt, *variatio* is generally treated as synonymous with *diminutio*, *coloratura* and *passaggio*, and all of these are thought of both melodically, to fill in a large interval, and rhythmically, to subdivide a longer note. The related Spanish term *glosa* was discussed not only as the technique of diminution *per se* but also in the context of dissonance treatment (e.g. P. Nassarre, *Fragmentos músicos*, 2/1700). The sense of *variatio* as resolving a dissonance in small-note values carries through into the 18th century with Fux (*Gradus ad Parnassum*, 1725, p.217) and Scheibe (*Compendium musices theoretico-practicum*, ed. P. Benary in *Die deutsche Kompositionslehre des 18. Jahrhunderts*, 1961, p.62), and the much older view of it as a subdivided cadential note is recontextualized as the decoration of a cadence in an improvised cadenza (Riepel, *Anfangsgründe zur musicalischen Setzkunst*, iv: *Erläuterung der betrüglichen Tonordnung*, 1765, pp.89–90). A late echo of *mutatio* is found in Johann Walther's *Musicalisches Lexicon* of 1732, referring to each of its various changes (of accidentals, of mode, of manner, of register) as a *Veränderung*. The idea of variation as something intrinsic and essential, like *ornatus*, part of the artistic 'tool-kit' of the composer, might also make specific rules beyond those of part-writing impossible to prescribe: as Werckmeister put it, 'one artist has a different *Invention*, a different *Variation*, and a different *Genium* from another' (*Harmonologia musica*, 1702, p.84).

Variety and variation as the goal of art became an oft-repeated maxim during the 17th and 18th centuries, as a source of pleasure and as an approximation of the beautiful variety of nature. Simpson, Heinichen, Mattheson and Daube all asserted its primacy in music. Both florid counterpoint and elaborate figured-bass realizations were perceived to vary a simpler underlying model, and the art of 'divisions upon a ground' was predicated upon it: Christopher Simpson used 'ground', 'subject', 'bass' and 'theme' interchangeably (*The Division-Violist*, 1659, p.27; *see* DIVISION). Whether the model was identified as a 'given *Moduli*' (Printz, *Phrynis Mytilenaeus*, 1696, pt 2, p.46), a 'simple melody for singing or playing' (Walther, *Lexicon*) or 'certain bass notes' (Mattheson's revision of Niedt's *Handleitung zur Variation*, 1721), the injunction that the original ought to be recognizable adds an important new strand to the ongoing evolution of the term. The possibilities of variations in fugues had been

discussed from the early 17th century onwards, with subjects varied by inversion and by change of key and mode; in 1773, Daube described fugues with four-part invertible counterpoint, which with inversions 'give rise to eight *Veränderungen*' (*Der musikalische Dilettant*, 1773, p.330). Grassineau (translating Brossard, *Dictionaire de musique*, 1703) was specific about the result of the varied repetition, not merely the varied projection, of a simple model (*Musical Dictionary*, 1740): 'Variation, is the different manner of playing or singing the same song, air, or tune, either by subdividing the notes into several of less value, or by adding of graces in such a manner, however, as one may still discern the ground [*le simple*] of the tune thro' all the enrichments'. The dictionaries of both Walther (1732) and Lacombe (1752) also adopted Brossard, but Lacombe was the first to use the plural *Variations* (*Dictionnaire portatif des beaux-arts*, 1752; subsequently used by Rousseau, 1768). Mattheson (1721) claimed that 'what the French call *double*, we call variation, though this is not the best [term]. The name is entirely too general'.

Just as the term 'variation' could refer to different things, many different terms referred to variations. *Double*, originating in the *pas doublé* of court dance (Thoinot Arbeau, *Orchésographie*, 1588, p.33), appeared first in suites, such as an allemande or sarabande with one or more *doubles*. Like *double* but each with subtle semantic distinctions, the Spanish *diferencia*, Italian *partita* and English *division* all referred to a 'partition' – a segment, later called 'theme', that was repeated with alterations – as well as the sense of subdividing the original note values. In the realm of 17th-century dance music, however, it is sometimes unclear whether one *double*, *glosa* or *variatio* of an entire short piece is meant to be a varied repetition or an alternative version, especially since these terms refer to the practice of improvising diminutions as well as to sets of variations (e.g. Hernando de Cabezón's 1578 edition of his father Antonio's music, which included nine sets of *diferencias*, suggested that it be used as a model for glossing). The German *Veränderung*, like the Spanish *mudanza* and Italian *mutanza*, on the other hand, means change or alteration; German writings sometimes appear to distinguish between it and *variatio*, where the former is a broader category subsuming the latter as a figure (Horst Weber comments that all the different terms 'make possible a latent distinction between the concept of a "figure" and that of a "segment"'). *Mudanza* and *mutanza* were choreographic terms of the 15th and 16th centuries, though both were applied to sets of variations (e.g. Antonio Valente's *Intavolatura de cimbalo*, 1576). Indeed, 'variation' as a term for a solo dance or 'number' persisted in the terminology of ballet, applied by Tchaikovsky and Stravinsky, among others, and perhaps connecting both with the sense of solo display often on view during performances of instrumental variations and with the possible origin of variations as varied repetitions of a piece of music to accompany the dancers. Certainly dancers from the 16th century onwards were given a vocabulary of steps to improvise in subdividing the basic steps, comparable to diminution practice. Such titles as 'aria' and 'capriccio' were at times given to pieces with variations or variation-based procedures, but more often not.
